program log requirement, except for those logs necessary to assure compliance with statutory programming obligations.[7] Obviously, this approach would go further than the FCC was willing to go in the radio deregulation decision, where the Commission replaced formal programming and ascertainment requirements with more general standards.[8] However, it should be noted that a similar approach was proposed in the radio deregulation NPRM although it was not finally adopted.[9]

My initial reaction is that the statutory approach has much to commend itself to the Commission, the television industry and, most important, the American public. First, such an approach would avoid the largely ritualistic regulatory burdens imposed by the Commission for no particular statutory reason. Moreover, it has become painfully clear in recent years that concepts such as ascertainment and generalized programming requirements have grown to encumber other Commission processes, particularly the Commission's comparative process. In addition, they clearly impinge on broadcasters' First Amendment choices. Finally, a statutory approach would avoid what I view as a critical failing of the radio deregulation decision: the replacement of specific ascertainment and programming guidelines with amorphous ones.[10]

I do not accept the view that the current FCC may do no more

---

compliance, it will be necessary to know exactly what is required by the Communications Act and what is not. *See* NPRM at n.50. To the extent that the Fairness Doctrine is found to be statutory, see *id.*, the obligation to present differing views of controversial issues of public importance would, of course, survive should the Commission opt for the statutory approach.

[7] *See Radio Deregulation Appeal*, sl. op. at 48–56. *See also Radio Deregulation*, 48 Fed. Reg. 33499 (1983), (FCC 83–311).

[8] The radio deregulation decision is perhaps more accurately denominated radio "reregulation" since its primary effect seems to have been the reformulation of Commission-imposed standards rather than the elimination of such standards. In fact, Commissioner Fogarty concurred in the decision "not because it 'deregulates' radio—it does not—but because it rationally refines the public interest obligations of radio station licensees in light of the contemporary reality of the radio marketplace." *Radio Deregulation* at 1119 (concurring opinion).

[9] Deregulation of Radio, 73 F.C.C.2d 457, 529–32 (1979).

[10] The transmutation of vague ascertainment guidelines into specific ascertainment requirements should be instructive to the Commission as it approaches deregulation. In 1960 the Commission found that broadcast licensees were obligated "to make a positive, diligent and continuing effort, in good faith, to determine the tastes, needs and desires of the public in his community" En Banc Programming Inquiry, 44 F.C.C. at 2314. After several years of case law development, the Federal Communications Bar Association asked for some "clarification" of the Commission's standard, and the Commission obliged with numerous, specific rules regarding ascertainment. Ascertainment of Community Problems, 27 F.C.C.2d 650 (1971). It was the ritual of that clarification that the Commission largely repudiated in the radio deregulation decision as it returned to a standard of allowing radio licensees to ascertain "by any reasonable means." *Radio Deregulation* at 993. It takes no great analytical skill to discern a disturbing pattern here, and I hope that our decision in this proceeding will do something more than start a similar metamorphosis.

with regard to television deregulation than retrace the steps of a prior Commission with regard to radio deregulation. Courts have consistently recognized that the Commission, as an expert regulatory agency, is entitled to great deference in its policy decisions[11] and that its statutory construction should be followed unless clearly incorrect.[12]

In this regard the *WNCN* case[13] is particularly instructive. There, the Court reversed an appeals court decision that the Commission was statutorily obligated to review certain entertainment format changes of broadcast stations. The Court found that the Commission had made a "reasonable explanation" of its preference not to inquire into entertainment format changes, 450 U.S. at 603, and stated:

> As we read the legislative history of the Act, Congress did not unequivocably express its disfavor of entertainment format reviewed by the Commission, but neither is there substantial indication that Congress expected the public-interest standard to *require* format regulation by the Commission. The legislative history of the Act does not support the Court of Appeals and provides insufficient basis for invalidating the agency's construction of the Act.

450 U.S. at 597–98 (emphasis in original). Similarly, in the instant situation, nothing in the Act appears to *require* the Commission to impose ascertainment and informational programming obligations on broadcasters. Accordingly, assuming the Commission could provide a reasonable explanation of its action, nothing appears to keep the Commission from relying exclusively on the strictures of the Act in this area.

Similarly, I find nothing in a statutory approach which is necessarily inconsistent with the court's decision in the radio deregulation appeal. Indeed, the court specifically noted that the Commission's original "preferred approach" had been "to rely totally on the market and the decisions of individual licensees to set the amounts and types of nonentertainment programming." *Radio Deregulation Appeal*, sl. op. at 23. However, since the FCC did not ultimately adopt this approach, the court stated no opinion on it, finding that it "need not consider whether the Act would permit the Commission to rely solely on market forces in the area of nonentertainment programming." *Id.* at 23, n. 34.

In short, I see no reason why the Commission may not view the radio deregulation decision as a point of departure rather as an absolute limit. And my initial reaction is that reliance on statutory requirements rather than Commission-generated standards is the best hope of bringing significant deregulatory relief to television licensees and more diverse program choice to the American people.

CONCURRING STATEMENT
OF
COMMISSIONER HENRY M. RIVERA

RE: Notice of Proposed Rulemaking to Revise Commercial Television Licensing Policies.

My concurrence in this Notice of Proposed Rulemaking is premised on the belief that the Commission should periodically reexamine its policies and procedures to see whether they can be improved. Most of the guidelines, policies and rules under study here have not been comprehensively revisited—as they apply to commercial television—for a decade or more.[1] Therefore, although I emphatically disagree with the Notice's suggestion that the television industry is ripe for substantial deregulation, I do not object to its issuance because the options outlined specifically include proposals that would improve, rather than eliminate, the existing regulatory structure.

Despite this acquiescence, I differ fundamentally with the reasons given for launching this broadly-gauged review. My objections are detailed at greater length below. Initially, however, it bears emphasizing that regardless of how this proceeding may be publicly characterized, it does not, and could not, propose complete television deregulation. *That* is possible only by legislation. Recent judicial decisions confirm that licensees remain, by law, public trustees, whose fiduciary status carries with it binding public service obligations.[2] As the court of appeals has once again confirmed:

> The regulatory scheme that Congress envisioned for the broadcast industry was a unique hybrid of private sector ownership of the broadcast licenses tempered by public service responsibilities; in return for "free and exclusive use of a limited and valuable part of the public domain," broadcasters were to be "burdened by enforceable public obligations."[3]

These public obligations may not be nullified by the philosphical predilections of this or any other Commission. Thus, any revision of the existing regulatory scheme must retain rational procedures to measure a licensee's service to the public. It must also preserve the public's opportunity to contribute meaningfully to our licensing decisions. The right of citizens to participate in our statutory public interest determinations is a "crucial" safeguard, one which the Commission may not indirectly undermine.[4]

---

[1] Although some regulations function so effectively that their review by notice and comment would be wasteful, I cannot unequivocally vouch for the efficacy of regulations under study in this Notice.

[2] *See Office of Communication of United Church of Christ* v. *FCC*, No. 81–1032 (D.C. Cir. May 10, 1983) ("*UCC* v. *FCC*"); *Central Florida Enterprises, Inc.* v. *FCC*, 683 F.2d 503 (D.C. Cir. 1982).

[3] *UCC* v. *FCC*, *supra*, slip op. at 24–25 (citation omitted).

Some of my fellow commissioners are apparently inclined to defer oversight of the television industry "to the marketplace" except where the Communications Act expressly requires otherwise.[5] In my judgment, pursuing that course before recently planted seeds of new competition fully mature, even if it could be legally justified, would work a profound disservice on the television viewers of this country, and could only be perceived as reflecting gross indifference to our mandate to regulate "for the benefit of the public, not for incumbent broadcasters."[6] Common sense and experience confirm that the two sets of interests are *not* always synonymous, and that the broader public interest will not be fully satisfied in the existing television marketplace absent continued selective regulatory involvement.[7] Any action ceding substantial new discretion to television licensees must be scrutinized closely to ensure that it does not undermine the public's interest *sub silentio*.

With these principles firmly in mind, I turn to my specific problems with the Notice. The Commission sets forth three primary arguments for reducing television regulation. The first two are wholly unpersuasive. The Notice suggests that: (1) growing competition in the television marketplace may offer an effective substitute for attaining the goals underlying FCC regulations; (2) regardless of the competitive condition of the television industry, our policies disadvantage licensees in competing with other, less regulated video services; and (3) in any event, existing federal policy disfavors burdensome and costly regulations.

As for the first contention, it is undeniable that television is a competitive industry; that has long been the case. However, in premising any fundamental policy shift on the degree of competition in television broadcasting, the Commission must have evidence that there has been a substantial increase in the number of outlets competing for the local television viewer. Only then can we plausibly assert that spectrum scarcity—the longstanding rationale for content-related regulation—has been reduced to such an extent that the FCC can largely rely on competitive market incentives to ensure that all major programming needs are satisfied and that all significant issues are aired.

---

[4] *Id.* slip op. at pp. 52–53.

[5] It is difficult to respond fully to the proposal that the Commission forswear all behavioral regulation except where required by statute, *see* para. 63, since the Notice advances neither policy nor legal support for this dramatic regulatory shift. However, it is worth observing that the FCC has already rejected such an approach for radio as administratively unworkable and of dubious legality. *See Deregulation of Radio*, 84 FCC 2d 968, 1022, 1069–71 (1981). The likely success of implementing in television what was just rejected for radio—after extensive study and public comment—is dim indeed. Consequently, I see no constructive public purpose to be served by inviting comment on the issue.

[6] *Central Florida Enterprises, Inc.* v. *FCC*, *supra*, 683 F.2d at 507.

[7] *See generally Notice of Proposed Rulemaking In the Matter of Children's Television Programming and Advertising Practices*, 75 FCC 2d 138 (1980) (inviting comment on task force findings that industry's self-regulatory efforts have failed and that public demand for additional children's programs is unlikely to be met in the present marketplace absent direct regulatory intervention).

Judged by that standard, it cannot be demonstrated that today's video market is fundamentally different, *nationwide*, than it was ten or twenty years ago.[8] Nevertheless, the Notice is somewhat schizophrenic about the present level of competition in television. On the one hand, it frankly acknowledges that recent FCC efforts to expand television viewing alternatives nationwide have not yet advanced much beyond regulatory fantasy; on the other, it suggests that a "burgeoning multitude" of video sources is spurring television licensees to render the most desirable program service. Whatever position the Notice means to espouse, it does not, nor could it, rebut the fact that conventional over-the-air television continues as the dominant video medium for a majority of the public. In other words, while the prospects for greater diversity seem bright, the choice of video service available to most Americans today is scarcely wider than it was before most of these rules and procedures were adopted.[9] One need only witness the recent astronomical sales prices of major market television stations—both VHF and UHF—to confirm that scarcity of television signals is still very much with us today.

The Commission's appraisal of the competitiveness of the existing video marketplace would have been considerably aided, and the necessity for comment on the issue substantially foreshortened, by meaningful consideration of the detailed report published just 18 months ago by the House of Representatives' Subcommittee on Telecommunications, Consumer Protection and Finance. That study is the most comprehensive assessment of competition in television performed outside the FCC. The Notice's failure to address these findings lends credence to the view that the Commission's bottom line in this proceeding is predetermined. After exhaustive factual, economic and policy analysis, the Subcommittee concluded that despite the advent of increased choices in some markets, "[i]f the argument for deregulation of television broadcasting is that the competitive infusion of the new technologies has overcome a preexisting scarcity, thus reducing or eliminating the former's position of market dominance, the argument must fail."[10] The Subcommittee's conclusions are amply supported by an extensive record and I fully concur in its judgment that "the burden falls on those who urge deregulation in the absence of sufficient competition to demonstrate how the public interest will be protected."[11] The analysis set forth by the Commission in this Notice falls woefully short on this score.

---

[8] It is true that some markets boast a multitude of video services, including VHF and UHF television, cable and STV. However, those markets are the exception rather than the rule. Where there is robust competition among numerous competing firms and types of service, more significant deregulatory measures may well be called for. *See* U.S. House of Representatives Committee on Energy and Commerce, *Telecommunications in Transition: The Status of Competition in the Telecommunications Industry*, 97th Cong. 1st Sess. 374–76 (1981). On the other hand, the Commission cannot take broadly based deregulatory steps today premised on the hope or expectation that a multiplicity of video outlets will develop tomorrow.

[9] At this time, cable systems provide the only significant alternative to over-the-air television. And although cable penetration has deepened impressively in the last decade, cable television is still available in only about one-third of this nation's homes.

Unlike commercial radio, where since 1965 the number of outlets has swelled by several thousand to a current total of nearly 9,000 stations, the ranks of commercial television licensees have increased by roughly two hundred (to approximately 800 stations) during the same period. Although 90 percent of the public receives at least four television signals, that is hardly the abundance witnessed in radio, where the number of outlets exceed outstanding television authorizations by a factor of ten.

The Commission's radio deregulation rulemaking noted fundamental structural differences between television and radio. Those distinctions still exist. For example, the FCC recognized that while both radio and television were part of a larger information market, the television industry's growth has been far more limited due to considerable technical constraints.[12] The Commission also found that in contrast to the pronounced trend toward specialization in radio, the economics of television encourage licensees to offer broad, common denominator programming, thus diminishing their capacity to respond to specialized needs.[13] Finally, the Commission observed that in sharp contrast to radio, television has achieved a prominent, if not paramount, role in informing and educating our society.[14]

In view of the significant differences between television and radio, any attempt to pattern "television deregulation" after our radio deregulation order could be achieved after only the most searching analysis. However, this Notice scarcely acknowledges the existence of distinctions between the two media, tersely observing that "[i]nterested parties may wish to comment on whether these [unspecified] differences should affect our thinking with respect to amending our commercial television rules and policies." *See* Notice at para. 34.

---

[10] U.S. House of Representatives Committee on Energy and Commerce, *Telecommunications in Transition: The Status of Competition in the Telecommunications Industry*, 97th Cong. 1st Sess. 375–76 (1981).

[11] *Id.* at 376.

[12] *See In the Matter of Deregulation of Radio*, 73 FCC 2d 457, 484–86 (1979).

[13] *Id.*, 73 FCC 2d at 486–87.

[14] Television may well be the primary source of news and information for most Americans, who rely on it for exposure to issues of local and national importance. *See* 73 FCC 2d at 486. Any action reducing Commission oversight of television must be especially sensitive to this fact and must be calculated to preserve undiminished the public's access to "diverse social, political, aesthetic, moral and other ideas. *See Red Lion Broadcasting* v. *FCC*, 395 U.S. 367, 390 (1969). This Notice unfortunately reflects no such insight or sensitivity.

The Notice's second premise — that these policies and rules are ripe for review because they hinder licensees' ability to compete with less regulated media forms — is little more than a paper tiger. As the Notice concedes, neither DBS nor LPTV is now a reality, nor is there any prospect for their becoming widely available in the immediate future.[15] The same is true of STV and MDS, neither of which presently reaches more than one million viewers. Accordingly, there can be no material competitive disadvantage as far as these services are concerned. Cable television, the only service that has made competitive inroads into the broadcast television market, is not subject to the identical panoply of rules applicable to broadcasters, but is often more extensively regulated by local franchise authorities. Thus, to the extent there are disparities between cable and broadcast regulation, they are not likely to dampen television licensees' incentive to compete and to innovate; in any event, the Notice has made no case to the contrary.

The final argument for revisiting these rules — the growing federal policy against overregulation — is the only persuasive basis supplied for going forward.[16] Over time, our administrative interven-

---

[15] The Notice's apparent concern over the competitive injustice resulting from the fact that DBS and LPTV are mimimally regulated is seriously misguided. In each case, the Commission's rationale for refraining from detailed regulation was carefully tailored to the unique attributes of the service being authorized. With respect to DBS, we concluded that it would be inappropriate to subject a service of unknown viability to extensive regulation during the initial "experimental" period; however, the Commission committed to revisit the matter before adopting permanent regulatory policies. *See Direct Broadcast Satellites*, 90 FCC 2d 676 (1982). The viability of LPTV is similarly undetermined, and the sharply limited range and preemptible status of those stations render them, at best, supplements to conventional television service. *See Low Power Television Service*, 51 RR 2d 476 (1982). Having couched its regulatory judgments in these limited terms, it would be disingenuous in the extreme for this agency suddenly to bootstrap significant commercial television deregulation on the fact that its DBS and LPTV decisions prejudice conventional broadcasters.

[16] It is argued that a "straightforward cost/benefit analysis" may supply another rationale for reducing these regulations. This approach is substantially a restatement of the third justification advanced, since many recent federal initiatives against burdensome regulation are essentially based on this calculus. In any event, at the risk of stating the obvious, a regulation should not be rescinded merely because it imposes costs. Furthermore, even if a regulation's costs outweigh its public benefits, the Commission is obliged to consider less burdensome alternatives before reflexively repealing it. *See UCC* v. *FCC*, *supra* note 2, slip op. at 48–52.

The Notice also maintains that licensees will remain responsive to the public absent present requirements because: (1) most licensees exceed the programming tion into broadcasters' daily activities may have become more intrusive than reasonably necessary to protect the public interest.[17] With the advantage of hindsight, it appears that the cost of complying with certain requirements — the ascertainment primers, for example — may indeed outweigh their public interest benefits, and that our programming guidelines, *as now structured*, may not optimally serve the public interest. Therefore, while I do not propose at this time to abandon ascertainment, non-entertainment programming, commercialization and logging requirements altogether, I am receptive to schemes that would permit television licensees to meet their public interest requirements in a less burdensome manner. In other words, my initial view is that it may be possible to achieve the public interest objectives at the heart of these procedures through more finely tuned administrative tools. All constructive ideas along these lines will receive my most careful attention.

In conclusion, I have considerable reservations about this Notice. Therefore, I hope these proposals will attract robust comment and debate by affected licensees, the general public they serve, and all other interested parties. The Commission cannot properly discharge

---

guidelines and generally air less commercial matter than specified by the commercialization guideline; and (2) if a broadcaster is unresponsive, it will invite "the ultimate sanction: viewers will stop viewing." *See* Notice at para. 43. The persuasiveness of these arguments is extremely limited. The fact that most licensees comply with FCC programming guidelines is unremarkable — after all, those guidelines were intended to reflect industry norms so the Commission's oversight resources could be reserved for exceptional license renewal applications. As for the latter claim, given that the economics of television foster mass appeal programming, the contention that dissatisfied viewers can substantially affect television choices is fundamentally flawed. It is altogether irrelevant as to demographically undesirable groups (*i.e.* those with limited purchasing power), whose "sanction" is unheard in this marketplace, and for residents of communities with limited video alternatives.

[17] I must confess some bewilderment, however, over the industry's apparent enthusiasm for this rulemaking. At least part of the scheme under review here was prompted by licensees in the interest of certainty and security. That certainty has been undermined to some extent by the FCC's failure to promulgate understandable comparative renewal standards. If the most deregulatory options proposed herein are adopted, a licensee's certainty about what service is necessary to obtain a "renewal expectancy" would be further reduced (as would the FCC's ability to fashion manageable and meaningful comparative renewal standards) because evaluation of licensee performance would inescapably require more subjective administrative judgments. *See also Deregulation of Radio*, 84 FCC 2d 968–989 (1981) (licensee not entitled to comparative renewal expectancy for "minimal service," which consists of "performance of all statutory obligations (i.e., Fairness Doctrine, access by candidates for federal elective office, etc.) and minimal although adequate, attention to the issues confronting the licensee's community primarily, and service area outside its community secondarily"). In such an environment, a substantial number of licensees would probably adhere to existing requirements in an effort to insure against a petition to deny or competing application, thereby negating the claimed benefits of reduced regulation. *See also Simon Geller*, 90 FCC 2d 250 (1982), *appeal docketed sub nom. Committee for Community Access* v. *FCC*, no. 82–2314 (D.C. Cir. Nov. 2, 1982).

its public interest mandate in an information vacuum. If our policies are misguided or unduly burdensome, it is incumbent upon the public to identify these failings, and if possible, to propose alternatives also calculated to safeguard the public interest. In the final analysis, of course, this Commission bears the responsibility for protecting the paramount interests of this nation's viewers and listeners. Absent legislative change, our statutory stewardship may not be delegated to licensees in the name of deregulation or any other popular ideology.

Application for Review
Fairness Doctrine
Fairness Doctrine, Complaint Sufficiency in Overall Programming
Fairness Doctrine, Controversial Issue of Public Importance

Application for review denied. Complainant must identify a particular well-defined controversial issue of public importance. In addressing overall programming, complainant must consider programming aired prior to a subject broadcast.
–*Conservative Caucus, Inc.*

FCC 83-314

BEFORE THE

FEDERAL COMMUNICATIONS COMMISSION

WASHINGTON, D.C. 20554

In re Complaint of
THE CONSERVATIVE CAUCUS, INC.
against
CBS, INC.
New York, New York

MEMORANDUM OPINION AND ORDER

(Adopted: June 29, 1983; Released: July 11, 1983)

BY THE COMMISSION:

1. The Commission has before it an Application for Review of the Broadcast Bureau's December 10, 1981 ruling, filed January 12, 1982, by The Conservative Caucus, Inc.[1]

2. The Bureau's ruling addressed the September 24, 1981 complaint, filed by The Conservative Caucus against the CBS television network, asserting that CBS had violated the Fairness

---

[1] On February 1, 1982, The Conservative Caucus filed a supplement to its Application for Review, composed entirely of "The Phyllis Schlafly Report," which includes her views on "national defense" and CBS' presentation of the subject programming. On May 12, 1982, The Conservative Caucus further supplemented its Application, requesting the Commission to consider that "The Defense of the United States" was shown during prime time and was broadcast on five successive days. On September 16, 1982, The Conservative Caucus requested and was granted additional time to further supplement its Application. Thereafter, on a periodic basis it submitted information purporting to demonstrate inaccuracy and unequal treatment in CBS' reporting of the subject series. On May 2, 1983, The Conservative Caucus informed the Commission it did not intend to submit further information.

Doctrine as a result of its airing of a five-part series entitled "The Defense of the United States."[2] The Conservative Caucus identified the controversial issue of public importance discussed as generally "national defense," and stated that its "monitoring" of CBS' nonentertainment programming "since" the series was presented demonstrated that CBS had failed to present contrasting views to those presented during the series. The complainant also stated that CBS refused its request that both sides of the issue be presented as required by the Fairness Doctrine. In addition, the complainant alleged that much of the information presented was "untrue and one-sided" and "misrepresented issues of great national importance."[3]

3. The Broadcast Bureau advised the complainant that its complaint was deficient in two respects: (1) it failed to identify a particular, well-defined controversial issue of public importance;[4] and it failed to address CBS' overall programming with respect to any broadcasts which aired *prior* to the subject series and which may have contained contrasting viewpoints.[5] Moreover, in the absence of a contrary *prima facie* showing, the Bureau indicated that the

---

[2] The Conservative Caucus' initial complaint and Application for Review stated that the series was broadcast August 3–7, 1981, during prime time. It is our understanding that the programs were initially broadcast June 14–18, 1981, during prime time and rebroadcast August 3–7, 1981, at 11:30 p.m., EDT, which is after prime time viewing hours.

[3] In response to this aspect of the complaint, the Bureau stated that:

> [T]he Commission is not the national arbiter of the "truth" of the news programming or the judge of the wisdom, accuracy or adequacy with which it may have been handled on the air.

The Bureau did indicate, however, that the Commission may appropriately act if it is furnished extrinsic evidence of an attempt by a broadcaster to "engage in intentional and deliberate falsification ('slanting or rigging') of the news."

[4] The Bureau stated:

> [W]ithin the issue of national defense you have brought together numerous individual issues that you have determined are relevant to the broader national defense discussion. For instance, under the umbrella of national defense you have identified a multiplicity of issues including the necessity for a United States military buildup, the relative military strengths of the United States and Russia, the nuclear strategy of Russia, Salt Treaty issues and Soviet influence in various countries throughout the world.

Furthermore, the Bureau, citing *American Security Council Educational Foundation (ASCEF) v. FCC*, 607 F.2d 438 (D.C. Cir. 1979), stated in pertinent part that:

> Consideration of the issues together, rather than individually, would not provide a basis for determining whether the broadcaster presented a reasonable balance of conflicting views because views on any one issue do not support or contradict views on the others. [Id. at 449.]

[5] In this regard, The Conservative Caucus stated that it had "consistently monitored news, public affairs and other nonentertainment programming *since* the airing of 'The Defense of the United States.'" (Emphasis added.) The complainant failed to address any programming prior to the subject series.

reasonableness or good faith of CBS' assertion to the complainant that it has "given extensive coverage to a wide array of opposing viewpoints bearing on these issues," is unrefuted.

4. In its Application for Review, The Conservative Caucus argues that the Bureau misapplied Commission precedent to its identification of "national defense" as a controversial issue of public importance. The Conservative Caucus contends that the issue of national defense, as presented by its complaint, sufficiently identified "an issue of exceptional public importance" and is clearly distinguishable from the facts in *ASCEF, supra*. In this regard, The Conservative Caucus argues that:

> All ASCEF requires is that when an issue, such as national defense, contains separate subissues, those subissues must be related in such a manner that "average viewers or listeners can be expected to believe that expression of a view on one supports or refutes a view on another. . . ." [*ASCEF* at 450.]

Accordingly, The Conservative Caucus contends that *ASCEF* is inapplicable because the subissues "outlined in [its] complaint are obviously well enough related that reference to the *ASCEF* case is erroneous." We disagree. The Conservative Caucus makes a bare assertion that the subissues in its complaint are "obviously well enough related" to "national defense." It provides no basis for the contention that the views on any one subissue directly support or contradict views on the others. Moreover, the claim that the subissues are "well enough related" ignores the Court's statement in *ASCEF*, cited by the Broadcast Bureau that:

> The issues that ASCEF joined together may have reference in varying degrees, to the umbrella concept of "national security." However, their relationships to one another are tangential. [Id. at 449].

The Bureau did not dispute the relevance of the subissues to "national defense." It concluded, correctly we believe, that The Conservative Caucus had not made a requisite showing demonstrating that the various subissues it identified were in effect interrelated to the extent that views on any one support or contradict views on any of the others. For example, views on Soviet influence in various countries throughout the world do not necessarily support or contradict views on Salt Treaty issues or Soviet nuclear strategy. This goes to the heart of the *ASCEF* decision. *ASCEF* stands for the proposition that a broadcaster when faced with a Fairness Doctrine complaint should be able to tell with a reasonable degree of certainty whether it has presented contrasting points of view in compliance with the Fairness Doctrine. As the Court in *ASCEF* stated:

> Unless a broadcaster can recognize the issue "with precision and accuracy" [cite omitted], proof of compliance with the Fairness Doctrine would require the production of "recordings or transcripts of all news programs, editorials, commentaries, and discussion of public issues, many of which are treated over long periods of time." [Id. at 451; cite ommitted.]

Thus, The Conservative Caucus' identification of the issue is not distinguishable from the circumstances in *ASCEF*, and clearly the rationale for the determination in that case is directly applicable to this complaint. The Court recognized the potential burden on a broadcaster when an identification of a controversial issue of public importance involves a myriad of subissues so extensive and diverse that to demonstrate compliance with the Fairness Doctrine, the broadcaster would be obligated to embark on an exhaustive, unnecessarily burdensome search of its programming. In this context, the Bureau cited the Court's statement in *ASCEF* that:

> The Commission has wisely determined that imposition of such onerous burdens on broadcasters would, in practice, defeat the policy of "encouraging robust, wide-open debate." [*Id.* at 451.][6]

It is important to note in light of the above discussion that our interpretation of *ASCEF* does not foreclose the success of every fairness complaint concerning broad, complex issues. The Court in *ASCEF* recognized that absent sufficient particularity some issues like "national defense" are inherently subject to numerous possible interpretations of what the issue means.[7] Unless the issue is adequately defined, it may, as illustrated in this case, contain subissues which, although related to the umbrella issue, do not necessarily contrast each other. Thus, in addressing an issue as broad as national defense it is incumbent upon a complainant to identify precisely what controversy concerning that issue is being focused upon, and if subissues are identified, to demonstrate how they are related to each other. If a complainant can neither define the umbrella issue with sufficient detail, nor explain how views on each subissue contrast with the others, the complainant should consider addressing individual subissues as separate controversial issues of public importance. Without such particularity, it is impossible from a practical standpoint for the broadcaster or the Commission to know how compliance with the Fairness Doctrine can be demonstrated.

---

[6] In this context, the following statement by the Court in *ASCEF* is pertinent:

> An editor preparing an evening newscast would be required to decide whether any of the day's newsworthy events is tied, even tangentially, to events covered in the past, and whether a report on today's lead story, in some remote way, balances yesterday's, last week's or last year's. Because this requirement would not promote the public interest, the limitations on the exercise of news judgment would be unjustified. [*Id.* at 455].

[7] In this connection, Chief Judge Wright's concurring opinion in *ASCEF* stated:

> That "national security" means different things to different people is incontestable and, in this fairness doctrine context, fatal to petitioner's complaint. To some, national security means devoting the bulk of our national resources to creating the ideal society. . . . To others, this is nonsense: national security translates literally into military superiority. Still others take a more discriminating view and seek to arrive at a secure compromise between domestic improvements and military might. And within each of those conceptions of National Security there is a sufficient number of allocational configurations to correspond to the multiplicity of individual visions of a "secure" nation. [Id. at 454.]

5. Assuming the issues listed in footnote 4, *supra*, were related as advocated by complainant, it has still not shown that CBS failed to afford a reasonable opportunity for contrasting views in its overall programming. In this regard, the Bureau noted The Conservative Caucus' assertion that, in "monitoring" CBS' programming "*since* the airing of 'The Defense of the United States,'" it found a lack of contrasting views to those presented during the series. The Bureau stated:

> Clearly, the burden upon the complainant to demonstrate an imbalance in the discussion of a controversial issue of public importance in a broadcaster's *overall* programming cannot exclude consideration of programming *prior* to subject presentations.

Rather than furnishing the necessary information regarding CBS' programming "prior" to "The Defense of the United States," the complainant now merely states that "The Conservative Caucus has not, however, contended that the programming *prior* to that series or that overall programming of CBS should not be taken into consideration in deciding whether or not Fairness Doctrine violations have been established." Clearly, The Conservative Caucus has still not made any showing regarding its viewing prior to the series, nor has it indicated any effort to ascertain the extent, if any, of CBS' presentation of contrasting views during this period. Absent such information, the Commission remains without a necessary element of a *prima facie* Fairness Doctrine complaint. Furthermore, we believe that The Conservative Caucus' complaint is deficient in an additional respect. The complaint states that officers of The Conservative Caucus have "consistently monitored news, public affairs and other nonentertainment programming by CBS since the airing of 'The Defense of the United States.'" There is no description of what "monitored" means. The *Fairness Report*, 48 FCC 2d 1, 19 (1974), states that "complainants should specify the nature and extent of their viewing or listening habits." In this regard, the Commission has stated that:

> [It] did not intend that the mechanical repetition of the words "regular viewer" or the assertion that the complainant "routinely listens to [or views] the news, public affairs and other nonentertainment programs" broadcast by the station, without the additional specific information setting forth the "nature and extent" of the complainant's viewing habits [cite omitted] would be considered an adequate basis for a Fairness Doctrine complaint. [*John Howard*, 55 FCC 2d 777, 780–81 (1975).]

Clearly, this is equally applicable to the complainant's bare monitoring assertion.

6. The Conservative Caucus supplemented its Application with documents contaning the views of various military personnel and

other interested parties who question the accuracy and balance of CBS' reporting. However, although the Bureau's ruling clearly advised the complainant that the Commission will not take action in this area unless provided with extrinsic evidence of *deliberate* distortion, no such evidence was furnished. Thus, because the Commission appropriately avoids arbitrating the truth or falsity of news programming, or judging the handling of particular news events in the absence of extrinsic evidence of bad faith, this aspect of the Application also fails to warrant alteration of the Bureau's ruling.

7. We recognize the high burden placed upon Fairness Doctrine complainants. However, the public interest is best served by avoiding government involvement in programming judgments as much as possible. By placing high procedural burdens on complainants, station and network inquiries initiated by the Commission are made only when we receive thorough, well-documented complaints. As the Bureau noted, we would place a heavy burden on broadcasters if we asked them to demonstrate compliance with the Fairness Doctrine on every complaint. If this were the case, broadcasters might tend to avoid controversies and present only bland programming rather than subject themselves to that burden. Such a result would certainly be contrary to the public interest, particularly because we seek to encourage vigorous coverage of the controversial issues of public importance that face us every day.

8. Having carefully examined the pleadings before us, it appears that The Conservative Caucus has presented no new or additional information or arguments which would warrant reversal or alteration of the Broadcast Bureau's ruling in this matter. Accordingly, in view of the above considerations, the Application for Review filed by The Conservative Caucus IS DENIED.

Application for Review
Fairness Doctrine
Fairness Doctrine, Controversial Issue of Public Importance

> Application for Review of Bureau ruling denying a complaint against the ABC television network denied. Complainant failed to establish that the treatment of allergy sufferers is a controversial issue of public importance.
> *–Council of Allergy/Immunology*

FCC 83–294

BEFORE THE

FEDERAL COMMUNICATIONS COMMISSION

WASHINGTON, D.C. 20554

In re Complaint of
JOINT COUNCIL OF ALLERGY AND IMMUNOLOGY
against
AMERICAN BROADCASTING COMPANIES, INC.

MEMORANDUM OPINION AND ORDER

(Adopted: June 23, 1983; Released: June 28, 1983)

BY THE COMMISSION: COMMISSIONER FOGARTY NOT PARTICIPATING.

1. The Commission has before it an Application for Review of the Broadcast (now Mass Media) Bureau's September 10, 1982 ruling[1] filed October 12, 1982, by Stephen Paul Mahinka on behalf of the Joint Council of Allergy and Immunology (JCAI).

2. The ABC television network, on its July 6, 1981 news program, "ABC World News Tonight," presented a news story that focused on a method of treatment for allergy sufferers called "clinical ecology." In response to this program, JCAI filed a complaint on June 25, 1982, requesting "that the Commission direct the American Broadcasting Companies, Inc. to provide the Joint Council of Allergy and Immunology with a 'reasonable opportunity for the presentation of conflicting views' on a controversial issue of public importance regarding safety and health, as required under the Fairness Doctrine. . . ." JCAI identified the issue as "what doctors should do for this nation's nearly 35 million allergy sufferers."

---

[1] A copy of the ruling is attached (Appendix).

3. On September 10, 1982, the Bureau ruled that ABC was not unreasonable in determining that the issue in question "did not involve a controversial issue of public importance subject to the Fairness Doctrine." In addition, the Bureau noted that the complainant had failed to establish "the nature and extent of the viewing habits" of its members.

4. In its Application for Review, JACI asserts that in addition to the broadcast in question, "recent attention from both the media and government officials, which the [s]taff determination failed to take into account, supports JACI's contention that the issue addressed in its complaint is both important and controversial." JCAI also reiterates its allegations that ABC's overall programming fails to present contrasting viewpoints and that the broadcast in question was a "one-sided" presentation. In addition, JCAI asserts that it adequately established the nature and extent of its members' viewing habits in accordance with the *Fairness Report*, 48 FCC 2d 1, 19 (1974).[2]

5. In support of its contention that the subject issue has received significant media attention, JCAI refers to the August 23, 1982 edition of Newsweek magazine which contained "a cover story on the subject of 'Allergies: New Discoveries, New Relief.'" JCAI states that this cover story "included a lengthy discussion of the growing controversy surrounding the methods of the 'clinical ecologist.'" In addition JCAI notes that, in August 1982, the Chicago Tribune carried a three-part series entitled "War on Allergies" which discussed methods of allergy research and treatment. Regarding its contention that this issue has received attention by government officials, JCAI explains that in June 1982 the Environmental Protection Agency circulated within the Agency a draft of a study entitled "Mini-Assessment of Selected Future Environmental Problems: Environmental Allergy." JCAI states that this "study directly addresses the growing controversy concerning alternative treatments for allergy sufferers."

6. JCAI asserts that the Bureau "failed to take into account" recent attention by the media and government officials pertaining to the subject issue. This material is brought to the Commission's attention for the first time in JCAI's Application for Review. Section 1.115(c) of the Commission's rules and regulations (47 C.F.R. § 1.115(c)) states that "No application for review will be granted if it relies on questions of fact or law upon which the designated authority has been afforded no opportunity to pass." The complainant did not submit copies or even identify the existence of the

---

[2] In this regard, JCAI in its June 23, 1982 complaint stated "JCAI's member organizations have several individuals who are and have been for some time regular viewers of the network's news and public affairs programming, including Abe L. Aaronson, M.D., and Robert J. Becker, M.D."

Newsweek and Chicago Tribune articles or the EPA draft while its complaint was pending before the Bureau.[3] Therefore, under Section 1.115(c) these matters are not properly before the Commission. Under the Fairness Doctrine it is incumbent on the complainant, and not the Commission, to establish a *prima facie* case. In assessing a Fairness complaint, the Commission examines only material submitted by the complainant in accordance with our rules.

7. In any event, even if the above-mentioned writings were properly before the Bureau and contemporaneous with the broadcast, we do not believe that they show the treatment of allergy sufferers to be a "controversial issue of public importance" so as to make ABC's judgment unreasonable. As the Bureau previously quoted in its ruling, to establish the controversiality of an issue, a complainant must show that an issue "is the subject of vigorous debate with substantial elements of the community in opposition to one another." *Fairness Report*, 48 FCC 2d at 12. The existence of two articles in the media, an unpublished report by a government agency, and the July 6, 1981 program in question, do not, in themselves, demonstrate that the treatment of allergy sufferers is controversial. The Bureau correctly concluded that media attention does not necessarily make an issue controversial. *See Healey v. FCC*, 460 F.2d 917, 922 (D.C. Cir. 1972).

8. Having carefully examined the pleadings before us, it appears that JCAI has presented no new or additional information or arguments which would warrant reversal of the Bureau's ruling on this matter. Therefore, we agree with the Bureau's finding that ABC was not unreasonable in its determination that the treatment of allergies, although newsworthy, is not an issue which should be subject to the Fairness Doctrine.

9. In regard to establishing the nature and extent of the viewing habits of the JCAI members, the JCAI complaint presents nothing more than a "mechanical assertion" of viewing habits (see Appendix), which we have found to be an insufficient showing for establishing a *prima facie* fairness complaint. Therefore, the Bureau was correct in finding that "[a] mechanical assertion that one is a 'regular viewer' will not serve to establish that the licensee, in its overall programming, has failed to present contrasting points of view." *John Howard*, 55 FCC 2d 777, 780–81 (1975); *Environmental Defense Fund*, 90 FCC 2d 658 (1982).

10. In view of the foregoing, it is unnecessary for us to address whether ABC's overall programming, or the program in question, presented contrasting viewpoints on the issue in question.

---

[3] The Newsweek and Chicago Tribune articles were published after the complaint was filed, but before the Bureau's ruling, and more than one year after the broadcast in question.

11. Accordingly, in view of the above considerations, the Application for Review IS DENIED.

FEDERAL COMMUNICATIONS COMMISSION
WILLIAM J. TRICARICO, *Secretary*

APPENDIX

FEDERAL COMMUNICATIONS COMMISSION
WASHINGTON, D.C. 20554

September 10, 1982

IN REPLY REFER TO:

8330-D
C6-677

Joint Council of Allergy and Immunology
c/o Stephen Paul Mahinka, Esq.
1800 M Street, N.W.
Washington, D.C. 20036

Dear Mr. Mahinka:

This is in response to your Fairness Doctrine complaint, filed June 25, 1982, on behalf of The Joint Council of Allergy and Immunology (JCAI) which alleges that the ABC television network, on its July 6, 1981 news program, "ABC World News Tonight," violated the Fairness Doctrine.

You assert that ABC only presented one side of the issue you identify as, "what doctors should do for this nation's nearly 35 million allergy sufferers." You allege that "the broadcast appeared to endorse . . . 'clinical ecology'" as a treatment for allergy sufferers, but failed to indicate that "traditional methods of medical treatment [for allergies] . . . have been shown to be safe and effective. . . ." You further assert that several members of JCAI, including Drs. Abe L. Aaronson and Robert J. Becker, are "regular viewers of the network's news and public affairs programming" and "have never encountered" programming on the traditional treatment of allergies. You assert the above stated issue is controversial and its controversiality was recognized by the "ABC World News Tonight" commentator when he stated there is "a growing controversy over what doctors should do for this nation's . . . allergy sufferers." Furthermore, you assert this issue is of public importance because a major portion of the United States' population, at least 35 million people, suffer from allergies, and that Fairness Doctrine obligations require "considered attention" to issues directly "affecting public safety and health." In addition, you allege that ABC's response to your Fairness Doctrine complaint was "incorrect and misleading" because, contrary to ABC's contention, the program "clearly appeared to advocate the methods of clinical ecologists." Finally, you assert that ABC did not clearly specify the subject of discussion in those programs it identified as representing contrasting viewpoints on the issue. As a result, you request that the Commission investigate ABC's response to your complaint and order ABC to provide you with a reasonable amount of time to present a contrasting viewpoint.

In reviewing complaints under the Fairness Doctrine, the Commission does not substitute its judgment for that of the broadcaster. Rather, the Commission considers whether the station or network has acted reasonably and in good faith. As the Commission stated in the *Fairness Report*, 48 FCC 2d 1, 9 (1974):

> We firmly believe that the public's need to be informed can best be served through a system in which the individual broadcasters exercise wide journalistic discretion, and in which government's role is limited to a determination of whether the licensee has acted reasonably and in good faith. [Citation omitted.]

In its December 9, 1981 response to your letter of November 3, 1981, ABC indicated that its program was newsworthy, but it did not involve a controversial issue of public importance under the Fairness Doctrine. Furthermore, ABC did not feel that its broadcast could be characterized as "an endorsement of clinical ecology" since it had presented criticisms of clinical ecologists within the same program.[1] Finally, ABC indicated that on four different occasions allergists have appeared on the "Good Morning America" program and, as a result, it was of the opinion that it had presented a representative sampling of allergy treatments in its programming.

To establish a *prima facie* case under the Fairness Doctrine, a complainant should demonstrate that an issue is *both* controversial and of public importance.[2] In determining the "controversiality" of an issue, a licensee should consider "the degree of attention paid to an issue by government officials, community leaders, and the media . . . and whether an issue is the subject of vigorous debate with substantial elements of the community in opposition to one another." *Fairness Report, supra,* at 12. You have not made any showing that this issue, the appropriate treatment of allergy sufferers, has received attention from government officials, community leaders or the media (except for the broadcast in question). Moreover, you have not established that this issue has been subject to vigorous debate with substantial elements of the community in opposition to one another. An issue which may be debated within the medical field will not, by itself, be considered controversial. *See Thomas W. Lippitt,* 53 FCC 2d 1195 (B/c Bur. 1975). There must be a cognizable public controversy for the Fairness Doctrine to apply. *See American Vegetarian Union,* 38 FCC 2d 1024, 1026 (B/c Bur. 1972), *review denied,* 45 FCC 2d 1038 (1973); *Nellie Shriver,* 46 FCC 2d 1121 (B/c Bur. 1974). Furthermore, an issue is not necessarily controversial or of public importance because it has received media attention. In this regard, the Court of Appeals in *Healey v. FCC,* 460 F.2d 917, 922 (D.C. Cir. 1972) stated:

> Merely because a story is newsworthy does not mean that it contains a

---

[1] ABC indicated in its letter of December 9, 1981, that "[i]n addition to the critical comments of Dr. Garry Ross," its correspondent, James Walker, "pointed out that the views of clinical ecologists were 'controversial' and that they 'have drawn sharp criticism from the medical establishment.'"

[2] In addition to the foregoing, the *Fairness Report, supra,* states that the complainant should include the following information to establish a *prima facie* complaint:

> (1) the broadcaster (station or network) involved;
>
> (2) the specific issue of a controversial nature broadcast (complainant should include an accurate summary of the views broadcast);
>
> (3) the date and time when the issue was broadcast;
>
> (4) reasonable grounds for the claim that the station or network broadcast only one side of the issue in its overall programming;
>
> (5) copies of correspondence between the complainant and the broadcaster; and
>
> (6) whether the broadcaster has afforded, or has expressed an intention to afford, reasonable opportunity for the presentation of contrasting viewpoints on that issue.

> controversial issue of public importance. Our daily papers and television broadcasts alike are filled with news items which good journalistic judgment would classify as newsworthy, but which the same editors would not characterize as containing important controversial public issues.

Thus, the existence of media coverage, by itself, is insufficient to demonstrate an issue is subject to the Fairness Doctrine.

In view of the foregoing, we cannot find that ABC was unreasonable in determining that its July 6, 1981 program, "ABC World News Tonight," did not involve a controversial issue of public importance subject to the Fairness Doctrine.[3]

Moreover, you have asserted that several members of JCAI, including Drs. Aaronson and Becker, are "regular viewers of the network's news and public affairs programming." Although the Commission does not require complainants to be "around the clock" viewers of a station or network in order to establish unbalanced programming, they are, however, required to "specify the nature and extent of their viewing or listening habits, and should indicate the period of time during which they have been regular members of the station's audience." *Fairness Report, supra,* at 19. A mechanical assertion that one is a "regular viewer" will not serve to establish that the licensee, in its overall programming, has failed to present contrasting points of view. *John Howard,* 55 FCC 2d 777, 780–81 (1975); *Environmental Defense Fund,* 90 FCC 2d 648 (FCC 82-268, July 9, 1982). You have made no showing as to the nature and extent of the viewing habits of Dr. Aaronson, Dr. Becker or any other members of JCAI.

Accordingly, no further action is warranted on your complaint. We recognize the high burden placed upon Fairness Doctrine complainants. However, the public interest is best served by avoiding government involvement in programming judgments as much as possible. By placing high procedural burdens on complainants, station and network inquiries initiated by the Commission are made only when we receive thorough, well-documented complaints. We would place a heavy burden on broadcasters if we asked them to demonstrate compliance with the Fairness Doctrine on every complaint. If this were the case, broadcasters might tend to avoid controversies and present only bland programming rather than subject themselves to that burden. Such a result would certainly be contrary to the public interest, particularly because we seek to encourage vigorous coverage of the controversial issues of public importance that face us every day.

Staff action is taken here under delegated authority. Application for Review by the full Commission may be requested within 30 days of the date of public notice of this letter (see Commission Rule 1.4(b) [47 C.F.R. §1.4(b)]) by writing the Secretary, Federal Communications Commission, Washington, D.C. 20554, stating the factors warranting consideration and, if mailed, should be sent by certified mail. Copies must be sent to the parties to the complaint. See Commission Rule 1.115 (47 C.F.R. §1.115).

---

[3] In your complaint you have requested that the Commission order ABC to provide JCAI with a reasonable amount of time to present a contrasting point of view. Under the Fairness Doctrine no individual or group has the right to respond to a controversial issue of public importance. Instead, the licensee exercises wide journalistic discretion in determining who may present contrasting viewpoints. Therefore, even if the Fairness Doctrine were applicable in this case, JCAI would not necessarily be afforded any broadcast time to present its viewpoint.

Sincerely,

Jeffrey W. Malickson
Assistant Chief
Complaints and Compliance Division
Broadcast Bureau

Satellite Direct Broadcast

Reallocation of spectrum to enable establishment of new Direct Broadcast Satellite service affirmed on reconsideration, given policies and procedures adopted to protect legitimate interests of existing users of the frequency band.
-Direct B/c Satellite Service
GEN. Docket No. 80-603

FCC 83-241

BEFORE THE

FEDERAL COMMUNICATIONS COMMISSION

WASHINGTON, D.C. 20554

In the Matter of Regulatory Policy Regarding the Direct Broadcast Satellite Service	General Docket No. 80-603

MEMORANDUM OPINION ORDER

(Adopted: May 17, 1983; Released: May 19, 1983)

BY THE COMMISSION: COMMISSIONER JONES CONCURRING IN THE RESULT.

I. Introduction

1. This *Order* considers and denies a petition for reconsideration of the Commission's June 23, 1982, *Report and Order* in General Docket 80-603 ("*DBS Report and Order* "), 90 F.C.C. 2d 676 (1982), that established initial rules and policies for the direct broadcast satellite ("DBS") service. The petition, filed on August 3, 1982, for the County of Los Angeles ("LA County") by George Y. Tice, Director of Communications, is limited to issues raised by the Commission's action confirming the allocation of the 12.2-12.7 GHz (12 GHz) band for satellite to earth transmissions in the DBS service, and outlining plans for accomodation of terrestrial microwave fixed service (fixed service) licensees currently using that spectrum. Oppositions were timely filed by Direct Broadcast Satellite Corporation ("DBSC"), Satellite Television Corporation ("STC"), Western Union Telegraph Company ("WU"), and United States Satellite Broadcasting Company ("USSB"). LA County is a licensee in the fixed service in the 12 GHz band. All parties participated in earlier stages of this proceeding.

2. The petition for reconsideration makes three substantive allegations:

(1) The Commission allocated the 12.2-12.7 GHz band for DBS use without giving adequate consideration to the needs of fixed service users of the band.

(2) The proceeding to accommodate the needs of existing 12 GHz fixed service licensees,[1] first announced and outlined by the Commission in the *DBS Report and Order*, will not protect adequately the needs of these licensees.

(3) The Commission did not establish a procedure in the *DBS Report and Order* to compensate adequately fixed service licensees that must move from the 12.2-12.7 GHz band.

LA County implicitly requests that the 12 GHz spectrum allocation be suspended pending full Commission consideration of the needs of fixed service users, and explicitly requests that it be suspended pending the conclusion of the 1983 Region 2 Administrative Radio Conference ("RARC-83"). At that conference, the United States and other regional administrations will adopt procedures for the sharing of the 12 GHz spectrum for direct satellite broadcasting services within Region 2. LA County also requests that the terrestrial proceeding be structured to allow public comment on the spectrum allocation issue after RARC-83. Opposition comments generally assert that the petition is technically flawed, that the allocation of the 12.2-12.7 GHz band to DBS was proper, that the needs of present and future fixed service users are protected adequately under the present procedures and plans, and that granting the petition would unnecessarily delay the introduction of DBS service to the detriment of the public interest. Consideration of these issues requires a somewhat detailed exposition of the relevant details of the DBS rule making and associated proceedings.

II. Background

3. The potential conflict of fixed service and DBS use of the 12.2-12.7 GHz band was considered by this Commission upon initiating this proceeding in 1980 with the *Notice of Inquiry*, 45 Fed. Reg. 72719 (published November 3, 1980). Therein the Commission noted that shared use of the band by fixed and DBS services might be impossible and thus requested comment on how to accommodate existing 12 GHz users, if required. Subsequently, after extensive comment and full consideration of these difficult issues, the Commission adopted the *Notice of Proposed Policy Statement and Rulemaking*("*Notice* ") in this proceeding, 86 F.C.C. 2d 719 (1981), designating the 12.2-12.7 GHz spectrum for DBS use. The *Notice* proposed that when DBS satellites began operating, "terrestrial licensees in the 12 GHz band will be required to make whatever adjustments in technical parameters or assigned frequencies necessary to prevent harmful interference to operating DBS systems." *Id.* at para. 36. To facilitate the needed adjustments, the *Notice* indicated that existing fixed service

---

[1] This proceeding, General Docket 82–334 (see paragraph 9, *infra*), is referred to herein as the "terrestrial rule making" or "terrestrial proceeding."

users would be subject to reassignment within or outside the 12 GHz band. The Commission announced these intentions at that time to give existing fixed service licensees enough time to prepare for a possible transition to other bands. *Id.* at para. 37. In addition, the *Notice* established a procedure to give specific notice to all new fixed service licensees of the probable need to alter frequencies at some future date to prevent harmful interference to operating DBS systems.[2]

4. The *Notice* reflected extensive study of the issues posed by the fact that the 12 GHz band was then being used by fixed service licensees. Recognizing the costs associated with a move to other bands by fixed service licensees, it invited comment on the best way to allocate these costs. The Commission proposed that existing fixed service licensees bear all costs of relocation, but the accompanying discussion considered the option of establishing a transition period when DBS and fixed services would share the band. The transition period was suggested to give fixed service users time to move to other bands as equipment reached the end of its useful life. In discussing this option, the *Notice* stated that reception of DBS signals during this period would be impossible and that the financial impact on the DBS systems might be severe. In contrast, spectrum sharing during this period was expected to have no negative impact on fixed service systems. Given the comparative disadvantage of such sharing to DBS operators, the Commission suggested that arrangements might be sanctioned wherein DBS operators could pay some costs of relocation by fixed service operators in return for earlier non-restricted use of the band. Additionally, the *Notice* announced the Commission's intention to initiate a proceeding looking to expansion of the alternative bands available for fixed services. Specifically, this new proceeding was to consider rules to initiate use of higher, undeveloped fixed service bands and to re-examine the rules governing the use of the fixed service at the lower bands.

5. Six months after publication of the *Notice*, the Aerospace and Flight Test Radio Coordinating Council ("AFTRCC") submitted a "Petition for Expedited Relief" seeking substantially the same relief as requested here by LA County. More specifically, the AFTRCC petition requested that the Commission (1) initiate a study of the 12 GHz and other bands for fixed service use, and (2) defer authorizing DBS in the 12 GHz band until the study was complete. The

---

[2] *Id.* at para. 36. Between the date of issuance of the *Notice* and the *DBS Report and Order*, the Private Radio Bureau specifically advised all new applicants for fixed service licenses in the 12 GHz band of the proposed DBS allocation decision, and of the probable need to change frequencies in the future. Similarly, all such licenses issued during this period were expressly conditioned on the outcome of the DBS proceeding. Since adoption of the *DBS Report and Order*, all fixed service license authorizations have been accompanied by a copy of the June 1982 News Release announcing Commission adoption of the *DBS Report and Order*.

Commission incorporated that pleading and the accompanying record into the DBS rule making.

6. The *DBS Report and Order* gave extensive treatment to the spectrum allocation and sharing issues raised in the *Notice*, in the AFTRCC petition, and in the combined record. In considering these issues in the *DBS Report and Order*, the Commission proceeded from two policy premises: first, the concerns of the fixed service users deserved serious attention; second, the potential public interest benefits of DBS justified both expedited action by the Commission and some adjustments by other services. Concluding that these premises posed difficult but not incompatible policy choices, the Commission chose a course of action designed both to avoid unnecessary delays in the DBS proceedings and to minimize the impact of its DBS allocation decision on existing 12 GHz fixed service licensees. The threshold question was whether to confirm the action of the *Notice* allocating the 12 GHz spectrum to DBS. In confirming the allocation, the Commission reviewed the spectrum needs for DBS and determined that no viable alternative to the 12 GHz spectrum existed.[3] This finding was based, in large part, on two interrelated considerations. First, the Commission concluded that sufficient spectrum for initial DBS service and its expected growth through the year 2000 must be made available quickly if its public interest goals in authorizing broadcast satellite services were to be realized fully. Second, the 12 GHz band offered the only means of accomplishing this end since it is the only spectrum suitable for satellite communications for which the necessary equipment would be readily available and in which DBS service was already authorized in the International Table of Allocations. The Commission's decision to utilize the 12 GHz spectrum for DBS was also based on various technical, legal and economic factors. One of the most important policy considerations was the need to provide sufficient spectrum to allow an "open skies" policy for DBS service that would afford the greatest possible flexibility and adaptability to those that would provide the service. The Commission noted that this policy was extremely successful in the domestic satellite area, and that it had facilitated the early implementation of many new satellite services.

7. At this point, the Commission considered extensively the issues raised by its DBS allocation action with respect to current

---

[3] It should be noted that the Commission decision to allocate the 12 GHz spectrum for DBS is not mandated by international agreement, but was made to further the domestic policy interest in providing for DBS service. The International Table of Allocations adopted at the 1979 World Administrative Radio Conference allows Region 2 administrations to implement several services in this band, including the Fixed, Fixed-Satellite, Mobile, Broadcasting, and Broadcasting Satellite services. The details of this sharing will be formulated at RARC-83, and have been the subject of General Docket 80–739. *See Report and Order Concerning Commission Proposals for RARC-83*, (adopted March 9, 1983), FCC 83–102, 4-28-83, 48 FR 19212.

users of the 12 GHz band. Although it continued to recognize the significance of these issues, it was then satisfied that the record contained sufficient evidence to assume that these issues could be reasonably resolved without further delay of the DBS rule making. The Commission recognized that rule makings were already in progress to establish rules and procedures governing the use of two higher bands and that these bands would be available for use by existing 12 GHz fixed service users.[4] It recognized also that these higher bands would not be entirely satisfactory to fixed service users and thus conducted an extensive review of the record and other available data to determine if more suitable spectrum could be found for many of the fixed service users. This review included a thorough exposition of the number of these licensees, the type of service they provide, the equipment and relay system arrangements employed, and the most important reasons why these users chose 12 GHz over alternative bands. On this latter point the record revealed that many fixed service users apparently chose the 12 GHz band for reasons not related to the technical characteristics of the band, including their being precluded because of status limitations on some bands and because of heavy use of some bands in specific geographical areas. The cost of equipment was also noted as a reason for selecting some bands over others. In this situation, the Commission determined that if it were to adopt changes in certain Commission procedures and policies, significant substitute spectrum might well be available in existing bands for these licensees. The Commission then tentatively identified other bands that might support existing 12 GHz users, and various means for accommodating these users through the development of rules and policies to encourage spectrum sharing and other spectrum use efficiencies. The Commission instructed the staff of the Office of Science and Technology to prepare a *Notice of Proposed Rule Making* that would look toward the adoption of these measures. The Commission stated its firm intention to take final action to accommodate these users no later than September 4, 1983. This date was chosen because of its proximity to the completion of the RARC-83 conference that will adopt final international rules for the use of the 12 GHz band by DBS in Region 2, and because it will precede post-RARC-83 authorizations of DBS systems.

8. The most important remaining matter involved the cost and timing of relocation. Given the alternatives proposed and considered in the record, the Commission adhered to its proposal in the *Notice* to require the fixed service users to bear the cost of their relocation, but included several very important provisions to mitigate these costs. First, those fixed service users that cause no interference to DBS

---

[4] The Commission noted two specific proceedings, Dockets 79–188 and 79–337, in which it had already identified frequencies that might be suitable for some existing 12 GHz users. *See DBS Report and Order*, n. 57.

users would be allowed to remain on the 12 GHz band indefinitely, although on a strict secondary basis. Second, all fixed service users licensed before the conclusion of the above mentioned terrestrial rule making would be allowed to remain on the band for a period of five years from the date of the conclusion of that rule making. Thus, existing fixed service licensees would be allowed to operate unimpeded until as late as September 4, 1988. This provision gave considerable notice to the affected fixed service users. Although the deadline will not be known precisely until the conclusion of the terrestrial rule making, it is apparent that current fixed service users will have about seven years to make the appropriate frequency adjustments from the time the Commission gave official notice of that probability when adopting the *Notice*, and six years from the time of the adoption of the *DBS Report and Order*. Third, the Commission sanctioned agreements by DBS and fixed service operators wherein DBS operators could agree to bear some of the relocation costs of an interfering fixed service operator in return for evacuation of the 12 GHz band before the deadline. These provisions, together with the expectation that certain fixed service operators would be able to relocate to adjacent or lower bands requiring relatively inexpensive modifications, appeared to forge the best possible compromise between the private interest of both DBS and fixed service operators, and the public interest in promoting the widest practicable availability of both services. In addition, the Commission noted that the higher frequencies appeared to offer sufficient capacity to meet the short distance radio link needs of these services in the future.

9. On January 13, 1983, the Commission adopted and released the *Notice of Proposed Rulemaking* in General Docket 82-334, FCC 83-2 ("Terrestrial Notice "), that, *inter alia*, was designed to make additional spectrum available for fixed service users displaced from the 12 GHz band. Following instructions in the *DBS Report and Order*, the *Terrestrial Notice* proposed changes and solicited comment from all interested parties on the following issues: (1) the feasibility of pooling or sharing microwave spectrum among the broadcast auxiliary, cable television relay (CARS) and private operational fixed services, (2) the need for minimum path link criteria in each of the available bands, (3) bandwidth and channeling requirements for each of the bands, (4) the feasibility of continued fixed service use of the 12 GHz band on a secondary basis, and (5) coordination and loading practices to ensure efficient use of the bands. In particular, the notice addressed the use of the frequency bands at 6 GHz, 13 GHz and 18 GHz that are expected to be most appropriate for existing 12 GHz users. The 6 GHz and 13 GHz bands were considered the most desirable because of the low cost of conversion to those bands. Although the Commission noted that some additional issues raised in the *Terrestrial Notice* might require more protracted deliberation, it declared its continued intention to

resolve those issues relating to 12 GHz conversion by the scheduled September 1983 deadline.

III. Discussion

10. Given the foregoing background, the Commission now considers the procedural and substantive issues raised and the relief requested in the petition for reconsideration. The threshold consideration for any petition concerns whether it is properly before the Commission. If it fails in this regard, the Commission must reject it, unless in its independent judgment the substance of the matter is sufficiently compelling to warrant prompt action to protect the public interest. In this regard, we find that the petition fails to meet the basic requirements of a petition for reconsideration, and on this ground alone should be rejected. The failure is two fold: (1) the substantive allegations of error on the part of the Commission in adopting the *DBS Report and Order* are not supported by facts meeting the basic pleading and procedural standards for a petition for reconsideration, and (2) the petition includes a request for relief not properly filed in a petition for reconsideration.

11. The Commission's standards and requirements for petitions for reconsideration are well established by rule and case law. Most relevant here, petitions for reconsideration are not granted for the purpose of debating matters which have already been fully considered and substantively settled.[5] Similarly, parties that wish to reopen debate based on new facts can do so only under limited circumstances. Reconsideration based on new facts is appropriate only when these facts relate to events subsequent to the last opportunity for submission, were unknown and could not have been known by the petitioner at the time of the last opportunity, or the Commission determines that subsequent consideration is required to protect the public interest.[6] The subject petition does not meet these criteria.

12. In essence, the petition for reconsideration simply restates the objections to the DBS rule making that have been stated previously by this petitioner and others representing the interests of fixed service users in this proceeding.[7] Section II of this *Order* clearly

---

[5] *See, e.g., WWIZ, Inc.*, 37 F.C.C. 685, 686 (1964), *aff'd sub nom., Lorain Journal Co. v. FCC*, 351 F.2d 824 (D.C. Cir. 1965), *cert.* denied, 383 U.S. 967 (1966); *Florida Gulfcoast Broadcasters, Inc.*, 37 F.C.C. 833 (1964); *Employment Practices of Stations - Charlotte, N.C. Market*, 77 F.C.C. 2d 1 (1980); *WEOK Broadcasting*, 4 Rad. Reg. 2d 503 (1965).

[6] *See Southeast Arkansas Radio, Inc.*, 61 F.C.C. 2d 72, 73 (1976).

[7] *See, e.g.*, Aerospace and Flight Test Radio Coordinating Council, Petition for Expedited Relief, General Docket No. 80-603 (Aug. 12, 1981); Comments of the Association of Maximum Service Telecasters (July 2, 1981), Harris Corporation [Farinon Electric Operations] (July 1, 1981), Manufacturers Radio Frequency Advisory Committee (July 1, 1981), and Utilities Telecommunications Council (July 1, 1981), all filed in General Docket 80-603. Indeed, LA County has been an

demonstrates that the resolution of these issues has been a central feature of this rule making from the outset, that full opportunity for all affected parties to comment has been amply afforded, that all relevant matters have been fully considered, and that the Commission made its policy choices and fashioned its procedural rule making processes to assure that the needs of the public and all interested parties were taken into account fully. That petitioner disagrees with some of these policy choices and various other procedural devices chosen by the Commission to pursue them is quite clear. However, bare disagreement, absent new facts and argument properly placed before the Commission, is insufficient grounds for reconsideration.

13. The petition suffers from one additional flaw. The primary specific relief requested is to defer the effective date of the *DBS Report and Order*, a form of relief only properly before the Commission in a separate motion for stay. Section 1.44(e) of the Commission's rules clearly sets out this requirement:

> Any request to stay the effectiveness of any decision or order of the Commission shall be filed as a separate pleading. Any such request which is not filed as a separate pleading will not be considered by the Commission.

Moreover, even if the Commission were to put aside this rule and construe this petition as a properly filed motion for stay, the motion would fail on its merits. This is because the petitioner fails to even plead, much less demonstrate, that the basic criteria for granting such a stay are met.[8] For all of the foregoing reasons, we conclude that the subject petition for reconsideration must be denied.

14. On April 27, 1983, the Commission received from the

---

active participant in this rule making and has previously requested similar relief. *See* Comments of the County of Los Angeles (July 1, 1981), and Reply Comments of the County of Los Angeles (July 28, 1981) in General Docket 80-603. *See also* County of Los Angeles, Statement in Support of National Association of Broadcasters' Motion to Establish Reasonable and Fair Procedural Dates (July 17, 1981); County of Los Angeles, Petition to Deny (December 11, 1981); and, County of Los Angeles, Comments (Feb. 6, 1981), all filed in General Docket 80-603.

[8] The accepted criteria for granting a stay require petitioner to demonstrate the following:

(1) a strong likelihood that it will prevail on the merits of its appeal;

(2) without such relief, it will suffer irreparable injury;

(3) the issuance of the stay will not substantially harm other parties interested in this proceeding; and

(4) it is in the public interest to grant the stay.

These standards are set forth in *Virginia Petroleum Jobbers Ass'n* v. *EPC*, 259 F.2d 921 (D.C. Cir. 1958) and *Washington Metropolitan Area Transit Comm'n* v. *Holiday Tours, Inc.*, 559 F.2d 841 (D.C. Cir. 1977). For a discussion of these standards in the context of the instant proceeding, *see Stay Request re: STC Interim Grant*, FCC 82-572, released December 22, 1982. *See also National Association of Broadcasters* v. *Federal* petitioner an extensive filing entitled "Supplemental Pleading and Exhibits in Support of Petition for Reconsideration." Section 1.429 of the Commission's Rules and Regulations which details the filing requirements for petitions for reconsideration in notice and comment rule makings states in relevant part:

> (d) The petition for reconsideration and any supplement thereto shall be filed within 30 days from the date of public notice of such action. . . . No supplement to a petition for reconsideration filed after the expiration of the 30 day period will be considered, except on leave granted pursuant to a separate pleading stating the grounds for acceptance of the supplement.

The *DBS Report and Order* was published in the Federal Register on July 21, 1982, making the filing deadline for petitions and supplements August 22, 1982. *See also* Section 1.4(b) of the Commission's Rules and Regulations. Petitioner's supplemental filing is not accompanied by a separate pleading stating specific grounds for acceptance of the supplement after expiration of the filing deadlines. Further, we note that petitioner's submission cannot be deemed a timely reply to the oppositions filed in this proceeding since the filing period for any such reply expired on September 30, 1982. Accordingly, we find that petitioner's proposed supplemental filing is not timely filed and need not be considered.

15. However, because of the gravity of the issues presented herein, we have asked the staff to conduct a preliminary review of the scope and content of the supplemental filing. Pursuant to this review, we find that petitioner's supplemental filing raises no substantive questions related to generic rule making issues which have not been addressed and resolved generally in this docket. Instead, this supplemental filing is devoted largely to submission of detailed information on how the 12 GHz allocation decision is expected to impact Los Angeles County as a multiple licensee in the fixed service. The proposed supplemental filing does not allege or suggest that the situation in Los Angeles County is representative of the situation faced by other 12 GHz licensees in the fixed service, and therefore should be a basis for general reconsideration of the 12 GHz allocation decision. The allocation issue here is of national dimensions, involving public interest questions related to DBS as well as to the fixed service, and therefore is not wholly dependent upon the situation faced by any one licensee. Thus, we find that it would be inappropriate to re-open this docket at this time to accept this supplemental filing.

16. This does not mean, of course, that we are insensitive to particularized consequences of our actions, nor that we are unwilling to consider requests for special relief where appropriate. *See* paragraph 19, *infra*. Assuming for present purposes that Los Angeles

---

Communications Commission, Number 82-1926 (D.C. Cir. February 10, 1983) (order denying stay).

County can successfully demonstrate its contention in the proposed supplement that the integrity of its safety and emergency services is wholly dependent on its continued use of the 12 GHz band, then the Commission would certainly fashion appropriate relief to ensure the continuation of those services. In that regard, we suggest that the substance of this proposed supplement be revised and resubmitted to not only detail the situation and the alternatives, but also to specify the types of particularized relief that would most appropriately address the situation with the minimum impact on other interested parties. Upon receipt of such request, the Commission would give it all due consideration, taking into account the full impact of the situation as demonstrated, the effect on other parties of all forms of relief suggested, and the need for timely action on the petition.

IV. Restatement

17. Although we are persuaded that the inadequacies of form and substance of this petition dictate its denial here, we nonetheless believe that the petition provides a useful opportunity for the Commission to restate the relevant facts and policy considerations relied upon in our DBS decisions. This restatement should ensure that no interested party misperceives these facts nor misunderstands the procedural avenues by which the Commission seeks to resolve the related policy questions. The substantive objections raised in the petition for reconsideration provide the framework for this discussion.

18. *Allocation of the 12 GHz Band to DBS.* The Commission's allocation of the 12 GHz band for DBS use was made against the background of international and domestic spectrum allocation and planning, and reflects not only careful consideration of all the facts and arguments put before it, but also a commitment to mitigate as much as possible any dislocation the decision might engender. In the *DBS Report and Order* the Commission concluded that the allocation of 12 GHz to DBS would further fundamental communications policies, and determined that expedited action was necessary to facilitate introduction of the service to the public. It concluded that DBS offered substantial potential benefits to the American public. *See DBS Report and Order* at paragraphs 12–20.

19. Further, the Commission found that the 12 GHz band was the only frequency band available both internationally and domestically that would allow initiation of the service in the foreseeable future, and, unfortunately, that DBS and most existing terrestrial uses of the band were incompatible. After serious and searching investigation of the status, number and needs of the 12 GHz users that potentially would be displaced, the Commission announced its intention to protect those users in several ways. The first of these was to create a transition period that delayed for more than five years the need for fixed service users to change frequencies, and to

"grandfather" indefinitely those fixed service users that cause no interference to operating DBS systems. Knowing that adequate alternative spectrum was available for fixed service users at the higher frequency bands, including 18 GHz, the Commission also resolved to find as much additional frequency space as possible in the more desirable bands adjacent to or lower than 12 GHz. Thus, it announced its intention to minimize any dislocation and expense by directing the staff of the Commission to facilitate the use of these more desirable bands through the development of an associated rule making. The Commission also understood that if it is faced with specific cases involving severe hardship or potential risk to the public safety, it has both the duty and the means to address and rectify them as they arise. For example, the Commission could, upon receiving a properly supported request, extend the transition date for a limited period for fixed service licensees in a given area if loss of vital emergency or safety services was unavoidably threatened by compliance with the existing spectrum relocation requirements.[9] It is particularly important to note in this regard that even if DBS service is actually implemented, it poses no danger to fixed services since any interference resulting from simultaneous use of the same frequencies by these two services is singularly detrimental to the DBS service. This fact is especially relevant to our conclusion that delay of the DBS proceeding in order to protect critical fixed service uses of 12 GHz is neither necessary nor advisable.

20. It should also be noted, however, that our duty to ensure that safety or emergency services are not impaired runs to the benefit of the public and not a particular licensee. Thus, while we might be persuaded to extend the transition period or to provide some alternative relief in order to preserve such services, assuming a clear and well documented showing of need, we must emphasize that all licensees are expected to exert diligent and good faith efforts to prepare for and comply with our DBS allocation decision in a timely manner.

21. *Delay of the DBS and Terrestrial Proceedings*. Petitioner has requested that the DBS proceeding be held in abeyance pending Commission action subsequent to RARC-83 and completion of the terrestrial rule making. The persuasive force of this request depends upon a showing that our established approach of proceeding concurrently to implement our DBS policies and to resolve the problems of displaced fixed service users disserves the public interest. This, in turn, would require petitioner to demonstrate that this approach

---

[9] We do not imply, of course, that simple extension of the transition period is the only relief we might fashion. Various alternatives exist, including acceptance of interference to DBS services in specified locations or forced relocation of fixed services upon appropriate compensation by DBS operators. The nature of the remedy chosen in any given situation would depend upon the particular facts of the case and the showings made by the interested parties

results in some specific harm that outweighs the public interest in the timely initiation of DBS service. Yet, petitioner has offered no showing of harm, either to itself or to the public interest. Indeed, our decision to proceed concurrently is reinforced by our study of these matters here.

22. The Commission has proceeded from the outset of the DBS rule making on the assumption that it should act as rapidly as possible in order to expedite the offering of DBS to the public.[10] Consistent with this assumption, the Commission reviewed the spectrum requirements of the DBS service, and determined to reallocate the 12 GHz band to broadcast satellite services. Petitioner's objections to that decision have been reviewed both here and in earlier Commission documents and need not be repeated. Petitioner now suggests that our allocation decision should be suspended until the results of RARC-83 are known. The basis for this suggestion, however, is unclear since our allocation of 12 GHz to DBS is a domestic policy matter largely unrelated to any expected outcome of RARC-83. While some details of the international allocation of 12 GHz to DBS will be worked out at the conference, the underlying international allocation decision was made at the 1979 World Administrative Radio Conference (WARC-79) and cannot be altered at RARC-83. As a result, the only possible outcome of RARC-83 relevant to the domestic allocation decision is that the full 500 MHz of spectrum would not be made available for DBS in Region 2. The only pertinent domestic consequence of this would be to *decrease* the number of existing fixed service users that would have to move from the 12 GHz band. Clearly, this result cannot be deemed detrimental to petitioner's interests. Similarly, we think it unnecessary to delay the allocation of the 12 GHz band to DBS pending the outcome of the terrestrial rule making. As previously noted, the Commission was fully satisfied that adequate spectrum existed at the higher bands to accommodate existing fixed service licensees before proceeding on the 12 GHz allocation matter. The relevant purpose of the terrestrial rule making is to find additional space at the most desirable frequencies for fixed service licensees.[11] Thus, although the addition-

---

[10] *See, e.g., Notice* at paras. 25–27; *DBS Report and Order* at paras. 7–27.

[11] Although sufficient frequency space exists at the higher bands for existing 12 GHz users, many licensees may be required to relocate or add transmitter/relay stations (links) to utilize these bands. Thus, a frequency shift to the adjacent or lower bands as contemplated in the terrestrial rule making would be more desirable because these bands require no additional links. When adopting the *DBS Report and Order*, the Commission estimated that under the worst possible circumstance, *i.e.*, all existing 12 GHz users moving to 18 GHz or higher, 50 to 85 percent of the links then in use would be sufficient for use at the higher bands. Assuming the use of one intermediate relay station, the Commission estimated that 75 to 90 percent of these links would be usable. *See DBS Report and Order* at para. 63.

al frequency space at these frequencies would facilitate the transition process, it is not a prerequisite. This is especially true considering the provisions adopted in the DBS docket to ensure that the services fixed services licensees provide to the public will not be interrupted. Accordingly, we believe petitioner's request that we delay the DBS proceeding is not adequately supported, particularly since granting such a request could substantially frustrate our public interest objective of implementing DBS service at the earliest practicable date.

23. The basis for petitioner's associated request that the Commission delay the terrestrial proceeding until after RARC-83 is similarly unclear. The primary purposes of the terrestrial rule making are to find additional spectrum for fixed service users, and to create rules and procedures that will facilitate more efficient spectrum use. Although related to the need to find additional spectrum for existing 12 GHz users, the resolution of these issues is not contingent on international allocation decisions made at RARC-83, nor on subsequent domestic policy decisions in the DBS rule making. If, as the petition suggests, the international spectrum allocation situation changes as a consequence of actions taken at RARC-83, or other subsequent factors arise that prompt the Commission to re-open the 12 GHz allocation decision, the spectrum issue can then be re-opened in the DBS rule making with all due concern for the equities of existing fixed service users.[12] Meanwhile, assuming as we must for present purposes that the U.S. goals will not be frustrated at the RARC-83 conference and that the international spectrum decisions there will be fully consistent with the 12 GHz allocation decision made in the *DBS Report and Order*, any unnecessary delay in the course of the terrestrial rule making could well impede the orderly transition of fixed service users to other bands. Delaying the terrestrial rule making at this time would serve no relevant purpose, but could have a negative influence on the interest of existing 12 GHz users. At the same time, the protections granted existing fixed service users in the DBS proceeding could well give these licensees more protection than that which would be afforded them by the requested delays. As noted earlier, existing terrestrial users will be "grandfathered" indefinitely so long as they cause no interference to operating DBS systems. Furthermore, no terrestrial 12 GHz users will be required to move until five years after the conclusion of the terrestrial rule making. Although not precisely what petitioners requested, these safeguards are designed to protect the public interest in DBS service while also protecting the legitimate interests of the existing fixed service users.

---

[12] For example, the Commission noted in the *DBS Report and Order* that the fixed service plan may be revisited if the U.S. is not allocated the entire 12.2–12.7 GHz band for DBS at RARC-83. *DBS Report and Order*, n.59.

24. *Compensation of Fixed Service Users*. The Commission has considered fully the compensation issue and is presented with no new facts to alter its previous determinations in this area. The Commission's extensive consideration of the issue is apparent from the face of the *Notice* and subsequent actions in the *DBS Report and Order*. Relying on the record before it and its administrative experience and expertise, the Commission resolved the compensation issue in two basic ways: (1) it adopted several measures to mitigate the costs of relocation, and (2) it sanctioned voluntary compensation arrangements to facilitate relocation and interference-free operation. The Commission concluded, however, that it would not be in the public interest to require DBS licensees to pay the costs of relocating fixed licensees to other bands.

25. The most important of the cost reduction provisions was the establishment of the transition period which will give terrestrial users at least five years in their present operating modes without providing interference protection to DBS users. Thus, those terrestrial users that must relocate will have considerable time to plan for the transition and substantial latitude in timing their move to other bands. This latitude should permit existing 12 GHz users to mitigate to some degree the costs of relocating by coordinating their spectrum shift with such factors as existing equipment lifetimes and other time-dependent considerations. To further reduce transition costs, the Commission ordered the initiation of the terrestrial fixed service rule making that would propose the use of adajacent and lower frequency bands. No additional transmission relay sites would be required at these frequencies, and, at least in the case of moves to adjacent frequencies, much existing 12 GHz equipment can be used with relatively inexpensive modification. Finally, some fixed service users may escape all relocation costs because of the provision to "grandfather" indefinitely all existing fixed service systems that do not cause interference to operating DBS systems.

26. Given these measures, the Commission concluded that in most cases the remaining costs could be be borne reasonably by the terrestrial users. At the same time, it determined that it would not serve the public interest to adopt a system whereby the Commission required DBS users to directly compensate displaced fixed service users, although it did sanction voluntary agreements providing such compensation. It is useful to note in this regard that no licensee of this Commission has a property interest in the use of that spectrum assigned to it, and that in situations such as this neither the Communications Act nor judicial precedent require the Commission

or individual parties benefitted by our actions to reimburse those parties that are adversely affected.[13] However, we believe that private agreements that accommodate the mutual interests of the parties and serve to further our own public interest goals are clearly desirable, and we fully expect that many of the parties will enter such agreements. Proposals that the Commission mandate and supervise such compensation agreements were rejected in part because of their potential for delay, and in part because of the increased administrative burden they would place on the parties and on the Commission. Against this background, the Commission found that it would be better for both the Commission and the affected licensees to simply sanction unsupervised financial agreements. Of course, if extraordinary circumstances arise where Commission intervention is warranted, such cases can be considered as they arise. Because its resources will be called upon only in these special cases, the Commission should be able to address and resolve them in an expeditious manner.

IV. Conclusion

27. In summary, our review of the petition for reconsideration requires that it be denied. To the extent that it requests a stay of Commission action in the *DBS Report and Order*, we find it improperly filed. Alternatively, we find that it does not meet the burden of proof required for us to grant a stay of our actions. To the extent that it lies as a petition for reconsideration, we find that no new facts or arguments are properly raised that would require modification of the Commission decisions addressed. We also note at this point that the petitioner raised no allegation of Commission error in fact or law in the relevant areas that would prompt us to change the outcome of this proceeding on our own motion.

28. Accordingly, IT IS ORDERED, that the petition for reconsideration filed by George Y. Tice on behalf of the County of Los Angeles hereby IS DENIED.

MEMORANDUM OPINION AND ORDER

(Adopted: June 29, 1983; Released: July 7, 1983)

BY THE REVIEW BOARD: BOARD CHAIRMAN MARINO ISSUING SEPARATE STATEMENT.

1. By *Memorandum Opinion and Order* (hereinafter *"Dismissal Order"*), FCC 83M-970, released March 24, 1983, presiding Administrative Law Judge (ALJ) Edward J. Kuhlmann dismissed the application of Faith Center, Inc. for renewal of license of television Station KVOF-TV, San Francisco, California. And, by *Memorandum Opinion and Order* (hereinafter *"Intervention Order"*), FCC 83M-1384, released April 27, 1983, the ALJ dismissed a petition to intervene filed by Lucille E. Johnston. Now before the Review Board for consideration are: (a) an appeal from *Dismissal Order* filed May 23, 1983 by Faith Center; (b) an appeal from *Intervention Order* filed May 27, 1983 by Lucille E. Johnston; (c) opposition to (a) filed June 10, 1983 and an erratum thereto filed June 13, 1983 by Together Media Ministries; (d) opposition to (a) filed June 10, 1983 by LDA Communications, Inc.; (e) opposition to (a) filed June 10, 1983 by West Coast United Broadcasting Co.; (f) opposition to (a) filed June 10, 1983 by the Mass Media Bureau; (g) opposition to (b) filed June 9, 1983 by West Coast United Broadcasting Co.; (h) opposition to (b) filed June 9, 1983 by the Mass Media Bureau; (i) opposition to (b) filed June 10, 1983 by LDA Communications, Inc.; and (j) motion to strike (c) filed June 27, 1983 by Faith Center. For reasons that follow, the Board will deny both of the appeals.

2. *Faith Center's Appeal.* Faith Center's application was dismissed by the ALJ because of its refusal to comply with numerous discovery orders. It has, *inter alia*: (1) never answered interrogatories filed on December 14, 1982 by Together Media Ministries, a competing applicant; (2) failed to produce documents as required by *Order*, FCC 83M-87, released January 7, 1983; (3) not complied with *Memorandum Opinion and Order*, FCC 83M-390, released January 31, 1983, which directed it to answer interrogatories propounded by the Mass Media Bureau and LDA Communications; and (4) failed to produce its principals for scheduled depositions as required by *Memorandum Opinion and Order*, FCC 83M-390, *supra*.

3. Faith Center appeals the dismissal of its application and appears to argue that: (1) discovery orders issued by the ALJ during the pendency of its September 7, 1982 motion to disqualify the ALJ (subsequently denied by the Commission, *Faith Center, Inc.*, 90 FCC 2d 519, 52 RR 2d 1223 (1982) were void *ab initio* and, consequently, Faith Center was not required to comply with them; (2) because the ALJ did not certify to the Commission its second motion to disqualify the ALJ, filed December 14, 1982, and its exception to the ALJ's dismissal of that motion, all of the ALJ's subsequent actions were void *ab initio*; (3) illness of its counsel during December 15–21, 1982 accounts, in part, for some of the procedural delays in this case; (4) it

was not required to answer the December 14, 1982 motion for production of documents and interrogatories propounded by Together Media Ministries because Faith Center's counsel was not directly served with a copy of them on the date they were filed and that, instead, a copy of the interrogatories was sent to Faith Center's co-counsel in another proceeding; and (5) it objected to the Bureau's discovery requests on constitutional and technical procedural grounds.

4. We reject these complaints. With regard to Faith Center's first argument, after the Commission denied its disqualification request on December 10, 1982, the ALJ extended additional time to Faith Center to comply with discovery. *Dismissal Order, supra*, at para. 4. Nevertheless, Faith Center has continued to refuse to comply with the ALJ's discovery orders. As to its second argument, we find that the ALJ properly rejected its second attempt to disqualify him because it was frivolously and speciously repetitious of the earlier attempt at disqualification which was denied by the Commission. *See Faith Center, Inc., supra*. Thus, continued refusal to comply with discovery on these grounds is equally impermissible. Its third argument is simply not germane; as pointed out above, Faith Center had been given additional time to comply with discovery but failed to do so, and has not even now indicated a willingness to so comply. *Dismissal Order, supra*, at para. 4. Fourth, Faith Center's defective service-of-process argument is rejected as frivolous. It has conceded that "it appears . . . counsel received [the interrogatories] from another attorney, co-counsel in another proceeding, though not this one," Faith Center Appeal, at 6, and that both the interrogatories and the motion for production of documents were "reserved" in mid-January. *Id.*, at 7. Finally, with regard to Faith Center's refusal to fully comply with the Bureau's discovery requests, its resistance to valid discovery requests on constitutional and non-constitutional grounds have already been rejected by the Board, the Commission and the courts. *See Faith Center, Inc.*, 82 FCC 2d 1 (1980), *aff'd without opinion*, 679 F.2d 261 (D.C. Cir. 1982), *cert. denied*, 103 S.Ct. 1188 (1982); *Faith Center, Inc.*, 92 FCC 2d 1255, 52 RR 2d 1547 (Rev. Bd. 1983). *Cf. Scott* v. *Rosenberg*, 702 F.2d 1263 (9th Cir. 1983).[*]

5. *Lucille Johnston's Appeal*. The petition to intervene filed on April 20, 1983 by Lucille E. Johnston was dismissed by the ALJ because it was late filed, no explanation for the tardiness in filing was provided, and because Ms. Johnston had failed to support her claims with specific allegations of fact. *Intervention Order, supra*. Ms. Johnston appeals her dismissal and asserts, in essence, that as an innocent creditor of Faith Center, she has standing to intervene. We

---

[*] Faith Center's June 27, 1983 motion to strike the opposition pleading of Together Media Ministries will be denied because the latter pleading was timely filed on June 10, 1983, and because Faith Center has not specifically alleged sufficient facts to support its motion.

shall deny her appeal for the reasons stated by the ALJ and because she has not stated any new grounds not considered by the ALJ that would warrant intervention. Specifically, she has failed to meet the requirements for late intervention set forth in Section 1.223 of the Rules, 47 CFR § 1.223. In particular, she has not explained why she did not seek intervention within 30 days after publication of the hearing designation order and has not shown that her participation would assist in determining the issues in question in this proceeding. *See Golden State Broadcasting Corp.*, 52 RR 2d 1253 (Rev. Bd. 1982); *Washington's Christian Television Outreach, Inc.*, ___ FCC 2d ___ , FCC 83R-23, released March 28, 1983. And, her status as a creditor, standing alone, is insufficient to confer standing as a party in interest. *Arizona Mobile Telephone Co.*, 80 FCC 2d 87 (Rev. Bd. 1980); *Hertz Broadcasting of Birmingham, Inc.*, 46 FCC 2d 350, 352 (Rev. Bd. 1974); *cf. American Telephone and Telegraph Co.*, 7 RR 2d 520 (1966) (shareholder status insufficient to confer standing to intervene).

6. ACCORDINGLY, IT IS ORDERED, That the motion to strike filed June 27, 1983 by Faith Center, Inc. IS DENIED; and

7. IT IS FURTHER ORDERED, That the appeal filed May 23, 1983 by Faith Center, Inc. IS DENIED: and

8. IT IS FURTHER ORDERED, That the appeal filed May 27, 1983 by Lucille E. Johnston IS DENIED.

FEDERAL COMMUNICATIONS COMMISSION
NORMAN B. BLUMENTHAL, *Member, Review Board*

SEPARATE STATEMENT OF BOARD CHAIRMAN MARINO

Our action in this case is compelled by the legal authority cited in the Board's order. But this is an occasion to think anew and deeper about such cases. Faith Center is now a step closer to losing its third, and possibly fourth, station for what on the record before us are sound procedural reasons. Perhaps this raging controversy which began with the licensee's good faith assertion of its constitutional rights, *Faith Center, Inc.* , 69 FCC 2d 1123, 1124 (1978), might have been contained if a procedural device had been used which permitted the licensee to obtain a final Court adjudication of its constitutional claims without putting all of its licenses in jeopardy. See authorities cited in my separate statement, *David Hildebrand*, 52 RR 2d 1671 (1983). Past experience teaches that renewal hearings are not the best vehicles for the adjudication of potential constitutional issues. *See, e.g.* , Lamb, *No Lamb for Slaughter* (1963); *Brandywine-Main Line* v. *FCC*, 473 F.2d 16, 27–28 n. 39 (D.C. Cir. 1972); and *Kaye Broadcasters*, 46 FCC 2d 600 (1974). On the other hand, Faith Center decided to litigate and is legally responsible for its bizarre, counterproductive and flawed litigation strategy in this and the companion Los Angeles case. *See Faith Center, Inc.* , 92 FCC 2d 1255, 52 RR 2d 1547 (Rev. Bd. 1983).

Recently, after a preliminary inquiry, the Commission referred a case containing similar 18 U.S.C. 1343 allegations to the Department of Justice for appropriate action. A criminal investigation, followed by possible Grand Jury action and trial in a U.S. District Court, would seem a more appropriate process than a less formal administrative hearing, especially when a licensee pleads its freedom of speech and religion, or Fourth and Fifth Amendment rights. The Commission's recent approach of deferring to other authorities makes much common sense whether the licensee is a controversial preacher accused of soliciting in violation of 18 U.S.C. 1343, an amateur operator alleged to have uttered non-obscene but indecent language, 18 U.S.C. 1464, or a commercial broadcaster who has allegedly conspired to fix prices in violation of the Sherman Act, 15 U.S.C. 1. Similarly, the NLRB is in a better position to resolve unfair labor practice charges against broadcasters. *Community Television of Southern California* v. *Gottfried,* 103 S.Ct. 885, 892–93, and notes 16–17 (1983). But see *Country Broadcasting Co.* , 93 FCC 2d 83, 53 RR 2d 293, 294–5 n.3 (Rev. Bd. 1983), Deferring to other authorities is even more appropriate today because the Commission's limited hearing resources are strained to the limits by matters which are closer to the core of the agency's primary mission set forth in 47 U.S.C. 151.

DECISION

(Adopted: June 10, 1983; Released: June 21, 1983)

BOARD MEMBER BLUMENTHAL FOR THE REVIEW BOARD:

1. This proceeding currently involves the mutually exclusive applications of GACO Communications Corporation (GACO) and The Way of Life Television Network, Inc. (TWL) for authority to construct a new commercial television station to operate on Channel 11 at Houma, Louisiana. By *Memorandum Opinion and Order,* 45 Fed. Reg. 66866, published October 8, 1980 (hereinafter "*Designation Order* "), the Commission designated these applications for consolidated hearing on a "fair break" religious programming issue against TWL to determine whether that applicant will provide reasonable opportunities for the expression of diverse religious views and on an issue to determine whether operation from TWL's proposed main studio located outside of the Houma city limits would be consistent with the public interest, as well as the standard comparative issue to determine which applicant would better serve the public interest. In the *Initial Decision (I.D.)* , FCC 82D-74, released November 23, 1982, presiding Administrative Law Judge (ALJ), John H. Conlin, provided a short history of this proceeding in which he pointed out that three of the original applications that had been consolidated for hearing by the *Designation Order* had been dismissed, to wit: Houma Broadcasters, Inc. (File No. BPCT-4992), Guaranty Broadcasting Corporation (File No. BPCT-5045), and Greater New Orleans Educational Television Foundation (File No. BPCT-5043). *I.D.* , para. 1. A sixth applicant, Communications Corporation of the South, Inc. (File No. BPCT-5006), was merged into GACO, and Houma Broadcasters was granted party-intervenor status. *Id.* After adding a financial and related issues against TWL, the ALJ found TWL to be financially unqualified and granted the GACO application. *See infra* para. 2 *et seq.* Now before the Review Board for consideration are: (a) exceptions filed January 14, 1983 by TWL (hereinafter "TWL Br."); (b) limited exceptions filed January 14, 1983 by Houma Broadcasters, Inc. (hereinafter "HBI Br."); (c) reply to (a) filed January 27, 1983 by GACO (hereinafter "GACO Br."); (d) reply to (b) filed January 27, 1983 by TWL (hereinafter "TWL Reply"); (e) contingent motion to reopen the record and to enlarge issues filed May 23, 1983 by GACO (hereinafter "GACO Motion"); and (f) motion for extension of time to reply to (e) filed June 6, 1983 by TWL (hereinafter "TWL Motion"). The Board reviewed the *I.D.* in light of these pleadings, the oral argument held March 18, 1983, and the record. We adopt the findings of fact in the *I.D.* , except as modified herein, affirm the ALJ's conclusion that TWL is financially unqualified, and, without reaching the comparative issue, affirm the ALJ's ultimate conclusion that a grant of the GACO application will serve the public interest, convenience and necessity.

TWL: Financial Qualifications

2. By *Memorandum Opinion and Order*, FCC 81M-538, released February 25, 1981, the ALJ added a financial issue against TWL;[1] he later added two other issues related to the basic financial qualifications of TWL. *Memorandum Opinion and Order*, FCC 81M-3432, released October 30, 1981.[2] In 9 pages of factual findings, *I.D.* , paras. 11–32, and in several pages of conclusions, *I.D.* , Conclusions, paras. 4–12, the ALJ reviewed the evidence, assessed the testimony and opinions of the witnesses, and thoroughly explicated the record. Based thereon, he found that TWL was not financially qualified. We easily affirm the ALJ's findings and conclusions on this issue. Without reiterating all that is painstakingly laid bare in the *Initial Decision*, we will encapsulate a number of facts and circumstances which clearly corroborate the accuracy of the ALJ's ultimate conclusion on the financial issue.

3. *Construction and Equipment*. TWL proposed to build its new VHF television station with $105,360 and deferred credit in the amount of $49,200 from an equipment supplier, Quality Media Corporation. *I.D.*, para. 12. TWL also claimed that it had its RF generating equipment, its monitoring and test equipment, and some of its program origination equipment "on hand." *Id.* It allocated $2,000 to remodel a building it intends to use for studios,[3] *id.*; and,

---

[1] This issue was:

> Whether the applicant is financially qualified to construct and operate its proposed station.

I.D. , para. 1.

[2] These issues were:

> To determine whether TWL has, in pleadings filed during the course of this proceeding, misstated the condition of equipment it has purported to rely on in the construction and operation of its proposed station.
>
> To determine whether TWL failed to comply with an order of the presiding officer to permit entry, inspection and photographing of its equipment.

I.D. , para. 1.

[3] Although the building TWL intends to use for studios, *etc.*, was originally built for the now-defunct KHMA-TV (1972–1974), *I.D.*, para. 9, the structure has been used for the past several years, and at the time of the hearing was being used, by the Louisiana Compressor Maintenance Company. *I.D.*, para. 26. A TWL consultant, Robert D. Blazier (*see infra* para. 5) averred that the studio building would not need much remodeling, TWL Exh. 8C at 1, and was "accoustically treated and air conditioned with a high volume, low velocity unit not presently in use." *Id.*

A rather different description of the condition of the building was contained in the testimony of GACO principal, Iddo K. Corkern, a former chief engineer at WBRZ-TV, Baton Rouge, Louisiana (*I.D.*, para. 50). Corkern stated that he had visited the studio building in June 1981, Tr. 915, that it was "very, very dirty, filthy over there," Tr. 916, that the air conditioning plant (obviously critical in a TV studio) had frozen in the past, *id.*, and that the company had given up on it after spending "$1,000 to although it originally indicated that its antenna system would cost no money, it revised its estimates to $35,000 after assertions by the other parties that the KHMA-TV antenna system was inoperable. *I.D.*, para. 13 & n.10. The very low equipment cost estimates of TWL (totalling, it appears, some $17,600 in certain expenses over and above its antenna system estimates, *see I.D.*, para. 12) were predicated squarely on the applicant's assertion that it already had "on hand" much of the equipment necessary to build and operate a new television station. This assemblage of used equipment, which later became the subject of an abuse of process and an inspection issue against TWL,[4] was acquired by TWL on a gradual basis with, at least, the partial assistance of William Kitchen, president of Quality Media Corporation. *I.D.*, para. 15. TWL's proposed transmitter (formerly belonging to WLCY-TV, Channel 10, Largo, Florida), a tube-type model, was first installed in Florida in 1965; it was dismantled and shipped to Houma in 1979. *I.D.*, para. 24; TWL Exh. 8D.

4. In view of its heavy reliance on its alleged equipment "on hand," the ALJ granted a motion "to permit inspection and photographing" of the material.[5] No TWL principal showed up at the ordered inspection, which was conducted primarily by William B. Carr, a registered engineer. *I.D.*, para. 38. Carr, who was accompa-

---

$2,000 a month trying to keep it operating." *Id.*

What is more, GACO filed on May 23, 1983 a "contingent" motion to reopen the record and enlarge the issues on the basis of an affidavit of Ronald R. Cannon, president of Louisiana Compressor Maintenance Company, the owner of the building TWL intends to use as a studio. In the affidavit, Cannon asserts that its agreement with TWL expired on May 21, 1982, that an eviction order was issued on September 16, 1982 requiring TWL to remove its trailer, and that:

> If TWL represents that it can continue to rely upon the availability of its proposed studio site, such representation is incorrect. The property is for sale to any party.

GACO Motion, Affidavit at 2.

TWL responded on June 6, 1983 seeking more time to respond and noting that GACO's "motion recites alleged facts which supposedly have been public knowledge since August 30, 1982. . . ." TWL Motion, at 2. It does not contest GACO's allegations: it merely states that a further hearing would consume several months.

Because we have found TWL financially disqualified, and because GACO's motion is merely "contingent," neither motion need be ruled upon. However, had any serious question remained concerning TWL's financial disqualification, this matter would require further evidentiary exploration since TWL's proposal is inextricably tied to its ability to secure renovated television studios at a negligible initial cost and a monthly rental of $2,000.

[4] *See I.D.*, paras. 33–39; Conclusions, paras. 13–18. These subsidiary issues are addressed *infra*, paras. 21–24.

[5] FCC 81M-1342, released May 4, 1981. The subsequent issue designated to determine whether TWL actually complied with the inspection ordered by the ALJ is reprinted at note 2, *supra*.

nied by principals of the other applicants (*id.*), found the used equipment stacked haphazardly in a trailer and in a warehouse. *I.D.*, para. 39.[6] Although some portion of the used equipment was inaccessible, *id.*, Carr testified with respect to the equipment he could access: he described it as in "extremely poor condition," with "parts broken off, components damaged, tube sockets broken. . . ." *Id.* (*quoting* Tr. 823). Carr also observed "evidence of broken meters, broken pieces, this type of thing." *Id.* (*quoting* Tr. 824). On the basis of his entire inspection, Carr concluded that there was not enough equipment to operate a television station (even assuming that the used equipment worked), *id.*; of particular and critical importance was TWL's complete lack of a diplexer which is that vital piece of equipment necessary to combine the audio signal with the video signal and to feed the sound and pictures simultaneously to the antenna system. *I.D.*, para. 19; Tr. 864. A station without a diplexer could be either a sound station or a picture station, but not a television station as we have come to know television. Carr testified that a diplexer would add $30,000-$40,000 to TWL's costs.[7]

5. To support its equipment "on hand" claim, TWL offered the statement of Robert D. Blazier, coordinator of instructional television at Nicholls State University, who visually examined the equipment.[8] Blazier submitted written testimony in which he "found the [TWL] equipment usable for television broadcasting program origination." *I.D.*, para. 17 (*quoting* TWL Exh. 8). But, at hearing and upon cross-examination, Blazier's written endorsement of the equipment withered away: he conceded (1) that in describing the equipment as "usable," he meant only that it was the type of equipment he was familiar with at television stations, *I.D.*, para. 17; (2) that although he inventoried the equipment and advised TWL of additional equipment it would need, he made no qualitative analysis of

---

[6] The photographs taken at the inspection are arrayed as GACO Exhs. 11A-Q. As did the ALJ, *see I.D.*, para. 18, we have examined those exhibits and the testimony related thereto (Tr. 829–63) and confirm the descriptions related by the ALJ and Carr.

[7] Tr. 864. Janis Graves, a TWL principal, says she was assured that a diplexer was part of the transmitter purchased in Florida. Tr. 995–96. But, the individual who shipped the transmitter and proposes to install it, Bruce E. Singleton, a former engineer at WLCY-TV, could not recall whether a diplexer was shipped with the transmitter and stated that the written inventory of parts supplied with the transmitter did not specify a diplexer. Tr. 662. Moreover, even if a diplexer had been shipped as part of the WLCY-TV transmitter, it would seem that any such diplexer would have to be converted from Channel 10 (WLCY-TV's frequency) to Channel 11 at a substantial cost. See related discussion of the necessity to convert the WLCY-TV transmitter itself at para. 9, *infra*.

[8] Blazier has no experience in commercial television and is not a registered engineer; neither does he have an electrical engineering degree nor an FCC First Class License. Tr. 289–90. He did, however, assist TWL in preparing its application, *I.D.*, para. 38, and was present at the inspection solely to unlock the doors to the trailer and warehouse. Tr. 294–95.

the equipment "on hand" nor did he test any of it for electronic performance, *id.*; and (3) that the equipment was 15–16 years old, had not been used in 10–11 years, and was tube-type—therefore needing more maintenance than solid-state and more susceptible to deterioration from lack of use. *Id.* Hence, Blazier testified that he did not know if the equipment would work. *Id.*[9] He did not know whether TWL had ordered other necessary equipment such as a studio-transmitter link. *See generally* Tr. 304–306. And, he noted that other program origination equipment would have to be ordered. *See* TWL Exh. 8C. GACO supplied the views of Horace W. Gross, president of Frazier, Gross & Kadlec, Inc., a Washington, D.C. broadcast consulting firm.[10] After reviewing TWL's equipment list (TWL Exh. 8), he found that TWL had neglected such basic items as "tools, fire extinguishers, lamps for the studio lights and camera equipment for the news department with facilities for editing tape or processing news film."[11]

---

[9] Blazier's "expertise" on the TWL equipment can be gleaned, in part, from the following exchanges:

> Q. So, your knowledge of this equipment is based on representations made by others, you did not feel it necessary to personally check out the equipment.
>
> A. No.

Tr. 297.

> Q. You can't tell whether it will work through a visual inspection.
>
> A. No.
>
> Q. The answer is that you cannot tell.
>
> A. I cannot tell.

Tr. 300. Although Blazier conceded that his knowledge of the operability of the equipment was based on the representations of others, he answered:

> Q. Have you ever dealt with a company known as Quality Media Corporation before?
>
> A. Not personally, no.

Id.

[10] *I.D.*, para. 20.

[11] GACO Exh. 8, at 2. Gross further opined:

> TWL has proposed all used equipment. Spare parts will be needed to maintain the equipment. The only provision for this item is an old list of spare parts associated with the transmitter and a canabalized [sic] studio camera that can be canabalized [sic] further to maintain the studio cameras. It is not possible to ascertain from the list of transmitter spare parts whether there are adequate tubes and parts for normal maintenance. Nor is it possible to determine if there are sufficient spare parts remaining to maintain the studio cameras. No spare parts have been provided to maintain the film camera and projectors which will receive heavy use. Because all of the equipment to be installed by TWL is used equipment, a greater than average quantity of spare parts will be needed to place

6. The president of Quality Media Corporation, William Kitchen, asserted that the equipment "on hand" was in working order at the time of initial acquisition, based upon personal inspection or reports of his subordinates. *I.D.*, para. 16. However, the equipment collection, accumulated gradually since 1977, was never tested to see if these variously acquired components functioned as a system. *Id.* Indeed, Kitchen himself had not inspected the equipment since it was moved to Houma from Monroe, Louisiana and stored in a trailer; nor was he familiar with the conditions of the storage of the equipment. *Id.* And, although Kitchen made a representation that he would remedy "any problems that could be determined to have been caused by the condition of the equipment when I purchased it," Tr. 590, he would not vouchsafe that the equipment would work.[12]

7. TWL's antenna system and proposed tower were also the subject of focus.[13] Whereas TWL initially specified no funds for rehabilitating the former KHMA-TV antenna system and tower, *I.D.*, para. 13 & n.10, and, in fact, represented in a 1979 amendment to its application that its antenna system was "on hand," *I.D.*, para. 34, it submitted an exhibit nearly one-and-a-half years later (on June 1, 1981) which confessed that it could "no longer presume that the

---

> the station in operation and maintain it for three months. A reasonable budget for these spares for the initial operation and the first three months would be $3,000.

Id., at 2–3.

[12] Kitchen testified:

> Q. What is your obligation in terms of making the Commission— the equipment operable?
>
> A. We did not make any statements as to warranty on the equipment. What I do is, when a large amount of equipment is installed, is we talk to the engineers. We find, if there was any misrepresentations on our part, whether actual or assumed by the customer, we try and make it right.

Tr. 589.

> Q. Is it your testimony now that all the equipment which was purchased or acquired through you would be made operable at your expense?
>
> A. No, I did not say that I would make it operable.
>
> Q. I didn't—I'm not—I'm asking you would you make all the equipment provided by you to date to TWL operable at your expense or operative at your expense?
>
> A. What you're asking me to do here is difficult because I'm stating in public record that I'm obligating myself to my customer for something which I didn't represent initially that I would do.

Tr. 590.

[13] The discussion here is limited to the costs related to bringing these equipment components up to operational level. The availability and costs associated with TWL's specification of the tower and transmitter site of the defunct KHMA-TV—now 50% owned by a GACO principal—is discussed more fully at paras. 10–14, *infra*.

transmission line and antenna mounted on the tower are in operable condition. . . ." *I.D.*, para. 35 (*quoting* TWL Exh. 8 at 1–2).[14] It amended its financial showing by specifying $35,000 to make the antenna system operable. *I.D.*, paras. 12–13. GACO challenged TWL's antenna syste financing as woefully understated: it offered the opinion of consulting engineer Richard L. Biby, who estimated a minimum of $100,000 to rehabilitate the tower and antenna plus $25,000 to replace the coaxial cable connecting the studio and the transmitter. *I.D.*, para. 14. Biby's estimate is based, in part, on the on-site inspections conducted in 1976 by R.C. Cornforth Associates, a firm specializing in structural analyses of towers, and by Dean W. Sargent Broadcast Service. *Id.*[15] Biby stated that the tower has had no maintenance since 1976 and has, therefore, probably deteriorated even further because of high winds and semi-salt water. *Id.*

8. TWL's assessment of the tower was offered by William Kitchen who claimed that he had visited the tower in 1977, found it in "very good condition," and opined that it should be serviceable for many years if "properly taken care of" by "routine painting and the things that go along with the tower."[16] However, Kitchen does not

---

[14] This belated concession and TWL's amendment led to the designation of the abuse of process (*cum* misrepresentation) issue set forth in note 2, *supra*. The ALJ's discussion of the issue is found at *I.D.*, para. 34 *et seq.*; our review of that issue is found at paras. 21–23, *infra*.

[15] GACO Exh. 12 contains, *inter alia*, a letter of December 10, 1976 in which, after inspecting the tower, R.C. Cornforth stated that the tower "appeared to be in good shape" but that the guy cables and anchors were not. Also contained is a November 1976 report from Dean W. Sargent who said that the tower was rusting even then, but that the antenna condition was "good" at that time.

The exhibit incorporating the Cornforth and Sargent reports is prefaced by the notarized statement of Biby, executed on December 10, 1980, which contends that, based upon the Cornforth and Sargent reports and upon telephone conversations with them, "a reasonable approximation of the costs of performing only such rehabilitation work as normal prudence and insurance requirements [insurance policy reference deleted] dictate is in excess of $100,000.00." Although the Cornforth and Sargent discussions alleged by Biby are hearsay and neither person was presented at hearing for cross-examination on their reports, hearsay evidence is not necessarily precluded in administrative proceedings. *National Ass'n of Recycling Industries* v. *FMC*, 658 F.2d 816, 825 (D.C. Cir. 1980); *see generally* K. Davis, *Administrative Law of the Seventies*, §14.00, at 338 (*citing* FCC Rule §1.351 which allows for relaxation of the Federal Rules of Evidence); §14.11, at 340 (1976). *But see United Broadcasting Corp.*, 53 RR 2d 57, 80 n.114 (1983) (hearing exhibits relating to financial showing properly rejected by ALJ as hearsay). However, Biby did testify, *see* Tr. 935–53, was cross-examined, *id.*, and TWL has neither impeached Biby's testimony nor offered its own tower rehabilitation cost estimates. Finally, TWL did not seek to subpoena Cornforth or Sargent. *See Richardson* v. *Perales*, 402 U.S. 389, 402 (1971) (physician's report "may constitute substantial evidence supportive of a finding by the hearing examiner" where adverse party did not exercise right to subpoena physician for cross-examination).

[16] Tr. 546, 548. Kitchen is neither a structural engineer nor an electrical engineer. Tr. 546.

perform any of the work on rehabilitating transmission lines or tower antenna systems and he had not contacted any of his local subcontractors who do such work to obtain estimates of the potential cost of rehabilitation.[17] Moreover, although Kitchen had previously emphasized the importance of tower maintenance in assuring structural integrity, he testified as follows at the November 1981 hearing:[18]

> Q. Do you know what maintenance has been performed on the KHMA-TV tower since you visited that site in 1977?
>
> A. I believe there's been practically none.

Furthermore, in its arguments asserting that the hypothetical $2,000 per month it would pay as rental to the owner of the KHMA-TV tower and transmitter site is reasonable, TWL argues that the land value of the 10 acres on which the tower is situated is low and:

> . . . according to documents filed with the Federal Communications Commission by CCSI [the land owner], the tower is in poor condition. Therefore, to assign it [land, transmitter building and tower] a value of $122,000 for . . . determining the property's fair rental value is at least reasonable, if not generous.

TWL Exh. 8 at 4.

9. With regard to the transmitter and transmitter site, the following appears. As noted *supra*, TWL's proposed transmitter was formerly used by WLCY-TV, Largo, Florida where it was installed in 1965 to operate on that station's frequency, Channel 10. Because the frequency here at contest in Houma is Channel 11, the transmitter must be converted to operate on the higher frequency. GACO submitted an estimate of approximately $90,000 for the conversion, such estimate being provided by E. Noel Luddy, manager of consultant relations for RCA.[19] The ALJ adverts to RCA's estimate in his conclusions;[20] however, TWL retorts that a GACO witness, Horace W. Gross, stated "that the cost of converting the transmitter could be as little as $440."[21] Thus, although TWL implicitly recognizes that its transmitter must be converted (at a cost, apparently, of between $440 and $90,000), it has specifically earmarked no funds for the conversion in its budget, *see I.D.*, para. 12; it furnishes no reasonably firm estimate of its own for the conversion; and, it does not indicate where the funds will come from if the actual transmitter conversion costs are closer to RCA's $90,000 estimate. Moreover, while TWL has budgeted $13,260 for the physical installation of the transmitter, *see id.*, the individual installing the

READEX FICHE best copy available

transmitter, Bruce E. Singleton, nowhere indicated that he would make the required conversion. *See* Tr. 646–674. Indeed, although Singleton expressed his belief that the transmitter was in generally good shape, *I.D.*, para. 24, he specifically noted that his obligation did not include completion of the final proof of performance, or the execution of the forms attendant thereto. *Id.* Moreover, Singleton's installation estimate and contract did not include the time or measurement equipment necessary for equipment performance measurements and he did not know if TWL had the requisite measurement equipment on hand.[22] Nor would Singleton take responsibility for replacing inoperative parts.[23][24]

10. A vigorous legal debate is presented over TWL's proposed tower and transmitter site and its allocation of a hypothetical $2,000 per month rental for that site. As indicated *supra*, TWL has specified the tower and site of the former KHMA-TV, which facilities are now "owned by The Vanderbilt Corporation, the corporate parent of CCSI, which in turn owns 50% of GACO."[25] The present owner paid $100,000 for the site in 1976,[26] has refused to rent the site, but says that it will sell it outright for $250,000.[27] TWL has never inquired of Vanderbilt as to the availability of the site;[28] and, its allocation of $2,000 per month for rental of the site is based exclusively upon its somewhat solipsistic view of a reasonable rate of return to the property owner.[29]

11. TWL contends that it may specify the site owned (50%) by its opponent by dint of the policy espoused in *George E. Cameron, Jr. Communications*, 71 FCC 2d 460 (1979) ("*Cameron*") and amplified in

---

[22] Tr. 652–53.

[24] Additionally, although Singleton's cost estimate for the physical installation of the transmitter was apparently based upon a 36-day installation period, *see* Tr. 651, 670, he refused to guaranty his estimate because of the "variables" associated with installation such as the condition of the transmitter building. *Id.* But, the state of the TWL transmitter building (used by KHMA-TV until 1974) is doubtful. The *Initial Decision* relates that its condition was described as "extremely poor, the door was ripped open, snakes and cattle had been in and out of the building and everything was in a state of disarray including the electrical system." *I.D.*, para. 22. Another witness' description reflected that the building "was in a state of disrepair with doors open, wiring and circuit breakers cannabalized and no sign of a water supply for cooling purposes." *Id.* In its brief, TWL does not challenge these descriptions; and, Singleton has not been to Houma to inspect the transmitter, Tr. 654, or the transmitter building. Tr. 664. Finally, Singleton had not personally tested the WLCY-TV transmitter prior to its being dismantled in 1977 to determine if it was in operating condition even then. Tr. 668–69.

[29] TWL Exh. 8 at 4–5.

New Continental Broadcasting Co., 45 RR 2d 1632 (1979) ("*New Continental*").[30] It claims that those cases establish a "conclusive presumption that applicants may specify the tower facilities of deleted stations . . . with a reasonable assurance that those facilities will be available to the applicant who emerges successful at the conclusion of the hearing."[31] In *Cameron*, the Commission announced a novel policy, the effect of which was to allow a license renewal challenger to specify the site of its opponent, the incumbent licensee; this approach was intended to preclude the incumbent from contumaciously eliminating an otherwise (possibly) viable applicant by refusing the challenger the future use of its site.[32]

12. GACO counters that *Cameron* is a comparative renewal case and thus distingushable because there is present here no "incumbent" to unfairly obstruct a "challenger."[33] It claims that the "narrow exception"[34] carved by *Cameron* to the general rule that an applicant must show the availability of a transmitter site is inapposite where "the property owner is not an incumbent, the site is not presently [sic] used for broadcasting and four of the other original applicants in this proceeding specified other sites which they found to be both suitable and available."[35] However, while GACO cites to *New Continental* in its brief,[36] it conveniently overlooks—disingenuously, we believe—the fact that that later case expressly extended *Cameron* to a situation in which one of the new applicants had privately acquired the site of a deleted radio facility (the former WFAB, Miami, Florida). The Commission found in *New Continental* that an applicant's stated refusal to make the site available to current competitors was "highly premature,"[37] and it

---

[30] TWL Br. at 22–25.

[31] *Id.* at 23. *But see Belo Broadcasting Corp.*, 88 FCC 2d 922, 926 n.19 (1981) where the Commission explained:

> Although the term 'conclusive presumption' was used, the intent of *Cameron* was to hold in abeyance all considerations relating to a challenger's transmitter site until a final determination can be made as to which applicant would best serve the public interest.

[32] *See Cameron, supra*, 71 FCC 2d at 466–67. However, *Cameron* may not be directly on point here because the site owner has *not* refused to make the site available. Rather, it has expressly represented that it would sell the site to TWL. But, TWL has refused to pay the initial asking price and has not even negotiated. Moreover, it has not been shown that TWL could pay even the $100,000 that the land sold for in 1976, let alone its current fair market value; and TWL does not say that it could or would. It merely pushes its right to rent the site at a hypothetical monthly amount. Nonetheless, nothing in the law would require GACO—if it lost this contest—to retain the land for TWL's benefit.

[33] *See* GACO Br. at 10.

[34] *Id.*

[35] *Id.*

[36] *Id.*

[37] 45 RR 2d at 1633.

permitted the other applicants to also specify the former WFAB site "given the fact that towers, transmission facilities and other equipment are already located there, making broadcasting its logical use."[38] The situation in *New Continental* was, therefore, virtually identical to that at bar and is, to that extent, controlling.

13. Nonetheless, it is salient here to note that the issue before the ALJ and the Board is not, as it was in *Cameron* or *New Continental*, an ordinary "site availability" issue. Rather, the matter of TWL's specification of the KHMA-TV site and its hypothetical $2,000 per month rental arises within the context of a larger financial issue and, in that connection, the law is dictated by the later case of *Belo Broadcasting Corp., supra* note 31, where the Commission clarified the *Cameron* doctrine by deleting a "site availability" issue against a renewal challenger and "deferring all questions concerning site availability until completion of the hearing."[39] In that regard, the Commission held that the *Belo* challenger was expected to demonstrate "its contingency planning in case [its competitor's] sites remain unavailable."[40] Here, the hearing has expired, TWL has yet to even query the property owner as to the availability of the KHMA-TV site or the potential cost to it (purchase or rental), and it has indicated no "contingency planning" whatever.

14. In *Belo*, Commissioner Quello concurred as being bound by the *Cameron* doctrine, but remarked:

> I am now concerned, however, that full implementation of the *Cameron* policy, plus its extension into areas outside the renewal context, may cause procedural and substantive problems which were not immediately apparent.

88 FCC 2d at 930 (footnote citing to *New Continental* deleted). The Commissioner's apprehensions appear prescient in consideration of the facts of this case. Yet, applying *Belo* as we understand it—as apparently did the ALJ (*see I.D.*, Conclusions, para. 5)—the current state of the law is this: (1) TWL was permitted to specify the KHMA-TV transmitter site (*qua* site) which is 50% owned by GACO principals; but that (2) TWL was nevertheless required to satisfy the larger financial qualification issue by showing ample resources for the site specified or "contingency planning" in the event that the specified site eluded it. Our understanding of *Belo* is reinforced by

---

[38] *Id.* Moreover, the Commission also held that if the applicant/site-owner continued to refuse to make the site available to the ultimately successful competitor, the winning applicant could later modify to specify an entirely new site. *Id.*, at n.2. TWL points to this ability to later modify a site proposal if an opponent's site remains unavailable. TWL Br. at 24–25 & n.13. However, as discussed more fully in the succeeding textual paragraph, while an applicant may specify a later site where there are *no* questions about its *basic* financial ability (as is true with most applicants), and the *only* remaining question is whether it will have *any* site at all, it is simply the deferral of any "site availability" issue that is permissible. There is, though, no "site availability" issue here; there is, rather, a basic financial issue.

[39] 88 FCC 2d at 926.

[40] *Id.*, at 927 n.27.

Kaye-Smith Enterprises, 90 FCC 2d 105, 108 (1982), where an applicant relying on *Cameron* specified the site leased by its incumbent opponent. But, in its financial showing, it estimated a hypothetical $1,000 per month lease cost without inquiring of the property owner. Accordingly, the Commission held that "this matter must be explored at hearing to determine the basis and actual cost of leasing the site" within the context of a general financial issue also specified against that applicant. Hence, while a competing applicant's site itself may be specified, the specifying applicant must nonetheless demonstrate the basic financial ability to acquire *some* site—its opponent's or a reasonable substitute.

15. *Programming*. TWL proposes to operate for the first 3 months by spending only $24,465 in salaries, *I.D.*, para. 25,[41] and $13,070 for programming. *Id.* Although the Commission had designated a so-called "fair break" programming issue against TWL to determine whether it would provide "reasonable opportunities [to] representatives of religious faiths which do not share the religious beliefs of the applicant . . .,"[42] TWL averred at hearing that although religious programming will be broadcast, it proposes, in fact, a general market format. *I.D.*, para. 4. But, while it proposes a general market format, its programming budget (over and above local) is only $115 per day. *I.D.*, para. 29. It proposes to acquire a substantial amount of "barter" programming to fill its schedule. *Id.*

16. TWL anticipates that, with the exception of its chief engineer and its news director, it will pay its other employees minimum wage for the first 3 months, *I.D.*, para. 28, and will rely on 3 student interns who will work 20 hours per week each, 1 in news and 2 in production. *See id.*, at paras. 25, 28. According to the TWL brief, "TWL's salary estimates were based on consultations with Charles Chatelain, general manager of Station KADN-TV, Lafayette, Louisana."[43] Although Chatelain did not appear as a witness, his estimates

---

[41] Its salary projections are:

Salaries

General Manager	$ 0	Technical Operator (6 full time or equivalent)	11,600
Program Director	0	Interns (3 at 20 hours/week; 1 News and 2 production)	2,900
Sales Director	Commission only	News Director	3,000
Salesman	Commission only	Secretary (20 hours/week)	965
Chief Engineer	6,000	Subtotal	$24,465

TWL Exh. 8 at 3–4.

[42] *I.D.*, para. 1 (referencing *Designation Order*, FCC 80–534, released September 30, 1980).

[43] TWL Br. at 8 (referencing TWL Exh. 8 at 5). However, that part of the exhibit adverting to alleged consultations with Chatelain was apparently stricken by the ALJ when Chatelain did not appear for cross-examination. *See* Tr. 564–66. We

were generally supported by William Kitchen.[44] Kitchen was also TWL's witness on program cost estimates.[45] However, when asked whether, in preparing his "testimony on programming available to the proposed station in Houma," he had studied the market, Kitchen replied that he hadn't;[46] in fact, he did not even know what perish (county) Houma was in.[47]

17. TWL's $115 per day allocation for syndicated programming and films, *etc.*, is based on its belief that some programs are available at a cost of $25 per episode and $20 or less for motion pictures. *I.D.*, para. 29. These cost estimates rest, in turn, on the evident assumption by TWL that Houma is considered a separate, small program market by program suppliers who price their programs according to whether the station's television market is within a larger ADI or is outside an ADI. *See I.D.*, Conclusions, para. 6. ADI's are established on a county basis. Despite this assumption, the record is conclusive that Houma is part of the New Orleans ADI, *id.*, a fact admitted by TWL's witness, William Kitchen.[48] GACO's witness, Horace W. Gross, a TV management consultant, testified that, based upon applicable standards, Houma could not be established as a separate market, *I.D.*, para. 30; and, that even if TWL tried to have Houma established as a separate market outside the New Orleans ADI, the process for making the showing necessary to change Houma's ADI status would take at least a year because it involves intensive diary-keeping by the audience rating service that establishes ADI designations. *Id.*[49] TWL's witness, Kitchen, stated that he had no idea whether Houma could ever be established as a separate market for purposes of costing programming and that the cost of programming to TWL would be "prohibitive" if it could not.[50]

---

believe that the striking of alleged reliance on Chatelain may have been inconsistent with the ALJ's failure to strike GACO's reliance on tower experts Cornforth and Sargent, neither of whom appeared at hearing for cross-examination. *See* Tr. 944–51; and also see our brief discussion of hearsay evidence in note 15, *supra*. In any event, the handling of the Chatelain estimates is harmless and the validity, *vel non*, of those estimates plays no part in our review of TWL's financial qualifications.

[44] TWL Br. at 8 n.7 (referencing Tr. 592–93).

[45] Tr. 566–71.

[46] Tr. 573.

[47] *Id.*, at 573–74. The question of which parish (county) Houma is in looms pivotal since TWL's $115 per day estimated programming cost is predicated on the erroneous assumption that Houma is a separate programming market and that its county is not one of those within the New Orleans ADI. See discussion *infra* at next textual paragraph.

[48] Tr. 573.

[49] Gross also testified that TWL had made no provision in its programming budget for such basic expenses as down payments and advance payments for film suppliers, materials to produce local programming such as film stock, slide materials, sets and "flats," news gathering costs, or for advertising and promotion, *etc. I.D.*, para. 31.

[50] Kitchen testified:

18. *Summary*. Although the Commission gives great latitude to an applicant in projecting its financial qualifications,[51] and currently requires that an applicant need initially only certify that it has sufficient resources to operate for the first 3 months without operational income, *Revision of Application for Construction Permit for Commercial Broadcast Station (FCC Form 301)*, 50 RR 2d 381, 382 (1981) (*"Revision of Form 301"*), a financial issue may be designated for hearing where a *prima facie* case is made that significant and material questions of fact exist as to the validity of the applicant's financial qualifications. *See* 47 U.S.C. §309(e); *see also United Broadcasting Co.*, 53 RR 2d 57, 78 & n.101 (1983).[52] An issue is proper where serious questions arise as to whether an applicant's proposal is capable of effectuation. *Thunder Bay Broadcasting Corp.*, 49 FCC 2d 1023, 1028 (1974). And, although an applicant may now initially certify on the revised Form 301 that it has its construction and financial resources, the Commission stated when revising the form:

> At the outset, it should be emphasized that we are not, in any way, modifying the underlying substantive financial criteria.

Revision of Form 301, supra, 50 RR 2d at 382. *See also United Broadcasting, supra*, 53 RR 2d at 78 n.101; *Kaye-Smith Enterprises, supra*, 90 FCC 2d at 108–10 (1982).[53]

19. Relying on *Thunder Bay, supra*, TWL excepts to the ALJ's close analysis of its equipment and finances and asserts that it is the Commission's policy to show deference to an applicant's determination of the resources it intends to rely upon.[54] It also relies on the

---

> Q. Do you have any personal knowledge of whether the Houma television market would be a separate market from the New Orleans television market of which it is now a part?
>
> A. Because of the number of households and the distance from the city, if I were the station owner, I would certainly attempt to establish, and I believe, sir, that your people would too—otherwise you would find the cost of programming prohibitive.
>
> Q. Yes, sir, that's exactly right. And do you have any knowledge of whether they would be successful in establishing Houma as a separate television market?
>
> A. No, sir, I do not.

Tr. 606.

[51] The Commission's authority to inquire into financial qualifications germinates from Section 308(b) of the Communications Act of 1934, as amended, 47 U.S.C. §308(b).

[52] In *United Broadcasting*, the Commission affirmed the financial disqualification of an applicant, 53 RR 2d at 79, after the Review Board had added an issue because the applicant had originally indicated that it had sufficient used equipment "on hand," but later admitted that it did not. *See id.*, at 78.

[53] In *Kaye-Smith*, and despite the policy relaxation announced a year earlier in the *Revision of FCC Form 301* to allow for self-certification of financial resources, the Commission added a financial issue against an applicant who had alleged $489,123 to construct and operate a new FM station because the applicant's (undated) financial statement did not establish the liquidity of its stock or real estate interests nor did it contain a verification of alleged "cash due." *See* 90 FCC 2d at 109–10.

Revision of Form 301, supra, for the proposition that "a party taking issue with [an applicant's] determinations bears a particularly heavy burden."[55] Finally, TWL intimates that inasmuch as its proposals were "reasonable in their inception," the ALJ's findings were not supported by substantial evidence.[56]

20. TWL's approach to the financial issue is backwards. Even if we were to agree, *arguendo,* that its proposals seemed "reasonable in their inception,"[57] once a financial issue is designated against an applicant, the applicant bears the burden of proof on the issue. The burden of proof on the financial issue was expressly placed on TWL. *I.D.*, at n.7.[58] TWL's formulation of the operable dynamics would place that burden somewhere else —perhaps on the ALJ. Moreover, TWL's reliance on *Revision of Form 301* is fatally misplaced; both *Kaye-Smith* and *United Broadcasting, supra,* decided *after* the form

---

[54] *See* TWL Br. at 26–27. TWL cites the Commission's language in *Thunder Bay* which stated that it would not:

> . . . publish with each finding of financial qualification a catalogue of prices for every fixture or item of inventory in a television station. Doing so would ignore the judgment of the applicant and infringe upon the applicant's prerogative to apply ingenuity and flexibility to devise the best practicable service for its community of license.

Id., at 26, *quoting* 49 FCC 2d at 1028 (footnote omitted).

[55] *Id.*, at 26–27.

[56] *In haec verba,* TWL contends:

> It is pertinent to observe here that findings in administrative hearings governed by the Administrative Procedure Act must be 'supported by and in accordance with reliable, probative and substantial evidence.' 5 U.S.C. § 556(d) (1976). *See Fox River Broadcasting, Inc.*, 88 FCC 2d 1132, 1140–41 (Rev. Bd. 1982) and cases cited therein.
>
> TWL's proposals were reasonable in their inception. They were based on consultations with managers of other television stations, TWL's equipment supplier, its counsel and the contractors it was engaging to do the work. . . . The record demonstrates that GACO's evidence was not sufficiently reliable, probative or substantial to cast doubt on the ability of TWL to effectuate its proposals.

TWL Br. at 27.

[57] Agreeing with TWL on this point would take considerable effort and constrain us to ignore TWL's own admissions that its proposals were not "reasonable in their inception." To wit, not only was TWL compelled to amend its application by adding $35,000 for antenna system costs in response to allegations and data supplied by others, *I.D.*, para. 13 & n.10, and to concede that it could no longer rely on its original assumptions with respect to its equipment "on hand," *id.*, at para. 35, it states in response to the abuse of process issue that its actions regarding initial equipment representations were:

> . . . at the worst, carelessness, exaggeration, puffing, slipshoddiness, or other similar behavior which is not a basis for disqualification [for misrepresentation].

TWL Reply, at 4. We doubt that an applicant's initial representations can be thus characterized and yet be considered "reasonable."

[58] This situs of the burden on the applicant is consistent with 47 U.S.C. § 309(e) and Commission precedent. *See, e.g., United Broadcasting, supra,* 53 RR 2d at 81.

relaxation policy was announced, attest to the fact that an applicant questioned as to its financial qualifications cannot merely "certify" those questions away as TWL's brief necessarily implies.[59] In this case, not only did TWL not meet its burden of proof on this issue (and we affirm the ALJ on his finding and conclusions thereunder) the "reliable, probative and substantial evidence"[60] shows—if anything—that TWL is not financially qualified to be licensed.[61]

TWL: Abuse of Process

21. *Misstatements Re Equipment.* In its application filed on December 31, 1979, TWL represented that it had "on hand" all of its antenna system, its RF generating equipment, its monitoring and test equipment, and its program origination equipment, *I.D.*, para. 34. Again, in an affidavit filed on December 1, 1980 (opposing an enlargement of issues motion challenging TWL's financial and equipment representations), TWL asserted that it had "on hand the necessary equipment to begin operation of a television station." *Id.*, at para. 35 (*quoting* GACO Exh. 10, at 3). Nevertheless, in a *volte-face* not satisfactorily explained to this day, TWL—facing a financial issue and a personal inspection of its purported equipment[62]—reversed its unqualified position just one week prior to the commencement of the hearing and, on June 8, 1981, admitted that it could no longer presume the operability of its transmission system and that other equipment was also needed. *Id.*

22. The foregoing sequence of events creates the unavoidable suspicion that TWL lacked candor regarding its equipment and the ALJ's addition of the "misstatement" issue based on the allegations before him was more than justified. After taking testimony and other evidence under the issue, the ALJ concluded that it was "conceivable" that TWL "believed until the eve of the hearing" that its equipment was as it originally envisaged. *I.D.*, Conclusions, para. 17. While we will not go so far as the ALJ and say that the record contains "no evidence" of deliberate overstatement (*id.*) in view of the fact that the other parties, very early on, made creditable allegations regarding the insufficiency of TWL's equipment, some of

---

[59] *See* TWL Br. at 27. *But see South Florida Broadcasting Co., Inc.*, FCC 83-265, released June 2, 1983 (applicant may not merely certify to financial qualifications where substantial and material questions of fact exist).

[60] TWL Br. at 27, *quoting* 5 U.S.C. § 556(d) (1976).

[61] Although it is said that all comparisons are invidious, it is ironic that in the case heavily relied upon by TWL, *Thunder Bay*, the television applicant there proposed to operate in the first year in reliance on a $400,000 bank loan and $600,000 worth of leased equipment. 49 FCC 2d at 1025. That proposal was made in 1972. *See id.*

[62] The financial issue had been added on February 25, 1981. *See* para. 2, *supra*. The ALJ's inspection order had been released on May 4, 1981. *See* para. 4 & note 5, *supra*.

which allegations TWL later admitted, we do agree that a potential finding of an intentional lack of candor is not supported by substantial record evidence.

23. TWL's shuffling regarding its extant equipment, although no more, perhaps, than the "exaggeration" or "puffing" that TWL asserts is the "worst" that might be said of its conduct,[63] does, however, reinforce the generic conclusion that TWL has not demonstrated its basic financial qualifications. Its shifting representations illustrate graphically that TWL did (and does) not know what of its used equipment is operable, what is missing, or what acquisitions were (are) necessary to create a fully functioning VHF television station out of untested, cast-off equipage and a derelict transmission system.[64] Thus, while no penalty is charged under the "misstatement issue," the ALJ's examination thereunder was collaterally useful in bringing to light facts which illuminate the underlying matter of TWL's basic qualifications. While TWL might have possessed a vain and unsupportable "belief" that it had the resources necessary for broadcasting, it has actually shown not much more than that mere belief.

24. *Equipment Inspection*. Because TWL's efforts to comply with the ALJ's "inspection order were grudging and so insufficient that the purpose of the inspection was to a considerable extent thwarted," *I.D.*, Conclusions, para. 15,[65] the ALJ assessed TWL a "serious comparative demerit." *Id.*, at para. 18.[66] Although wholly agreeing

---

[63] TWL Reply at 4.

[64] *Houma Broadcasters, Inc.* ("HBI"), a party-intervenor who has settled out of this case, *I.D.*, para. 1 & n.2, has filed "limited exceptions" and urges, *inter alia*, that the ALJ erred in not adding a misrepresentation issue based on TWL's listing of the ownership of a "production van" on its application balance sheet; it contends that California records show that the van is registered to KQED, Inc., San Francisco. HBI Br. at 7–8. Without going into great detail, we affirm the ALJ. TWL's financial status and its misplaced reliance on dubious equipment is already sufficiently clear without pursuing the incidental question of the locus of seisin in a used truck. HBI's other exceptions are likewise rejected as duplicative or non-decisional.

[65] It will be recalled that the alleged equipment "on hand" was, in substantial part, stored haphazardly and inaccessibly in a trailer and that TWL's representative was instructed only to unlock the doors. *See* paras. 4–5, *supra*; *see also I.D.*, paras. 37–39.

[66] The comparative demerit was also apparently based, in undefined proportion, on the so-called "settlement agreement" aspect of the abuse of process issues. *See I.D.*, Conclusions, paras. 16–18. Because we hereinbelow reverse the ALJ's assessment of the demerit, we need not delve into the legal sufficiency of assessing a demerit without a more specific identification of the conduct elements warranting a particular penalty. *Cf. Leflore Broadcasting Co., Inc.* v. *FCC*, 636 F.2d 454, 463 (D.C. Cir. 1980) ("Where several violations are found, the Commission should set forth the role each plays in the assessment of a penalty. Rarely should the agency be permitted to take a 'gestalt' approach, one based upon a reaction to the 'overall' situation rather than to each violation one at a time.")

with the ALJ's characterization of TWL's conduct, we believe that the levy of a penalty based, in any degree, on that conduct partakes too strongly of the application of a retroactive standard. The conduct expected of this first-time applicant at the inspection was not articulated beforehand; nor are we aware of any published code that sets out such expectations. Before a penalty is assessed for misconduct, adequate prior notice of the appropriate standard of conduct should be redacted. *See, e.g., Straus Communications, Inc.* v. *FCC*, 530 F.2d 1001, 1011 (D.C. Cir. 1976); *Pressley* v. *FCC*, 437 F.2d 716, 721 n.5 (D.C. Cir. 1970). Should an "inspection" order be issued in a future case, the party against whom the order is directed should be apprised in relatively definitive terms as to its role. At a minimum here, TWL could have been reordered to submit to a second inspection more conducive to eliciting the objective condition of the equipment. In any event, the situation is largely selfcorrecting in that a party under the onus of a reasonable inspection order that does no more than did TWL runs the ineluctable risk that it will default on its showing, fail its procedural burden, and face disqualification. That scenario is at least as sharp a deterrent to "grudging" inspection conduct as a comparative demerit under the mantle of abuse.

25. *Settlement Agreement*. For reasons relating, in part, to the retroactivity factor discussed *supra* under the "inspection" issue, we will likewise erase whatever proportion of the "serious comparative demerit" the ALJ found attributable to TWL's withdrawal from a general settlement agreement announced by (prior) counsel. *See I.D.*, paras. 40–43; Conclusions, paras. 16–18. In synopsis, TWL president John Graves testified that he had instructed counsel on June 16, 1981 to settle the case because his wife was ill and he had tired of pursuing the application. *I.D.*, para. 41. Counsel advised the ALJ that the case had been settled, and the parties as well as the ALJ believed the case to be over on that day. *Id.* The ALJ dismissed the witnesses (who had travelled considerable distances) and continued the proceeding solely for the receipt of the final settlement agreement. *See I.D.*, Conclusions, paras. 16, 18. Unbeknownst to the ALJ, Graves later refused to sign the agreement papers forwarded to him by counsel and commenced to haggle on his own for substantially more money. *I.D.*, para. 42. TWL failed to respond to the settlement agreement filing deadline established on August 27, 1981 and later advised the ALJ—for the first time—that it intended to pursue its application. *Id.*, para. 43. The hearing was then recommenced.

26. TWL explains its conduct by saying that after Graves had telephonically agreed to the settlement, he later felt that it actually differed from the one TWL counsel had described on the telephone. TWL states that Graves "prayed" about what to do because he felt that he was "gambling" that the GACO application would be

granted, without which grant TWL would receive no reimbursement under the agreement.[67] Despite TWL's curious juxtaposition of the sacred and profane, and despite the fact that the record seems clear that TWL had agreed on June 16, 1981 to the original settlement amount (*i.e.*, $20,000, *see I.D.*, para. 41) and later reneged, thus greatly disrupting the adjudicatory process and causing wasted expenditures necessary to reassemble the hearing and the out-of-state witnesses, we find insufficient evidence that TWL's settlement conduct was intentionally aimed at abusing Commission processes.[68] Apart from the retroactivity considerations mentioned above, the Broadcast Bureau noted in its opposition to the addition of the "settlement" abuse issue that no written agreement had ever been filed.[69] And, while TWL's abandonment of its prior oral agreement was seriously disruptive, the Board has written that "[a]lthough the law does favor settlement, no Commission precedent prevents withdrawal of settlements. . . ." *Hanover Radio, Inc.*, 91 FCC 2d 849, 852 (Rev. Bd. 1982).

27. The Board is not insensitive to the fact that parties to an adjudicatory proceeding may attempt to use Commission processes as leverage in settlement negotiations. Nor are we immune to the fact that a request to an ALJ to cancel a scheduled hearing on the basis of a putative (or tentative) settlement involves the unpalatable risk of potential disruption if the settlement ultimately falls through. However, the law so favors settlements, *Country-Politan Broadcasting, Inc.*, 68 FCC 2d 640 (1978) (concurring statement of Chm'n Ferris), that we are reluctant to suggest a hearing procedure that goes so far towards reducing the risk of an abandoned settlement negotiation that we incur the equivalent risk that litigation might be pursued in lieu of careful and delicate settlement negotiations.[70] The best we can offer is that, when parties advise of a prospective settlement, the ALJ should seek a written confirmation of the basic settlement terms as early as possible and that the parties be monitored continually to determine the status of negotiations. Finally, should substantial extrinsic evidence surface to reveal that a party has disingenuously announced a settlement agreement for purposes of obstructing a hearing or for extracting better terms from a competing applicant who, necessarily, has been revealed as

---

[67] TWL Br. at 18.

[68] For an example of a "serious misuse of Commission procedures," *see Jimmie H. Howell*, 46 FCC 2d 1150, 1151 (Rev. Bd. 1974) (enlargement of issues), 65 FCC 2d 516 (Rev. Bd. 1977) (applicant disqualified).

[69] Broadcast Bureau Opposition to Petition to Enlarge Issues, filed October 20, 1981, at 3.

[70] The Review Board is itself familiar with the frustration attending the delay of abandoned settlements. *See, e.g.*, *Absolutely Great Radio, Inc.*, 53 RR 2d 97, 100 n.6 (Rev. Bd. 1983) (proceeding held in abeyance for 49 days pending filing of announced settlement; settlement later abandoned).

amenable to settlement, that abusive party should be disqualified forthwith and absolutely.[71] No extrinsic evidence of such egregious conduct appearing in this case, TWL will not be penalized, notwithstanding its erratic conduct.

Conclusion

28. Over the past several years, the Commission has relaxed its financial qualification requirements to the point that applicants seeking to construct and operate a broadcasting facility may propose to do so on a veritable "shoestring."[72] Yet, the Commission has purposefully retained a substantive minimum to help ensure that those awarded a valuable broadcast construction permit first have the merest wherewithal to construct the station and to meet inaugural public interest obligations. *New Financial Qualifications Standards for Broadcast Television Applicants, supra* note 72; *Revision of Form 301, supra*. In the case at bar, TWL is not only bereft of the shoeleather necessary to ascend the relatively mild economic slope ahead, its "shoestring" is cleft through at virtually every eyelet. If anything, TWL's financial position is inferior to that of the applicant recently found unqualified in *United Broadcasting Co., supra*; and, TWL's actions and representations surrounding its alleged equipment "on hand" reflect a lack of seriousness and an irresponsibility towards the licensee qualification process. Viewed in a less charitable light then we have cast, its actions in that latter regard flirt with fraud. As we have said, though, we will generally accept the ALJ's conclusion that there is not sufficient evidence of "deliberate falsification." *See I.D.*, Conclusions, para. 17.

29. This case does reaffirm, however, the Commission's foresight in maintaining a bare minimum financial requirement for broadcast applicants. *See Revision of Form 301, supra*, 50 RR 2d at 382. The people of Houma and Southeastern Louisiana deserve far better on one of the nation's few remaining full power VHF frequencies than, at best, a garage-shop electronics experiment (assuming, doubtfully, that TWL could ever actually transmit under the circumstances proposed) and a programming budget of $115 per day, augmented by

---

[71] In that connection, a party found to have abused processes in the described manner should not hope to escape with a mere "demerit." Abuse of process is a disqualifying offense. *Cf. Gulf Coast Communications, Inc.*, 81 FCC 2d 499, 513–515 (Rev. Bd. 1980), *application for review denied*, FCC 82–128 (released April 16, 1982) (mem.) *appeal docketed* No. 82–1760, D.C. Cir., 1982; *Home Service Broadcasting Corp.*, 24 FCC 2d 192 (Rev. Bd. 1970).

[72] *Compare Ultravision Broadcasting Co.*, 1 FCC 2d 544 (1965) (applicant must show ability to construct and operate for 1 year without advertising revenues) *with New Financial Qualifications Standards for Broadcast Television Applicants*, 72 FCC 2d 784 (1979) (reducing financial requirement for "start-up" period to 90 days' operating revenues plus construction costs) (PUBLIC NOTICE, released May 11, 1979). *Cf. Financial Qualifications Standards for Aural Broadcast Applicants*, 69 FCC 2d 407 (1978) (PUBLIC NOTICE, released August 2, 1978).

uncertain allusions to some "barter" programming. Although the Commission has pared its advance financial requirements to, perhaps, an irreducible minimum, that minimum must be met. *United Broadcasting Co., supra*. TWL has not come close. GACO, on the other hand, is fully qualified—a qualification TWL does not contest—and we affirm the ALJ's findings and conclusions with regard to GACO in every respect as well as the award of the permit.

30. ACCORDINGLY, IT IS ORDERED, That the Contingent Motion to Reopen the Record and to Enlarge Issues filed May 23, 1983 by GACO Communications Corp. and the Motion for Extension of Time filed June 6, 1983 by The Way of Life Television Network, Inc. ARE DISMISSED as moot; and

31. IT IS FURTHER ORDERED, That the application of GACO Communications Corporation (File No. BPCT-5047) IS GRANTED, and the application of The Way of Life Television Network, Inc. (File No. BPCT-790622KE) IS DENIED.

INITIAL DECISION OF ADMINISTRATIVE LAW JUDGE JOHN H. CONLIN

(Issued November 15, 1982; Released: November 23, 1982)

Preliminary Statement

1. By Memorandum Opinion and Order, FCC 80–534, released September 30, 1980, the Commission designated six mutually exclusive applications for hearing. All had applied for Channel 11 in Houma, Louisiana following the demise of station KHMA-TV, which had operated on the channel for a brief period in the early 1970's. During the course of the proceeding, three applications were dismissed and two applicants, Communications Corporation of the South, Inc. (CCSI) and GACO Communications Corporation, were merged into a single entity.[1] Thus at the commencement of the hearing on November 10, 1981, there were two surviving applicants, The Way of Life Television Network, Inc. (TWL) and the newly

[1] FCC 80M-2618, released December 12, 1980; FCC 81M-73, released January 12, 1981; and FCC 81M-2654, released August 27, 1981.

constituted GACO Communications Corporation (GACO). In addition a former applicant, Houma Broadcasters, Inc. (HBI), was granted intervenor status.[2] The issues in the case include the standard comparative issue and the following issues against TWL:

1. Whether the applicant will adopt and implement a policy of providing reasonable opportunities by representatives of religious faiths which do not share the religious beliefs of the applicant to express opposing or diverse religious views on the proposed Houma station;[3]
2. Whether operation of the proposed station from a main studio outside the city limits of Houma would be consistent with the public interest;[4]
3. Whether the applicant is financially qualified to construct and operate its proposed station;[5]
4. To determine whether TWL has, in pleadings filed during the course of this proceeding, misstated the condition of equipment it has purported to rely on in the construction and operation of its proposed station;[6]
5. To determine whether TWL failed to comply with an order of the presiding officer to permit entry, inspection and photographing of its equipment;[6]
6. To determine the facts and circumstances surrounding TWL's failure to comply with representations made to the presiding officer that its application would be dismissed in return for partial reimbursement of expenses;[6]
7. To determine, in light of the evidence adduced under the foregoing issues [4–6], whether TWL has abused the processes of the Commission and, if so, whether it possesses the requisite qualifications to be a Commission licensee.[7]

The designation order also specified a studio location issue against GACO. That issue was mooted by the GACO/CCSI merger, which provided that the merged applicant would utilize CCSI's proposed studio location.[8] The issue is therefore deleted.

2. Prehearing conferences were held on December 11, 1980 and February 10, 1981. An admissions session was held on June 15, 1981. On the following day, the parties represented that an agreement had been reached settling the case. The hearing was therefore continued

[3] Specified in the Memorandum Opinion and Order (FCC 80–534, released September 30, 1980) designating the case for hearing.

[4] The studio location issue specified in the designation order was modified by the presiding officer in an order (FCC 81M-466, released February 19, 1981); see also Memorandum Opinion and Order (FCC 81M-445, released February 17, 1981).

[5] Added by Memorandum Opinion and Order (FCC 81M-538, released February 25, 1981); see also Memorandum Opinion and Order (FCC 81M-445, released February 17, 1981 at n. 2).

[6] Added by Memorandum Opinion and Order (FCC 81M-3432, released October 30, 1981).

[7] Added by Memorandum Opinion and Order (FCC 81M-3432, released October 30, 1981). The burden of proceeding with the introduction of evidence on issue 4 was placed on GACO; the burden of proceeding with the introduction of evidence under issue 5 was placed on HBI; and the burdens of proof under all issues were placed on TWL.

[8] See FCC 81M-2654, released August 27, 1981, p. 2.

without date. However, as will be discussed *infra*, the settlement agreement was not consummated, necessitating a further conference on September 25, 1981 and hearings on November 10, 12, 13, 16 and 17, 1981. Proposed findings of fact and conclusions of law were filed on March 1, 1982 and replies thereto were filed on April 5, 1982.

Findings of Fact

TWL's Religious Program Policy

3. In its designation order, the Commission stated that TWL proposed to provide "predominantly religious programming," but had not expressed an intention to provide a "fair break" to others who do not share the same religious precepts as the applicant (para. 16). Accordingly, an issue was specified to determine whether TWL would provide a reasonable opportunity for the expression of "opposing or diverse religious views."

4. At the hearing, Janis Graves, TWL's vice president, explained that TWL in fact proposes a general market format, not a religious format as the designation order had suggested. Some religious programming will be broadcast. She stated that TWL will make time available to persons or organizations for the broadcast of religious views, precepts and/or tenets regardless of whether TWL or its directors agree with them. Time will be given on a "first come, first serve" basis. The board of directors will determine if free time is available. Further, TWL will not discriminate as to which persons or organizations are offered free time; and as to those who purchase time all will be charged the same rate for the same time, but the rate may vary depending upon the amount of time purchased and the time of day broadcasts are aired.

5. According to Mrs. Graves, TWL will make at least one hour per week available free to houses of worship located within its Grade B service contour. The hour may be divided into half hour segments. In any event, its use will be allocated on a rotating basis among the entities participating. If several churches are of the same denomination, the frequency of the invitations extended would be determined by the number of churches comprising the group. However, the size of the congregation would not be a factor in determining how often a church or organization would be offered free time (TWL Ex. 7, pp. 1–2).

6. Mrs. Graves testified that this policy would be made known as widely as possible through on-air announcements occurring at least once a week. Additionally, letters reflecting the policy would be sent to the Roman Catholic Diocese of Houma-Thibodaux and to the Ministerial Association which represents most other organized churches. Their assistance in disseminating the policy would be requested, and fringe religious groups would also be contacted. All houses of worship whose addresses appear in the yellow pages

telephone books of the various communities within the Grade B contour would also be sent letters outlining the station's policy. TWL hopes that as a result a variety of religious views would be expressed over the station.

TWL's Main Studio Location

7. TWL proposes to locate its studio on a tract of land approximately 210' x 210' abutting Federal Highway 90, which is one of the two main thoroughfares going into Houma. The site is approximately 1.25 miles from the city limits, 4–5 miles from downtown Houma and no more than 7–8 miles to the NE boundary of Houma. The proposed studio building is within several hundred feet of the site proposed by TWL for its transmitter tower and building (TWL Ex. 5, pp. 1–2; TWL Ex. 6; Tr. 344–46).

8. Although there is no public transportation, TWL represents that the proposed studio site is readily accessible to the residents of Houma and that parking facilities exist for 12–15 cars, with more room becoming available when certain equipment is removed from the area. In this connection TWL notes that since Houma has no mass transportation system, it would be necessary to use a privately-owned vehicle or taxicab to get to the studio no matter where it is located unless one lived within walking distance. According to Mrs. Graves, the availability of suitable property inside the city limits of Houma is small, if not nonexistent. Moreover, due to the rapid growth of the city's population and the upsurge of commercial building, acquiring any property comparable to this site within the city limits is not a reasonable alternative.

9. The 5,500 square foot building located on the proposed site was originally designed and constructed specifically for a television studio and served as the studio for station KHMA-TV during its short existence. The building is designed to accommodate future additions and the site affords space for expansion.

10. The proposed studio location is within a 10-minute drive of the center of Houma. It is on the major highway in the region and therefore the site will be accessible to residents of other communities within TWL's proposed service area, including Morgan City and Thibodaux. There are no barriers between the studio building and the city limits of Houma, such as canals or bridges. Finally, the proximity of the proposed studio building and transmitter to each other will provide for a more economical operation of the proposed station.

TWL's Financial Qualifications

11. TWL estimated that the cost of constructing and operating its proposed station for the first quarter would be $177,174. Of this total $105,360 would be dedicated to equipment and construction costs and $71,814 to first quarter operating costs (TWL Ex. 8, pp. 1–

2). In specifying the general financial issue against TWL, the presiding judge noted that substantial doubt existed regarding the applicant's financial ability to obtain use of the site it is proposing and to place the equipment located thereon in operational condition. There was also uncertainty as to how much additional equipment TWL would have to acquire and the terms under which its studio building would be obtained. See FCC 81M-445, released February 17, 1981.

12. *Construction and Equipment.* The estimated cost of construction and equipment was itemized as follows:

Antenna System	$ 35,000
RF Generating Equipment	On hand
Monitoring and Test Equipment	On hand
Program Originating Equipment	14,200[9]
Remodeling of Buildings	2,000
Legal Costs	30,000
Engineering Costs	500
Installation	
(a) Studio Equipment	7,000
(b) Transmitter	13,260
Other Miscellaneous	3,400
TOTAL	$105,360

TWL's estimate is so low because, as indicated above, it already has equipment on hand. Additionally, the applicant proposes to rely on a deferred credit arrangement with Quality Media Corporation for $49,200 to cover the cost of any additional equipment it might be required to purchase (TWL Ex. 8, pp. 7–8, Attachment B). Many aspects of its proposal, however, were seriously challenged at the hearing.

13. Regarding the antenna system, TWL now estimates that it will cost $35,000 to make it operable.[10] This estimate includes the cost of replacing transmission line, refurbishing the antenna, and dismounting and remounting equipment on the existing tower. The price quotation was obtained from Quality Media, which would act as general contractor for the project and carry the entire $35,000 on a deferred payment basis (TWL Ex. 8, pp. 1–2, Attachment B, pp. 2–3; Tr. 537). Its president, William J. Kitchen, visited the tower site in 1977 and testified that absent any significant stress in the interim the tower should remain serviceable for many years (Tr. 547–51). He stated that his firm had experience in replacing transmission lines and would have no difficulty in acquiring the services of a subcon-

---

[9] This is in addition to the equipment on hand.

[10] Previously, TWL indicated that its atenna system, initially used by station KHMA-TV, would require no outlay for renovation and that it had on hand all required equipment for program origination. The revised estimate was prompted by allegations and supporting data by other parties to the effect that the antenna system was not operable (TWL Ex. 8, pp. 1–2).

tractor to work on the antenna (Tr. 554). However, he admitted that he did not contract any local contractors regarding their costs to correct the transmission or antenna systems (Tr. 586).

14. GACO witness Richard L. Biby, a consulting engineer, expressed a contrary view, estimating that the cost at present prices (i.e., December 1980) of putting TWL's proposed tower and antenna site into acceptable condition would be in excess of $100,000. Biby's estimate was based upon his analysis of on-site investigations conducted in 1976 by R. C. Cornforth of Cornforth Associates, whose firm specializes in structural analysis of towers, and by Dean W. Sargent of D. W. Sargent Broadcast Service, who inspected the tower site from the standpoint of radiating capabilities. There has been no maintenance in the interim, a fact which in Biby's view would have resulted in further deterioration from high winds and the semi-salt water near the site (GACO Ex. 12). Biby also stated that in addition to the minimum rehabilitation costs of $100,000 for the tower and antenna, additional expenses in excess of $25,000 would probably be required to replace coaxial cable connecting the studio to the transmitter (GACO Ex. 12, p. 5).

15. Turning to equipment, TWL relies essentially on used equipment it has acquired over the years; it has also earmarked $14,200 for various additional items that might be needed and $3,400 for miscellaneous technical parts and supplies (TWL Ex. 8, pp. 1–2, Attachment A). The $14,200 estimate for required additional equipment was furnished by William Kitchen who testified that, based upon his personal experience, these items could be acquired on the used market for that amount. Kitchen had previously assisted TWL in the acquisition of its other used equipment which he represented was in working order at the time it was sold to TWL (TWL Ex. 8, Attachment B, pp. 1–2). To the extent that additional equipment was needed, he said his firm would carry it on deferred payments for six months (Tr. 544).

16. Kitchen's assertion that the equipment was in working order at time of sale was based either upon personal inspection or reports of his staff. However, his representations as to the workability of the equipment related to the individual components since he had never assembled the entire system to see if it actually would function together (Tr. 588). The equipment had been gradually acquired by TWL since 1977 and had been stored in Monroe, Louisiana until recently when it was moved to Houma and housed in a trailer. Although Kitchen had observed the manner in which the equipment was stored when it was in Monroe, he was not aware of storage conditions once it was brought to Houma. Furthermore, he was reluctant to commit himself to guaranteeing that the equipment would be operable. He stated, however, that he would remedy any problems or replace any equipment that was defective at the time he furnished it to TWL (Tr. 589–90).

17. Robert D. Blazier, coordinator of instructional television at Nicholls State University, testified that on May 20, 1981 he examined TWL's inventory of equipment. He indicated to TWL that certain additional equipment would be required and TWL provided funds in its budget to cover the cost of the items he had suggested. In his written testimony, Blazier stated that he "found the [TWL] equipment usable for television broadcasting program origination" (TWL Ex. 8, p. 1, Attachment B, pp. 1–2, Attachment C, p. 1). On cross-examination, he explained that by referring to the TWL equipment on hand as "usable," he meant that it was equipment of a type that he had experience with and that it "looked to be in good shape" (Tr. 308–09). He also admitted that he did not inspect the transmitter, other than to look at it. His inspection of the studio equipment consisted of trying to take down the serial numbers to make sure all the equipment purportedly available was in fact available. He made no qualitative analysis of the equipment. He relied upon representations that the equipment was operational when purchased and did not plug any of it in to test for electrical performance. He claimed it would be unrealistic to check out each piece of equipment, but acknowledged that each piece would have to be checked before being assembled and that he could not tell from visual inspection if the equipment would work. According to Blazier, the equipment was 15–16 years old, had not been used for 10–11 years and was of tube, not solid state, variety. He testified that tube type equipment requires more maintenance than solid state and is more likely to deteriorate from lack of use (Tr. 296–300, 307–09).

18. Pursuant to an order from the presiding officer (FCC 81M-1342, released May 4, 1981), representatives of GACO and two other applicants who were then parties to the case conducted an inspection of the equipment in Houma during June 1981. The equipment was contained in a tractor trailer, adjacent to the KHMA studio site, and at a warehouse (Tr. 328). Photographs of the equipment reveal that it was strewn about or stacked randomly in facilities that were not thermostatically controlled (Tr. 308, see GACO Exs. 11A-Q; Tr. 829–63).

19. William B. Carr, a registered professional engineer, was among those who conducted the inspection. Based on first-hand observation, which was as detailed as possible under the circumstances, he concluded that there is not enough equipment in TWL's possession to construct and operate its proposed station. He also stated that the equipment in the trailer was in extremely poor condition and was placed there in a haphazard manner. It was crammed into a small space and much of it appeared to be damaged. Based upon the conditions under which inspection took place and the appearance of the equipment, it was not possible to determine whether it was operational (GACO Ex. 11, pp. 1–3). He noted, in particular, that the transmitter appeared to be dirty, with meters

and other components apparently broken (Tr. 823–24). Prior to the inspection, Carr had been furnished with a copy of TWL's purported inventory of equipment, but could find no evidence of a diplexer, which was indispensable to the functioning of a station, and which cost in the neighborhood of $30,000 to $40,000. He also was unable to locate video monitoring equipment, projectors and other equipment (GACO Ex. 11, p. 3; Tr. 864).

20. Horace W. Gross, president of Frazier, Gross & Kadlec, Inc., radio and TV management consultants, reviewed TWL's proposed capital investment, and concluded that the equipment which TWL listed in its proposal is insufficient for the proposed operation. He specified certain items which were lacking and also noted an absence of spare parts which would be required for normal maintenance. He specifically noted the transmitter proposed by TWL would require modification to operate on Channel 11 (GACO Ex. 8, pp. 2–3). According to E. Noel Luddy, manager, consultant relations for RCA, the cost of new equipment necessary to convert the TWL proposed transmitter from Channel 10 to Channel 11 would exceed $90,000 (GACO Ex. 14).

21. With respect to studio and transmitter buildings, TWL, which proposes to use the facilities of the former licensee, budgeted $2,000 to cover any repairs or remodeling which might be required (TWL Ex. 8, p. 2). The studio facility is now owned by the Louisiana Compressor Maintenance Company and has been used since 1977 as a repair shop for compressors. According to Ronald Cannon, president of the company, a machine shop was installed in the building, but the basic structure has not been significantly altered. The company left everything in the studio portion of the building intact on the assumption that it would again be used as a TV studio. The walls, electrical system and lighting grid remain unchanged and, according to Cannon, the building still resembles a studio (Tr. 611–17, 644). From his perspective, the only thing needed to make the building functional as a studio is a general cleanup (Tr. 643). Cannon's testimony is essentially confirmed by Blazier, who stated that the studio facilities used previously by KHMA do not require significant remodeling since the physical plant was well designed and has not been altered significantly (TWL Ex. 8, Attachment C, pp. 1–2). To the extent that the air conditioning unit for the building is not working, Cannon testified that he can and will repair it at no cost to TWL (Tr. 636–40). Iddo Corkern, a principal of GACO who visited the proposed studio building in June 1981, testified that the building was filthy, and that a big six-eight foot high hole had been cut in the west wall of the building to put in a big exhaust fan (Tr. 916–17). William Carr testified that the studio building looked like a machine shop and required the addition of special circuit breakers which cost $2,000-$3,000 (Tr. 866–67).

22. Carr also testified that the condition of the transmitter

building was extremely poor, the door was ripped open, snakes and cattle had been in and out of the building and everything was in a state of disarray including the electrical system (Tr. 865). Corkern stated that as of June 1977, when he inspected the transmitter building, it was in a state of disrepair with doors open, wiring and circuit breakers cannibalized and no sign of a water supply for cooling purposes (Tr. 911–14).

23. TWL earmarked $7,000 for installation of studio equipment, based upon an estimate by Blazier, who said that the total cost to install and interconnect all master control and production control equipment should not exceed that amount (TWL Ex. 8, p. 2, Attachment C, p. 5). However, although Blazier described various pieces of equipment which he would use with respect to installation of the master control and production control equipment, he testified that he only verified the availability of the equipment specifically referred to in his affidavit. He admitted that he did not know whether some of the materials which he pre-supposed were "on hand" or being acquired were actually available (TWL Ex. 8, Attachment C, pp. 2–5; Tr. 301–07, 327–28).

24. TWL's estimate of $13,260 for transmitter installation was furnished by Bruce E. Singleton, who was formerly chief engineer of the station (WLCY-TV, Largo, Florida) where TWL's transmitter previously was used. Singleton installed the transmitter when it was new in 1965, and dismantled it for shipment to Houma in the spring of 1979 (TWL Ex. 8, p. 2, Attachment D). Singleton testified that the life expectancy of a transmitter is about 10–15 years before requiring an overhaul. The particular transmitter acquired by TWL had been completely overhauled about one year prior to its being taken out of service in 1977. Prior to dismantling the transmitter for shipment, Singleton had checked with the previous transmitter maintenance engineer, who said that it had operated satisfactorily (Tr. 660, 668–69). He was confident that he could install the transmitter in accordance with the provisions of his estimate which included time for partial proof of performance. His obligation did not include completion of the final proof of performance and final preparation of the required forms (Tr. 648–49, 651, 673–74). Singleton acknowledged that, as a tube type transmitter, the TWL transmitter would be subject to breakage if not properly handled. He also included some spare parts shipped with the transmitter (Tr. 657–58; TWL Ex. 8, Attachment A, pp. 8–9).

25. *Cost of Operation*. TWL's estimated costs of operating for a three-month period are broken down as follows (TWL Ex. 8, pp. 3–4):

Studio Rental (Five Months)		$10,000
Transmitter Site and Tower Rental (Five Months)		10,000
	Subtotal:	$20,000
Salaries		

General Manager		$ 0
Program Director		0
Sales Director		Commission only
Salesman		Commission only
Chief Engineer		6,000
Technical Operators (6 full time or equivalent)		11,600
Interns (3 at 20 hours/week; 1 News and 2 production)		2,900
News Director		3,000
Secretary (20 hours/week)		965
	Subtotal:	$24,465
Programming		
Film and Tape Programming		$10,500
Blank Tapes (initial stock and replacement)		1,000
News Service		1,320
Music License Fees		250
	Subtotal:	$13,070
Office Operations		
Supplies (initial stock and replacement)		$500
Telephone		750
Postage		300
Freight		3,000
Janitorial Service		450
Insurance		600
	Subtotal	$5,900
Utilities		
Studio Building		$1,950
Transmitter		6,429
	Subtotal:	$8,379
	Total:	$71,814

At the hearing a number of these estimates were disputed by the other parties, in particular the costs assigned to site rentals for the studio and transmitter, salaries and programming costs.

26. TWL estimated its studio rental at $2,000 per month based upon an agreement with Louisiana Compressor Maintenance Company (TWL Ex. 8, Attachment E). Ronald Cannon, its president, verified that the $2,000 was a correct and binding figure (Tr. 641). He indicated that this figure covers all costs of maintenance, his mortgage and insurance costs and still results in a profit of about $500 a month for his company (Tr. 625). Also, to the extent that TWL as the lessee of the property would have to absorb some of the costs of having the compressor company vacate the premises and relocate, he said no cash outlay would be required from TWL. Rather, the costs could be recouped through trades or advertising time (Tr. 642). TWL would be reasonable for the costs of utilities and estimated the cost at $1,950 (TWL Ex. 8, p. 4; Tr. 640).

27. TWL estimated its transmitter site and tower rental at $2,000 per month. TWL proposes the former KHMA site and tower now owned by The Vanderbilt Corporation. The basis for TWL's estimate is an analysis conducted on its behalf of the value of the land and the tower, the price paid for the land and tower and an evaluation of what would constitute a fair return to the property owner (TWL Ex. 8, p. 4). Seymour Smith, president and principal stockholder of The Vanderbilt Corporation,[11] testified that no one from TWL has made any inquiry as to the availability of the property. He further stated that The Vanderbilt Corporation would not lease the property to any of the other applicants but would be willing to sell it to TWL for $250,000 (CCSI Ex. 8; Tr. 965–66). The property was purchased about six years ago for $100,000 (Tr. 960).

28. The salary estimates were based on conversations with the general manager of KADN-TV in Lafayette, Louisiana. With the exception of the chief engineer and the news director, all employees will be paid minimum wage during the first three months of operation, and an additional twenty percent has been set aside to cover other payroll costs. John Graves and Janis Graves, general manager and program director, respectively, will receive no salary during the first three months (TWL Ex. 8, p. 5). John Graves testified that he has not received any salary over the past six months, and has been able to support his family from outside sources of funds. He stated that he will continue to be able to do so (Tr. 407, 744–45). TWL also proposes to rely upon student interns from Nicholls State University in Thibodaux, Louisiana. Robert Blazier, the coordinator of instructional television at the university, described the internship program at the university and testified that there would be no difficulty in finding student interns in the communications arts program who would be willing to work at the minimum wage level (TWL Ex. 8, p. 6, Attachment H, pp. 1–2).

29. For its program schedule TWL proposes to rely upon a substantial amount of so-called "barter" programming.[12] It also anticipates that the station will be paid to air religious programming provided by organizations such as the Christian Broadcasting Network and the PTL Television Network. In addition TWL has budgeted approximately $115 per day for other programming. TWL claims that a number of programs are available to small market stations at a cost of $25 per episode or less and many packages of

---

[11] The Vanderbilt Corporation is the parent of CCSI which, as a result of the merger between itself and GACO, is a 50% stockholder in GACO. See FCC 81M-2654, released August 27, 1981.

[12] Under a "barter" arrangement, as described by TWL, the station is provided programming free of charge in exchange for running the commercials contained in the program. Commercial positions are also available in the program for the station to sell to local advertisers.

motion pictures are available at a cost of $20 or less per showing on small market stations (TWL Ex. 8, pp. 6–7).

30. Horace Gross, an expert witness and radio and TV management consultant, testified that Houma is not a separate ADI (Area of Dominant Influence) and is currently within the New Orleans ADI. Thus, the cost of programming would be substantially more than that proposed by TWL. Moreover, based upon applicable standards, Gross testified that TWL would not be able to establish Houma as a separate ADI. Moreover, any attempt to make the necessary showing would require at least a year's time.[13] Thus, for the first quarter of operation the station, in Gross' opinion, could not purchase programming at the budgeted figure (Tr. 800–05). According to Gross' analysis of TWL's programming proposal, the costs of acquiring the syndicated and feature film programming proposed by TWL would be at least three times as much as that proposed by TWL and probably more depending upon the actual mix (GACO Ex. 8, pp. 3–4).

31. Gross also pointed out that no provision was made for such basic and anticipated expenses as down payments and advance payments for film suppliers, materials and supplies to produce local programming such as film stock, slide materials, sets and flats, news gathering costs, advertising and promotion expenses, etc. Gross estimated that total operating costs for a station operating 117 hours a week without a network affiliation in a market such as Houma, with the type of operation proposed by TWL, would exceed TWL's estimate by at least $50,000 (GACO Ex. 8, pp. 4–6). William Kitchen, who was largely responsible for the preparation of TWL's estimates for programming and operating expenses, admitted that if TWL were not able to establish Houma as a separate market, its programming costs would be prohibitive. He also admitted that he had no idea whether TWL would be able to establish Houma as a separate market (Tr. 606).

32. Finally, in addition to challenging TWL's cost estimates GACO maintains that even the small sum set forth in TWL's financial showing would not be available to the applicant. In order to meet its estimated construction and first quarter operating costs of $177,174, TWL proposes to rely upon funds on deposit in the amount of $130,000 and deferred credit from its equipment supplier, Quality Media, in the amount of $49,200. The $130,000 is in the form of certificates of deposit at Progressive Bank and Trust Co. Quality Media has also agreed to provide deferred credit for additional equipment which TWL may purchase. No interest will be charged during the six-month period following delivery and payments will not be due until six months after delivery of the equipment (TWL Ex.

---

[13] The determination is made by a rating service based upon the number of television households in the country, the number of diaries being kept there for rating purposes, and the audience market share achieved by the station.

8, pp. 7–8, Attachment B, p. 1; Tr. 543–44, 735). In a Hearing Designation Order, BC 000634, released April 30, 1981, a financial issue was specified against Quality Media, an applicant in that proceeding, since its balance sheet reflected net liquid assets of only $13,262. The issue was never resolved because Quality Media dismissed its application. William Kitchen, president of Quality Media, explained that the analysis in that designation order was based on an outdated balance sheet and that Quality Media's financial condition has improved appreciably, to the point where the company is now quite profitable. Kitchen also testified that his costs of acquiring the equipment which he furnishes to TWL are substantially less than he charges them, so that Quality Media is not bearing as much of a cost as it appears (Tr. 581–82, 595–98, 602).

Abuse of Process Issues Against TWL

33. The presiding officer specified three factual issues against TWL which raised the general question whether the applicant had abused the processes of the Commission (see FCC 81M-3432, released October 30, 1981). The issues were based on allegations that TWL had made misstatements regarding its equipment on hand (issue 4, *supra*); had failed to fully comply with an order issued during the discovery phase of the proceeding (issue 5, *supra*); and had failed to comply with representations made to the presiding officer relating to a settlement of the case (issue 6, *supra*).

34. *Equipment Misstatements*. In an amendment to its application filed December 31, 1979, TWL represented at page 2, Section III, FCC Form 301, that all of its antenna system, its RF generating equipment, its monitoring and test equipment and its program origination equipment were "on hand." It also indicated that the antenna and transmission lines are presently in place on the tower the applicant proposes to lease. Accordingly, no funds were provided for any of these items on the form (GACO Ex. 9, p. 3; Tr. 885).

35. Thereafter, in an affidavit filed December 1, 1980 (filed with TWL's opposition to a petition to enlarge issues), John A. Graves again averred that "[w]ith the exception of the transmission line and antenna, which are already mounted on the tower facility T.W.L. intends to lease, T.W.L. has on hand the necessary equipment to begin operation of a television station" (GACO Ex. 10, p. 3). It was not until TWL's exhibit exchange on June 8, 1981, which was accompanied by an amendment to its financial proposal, that TWL made the following acknowledgment (TWL Ex. 8, pp. 1–2):[14]

> Previously, TWL had been advised that with the exception of the transmission line and antenna already mounted on the tower TWL proposes to rent, all necessary equipment to build the proposed station was on hand. In preparing for

---

[14] The amendment was accepted in an order (FCC 81M-3412, released October 30, 1981).

> this hearing, TWL has learned that some additional equipment should be obtained. Based on materials filed with pleadings of other parties to this proceeding, TWL has determined that it can no longer presume that the transmission line and antenna mounted on the tower are in operable condition. . .

Later, TWL identified additional equipment which it had not previously provided for (TWL Ex. 8, pp. 1–3, Attachment B).

36. Evidence as to the existence and state of TWL's equipment "on hand" has been described in the discussion of TWL's financial qualifications, *supra*, and will also be referred to in connection with the inspection issue, *infra*. This material is incorporated herein by reference.

37. *Inspection Issue*. In an order (FCC 81M-1342, released May 4, 1981), the presiding officer granted a motion to permit inspection and photographing of equipment which was allegedly "on hand" for use by TWL in the construction and operation of its proposed station. GACO and HBI contend that TWL, in violation of this order, prevented them from conducting any meaningful inspection of the equipment.

38. The inspection took place on June 8, 1981. It was conducted primarily by William B. Carr, a registered engineer, who was accompanied by principals of GACO, CCSI and HBI (all of whom were then applicants) and their counsel. No TWL principal was present; however, Robert Blazier, who had assisted in the preparation of TWL's application, met the group and explained that he had been instructed to unlock the doors to a trailer and a warehouse where the equipment was stored.

39. The trailer contained a transmitter, other RF generating equipment and certain studio equipment. The interior of the trailer was dark and the equipment was stacked in a haphazard manner. Access to it was difficult or in some instances impossible since there was only one entrance and little or no room to move about inside the trailer. Blazier's instructions were simply to unlock the trailer (Tr. 294–95), and no attempt was made to unload it so that individual pieces of equipment could be examined (GACO Ex. 11). Carr inspected the equipment as best he could under the circumstances. He testified that it was in "extremely poor" condition, with "parts broken off, components damaged, tube sockets broken . . ." (Tr. 823). He was unable to obtain the serial number of the transmitter, but observed "evidence of broken meters, broken pieces, this type of thing" (Tr. 824). He testified that on the whole the equipment could not be fully inspected or inventoried under the conditions that existed (GACO Ex. 11). The equipment in the warehouse was more accessible, but on the basis of the entire inspection Carr concluded that there was not enough equipment to construct and operate a television station and that he could not tell whether the equipment he did observe would actually work (*id.*).

40. *The Settlement Agreement*. The hearing in this case began on June 15, 1981. On the following day the parties announced that they had reached an agreement settling the case. TWL and HBI were to dismiss their applications with GACO and CCSI being merged into a single entity which would become the sole applicant for the channel. The hearing was therefore continued without date. In due course, HBI, CCSI and GACO filed a joint motion for approval of the settlement agreement. The motion was granted, the HBI and CCSI applications were dismissed and the GACO application was amended to reflect the GACO/CCSI merger (FCC 81M-2654, released August 27, 1981). During this period TWL remained silent. The presiding officer therefore scheduled a conference at which time (September 25, 1981) TWL stated that the case could be settled only if GACO accepted a counter offer calling for a substantially greater payment to TWL, something GACO refused to do. In view of the disruption and delay created by TWL's conduct, an inquiry into the entire matter was conducted.

41. TWL president John Graves testified that on the morning of June 16, 1981 (the day testimony in the case was to commence) he instructed his counsel to dismiss TWL's application without regard for any reimbursement. He explained that his wife was ill and that he had become tired of pursuing the application. Counsel advised him to seek a settlement, whereby TWL would dismiss its application in return for reimbursement of certain of its expenses (TWL Ex. 9, p. 2; Tr. 467). This conversation took place on the telephone since Graves was still in Houma. Later that morning counsel informed him that a settlement agreement had been reached. Graves understood that under the agreement he would receive $3,000 when the agreement was approved and $17,000 if and when the merged GACO/CCSI application was granted. He agreed to the terms and testified that at this point he believed the case "was over" (TWL Ex. 9, p. 3; Tr. 471). So, too, did the presiding officer when later that day announcement of the agreement was made on the record (Tr. 228–30).

42. In mid-July Graves received a final version of the agreement for his signature and found that the $3,000 and $17,000 had been consolidated, with payment of the entire sum to be made upon a grant to the merged applicant.[15] Graves testified that he feared he would receive nothing, since there was no assurance the merged applicant would be granted, there being an outstanding issue against one of the parties to the merger (TWL Ex. 9, p. 4).[16] For this reason,

---

[15] This document had been approved by Graves' counsel, who requested that Graves sign it.

[16] A cross-interest issue had been designated against CCSI (FCC 81M-467, released February 19, 1981). This was later resolved by summary decision (FCC 81M-2653, released August 27, 1981).

according to his testimony, he refused to sign the agreement. However, in late July Graves contacted Seymour Smith, a CCSI principal, regarding the settlement terms (TWL Ex. 9, pp. 4–5). According to Smith, Graves advised him that he had received a bill for $25,000 from his attorneys which was $5,000 more than he would receive under the settlement agreement (Tr. 954). He also told Smith he could not understand why he was getting $20,000 while HBI was getting $75,000 (Tr. 954). Graves then told Smith he thought he was to get $20,000 in addition to his expenses (Tr. 955). The problem, as Graves related it to Smith, was not the terms of payment but rather that the total figure of $20,000 was inadequate (Tr. 955–56). Smith testified that CCSI has at all times been willing to pay the agreed upon $20,000; but this was apparently no longer agreeable to Graves, even though his stated fear that the merged applicant would not be granted was largely obviated in August, when the issue which he said had concerned him was favorably resolved through summary decision (see n. 16, *supra*).

43. During this period TWL never advised the presiding officer that it did not intend to live up to the settlement agreement announced on June 16, and that the representations regarding the voluntary dismissal of its application would be ignored. In an order released August 27, 1981 (FCC 81M-2654, n. 2), a deadline for the filing of settlement papers was set, and when no response was made by TWL a conference was held at which TWL finally indicated its intention to pursue the application.

Comparative Issue

44. *GACO*. The applicant has the following corporate structure:

Communications Corporation of the South, Inc. (CCSI)	1,000 shares (50%)
Seymour Smith	Director, voting the shares of CCSI
Douglas W. Black	Director
Iddo K. Corkern	President, Director, 490 shares (24.5%)
James A. Gatewood	Vice President, Director, 500 shares (25%)
Marion W. Corkern	Secretary, Treasurer, 10 shares (0.5%)

45. CCSI has the following corporate structure:

The Vanderbilt corporation	10,000 shares (100%)
Seymour Smith	President, Director, votes the shares of The Vanderbilt Corporation
Florence Anne Smith	Director
David J. Smith	Vice President, Assistant Secretary, Director
Barbara (Smith) Hirst	Director

Douglas W. Black	Executive Vice President, Secretary, Treasurer

46. The Vanderbilt Corporation has the following corporate structure:

Seymour Smith	President, Director, 22,700 shares (74.4%)
Seymour Smith, Trustee of the David Smith Trust	3,000 shares (9.8%)
Seymour Smith, Trustee of the Barbara Smith Trust	3,000 shares (9.8%)
Florence Anne Smith	Director, 1,800 shares (5.9%)
David J. Smith	Vice President, Assistant Secretary, Director
Barbara (Smith) Hirst	Director
Douglas W. Black	Executive Vice President, Secretary, Treasurer

47. Seymour Smith and Florence Anne Smith are husband and wife. David Smith and Barbara (Smith) Hirst are their children. Smith distributed the ownership to his family as shown for estate purposes. Iddo K. Corkern and Marion W. Corkern are husband and wife. James A. Gatewood is the nephew of Iddo K. Corkern.

48. CCSI owns 80% of the stock of Radio Vanderbilt, Inc., licensee of WWIW, a 1 kW-D, 250 W-N station in New Orleans, Louisiana. James A. Gatewood owns 98% of the stock of GACO Broadcasting Corporation, licensee of WFCG, Franklinton, Louisiana, a 1 kW-D station.[17] GACO and its principals have no other ownership interests in media of mass communication.

49. Iddo K. Corkern will serve as technical director of the proposed station on a full-time basis devoting at least 40 hours per week to station operations. James A. Gatewood will serve as sales manager of the proposed station on a full-time basis devoting at least 40 hours per week to station operations. Seymour Smith will serve as general manager of the proposed station on a full-time basis devoting at least 40 hours per week to station operations. As indicated in the above tables, Corkern is a 24.5% shareholder in GACO; Gatewood owns 25%; and Smith, who controls The Vanderbilt Corporation, will vote the 50% interest in GACO which is held by Vanderbilt's subsidiary, CCSI.

50. None of these individuals is a resident of the Houma area. However, they have extensive broadcast experience. Seymour Smith served as principal owner, president and full-time general manager of WGNO-TV, Channel 26, New Orleans, Louisiana, from 1972 to August 21, 1978. Since then he has been president of the licensee of

---

[17] New Orleans is about 50 miles from Houma, Franklinton about 97.

WWIW. Iddo K. Corkern served for 25 years as assistant chief engineer and later as chief engineer at WBRZ-TV, Baton Rouge, Louisiana. From 1967–1980 he was also an officer, director and principal of standard broadcast station WFCG, Franklinton, Louisiana. He was involved in part-time sales, on-air work and news reporting at the station. James A. Gatewood became program director of WHXY (now WBOX) in Bogalusa, Louisiana in 1953. In 1955 he joined the engineering department of WBRZ-TV in Baton Rouge where he worked until 1966 in engineering and sales. In 1966 he and Corkern formed GACO Broadcasting Corporation and constructed standard broadcast station WFCG, Franklinton. He is president, general manager and principal owner of the station. He also serves as sales manager and chief engineer.

51. *TWL*. Formed in 1977, TWL is a nonprofit, nonstock corporation organized under the laws of Louisiana. From the time its application was filed in June 1979, TWL's board of directors has consisted of John Arthur Graves, Janis Armstrong Graves and Purvis Glen Nash. Graves is president, Mrs. Graves is vice president and Nash is secretary-treasurer of the corporation. All three propose to work at TWL's station on a full-time basis, Graves as general manager, Mrs. Graves as program director and Nash as sales and news director.

52. Nash's commitment to the station is somewhat conditional. He presently operates a pharmacy in Jonesboro, Louisiana. If TWL is awarded the construction permit, he intends either to sell the pharmacy or hire a pharmacist-manager to replace him. If neither of these can be accomplished, a situation he does not anticipate, Nash will reduce his full-time commitment to the station, but in no event would he work there less than 20 hours per week (TWL Ex. 4, p. 2; Tr. 682).

53. In 1973 Graves and his wife formed and began operation of an independent nondenominational worship center and evangelistic outreach association in Monroe, Louisiana. The association grew to include a state-licensed day care center and a youth rehabilitation house. In 1976 the association was incorporated as Evangel Temple of Monroe, Inc. Graves served as president, a position he still occupies although the corporation is presently inactive. He resigned as pastor-general manager of Evangel Temple in the summer of 1980 and moved to Houma. As time permits, he continues to hold meetings and serve as a guest lecturer in various places.

54. In addition to extensive involvement with TWL, Mrs. Graves has taken two broadcast courses at Nicholls State University, "Television Production" and "Television Broadcasting Workshop." Additionally, in the fall of 1976 she co-hosted a daily radio talk show aired on station KJOE-FM, Shreveport, Louisiana. In the early 1970's she made appearances as a vocal artist on station KNOE-TV,

Monroe, Louisiana. She has also made numerous appearances on radio programs as a vocal artist and guest speaker.

55. Purvis Glen Nash is a registered pharmacist who in 1975 became the owner of a pharmacy in Jonesboro where he now resides. He intends to move to Houma if TWL's application is granted.

Ultimate Findings and Conclusions

Issue 1 - TWL's Religious Program Policy

1. TWL proposes a generalized program format which, among other things, will include religious broadcasts. TWL has represented that it would make time available to religious groups which sought it and would give no preference to any group in offering free time or in rates charged for paid time. TWL plans to air one hour of religious programming on Sunday for which no charge would be made. The time would be allocated on a rotating basis among all churches in the area which wish to use the station. There is no persuasive evidence that these representations would not be carried out if TWL were to receive a grant. It is therefore concluded that the TWL proposal complies with Commission policy with respect to the presentation of religious broadcasts, i.e., that a "fair break" will be afforded to those who do not share the same religious precepts as the applicant. *Queen City Broadcasting, Inc.*, 69 F.C.C. 2d 1775, 1778 (1978); *KIRO, Inc.*, 58 F.C.C. 2d 86, 89 (1976); *K.C.O.D. Broadcasting Corp.*, 11 F.C.C. 2d 349 (Rev. Bd. 1968).

Issue 2 - TWL's Studio Location

2. Section 73.613 requires a television station to maintain a main studio within its community of license, absent Commission permission to locate elsewhere. The rule "is intended as one means of assuring that the needs and interests of the residents of [the] community [of license] are met and that the station serves as an outlet for local self-expression." *Arizona Communications Corp.*, 25 F.C.C. 2d 837, 839 (1970), *recon. denied* 27 F.C.C. 2d 283 (1971). The Commission has stated that "the main studio rules . . . are intended to make broadcast stations readily accessible to the people in the communities which they are primarily licensed to serve . . . ." *FM-TV Main Studio Moves*, 27 F.C.C. 2d 851, 852 (1971).

3. TWL proposes to locate its studio on a main highway little more than a mile outside the city limits of Houma and four or five miles from the downtown area. The building itself was formerly used by KHMA-TV during its brief period of operation in the early 1970's. Driving time from the downtown area is about 10 minutes and there is an ample parking area at the site. There is no mass transportation system in Houma so access to this or any other site would be by motor vehicle unless it were within walking distance. In the circumstances TWL has demonstrated that operation from its

proposed site would be consistent with the public interest. See *Jersey Cape Broadcasting Corp.*, 85 F.C.C. 2d 654, 661 (1981).

Issue 3 - TWL's Financial Qualifications

4. The findings demonstrate that TWL has available to it $179,200 to meet its costs of construction and first three months of operation. Its cash in the amount of $130,000 is on deposit, and its equipment supplier (Quality Media Corporation) stated that it would extend deferred credit to TWL in the amount of $49,200. This is sufficient to meet TWL's estimates for construction and operating costs. These estimates, however, are based on a number of unwarranted assumptions and are consequently grossly understated.

5. First of all, the cost of obtaining the proposed transmitter site has not been included in TWL's estimate. It proposes to use the tower and transmitter site formerly used by station KHMA-TV and has budgeted $2,000 per month for rent. TWL has never discussed this arrangement with the owner of the land, The Vanderbilt Corporation, and the president of the corporation stated that the property would not be rented except to GACO, an applicant in which Vanderbilt holds an interest. If that application is denied, the site would be made available to TWL but only through a purchase of the property. A sale price of $250,000 was mentioned, but TWL has not demonstrated capability to meet even the $100,000 which the present owner paid for the site some years ago. Nor has TWL made any contingent showing as to its ability to obtain another site. See *Belo Broadcasting Corp.*, 88 F.C.C. 2d 922, 927, n. 27 (1981).

6. TWL's allocated cost for film and tape programming is approximately $115 per day, a figure which apparently assumes Houma would be recognized as a separate market. The record convincingly establishes that Houma is within the New Orleans ADI, that it is unlikely that Houma will be recognized as a separate market, and that in any event this could not come about until the station had been on the air for a year or more. Without such status its program costs would be about three times the estimated figure and would in the words of TWL's own witness be prohibitive (Findings, paras. 30–31). Additionally, the findings demonstrate that TWL failed to make provision for such costs as advance payments for film suppliers, materials and supplies to produce local programming, news gathering costs, etc. An expert witness, Horace W. Gross, estimated that in view of understatements and omissions in TWL's program budget, its total operating costs for the first quarter would be about $50,000 more than had been allocated. The testimony on this matter is detailed and explicit and is in the presiding officer's judgment thoroughly persuasive.

7. The findings also demonstrate that TWL's estimate of $35,000 to make its proposed antenna system operable is also grossly inadequate. TWL relied for its estimate on an on-site visit in 1977 by

its equipment supplier, who initially indicated that the tower and antenna system were adequate without any additional expenditure of funds. Thereafter, based upon allegations made by other parties in this proceeding, TWL revised its estimate to $35,000. The expert testimony of Richard L. Biby, a consulting radio engineer, belies this estimate. Biby analyzed reports of on-site investigations by a firm which specializes in structural analysis of towers and by a firm which specializes in analyzing antenna radiating capability for television broadcast signals. Biby's analysis of the experts' reports was documented and indicated that the minimum rehabilitation costs to bring the tower and antenna up to insurance standards would be $100,000 at 1980 prices. Biby also noted that the reports on which his estimates were based were four years old and that no maintenance took place in the interim period. Thus, the degradation may even be greater than that reflected. The presiding officer found Biby's analysis more complete and convincing than the showing made by TWL in support of its estimate and therefore concludes that his estimate of $100,000 is a more accurate reflection of the true cost of making TWL's proposed antenna system operable.

8. TWL had the burden of demonstrating that it had sufficient equipment "on hand" or available to it within its estimated costs to construct and operate its proposed station. To meet its burden, TWL relied principally upon the testimony of William J. Kitchen, the president of its equipment supplier, and Robert D. Blazier, coordinator of instructional television at Nicholls State University. Kitchen testified that he had provided enough equipment to construct and operate a functional station. He also stated that the equipment which he provided was operable at the time he furnished it to TWL.[18] However, he admitted that he had not inspected the equipment since it was transported to Houma and stored in a trailer truck and warehouse. He also admitted that he never assembled the components of the system to see if they functioned together. Similarly, Blazier admitted that he had not inspected the equipment since it was transported (or at any prior time), but had merely observed some of it and relied upon representations that it was all available and operable or to be provided. He did not test any of the components and admitted that it would not be possible to tell from visual inspection that the equipment worked or that it would function when assembled together.

9. William B. Carr, a registered professional engineer, conducted an on-site inspection of TWL's equipment at the facilities where it

---

[18] Kitchen also testified that he would replace any equipment which was not in operating condition at the time it was provided to TWL. However, he did not extend that assurance to equipment which was damaged subsequent to its acquisition by TWL. In light of the manner of storage of the equipment, a substantial question is raised as to how much it will cost TWL to replace the equipment which was damaged in transit or storage.

was stored. He had an inventory list of all the equipment which TWL purportedly had available; and based on his investigation he concluded that much of the itemized equipment was not to be found. For example, he could not find evidence of a diplexer which costs between $30,000–$40,000 or video monitoring equipment. He also discovered that much of the equipment was in damaged condition although he could not determine whether or not the damage would impair its performance. His evaluation of the equipment proposed to be used by TWL was that it was inadequate to construct and operate the proposed station.

10. Horace W. Gross, an expert radio and TV management consultant, reviewed TWL's proposal. Based upon his analysis, he concluded that certain additional items would be needed in light of the age of the equipment. He also noted that the transmitter proposed by TWL had originally operated on Channel 10 and would require substantial modification to operate on Channel 11. The cost of new equipment to convert the transmitter was estimated at $90,000 by the equipment manufacturer.

11. Based on the foregoing, it is found that TWL failed to meet its burden of proving that it has sufficient equipment "on hand" or available to it to construct and operate the proposed station. In light of the testimony of Carr, who conducted an on-site inspection of TWL's equipment, and of Gross, who analyzed TWL's list of equipment purportedly available, it is clear that a substantial question still exists as to whether TWL has the equipment it needs and that in all likelihood significant expenditures will still be required in order to construct an operable facility.

12. To conclude, TWL had the burden of demonstrating that it was financially qualified to construct and operate its proposed station for three months. TWL demonstrated the availability of $179,200 to meet its estimated costs. However, whereas TWL estimated its costs at $177,174, the record demonstrates that the actual costs will far exceed the amount shown to be available to TWL. Though it is not possible to establish a precise figure, TWL's cost of tower and transmitter site acquisition is speculative and contrary to the evidence; its estimate for tower and antenna rehabilitation is grossly understated; it has not established the availability of sufficient equipment in operational condition; and it failed to allocate sufficient funds to carry out its programming proposal. Thus it is concluded that TWL failed to establish its financial qualifications to become a permittee and that its application must therefore be denied.

Issues 4–7 - Abuse of the Commission's Processes

13. At issue here is whether TWL abused the Commission's processes through misstatements regarding equipment it proposed to utilize to construct the proposed station; failure to comply with an

order that the equipment be made available for photographing and inspection; and failure to comply with representations made to the presiding officer with regard to settlement of the case. Reduced to their essentials, the facts are these.

14. Until one week prior to the commencement of the hearing on June 15, 1981, TWL consistently represented that it had the necessary equipment (i.e., antenna system, RF generating equipment, monitoring and test equipment, program origination equipment) "on hand" to construct and begin operation of the station. Possession of such equipment in proper condition was an essential element of TWL's case since its financial proposal would otherwise be woefully inadequate, as the other applicants had contended in pretrial motions to enlarge issues. It was only after an order had been issued permitting inspection of the equipment by the other parties that TWL conceded the validity of some of the allegations which had been made against it. And even then the shortcomings, both as to the existence and the condition of some of the equipment, were significantly understated. No explanation for this conduct has been offered by TWL, which continues to insist that its representations were essentially correct.

15. As to the inspection itself, TWL's efforts to comply with the order that the equipment be made available for photographing and inspection appear to have been minimal. TWL simply sent a representative to the two sites where the equipment was stored with instructions that he unlock the storage areas. As TWL surely knew, the bulk of the equipment, nearly filling a small darkened trailer which had limited access, could not be examined in a meaningful way without being removed from the storage area,[19] something for which TWL had made no provision. Its conduct in this matter cannot be condoned; its efforts to comply with the inspection order were grudging and so insufficient that the purpose of the inspection was to a considerable extent thwarted.

16. TWL's conduct with respect to the settlement agreement is also disquieting. While it is not uncommon for settlement negotiations to break down, the consequences in this case were particularly unfortunate. The hearing had commenced and witnesses, who had traveled a considerable distance, were in the hearing room prepared to testify. When it was announced that the applicants had "reached a settlement" (Tr. 228) and its terms (including the proposed dismissal of the TWL application) were described, it was agreed that the hearing should be continued. In the circumstances all parties were clearly obliged to proceed in good faith toward effectuating the settlement. TWL failed to do so. Graves' testimony that he rejected

---

[19] It appears in fact that TWL had at one point represented that all the equipment would be consolidated in a single location and displayed in a manner that would permit a thorough inspection (Tr. 871–72, 877).

the agreement because it provided for a lump sum payment rather than two separate payments is clearly an after the fact rationalization. He never sought to have the agreement modified to conform to his original understanding, but instead began dickering for more money than he had earlier authorized counsel to accept. Moreover, his alleged fear that he would receive nothing if the merged GACO/CCSI application were not granted was rendered baseless with the issuance of an order making clear that only the continued pendency of the TWL application stood in the way of a grant.[20] There is no rational explanation for Graves' conduct in this matter except that he wanted more money for dismissing his application than he had originally agreed to accept. In other circumstances, this behavior might be overlooked but here it served to frustrate the orderly conduct of the hearing. The trial of the case was seriously disrupted, and TWL's failure to advise the presiding officer in a timely fashion of its intentions created uncertainty and further delay. When the Commission accepts representations from parties to its proceedings, it expects that good faith efforts will be made to carry them out. Graves' arbitrary refusal to abide by his prior agreement does not meet this standard. Clearly more punctilious conduct is expected of applicants for a broadcast license.

17. Of the matters discussed above, the presiding officer is reluctant to draw an adverse conclusion regarding TWL's misstatements as to its on-hand equipment. Conceivably, it believed until the eve of the hearing that the equipment was adequate, earlier allegations to the contrary by the other parties notwithstanding. In any event there is no evidence of deliberate falsification.

18. The other matters are more serious. TWL's compliance with an order directing that its equipment be made available for inspection and photographing was at best halfhearted and effectively precluded a full examination of the equipment. The representation to the presiding officer, after the hearing had begun, that TWL would dismiss its application as part of a settlement agreement that would eliminate the need for further hearings and expedite service to the public, was not carried out. TWL's principal John Graves undermined the agreement by insisting on a larger monetary payment than he had originally agreed to accept. In both of these matters TWL demonstrated a cavalier disregard for the processes of the Commission which adversely affected the orderly conduct of the case. Though its behavior is perhaps not disqualifying, a serious comparative demerit is warranted.

Comparative Issue

19. In view of TWL's disqualification under the financial issue, the comparative issue will be only briefly addressed.

---

[20] See FCC 81M-2654, released August 27, 1981.

20. TWL is entitled to a preference under the ownership diversification criterion since none of the principals holds an interest in any medium of mass communication, whereas one of GACO's shareholders owns a controlling interest in a Class IV AM station in New Orleans and another owns a 1 kW daytime-only station in Franklinton, Louisiana. Both applicants propose to integrate their owners[21] into the day-to-day operation of the station on a full-time basis.[22] However, TWL's proposal is less than unconditional, since it depends on the ability of one of its three directors to sell an existing business or hire a replacement for himself as pharmacist-manager of the enterprise. If neither of these plans can be accomplished, his participation in station affairs would be on a part-time basis. In view of this element of uncertainty the presiding officer has concluded that from a quantitative standpoint, GACO's proposal is to be preferred. Qualitatively GACO brings vastly more broadcast experience while TWL would provide local ownership, though none of its principals is a long-time resident of the area. TWL's proposal would also be enhanced by the presence of a female, Mrs. Graves, in station management. On balance, however, a preference will be accorded GACO because of the unequivocal nature of its representation that individuals holding a 99.5% interest would be integrated on a full-time basis, whereas some doubt exists as to whether TWL's full-time integration would be 100% or 66 $^{2}/_{3}$%. In the circumstances, the negative conclusions reached on two of the abuse of process issues against TWL assume particular significance. Though the comparative issue would otherwise be a close one, in view of the comparative demerits assessed for abuse of process the presiding officer concludes that if the decision were to be based on comparative grounds GACO has shown itself to be the better qualified applicant.

Accordingly, IT IS ORDERED that unless an appeal from this Initial Decision is taken by a party or it is reviewed by the Commission on its own motion in accordance with Section 1.276 of the rules, the application of The Way of Life Television Network, Inc. IS DENIED and the application of GACO Communications Corporation IS GRANTED subject to the condition[23] that prior to commencement of its operation on Channel 11 Seymour Smith and David

---

[21] TWL is a nonstock corporation. For purposes of this comparison its three directors will be equated with shareholders.

[22] GACO's integration is actually 99.5%. In arriving at this figure, the presiding officer has credited Seymour Smith with a 50% ownership interest. While his beneficial interest is somewhat less, he will vote the 50% interest held by The Vanderbilt Corporation.

[23] See FCC 81M-2653, released August 27, 1981.

Smith shall terminate their employment agreements with WGNO(TV), New Orleans, Louisiana.[24]

FEDERAL COMMUNICATIONS COMMISSION
JOHN H. CONLIN, *Administrative Law Judge*

---

[24] In the event exceptions are not filed *within 30 days after the release of this Initial Decision*, and the Commission does not review the case on its own motion, this Initial Decision shall become effective 50 days after its public release pursuant to Section 1.276(d).

Broadcast Experience
Diversification, of Control of Mass Media
Issue, Rule 1.65
Minority Ownership, Factors in Comparative Proceeding
Misrepresentation, Character Qualifications
Programming Proposal

Review Board Decision modified. Diversification and minority ownership entitled to less significance in an interim proceeding whereas broadcast experience has more significance than in a permanent licensing proceeding. Petition to add misrepresentation and proposed programming issues based on allegations that program plans have changed denied. Failure to report death of principal does not warrant Section 1.65 issue.

In re Applications of GLOBAL BROADCASTING GROUP, INC.	BC Docket No. 82–531 File No. BPIH-820409AA
NEWARK RADIO BROADCASTERS ASSOCIATION	BC Docket No. 82–533 File No. BPIH-820429AJ
For Interim Authority to Operate the Facilities of Former Station WHBI(FM) Newark, New Jersey	

MEMORANDUM OPINION AND ORDER

(Adopted: June 29, 1983; Released: July 8, 1983)

BY THE COMMISSION: COMMISSIONER QUELLO CONCURRING IN THE RESULT; COMMISSIONER FOGARTY NOT PARTICIPATING; COMMISSIONERS DAWSON AND RIVERA DISSENTING.

1. Now before us are: (a) an application for review of a Review Board Decision (FCC 82R-66, released November 19, 1982), filed

December 17, 1982, and Notice of Appeal, filed November 29, 1982, by Newark Radio Broadcasters Association;[1] (b) a petition for special relief, filed February 28, 1983, by Global Broadcasting Group, Inc.;[2] (c) a motion to reopen the record and to enlarge issues, filed January 12, 1983, by Newark Radio Broadcasters Association;[3] and (d) a supplement to motion to reopen the record, filed February 7, 1983, by Newark Radio Broadcasters Association.[4]

2. *Motion to Enlarge Issues*. The Review Board refused to award any applicant in this proceeding a comparative preference for proposed programming because all of the applicants proposed to continue the multi-ethnic and multi-lingual format of former Station WHBI and no showing of substantial and material differences had been made. Relying on an interview with Global's vice president Raul Alarcon which was reported in *Billboard* magazine, Newark maintains that Global intends to adopt a Spanish language, rather than a multi-ethnic/multi-lingual, format. Newark submits that *George E. Cameron, Jr. Communications*, 71 FCC 2d 460, 465 (1979), requires the addition of a proposed programming issue to inquire into the relative need for the two formats. Since Global previously represented to the Commission[5] that it would follow the multi-lingual format, Newark also seeks the addition of a misrepresentation and/or lack of candor issue against Global.[6]

3. We will deny Newark's motion to enlarge issues. We find that Newark's allegations concerning Global's proposed programming are not supported by the requisite specificity to warrant the addition of an issue under Section 1.229 of the Commission's Rules.[7] The only

---

[1] Global Broadcasting Group, Inc. filed an opposition on January 3, 1983, and Newark Radio Broadcasters Association filed a reply on January 13, 1983.

[2] Newark Radio Broadcasters Association filed an opposition on March 7, 1983 and Global Broadcasting Group, Inc. filed a reply on March 21, 1983. In its petition Global sought permission to begin immediately operating the facilities of Station WHBI(FM). In view of our action herein we will dismiss the petition for special relief as moot.

[3] Global Broadcasting Group, Inc. filed an opposition on January 26, 1983 and Newark Radio Broadcasters Association filed a reply on February 2, 1983.

[4] Global Broadcasting Group, Inc. filed an opposition on February 24, 1983, and Newark Radio Broadcasters Association filed a reply on March 3, 1983.

[5] Global's application, a comparative showing filed with the Board, and oral argument before the Board indicate that Global would maintain the multi-lingual format.

[6] Newark relies upon *Fox River Broadcasting Inc.*, 88 FCC 2d 1132, 1136 (Rev. Bd. 1982)

[7] Section 1.229 of our rules specifies: "Such motions, oppositions thereto, and replies to oppositions shall contain specific allegations of fact sufficient to support the action requested. Such allegations of fact, except for those of which official notice may be taken, shall be supported by affidavits of a person or persons having personal knowledge thereof."

support for Newark's allegations is a magazine article which is clearly hearsay.[8] Moreover, the only statement attributed to Global principal Raul Alarcon in the article simply indicates that Global will honor the station's program commitments, and thus does not contradict Global's previous representations to the Commission. In its opposition, Global denies that it intends to change its proposed programming format. Subsequent affidavits from Raul Alarcon, Jr., Emil Antonoff, and Guy LeBow confirm that Global intends to maintain the current multi-lingual/multi-ethnic format of Station WHBI(FM).[9] As Global asserts, a greater emphasis on hispanic programming is not inherently inconsistent with the proposed multi-lingual format.[10] In view of Global's uncontroverted assurance that its program plans have not changed, further inquiry into this matter would serve no useful purpose.

4. *Supplemental Motion to Enlarge Issues.* Newark also seeks a Section 1.65 issue against Global for its failure to report the December 26, 1982 death of Global principal Juan Cossio.

5. We will not add a Section 1.65 against Global. Section 1.65 of the Commission's Rules requires applicants to timely report any change in the information furnished on their applications. Thus, Global has technically violated Section 1.65 by not reporting the death of Juan Cossio.[11] However, a Section 1.65 issue is not warranted since the unreported change could have no bearing on Global's basic and/or comparative qualifications. There does not appear to have been any intent to conceal this information from the Commission and no pattern of reporting violations has been established.[12] [13]

---

[8] *LeFlore Broadcasting Co.*, 48 FCC 2d 1199, 1200 (Rev. Bd 1974).

[9] The affidavits were executed on February 18, 1983, February 9, 1983, and February 18, 1983, respectively, and were attached to Global's February 28, 1983, Petition for Special Relief.

[10] Attached to Global's Opposition is an affidavit from the reporter who wrote the article in *Billboard*. It states that the reporter has no reason to believe, and did not intend to indicate, that Global is not committed to the proposed multi-lingual format.

[11] Juan Cossio was a 15% owner of Alarcon Hernandez & Cossio Assoc., and became a nonvoting shareholder of Global when the parties merged. By the terms of the merger agreement Cossio received one share of stock in exchange for services to be rendered. *See* Joint Request for Approval of Agreement, filed October 12, 1982, by Global Broadcasting Group, Balkan Echo, and Alarcon, Hernandez & Cossio Assoc.

[12] *Gainesville Media, Inc.*, 59 FCC 2d 382 (Rev. Bd. 1976); *United Broadcasting Co.*, 58 FCC 2d 1346, 1360–61 (Rev. Bd. 1976); *Post-Newsweek Stations*, 52 FCC 2d 572 (Rev. Bd. 1975); *Erwin O'Conner*, 51 FCC 2d 930 (Rev. Bd. 1975); *Western Connecticut Broadcasting Co.*, 47 FCC 2d 142 (Rev. Bd. 1974); *Lexington County Broadcasters Inc.*, 40 FCC 2d 694 (Rev. Bd. 1973).

[13] We will not, as Newark requests in its Reply, add a financial issue against Global. Newark has not submitted its request for an additional issue in the form of a motion to enlarge issues, and we do not entertain requests for new issues which are contained in responsive pleadings. *See* Section 1.44 of the Commission's Rules;

6. *Application for Review.* In a decision, released November 19, 1982, the Review Board found all three applicants fully qualified but preferred Global on comparative grounds. It awarded Global a slight preference on diversification[14] and concluded that Global and Newark were virtually equal on integration. In so concluding the Board found that Global's advantage for superior broadcast experience and local residence[15] balances out Newark's plus for minority participation.[16] Newark seeks review of the Board's determination that Newark and Global are virtually equal on integration. It maintains that the Board's Decision is inconsistent with our recent decision in *Waters Broadcasting Corp.*[17] and that its conclusion that Global is superior on local residence and broadcast experience is not supported by substantial evidence on the record.[18]

7. We substantially agree with the findings and conclusions of the Board, and they are affirmed except as they are modified herein. In determining that Global was superior to Newark on local residence and broadcast experience, the Board credited Global with 100% local residence and Newark with 60% local residence. It appears, however, that Oyster Bay Cove, the residence of Emil Antonoff,[19] is outside the service area of Station WHBI.[20] Thus,

---

Milam & Lansman, 4 RR 2d 463 (Rev. Bd. 1964). Furthermore, Juan Cossio received one share of nonvoting stock in Global in exchange for services to be rendered. Thus, his death raises no question as to the financial qualifications of Global and we will not add the issue on our own motion.

[14] One of Newark's five trustees, Joseph Bahr, is the sole proprietor of Station WVIS(FM), Frederiksted, St. Croix, Virgin Islands. Decision, para. 14.

[15] All three of Global's principals were found to have extensive broadcast experience whereas only one of Newark's principals has significant broadcast experience. Decision, para. 22. The Board found that three of the five Newark principals reside in the service area whereas all three of Global's principals live in the service area. Decision, para. 21.

[16] Newark is 60% minority controlled whereas Global is one-third minority owned. Decision paras. 15 and 17.

[17] 91 FCC 2d 1260 (1982).

[18] Newark also maintains that Global is financially unqualified because it failed to certify that it was financially qualified when it amended its application on October 22, 1982 to eliminate the participation of certain of Global's non-voting shareholders which had had financial responsibility for Global. However, Global's October 12, 1982 amendment which reported the formation of Global Broadcasting Group, Inc. certified that it was financially qualified. Global was not required to recertify this matter in the October 22 amendment changing the status of the corporation to nonprofit.

[19] It is alleged by Global that Antonoff has relocated to New York City, which is within the service area. We attach little weight to residence which is not of several years duration. *See Policy Statement on Comparative Broadcast Hearings*, 1 FCC 2d 393, 396 (1965). Furthermore, the two principals of Newark who presently do not reside in the service area propose to move to the city of Newark. Board Decision, para. 21.

[20] Global has submitted no documentation to support its contention that Oyster Bay Cove is within the service area. We take official notice of the most recent contour map contained in the Commission's engineering file for Station WHBI(FM). It is dated April 1979 and shows that Oyster Bay Cove is outside the station's 60 dbu (1

Global is entitled to only 66 2/3% local residence credit and the applicants are virtually equal on this factor. Nevertheless, we believe that Global is entitled to a clear preference on integration. All three of Global's principals have significant broadcast experience whereas only one of Newark's principals has had any prior broadcast experience.[21] Ordinarily we would attribute little significance to Global's advantage on this factor since broadcast experience confers only an initial advantage.[22] However, broadcast experience has added significance in an interim proceeding where an applicant seeks to take over an ongoing operation. In view of the limited duration of an interim operation, we find that an experienced broadcaster is at a decided advantage because it is difficult for interim operators to attract experienced, competent staff to run the station. Consequently, it is especially important that the interim operator have broadcast experience. Here the cumulative experience of Messrs. Alarcon, Antonoff and LeBow is superior to that of Newark's principals. Moreover, the broadcast experience of Global's three principals is more closely associated with the type of operation presently in place at Station WHBI(FM) and which both applicants propose to continue. Given the importance of broadcast experience where an interim operator is being selected, Global's advantage in this area outweighs Newark's advantage for minority ownership. Accordingly, we will award Global a clear preference on integration. Although we have applied standard comparative criteria in this proceeding, we cannot ignore the fact that we are determining which of the applicants becomes the interim operator of an already operating station. Under these circumstances the weight to be given to the various comparative factors varies from the ordinary situation involving applicants for permanent facilities.

8. In addition to a clear preference on integration, Global is entitled to a slight preference on diversification, as the Board found, because Newark principal Joseph Bahr is the sole proprietor of

---

mV/m) contour. *See Midwest Television, Inc.* v. *FCC*, 18 RR 2d 2001 (D.C. Cir. 1970); *International Radio, Inc.*, 1 RR 2d 701 (1963).

[21] The Review Board found that Guy LeBow has had more than thirty-five years experience in radio and television broadcasting, programming and management; that Emil Antonoff has been a broadcaster and producer of ethnic programming for approximately 20 years; and that Raul Alarcon is an experienced producer of hispanic oriented broadcasts. Newark claims that the findings with respect to Antonoff and Alarcon are not supported by substantial evidence because they are based on unverified pleadings and statements of counsel. We will adopt the Board's findings with respect to broadcast experience notwithstanding Newark's argument. Newark's purely procedural argument does not challenge the accuracy of these findings. Under the circumstances of this expedited proceeding, where there was not an evidentiary hearing before an Administrative Law Judge, it was appropriate for the Board to rely on uncontroverted statements made by counsel in written pleadings and during oral argument.

[22] *Policy Statement on Comparative Broadcast Hearings*, 1 FCC 2d 393, 396 (1965).

Station WVIS in Frederiksted, St. Croix, Virgin Islands whereas Global has no other media interests. Since Global is entitled to a clear preference for integration and a slight preference for diversification, we find that the grant of Global's application would better serve the public interest.

9. ACCORDINGLY, IT IS ORDERED, That the Motion to Reopen the Record and to Enlarge Issues, filed January 12, 1983, by Newark Radio Broadcasters Association IS DENIED.

10. IT IS FURTHER ORDERED, That the Supplement to Motion to Reopen the Record and to Enlarge Issues, filed February 7, 1983, by Newark Radio Broadcasters Association IS DENIED.

11. IT IS FURTHER ORDERED, That the Application for Review, filed December 17, 1982, by Newark Radio Broadcasters Association IS DENIED, that the Decision of the Review Board (FCC 82R-66, released November 19, 1982) IS SET ASIDE; that the application of Global Broadcasting Group, Inc. IS GRANTED; that the application of Newark Radio Broadcasters Association IS DENIED; and that the Petition for Special Relief, filed February 28, 1983, by Global Broadcasting Group, Inc. IS DISMISSED as moot.

DECISION

(Adopted: July 8, 1983; Released: July 13, 1983)

BOARD MEMBER BLUMENTHAL FOR THE REVIEW BOARD:

Background

1. This proceeding is back before the Board on remand from the Commission *en banc. Memorandum Opinion and Order*, FCC 83-208, released May 3, 1983 (hereinafter "*Remand Order*"). The Board, after reviewing the *Initial Decision*[1] and exceptions thereto, as well as hearing oral argument on the exceptions, certified the proceeding to the Commission on the question of the relative comparative enhancement due to 100% "integrated" applicants,[2] one of which had female ownership and one of which had minority (black) ownership. *Horne Industries, Inc.*, 91 FCC 2d 1193, 1196-97 (Rev. Bd. 1982)(hereinafter "*Certification Order*"). In its *Remand Order*, the Commission observed that "there are other issues which could have a bearing on the ultimate outcome of this proceeding" (*id.*, at para. 2),[3] and that "the Board's analysis of the [policy] questions in this proceeding is appropriate" (*id.*, at para. 3). To assist us in our analysis, we invited the parties to comment on the policy matters herein.[4]

2. In his decision, the ALJ compared all three applicants and found: (1) "Horne [Industries, Inc.] is out of it," *I.D.*, Conclusions, para. 3 (footnote omitted), that applicant already owning KARV-AM, Russellville, as well as having other media interests in the Southwest which rendered it a "clear loser" under the diversification criterion, *id.*,[5] and proposing no integration whatever, *id.*, para. 4; (2)

---

[1] FCC 82D-32, 91 FCC 2d 1198, (ALJ W. Miller)(hereinafter "*I.D.*").

[2] Integration, in the sense used here, is a term-of-art well-known to communications practitioners and denotes the level of active participation in station management by station owners. The higher the management integration level, the greater the credit within the comparative criterion of "best practicable service." *Policy Statement on Comparative Broadcast Hearings*, 1 FCC 2d 393, 395-96 (1965). *See also, e.g., Muncie Broadcasting Corp.*, 89 FCC 2d 123, 134 (applicant with 100% integration preferred over applicant with 39.86% integration), *recon. denied*, 89 FCC 2d 1331 (Rev. Bd. 1982), *review denied*, FCC 83-234, released May 19, 1983.

[3] The *Remand Order* specifically pointed to the finding of the ALJ that the minority principal of River Valley had been untruthful in his representations to the Commission. Our review of this finding is to be found *infra*, paras. 5-6.

[4] Letter of May 13, 1983 from Board Chairman Joseph A. Marino to counsel for the parties. The parties duly filed supplemental briefs and we, in turn, have duly considered them.

[5] "Diversification [of control of the mass media] is a factor of primary significance" in awarding broadcast licenses. *Policy Statement*, *supra* note 2, 1 FCC 2d at 394. A competing applicant which already owns a station in the community at issue is almost always at an insurmountable comparative disadvantage. *See, e.g., Thomas and Essie Collins*, FCC 83R-11, 53 RR 2d 219, 221 (Rev. Bd. 1983); *Hassayampa Broadcasting*, FCC 82R-70, 52 RR 2d 1059, 1061 (Rev. Bd. 1982), *review denied*, FCC 83-295, released June 28, 1983 (mem.).

River Valley deserves a "slight preference" for proposing auxiliary power, *id.*, para. 22, but that its 100% integration proposal was, in significant part, qualitatively inferior because a 15% principal had been "untruthful," had "less than a stable employment record," and had "dead-beat propensities," *id.*, para. 19;[6] and, (3) Judy K. Purtle, with a 100% integration credit enhanced by, *inter alia*, "nine solid years of quality broadcast experience . . . combined with her local residence, and her civic participation," *id.*, para. 23, was the

---

In its exceptions, Horne does not challenge its clear loss in this competition; it merely desires that the record be updated to reflect that its principal, Michael Horne, has sold his interests in "KIKZ, Seminole, Texas; KOYY(AM & FM), El Dorado, Kansas; and KWCK(AM) and KSER(FM), Searcy, Arkansas." Horne Exceptions at 2. Although recognizing that these interests were properly charged to Horne since their sale came after the deadline for comparative upgrading, *see, e.g.*, *Alexander S. Klein, Jr.*, 87 FCC 2d 423, 427 (1981)(applicant charged with media interests owned at cut off date unless filing includes unqualified representation to divest), Horne would like the record to be "corrected" so that "Michael Horne should not be faced with the task of explaining to others that a government agency has released a document which states that he is a multi station owner rather than a single station owner." Horne Exceptions at 2.

Accordingly, and except for decisional purposes in this proceeding, *Klein, supra*, the "record" hereby reflects that Michael Horne owns whatever broadcast interests shown in current Commission files, official notice taken (*see* 5 U.S.C. § 556(e)).

[6] As noted at note 3, *supra*, the issue respecting the truthfulness of a River Valley principal, Almer Jackson (15%), is addressed textually *infra* at paras. 5–6. River Valley also excepts to the ALJ's "findings" anent Jackson's "employment record," River Valley Exceptions at 33–36, his degree of interest in the application, *id.*, at 37–39, and his credit-worthiness, *id.*, at 39–40.

With respect to these "findings," River Valley complains that the ALJ demonstrated an "unfortunate disdain for Jackson," *id.*, at 33, that the ALJ conducted an "unrelenting attack against Jackson," *id.*, at 37, and it even questions "the standards of fairness and impartiality which the ALJ used in weighing and evaluating the qualifications of River Valley," *id.*

Because of the vehemence of these complaints, the Board has reviewed minutely the record and the transcript in this proceeding. We find that, apart from the "truthfulness" aspect discussed *infra*, the ALJ's "findings" regarding Almer Jackson are exaggerated, gratuitous, and mostly irrelevant under the Commission's comparative standards; they will be disregarded by the Board for decisional purposes.

On the other hand, we observe in passing that River Valley's "exceptions" to these "findings" are almost equally exaggerated and—with their intemperate language—smack sharply of protesting "too much." For example, River Valley complains that the ALJ characterized Jackson as "shiftless, a deadbeat, unreliable and untrustworthy." River Valley Exceptions at 40. However, as Purtle accurately notes in its Reply (at 15–16), these derogatory terms (other than the ALJ's acceptance of Purtle's charge that Jackson has "dead-beat propensities," *see I.D.*, Conclusions, para. 19) are used exclusively by River Valley's own counsel. And, the ALJ also made some important positive findings about Jackson, *see I.D.*, Conclusions, paras. 16–17 (finding that Jackson will honor his $15,000 debt for his stock in the applicant and his pledge to integrate 40 hours per week).

preferred applicant. In the main, and in view of the more recent developments of law and policy relating to minority/female enhancement merits discussed *infra* at paras. 7–13, we affirm the ALJ's findings and conclusions, except as modified herein, as well as the award to Purtle.

APPLICANT QUALIFICATIONS

3. River Valley fires a salvo at the ALJ's determination that Purtle is entitled to an enhancement of its integration credit for Judy Purtle's past broadcast background and her civic activities in Russellville;[7] it alleges, in fact, that Purtle misrepresented her alleged status as operations manager of radio station KCAB for a 10-month period in 1977 and that the ALJ's crediting of her experience (*see I.D.*, para. 27) was "[k]ey to the ALJ's decision. . . ."[8] In these exceptions, River Valley uses mostly spent bullets, and its allegations with respect to Judy Purtle's past broadcast experience raise no significant or material questions of fact.[9]

4. As evidence of Purtle's purported dishonesty concerning her claim to have been the operations manager for a 10-month period, River Valley relies upon the FCC Annual Employment Reports (Forms 395) filed by her employer during the relevant period (1974–1981);[10] it also invokes the testimony of three former KCAB

---

[7] *See, e.g.*, River Valley Exceptions at 4–19, 26. The 1965 *Policy Statement, supra*, affords qualitative credit for these applicant attributes, *see* 1 FCC 2d at 395–96.

[8] River Valley Exceptions at 4.

[9] For example, River Valley brings to our attention:

> Ms. Purtle demonstrated a marked inability to distinguish between titles. Thus she said the positions of 'office manager' and 'business manager' were 'basically the same.' Nor did she distinguish between an 'assistant *to* a general manager' and an 'assistant manager.' Similarly, she did not consider the position of 'Operations Manager' any more prestigious or important in this proceeding than that of 'Office Manager.'

Id., at 5 n.1 (transcript citations omitted). Its picayune carping here suggests strongly that River Valley counsel has had insufficient experience with smaller radio stations where, from time-to-time, almost any warm body might be impressed to be anything from "chief cook" to "bottle washer" and where, frequently, the only titles of internal significance are those to the tower and/or transmitter site and the studio quarters, it being nicer to own than to rent. Job titles can be useful indicators of vocational functions, *see, e.g.*, *Policy Statement*, 1 FCC 2d at 395; but *actual* functions are much more important in the long-run. *Cf. Central Texas Broadcasting Co.*, 90 FCC 2d 583, 598 (Rev. Bd. 1982)(separate statement of Bd. Mb'r Jacobs), *recon. denied*, 52 RR 2d 1383.

[10] River Valley Exceptions at 7–12. The ALJ rejected the introduction of these forms into evidence and River Valley excepts to this rejection. *Id.*, at 9. We agree completely with River Valley that the ALJ erred in refusing to admit copies of these official forms into evidence; the evidence was relevant and probative. It was also admissible. Fed. R. Evidence § 1005. However, the data in such forms is neither conclusive nor does it create any decisional presumptions. Considering

employees.[11] With respect to the Forms 395, River Valley contends that these showed no listing of a female in a management capacity. And, the testimony of three former co-employees, it contends, conflicts with Purtle's description of her KCAB functions. Purtle replies;[12]

> During the past nine years, Purtle was in charge of the station's traffic and accounting departments; supervised programming; directed the training of announcers, news people and engineers; determined what programming to air and what music to play; kept inventory checks on equipment and music; obtained music from record companies; managed in-coming and out-going mail; handled daily and weekly sales and collection reports, the public file and the political file; handled bookkeeping; prepared and reviewed program logs; posted accounts receivable and payable; sold commercial spots; prepared substantial portions of the stations' license renewal applications; and participated in the stations' ongoing ascertainment effort.

These assertions are factually unrebutted and the testimony and evidence invoked by River Valley do no more than suggest that—in describing her prior experience—Purtle was uninhibited by modesty. The record evidence does not shake Purtle's basic claims as to her KCAB functions and it adequately affirms Purtle's entitlement to the enhancement of past broadcast experience which, in any event, the Commission has described as "not so significant as local residence" and merely of "some value."[13] While Purtle's local civic activities have not been nearly as extensive as some applicants we have seen,[14] her activities combined with her long-time Russellville residence do "indicat[e] a knowledge of an interest in" the community.[15] River Valley's exceptions on that score are essentially rejected and Purtle is entitled to some enhancement, though slight, for community activities.

5. As noted previously, River Valley also excepts in the strongest terms to the ALJ's determination that Almer Jackson, a 15% owner of the applicant entity, was "untruthful" with respect to his academic achievement and that his untruthfulness, in pertinent part, rendered River Valley's integration proposal "qualitatively subaverage."[16] This disputation emanates from Jackson's represen-

---

that, as well as the other evidence and testimony in this case supporting Purtle's KCAB experience, the error here was harmless.

[11] *Id.*, at 13–17. River Valley also submits (without substantiation) that Purtle's two awards as KCAB "Employee of the Year" and her "sundry managerial titles" were the product of "a romantic relationship which started in 1973 and ended in 1976." *Id.*, at 18.

[12] Purtle Reply at 8 (*citing to* Purtle Exh. 1; Tr. 227–30; 234; 238–50; 256–70; 350–54). We have closely reviewed the transcript and record and find no genuine basis for contesting these descriptions.

[13] *See Policy Statement*, 1 FCC 2d at 396.

[14] *See I.D.*, paras. 30–31.

[15] *Policy Statement*, 1 FCC 2d at 396.

[16] *I.D.*, paras. 17–18; Conclusions, para. 19. *But see supra* note 6 (certain other ALJ "findings" re Jackson gratuitous and irrelevant).

tation that he held a Bachelor of Arts degree from Arkansas Tech University.[17] However, Purtle produced a notarized letter, under seal, from the university's Registrar, Charles Shelton, indicating that its records did not reflect a degree awarded to Jackson.[18] River Valley objected at hearing to the introduction of this document as hearsay; but the ALJ accepted it[19] and River Valley excepts to that action here.[20] The ALJ accepted the document under Fed. R. Evidence 902 (self-authentication).[21] We believe that the document was admissible as reliable under the hearsay exceptions since the likelihood of forgery here is infinitesimal, if not under Rule 902 alone than certainly in conjunction with Rule 903,[22] *see generally* D.W. Louisell & C.B. Mueller, *Federal Evidence*, §§ 543–44 (1981); *cf.* Rule 803(6), (8) and (24), but the issue is effectively moot since River Valley admits that Jackson needed further academic course credit for a B.A. degree.[23] River Valley asserts: "Jackson simply misspoke when he equated completion of degree requirements with the completion of courses in his major field of study. It is obvious they are not the same. . . ."[24]

6. River Valley argues that there is "confusion in Jackson's testimony about his college experience" and that "while Mr. Jackson could have been more careful in his written statement [River Valley Exh. 5], the critical point, his *intention* to be forthcoming, was evident from his live testimony."[25] But, the only confusion apparent here is that sought to be injected by the *post-hoc* rationalizations of counsel; indeed, it is Jackson's "live testimony" itself demanding that his further courses had "nothing whatsoever" to do with his B.A. degree (*see supra* note 17), while River Valley now concedes that

---

[17] River Valley Exh. 5, at 1; *see also* Testimony of Almer Jackson (Tr. 162):

> Q. * * * Did you in fact receive a degree from Arkansas Tech?
>
> A. Yes, I did.

Jackson further stated that he had completed "[a]ll the courses that were necessary for the degree" but that he "needed a three hour expansive [elective] course" that "had nothing whatsoever to do with my degree itself." *Id.*

[18] Purtle Exh. 5.

[19] Tr. 442–47.

[20] River Valley Exceptions at 28–29.

[21] *See* Tr. 443–446. Commission Rules require that hearings be conducted according to "the rules of evidence governing [federal] civil proceedings in matters not involving trial by jury. . . ." 47 CFR § 1.351.

[22] Fed. R. Evidence 903 provides:

> The testimony of a subscribing witness is not necessary to authenticate a writing unless required by the laws of the jurisdiction whose laws govern the validity of the writing.

[23] River Valley Exceptions at 29–30.

[24] *Id.*, at 30.

[25] *Id.* (Emphasis in original.)

further course work was a B.A. prerequisite, that underscore the patent contradiction.[26] Thus, the ALJ's finding that Jackson's claim to a B.A. degree was "false"[27] is accurate. We acknowledge that there is energy in Justice Jackson's dictum that "willingness to deceive a regulatory body may be disclosed by immaterial and useless deceptions as well as by material and persuasive ones." *FCC* v. *WOKO, Inc.*, 329 U.S. 223, 227 (1946). However, Jackson's useless fib (Almer's, that is) was, unlike the subject misstatement in *WOKO*, unrelated to any matter of FCC regulatory interest;[28] and, even in cases where a relevant misstatement is perceived, Judge Mikva has taught that although an applicant may have slipped slightly on the forthcomingness index, absolute disqualification is not mandatory.

> There is no doubt that the Commission could have evaluated the character issue [misrepresentation] in the measured forum of a comparative hearing. Demerits could have been assessed against WADECO for whatever it did wrong or did not do right.

WADECO, Inc. v. *FCC*, 628 F.2d 122, 133 (D.C. Cir. 1980) (dissenting statement) (footnote omitted). Both the Board and the Commission have given life to that juridical enjoinder, *see Fox River Broadcasting, Inc.* , 88 FCC 2d 1132 (Rev. Bd. 1982), *modified* 53 RR 2d 44, 46 (1983) (Comm'n) ("we concur in the Board's imposition of a slight comparative demerit against [applicant] based on [principal's] lack of care in making his statements. . . ."), *recon. denied*, FCC 83I–43, released April 20, 1983. We believe that - just as in *Fox River* - while Jackson's claim to a college degree "goes beyond 'exaggeration' and 'puffing' [*citing to John C. Roach* , 43 FCC 2d 685, 689 (Rev. Bd. 1973)] . . . it does not stretch far beyond that ambit." 88 FCC 2d at 1143. In view thereof, we agree with the ALJ's implicit holding that no absolute disqualification is warranted and that, to the extent that his "qualitative" penalization of River Valley[29] is coextensive with a very slight demerit, we find no decisional error.

---

[26] River Valley asserts:

> However, long before the purported registrar's letter was ever introduced, it was Jackson himself who volunteered in the context of a question as to completed degree requirements, that he 'needed' another three hour elective; *a course which he erringly said was unrelated to his degree.*

River Valley Exceptions at 29–30. (Emphasis added.)

[27] *I.D.*, para. 18.

[28] We nevertheless disagree with River Valley's argument that no censure should occur because Jackson had no apparent motive to deceive the Commission. River Valley Exceptions at 33. Motive is merely a clue in the cogitative process employed to deduce to the potential falsity of a claim or fact; it is not the end-product. Here the falsity is manifest.

[29] *I.D.* , Conclusions, para. 19.

MINORITY/FEMALE OWNERSHIP

7. In its exceptions, River Valley contends that Purtle's female ownership is not entitled to as much enhancement merit as its black ownership because case law and Commission policy have stressed minority ownership while, at best, giving female ownership only token consideration.[30] In our *Certification Order* , we acknowledged that comparative recognition of female ownership apparently germinated from Review Board dictum in *Mid-Florida Television Corp.* , 69 FCC 2d 607 (Rev. Bd. 1978), *vacated* 87 FCC 2d 203 (1981) (Comm'n). Although stating that "the need for diversity and sensitivity reflected in the structure of a broadcast station is not so pressing with respect to women as it is with respect to blacks - women have not been excluded from the mainstream of society as have black people," 69 FCC 2d at 652, the *Mid-Florida* Board nevertheless ventured:

> We hold that merit for female ownership and participation is warranted upon essentially the same basis as the merit given for black ownership and participation, but that it is a merit of lesser significance. The basic policy considerations are the same. Women are a general population group which has suffered from a discriminatory attitude in various fields of activity, and one which, partly as a consequence, has certain separate needs and interests with respect to which the inclusion of women in broadcast ownership and operation can be of value.

Id. Mid-Florida was followed by the Board in *Alexander S. Klein, Jr.* , 69 FCC 2d 2134, 2147 n.26 (Rev. Bd. 1978) ("Female ownership and participation warrants only a slight merit . . . less significant than black ownership and participation"), *aff'd* 86 FCC 2d 423 (1981),[31] and in *Radio Gaithersburg, Inc.* , 72 FCC 2d 820, 829 (Rev. Bd. 1979) ("the credit awarded for female participation is less than that accorded black participation"), *review denied* FCC 80-734, released December 4, 1980 (mem.), *aff'd per curiam without opinion* , D.C. Cir. No. 81-1028, October 19, 1981.

8. Our *Certification Order* also observed that, at about the same time the Board was deciding the foregoing cases, the Commission itself was contemplating the question of whether or not to include female ownership under certain preferential treatment devices it then was fashioning to increase minority ownership (discussed more fully *infra* , paras. 11-12), but decided:

> . . . we have not concluded that the historical and contemporary disadvantagement suffered by women is of the same order, or has the same contemporary consequences, which would justify inclusion of a majority of the nation's

---

[30] River Valley Exceptions at 19-26; Supplemental Brief at 4-10.

[31] Although, in affirming *Klein* , the Commission cursorily referenced the Board's treatment of "minority and female ownership-participation," 86 FCC 2d at 429, the Commission's decision may be read to have turned on minority ownership alone, *see id.* , at 430-432.

> population in a preferential category defined by the presence of 'minority groups.'

Minority Ownership of Broadcast Facilities , 69 FCC 2d 1591, 1593 n.9 (1978).[32] At the time our *Certification Order* was issued in this case, it seemed therefore that the thrust for preferential recognition of female ownership was fueled by "Review Board law," and so we sought affirmation and clarification from the full Commission.

9. Such affirmation was not long in coming, for shortly after the release of our November 26, 1982 *Certification Order* the Commission issued variegated statements which ratified the female preference first suggested by the *Mid-Florida* Board. Most important, perhaps, is the language of the *Remand Order* in this very case which declared that "[w]e have previously stated our commitment to fostering greater participation by minorities and women in broadcasting."[33] Presaging that declaration was the Commission's December 1, 1982 release of its decision in *Waters Broadcasting* (later cited in the *Remand Order* , *see supra* note 33) in which it held that the winning applicant was entitled "to a substantial enhancement for its 100% minority and female ownership integrated with full-time management." 91 FCC 2d at 1266. What is more, and as possibly distinguished from its decision in *Klein* , *supra* , the Commission gave isolated recognition to female ownership in *Waters* by noting that the losing applicant's "enhancement for 24% [minority] female ownership integrated with full-time management is substantially less." 91 FCC 2d at 1266. Further indications followed. Thus, on the same day the Commission issued its *Remand Order* herein, it affirmed without opinion the Board's decision in *North Carolina Radio Service, Inc.* , 52 RR 2d 993 (Rev. Bd. 1982), where the sole comparative distinction between the competing applicants was the winner's 49% (non-minority) female integrated ownership.[34] And, the Commission has lately represented to the U.S. Court of Appeals in unequivocal terms: "Female ownership is also considered an

---

[32] In that same footnote 9, however, the Commission apparently took tacit recognition of the Board's 1978 decisions in *Mid-Florida* and *Klein* , *supra* (which had been issued just several months before the Commission issued its 1978 *Minority Ownership* document, *supra*), and it indicated that it "has, in appropriate factual circumstances, recognized female involvement as contributing to potential diversity of programming and awarded merit in a comparative proceeding on that basis."

[33] *Remand Order* , at n.5, *citing* both the aforecited footnote 9 of its 1978 policy statement on *Minority Ownership* and *Waters Broadcasting Corp.* , 91 FCC 2d 1260 (1982) (hereinafter "*Waters* "), *reversing on other grounds* 88 FCC 2d 1204 (Rev. Bd. 1981), *appeal docketed sub nom* . *West Michigan Broadcasting Co.* v. *FCC* , No. 82–2513 (D.C. Cir. 1983).

[34] *See Order* , FCC 83–211, released May 3, 1983 (mem.).

enhancement factor but is entitled to lesser weight than minority ownership."[35] Finally, two Commissioners have very recently voiced their view that significant preferences ought to be accorded to female ownership *per se* under the lottery scheme authorized by Congress for awarding licenses for, *inter alia* , low power television stations;[36] and, it seems, the Commission may soon release a notice proposing for comment just such a female lottery preference.[37]

10. Hence, and as we apprehend this dynamic policy area, distaff ownership is now brightly fixed in the constellation of preferences, credits, enhancements and merits that light the distance to our ultimate destination, the comparative "Star." The weights and measures appending many of those "pulses" are outlined in the 1965 *Policy Statement, supra*, and - in the Anglo-Saxon tradition of the common law incorporated into the American system of jurisprudence - highlighted by the application of implemental policy standards in an ever-expanding galaxy of case law precedents. This adjudicatory means of developing comparative standards was expressly anticipated by the Commission:

> We pointed out at the outset that in the normal course there may be changes in the views of individual Commissioners as membership on the Commission changes or as Commissioners may come to view matters differently with the passage of time. Therefore, it may be well to emphasize that by this attempt to clarify our present policy and our views with respect to the various factors which are considered in comparative hearings, we do not intend to stultify the continuing process of reviewing our judgment on these matters. Where changes in policy are deemed appropriate they will be made, either in individual cases or in further general statements, with an explanation of the reason for the change. In this way, we hope to preserve the advantages of clear policy enunciation without sacrificing necessary flexibility and open-mindedness.

Policy Statement, supra, 1 FCC 2d at 399. The choice of enunciating public policy through either rules and policy statements - Code Law, in the Napoleonic tradition - or through case-by-case adjudication is an election which lies "primarily in the informed discretion of the administrative agency." *SEC* v. *Chenery Corp.*, 332 U.S. 194, 203 (1947). The emphasis on particular applicant attributes chosen by the Commission to be considered as positive comparative factors flows from its daily administration of the "public interest" standard of the Communications Act,[38] a lodestar that has been described as "'a supple instrument for the exercise of discretion by the expert body which Congress has charged to carry out its legislative policy.'" *FCC* v. *WNCN Listeners Guild*, 450 U.S. 582, 593 (1981), *quoting FCC* v. *Pottsville Broadcasting Co.*, 309 U.S. 134, 138 (1940). The bulwark against arbitrary or capricious shifts of policy standards is consistency with prior precedent or a reasoned explanation for departure. *See generally Columbia Broadcasting System, Inc.* v. *FCC*, 454 F.2d 1018, 1026 (D.C. Cir. 1971) (agency has a duty to provide "an opinion or analysis indicating that the standard is being changed and not ignored, and assuring that it is faithful and not indifferent to the rule of law"). Although we are unaware of any independent Commission exposition on the rationale supporting a female ownership preference, it may now be assumed more confidently that the Commission has adopted the *ratio decidendi* of the Board's *Mid-Florida* discussion set out in para. 7, *supra*. The very recent Commission pronouncements ratifying an enhancing merit for female ownership, and referenced in the paragraph immediately above, reflect a policy bent now luminously discernible. Purtle, a 100% female-owned applicant, is therefore entitled to a solid, qualitative integration enhancement.

---

[35] Brief for FCC in *West Michigan Broadcasting* (*Waters*), *supra* note 33, filed April 29, 1983, at n.2 (*citing to* the Board's 1979 decision in *Radio Gaithersburg* , *supra*).

[36] *See Amendment of the Commission's Rules to Allow the Selection from Among Certain Competing Applications Using Random Selection or Lotteries Instead of Comparative Hearings* (hereinafter "*Competing Applications Using Random Selection* "), 53 RR 2d 1401, 1438 (1983) (separate concurring statements of Comm'rs Jones and Dawson). *But see* Concurring Statement of Chm'n Fowler (*id.* , at 1435–1437) (opining that governmental preferences based on biological differences may be constitutionally infirm and, in any event, undersirable public policy).

[37] *See id.*, Concurring Statement of Comm'r Dawson. Commissioner Dawson's view is that although the new lottery statute authorizes special preferences for "minority group" applicants (*see* 47 U.S.C. § 309(i)(3)(A), as amended by Pub. L. 97–259 (1982)), and no specific mention is made of women in the statutory definition (*see id.*, at § 309(i)(3)(C)(ii)), Congress did not intend its "minority group" definition as words of limitation. We also note that Commissioner Dawson adverted to the recent recognition of female ownership in comparative licensing cases (*citing Waters, supra*), but remarked that such recognition was perhaps "not a well-defined one." Concurring Statement, at n.2.

11. Ascending in parallel to the Commission's heightening recognition of integrated female ownership is the dimension of the weight to be accorded various levels of minority ownership. Thus, while a limited level of minority ownership might tip the comparative scales in an almost deadlocked case, *see, e.g., Klein, supra*, 86 FCC 2d at 431, it appears increasingly evident that the Commission's grants of preferential treatment are linked firmly to minority "control." For example, in *Competing Applications Using Random Selection, supra* note 36, the Commission restricted the statutorily-mandated minority preference to those lottery participants whose minority owners hold "a majority interest." 53 RR 2d at 1420.[39]

---

[38] 47 U.S.C. §§ 301, 303 309(a), 310(d).

[39] In so doing, the Commission was tracking Congressional intent as expressed in the Conference Report accompanying H.R. 3239, which legislation matured into the minority lottery preference now set forth in § 309(i) of the Communications Act (*see* 96 Stat. 1087). That Report stated:

> The Conferees intend that in the administration of a lottery to be used for granting licenses or construction permits for any media of mass communications.

Similarly, even while expanding its opportunities for minority preferences in its recent *Minority Ownership In Broadcasting*, 52 RR 2d 1301 (1982) (hereinafter "*Minority Ownership II*") by permitting the issuance of an IRS tax certificate (*see* 26 U.S.C. § 1071) or permitting a "distress sale"[40] where the minority "general partner" owns more than 20% of the entity and the non-minority entrepreneurs are "limited" partners, the Commission retained its previous requirement for minority control. *See id.*, at 1305–07; *see also id.*, at 1307–09, where the Commission indicated that it would now permit non-minority owners to receive a tax certificate for a deferred sale of their ownership shares if, in general, the sale does "not reduce minority ownership of and control in the entity below 51 percent."

12. The Commission's concentration on minority control as a prerequisite to the preferential devices of tax certificates or "distress sales" is embodied in *Minority Ownership of Broadcasting Facilities*, 68 FCC 2d 979 (1978) (hereinafter "*Minority Ownership I*"), *clarified*, 44 RR 2d 479 (1979). Therein, the Commission stated that these devices could be extended where "a sale is proposed to parties with a significant minority interest to determine whether there is a substantial likelihood that diversity of programming will be increased," 68 FCC 2d at 983; it quantified that "likelihood" by stating that "[w]e currently contemplate issuing a [tax] certificate where minority ownership is in excess of 50% or controlling," *id.*, at n.20.[41] To the same effect is *Clear Channel AM Broadcasting*, 78 FCC 2d

---

> the Commission award a significant minority ownership preference to those applicants, a majority of whose ownership interests are held by a member or members of a minority group.

Rep. No. 97–765, 97th Cong., 2nd Sess. 44 (1982).

[40] A "distress sale" permits a licensee about to face a hearing to determine whether its license should be lost to sell out at a "discount" price (*i.e.*, 75% of market value, *see Grayson Enterprises, Inc.*, 77 FCC 2d 156, 164 (1980)). For a more complete discussion of the "distress sale" mechanism, *see Stereo Broadcasters, Inc.* v. *FCC*, 652 F.2d 1026 (D.C. Cir. 1981) (*aff'g* "distress sale" procedure; but not necessarily minority preference policy, *see* 652 F.2d at 1029 and concurring statement of Judge Nichols, *id.*, at 1032).

[41] The Commission's contemplated 50% prerequisite was effectuated with rigor. *See Long-Pride Broadcasting Co.*, 48 RR 2d 1243 (1980), where it denied a tax certificate to a transferee which was 45% minority owned, even though the minority owner also held a voting trust over another 10%; it held that the transferee's minority interest was insufficiently "significant," *id.*, at 1244, and further held that "minority ownership in excess of 50%" would be the benchmark, *id.*, at 1245.

The *Long-Pride* rationale was reflected, in part, in our recent *HLD&M Communications*, 53 RR 2d 732 (Rev. Bd. 1983), where we held that 45% minority ownership, although integrated, was less than controlling and therefore insufficient to "determine whether there is a substantial likelihood that diversity of programming will be increased." *Minority Ownership I*, 68 FCC 2d at 983. The award in *HLD&M* went to a 100% integrated competing applicant on the basis of comparative superiority. *See also Las Misiones De Bejar Television Co.*, 53 RR 2d 119 (Rev. Bd. 1983).

1345, *recon. granted in part and denied in part*, 83 FCC 2d 216 (1980).[42] Therein, the Commission amended its rules to permit the acceptance of applications for AM stations in the larger cities where "more than 50% of the ownership interest . . . is held by minority persons. . . ." 78 FCC 2d at 1369; *see also* 47 CFR § 73.37(e)(2) (rules).

13. In view of the foregoing, it appears to us that the general threshold for awarding any significant comparative qualitative enhancement for integrated minority ownership should be set at a more-than-50% (or otherwise controlling) interest level to ensure the "substantial likelihood that diversity" of viewpoints will be increased. *Minority Ownership I, supra*, 68 FCC 2d at 983; *see also Minority Ownership II, supra*; *Clear Channel, supra*; *Long-Pride, supra* note 41. Although a lower level of integrated minority ownership may be decisional in otherwise deadlocked cases, *see, e.g., Klein, supra*, an applicant with less than controlling integrated minority ownership cannot expect to be preferred over a comparatively superior applicant. *HLD&M Communications, supra*. The same general threshold would be appropriate, of course, with respect to comparative merit for female ownership.[43] To do otherwise would

---

[42] The general tenets of the *Clear Channel* rulemaking were affirmed *sub nom. Loyola University* v. *FCC*, 670 F.2d 1222 (D.C. Cir. 1982). The minority preference aspect of the new clear channel rules was reiterated by the Commission in *Bunkfeldt Broadcasting Corp.*, 88 FCC 2d 1696 (1982), *aff'd per curiam without opinion*, D.C. Cir. No. 82–1212, decided January 6, 1983, *petition for writ of certiorari*, No. 82–1607, filed March 30, 1983.

[43] Affirmation of this principle is found in *Waters* where the Commission stated that its "minority ownership policy is to be given full application and significant weight in comparative broadcast proceedings." 91 FCC 2d at 1266.

It concluded that "Waters is also entitled to a *substantial enhancement* for its *100% minority and female ownership* integrated with full-time management," *id.* (emphasis added), thus instructing necessarily that a lower ownership interest should receive a proportionately lower enhancement value. Indeed, in reviewing the doctrinal base for minority ownership preferences, the *Waters* Commission specifically invoked *Minority Ownership I* and *Clear Channel*, the preferential mechanisms of which are tautly tied to minority control.

We do note, however, that at one time the Commission contemplated adding more specificity to the comparative measure to be accorded minority ownership, and stated:

> *Minority Involvement in Applicants Involved in Comparative Proceedings.* We believe minority ownership involvement should continue to be a significant factor in comparative evaluations of applicants for broadcast authorizations, and are actively examining methods to rationalize such consideration of this issue as well as refining the comparative hearing and decision process generally. However, we believe a more appropriate resolution of NTIA's proposals in this area will be to consider them as part of our review of the broad comparative process.

Minority Ownership of Broadcast Facilities, supra, 69 FCC 2d at 1595–96 (footnote omitted). Until such time, case-by-case analysis is appropriate. *S.E.C.* v. *Chenery Corp.*, *supra*.

be to entreat endless "qualitative" comparisons of fractional ownership levels (*e.g.*, 30% female *v.* 20% minority - or *vice versa*), none of which, as the Commission has clearly indicated, bode especially meaningful as auguries of viewpoint diversity. Against that premise, River Valley's 15% minority ownership is comparatively insignificant in this case and warrants little, if any, preferential consideration.[44]

SUMMARY AND CONCLUSIONS

14. Purtle is a fully qualified applicant, qualitatively enhanced in the manner generally described by the ALJ, *see I.D.*, Conclusions, paras. 8–11. Additionally, in light of the Commission's unambiguous ratification of a comparative merit for female ownership, we likewise accord with the ALJ's conclusion that "Judy Purtle's 100% integration proposal is greatly enhanced by her own female participation as the Station's General Manager." *Id.*, at 12. River Valley's exceptions to these aspects of the *Initial Decision* have been rejected. Hence, for the reasons more fully set forth hereinabove, River Valley is found comparatively inferior even if *arguendo* we assess no demerit whatsoever for the inopportune misstatements of its minor principal.[45] Its 15% minority ownership, as we have said, cannot compete under our amplified comparative criteria with Purtle's qualitative attributes, even if we lightened somewhat the enhancement for her past broadcast experience and her civic participation that the ALJ factored into his ultimate conclusion. *See id.*, at para. 23.

15. ACCORDINGLY, IT IS ORDERED, That the application of Judy K. Purtle (File No. BPH-800807AE) IS GRANTED, and the applications of Horne Industries, Inc. (File No. BPH-11185) and River Valley Broadcasting, Inc. (File No. BPH-800711AJ) ARE DENIED.

FEDERAL COMMUNICATIONS COMMISSION
NORMAN B. BLUMENTHAL, *Member, Review Board*

---

[44] As with all factors which enhance integration (*e.g.*, local residence, civic activities, past broadcast experience), the enhancement drops off sharply in proportion to the ownership level. *See generally Policy Statement*, 1 FCC 2d at 395–96.

[45] Because Almer Jackson holds only a relatively insignificant interest in River Valley, thus entitling it to only passing recognition for minority ownership, equilateral justice would dictate that any comparative demerit for Jackson's misstatements would be of commensurate scale.

Bankruptcy
Control, Transfer of, Procedures
License, Assignment of, By Receiver in Bankruptcy
License, Assignment of, Involuntary
License, Assignment of, Procedures
Trustee in Bankruptcy

While the Commission has a general policy of not questioning the appointment of a receiver or trustee in bankruptcy by state and federal courts, where such an appointment involves the enforcement of a reversionary interest in a broadcast license and the recognition of a security interest in that license by creditors, the application seeking consent to assign the broadcast license to receiver or trustee is unacceptable for filing.
–Kirk Merkley

FCC 83–310

BEFORE THE

FEDERAL COMMUNICATIONS COMMISSION

WASHINGTON, D.C. 20554

In re Applications of KIRK MERKLEY, RECEIVER For Involuntary Assignment of License of Station KPRQ, Murray, Utah.*	File No. BAL-
KIRK MERKLEY, RECEIVER (Assignor) and TRI-ALPHA BROADCASTING CORPORATION (Assignee) For Assignment of License of Station KPRQ, Murray, Utah.	File No. BAL-
MURRAY BROADCASTING COMPANY, INC. For Renewal of License of Station KPRQ, Murray, Utah.	File No. BR-800529UY

MEMORANDUM OPINION AND ORDER

(Adopted: June 29, 1983 Released: July 11, 1983)

---

* The call letters for station KPRQ were recently changed to KLAF. For ease of reference and to facilitate an understanding of the pleadings, the former call letters, KPRQ, have been used throughout this document.

By the Commission: Commissioner Fogarty not participating.

1. The Commission has before it for consideration: (1) an FCC Form 316 application for the involuntary assignment of the license of station KPRQ(AM), Murray, Utah, to Kirk Merkley, Receiver, which has not been accepted for filing; (2) a contingent application to assign the license from the Receiver to Tri-Alpha Broadcasting Corporation, which has also not been accepted for filing; (3) objections to the acceptance for filing of these assignment applications by Murray Broadcasting Company, Inc. (MBC), licensee of KPRQ; (4) an application for the renewal of the license of station KPRQ filed by MBC; (5) an informal objection to the renewal application filed by the Receiver; and (6) various related pleadings.

Preliminary Matters

2. The Receiver argues that MBC's objection to the acceptance of his involuntary assignment application is an unauthorized pleading. Specifically, he contends that the pleading is in the nature of a petition to deny and that, under the Communications Act and Commission Rules, such petitions against involuntary assignment applications are not permitted. Citing *McClatchey Newspapers, Inc.*, 63 FCC 2d 669 (1977), *Barnes Enterprises, Inc.*, 55 FCC 2d 721 (1975) and *Gulf Coast Radio, Inc.*, 45 FCC 1865 (1964), the Receiver maintains that MBC's pleading does not lie against his application as a matter of law, and even if it was found acceptable, the Commission has a policy of not permitting challenges to applications which have not been accepted for filing. *University of Tennessee*, 44 RR 2d 1082 (1978). Thus, the Receiver contends that MBC's submission should be dismissed without consideration. We find, however, that this proceeding presents an unusual set of circumstances in which it is appropriate to consider MBC's pleading on its merits as an informal objection, pursuant to Section 73.3587 of the Rules.

3. Before addressing the specific facts of this case, we will briefly review applicable communications policy so as to set the issues presented in proper perspective. The Commission has consistently held that a broadcast license, as distinguished from the station's plant or physical assets, is not an owned asset or vested property interest so as to be subject to a mortgage, lien, pledge, attachment, seizure, or similar property right. *See* Sections 301, 304, 309(h), 310(d), of the Communications Act, as amended, and Section 73.1150 of the Commission's Rules. *See also*, *Radio KDAN, Inc.*, 11 FCC 2d 934, *recon. denied* 13 RR 2d 100 (1968), *affirmed on procedural grounds sub nom.*, *W. H. Hansen* v. *FCC*, 413 F. 2d 374 (D.C. Cir. 1969). As stated in *Radio KDAN*, "This principle is firmly rooted in Commission practice, its rationale being that such hypothecation endangers the independence of the licensee who is and who should be

at all times responsible for and accountable to the Commission in the exercise of the broadcasting trust." 13 RR 2d at 102.

4. The Commission has had a rule prohibiting reversionary interests in broadcast licenses since 1949.[1] This prohibition is presently contained in Section 73.1150 of the Rules. This rule provides:

> (a) In transferring a broadcast station, the licensee may retain no right of reversion of the license, no right to reassignment of the license in the future, and may not reserve the right to use the facilities of the station for any period whatsoever.
>
> (b) No license, renewal of license, assignment of license or transfer of control of a corporate licensee will be granted or authorized if there is a contract, arrangement or understanding, express or implied, pursuant to which, as consideration or partial consideration for the assignment or transfer, such rights, as stated in paragraph (a) of this section, are retained.

In *KDAN*, we stated: "In interpreting the prohibition of reversions contained in . . . [Section 73.1150], the Commission has consistently refused to grant applications for transfer of control of a corporate licensee or for an assignment of a station license where a former owner or licensee has retained . . . a right or a power to regain the status of licensee through a reversion of stock control or the reassignment of the station license." 13 RR 2d at 102.

KPRQ - Background

5. On June 26, 1974, agreements were executed to assign the license for station KPRQ (then KMOR), from O. J. Wilkinson to Seagull Enterprises, Inc. Essentially, the agreements provided, in pertinent part, that Seagull Enterprises (Seagull) was to make a series of payments to Wilkinson in consideration of the sale of the station's assets and the assignment of its license. These agreements contained the following provision:

> DEFAULT BY BUYER. In the event of a failure to comply with the terms hereof by the Buyer, or upon failure of the Buyer to make any payment or payments when the same shall become due, or within 90 days thereafter, the Seller, at his option, shall have the following alternative remedies:
>
> A. Seller shall have the right, upon failure of the Buyer to remedy the default within five days after written notice, to be released from all obligations in law and in equity to convey said property, and all payments which have been made theretofore on this contract by the Buyer, shall be forfeited to the Seller as liquidated damages for the non-performance of the contract, and the buyer agrees that the Seller may at his option *re-enter and take possession of said premises without legal processes as in its first and former estate*, together with all improvements and additions made by the Buyer thereof, and the said additions

---

[1] *But see Policy Statement and Notice of Proposed Rulemaking* (Gen. Docket No. 82-797), 52 RR 2d 1301 (1982), whereby the Commission is currently examining the appropriateness of modifying somewhat its general practice regarding reversionary interests.

> and improvements shall remain with the land, and become property of the Seller, the Buyer becoming at once a tenant at will of the Seller; . . . [Emphasis added].[2]

Before the Commission approved the assignment of the station license to Seagull, this provision was amended to eliminate the Seller's right to "re-enter and take possession of said premises without legal processes," *i.e.*, a right of reversion to the station and its license and to provide, as an alternative remedy in the event of a default, a "bona fide public sale" subject to prior Commission approval. The Commission approved the assignment on December 13, 1974.

6. Soon after being assigned the license, Seagull encountered financial difficulties. Consequently, it began to negotiate a sale of the station to an individual, Tim Themy. However, no agreement was reached and Seagull eventually defaulted on its payments to Wilkinson. Nonetheless, after Wilkinson began to exercise his rights under the default provision, Themy negotiated with Wilkinson and eventually acquired Wilkinson's rights under the 1974 contracts. Also, around this same time, Seagull executed an agreement to assign the station's license to Shirley K. Watson, doing business as Murray Broadcasting Company (MBC), and submitted an application to the Commission seeking approval of the license assignment.

7. Themy filed an objection to the Seagull-MBC assignment application, based upon the rights he had acquired from Wilkinson. Themy alleged that he was successor to the former licensee's interest in the station's real property and broadcast equipment and to the obligation of Seagull to make installment payments with respect to this property under the 1974 agreements. Themy stated that the proposed assignee of the license, MBC, had refused to accept responsibility for Seagull's financial obligations. He noted that he had filed a complaint in a local state court against Seagull and principals of MBC, as well as a creditor who also claimed a security interest in certain of the station's assets. In his complaint, he sought the appointment of a receiver and a determination that these parties had no right or interest in the bulk of the real and personal property used in the operation of the station.[3] Themy argued that MBC could not expect to use the Seagull equipment and property once his claims were executed. Consequently, he contended that MBC was only acquiring a bare license and that it had failed to show its financial qualifications for purchasing new broadcast facilities. Themy also expressed a concern that a grant of the assignment application

---

[2] There were two agreements involved in the assignment transaction, one involving the station's real property, the other concerning its remaining assets. The above provision was contained in both agreements.

[3] Themy's request for the appointment of a receiver was denied by the court. The other aspects of Themy's complaint were still before the court.

might substantially impair any possibility that Seagull's obligations would be paid.

8. MBC responded that it was attempting to negotiate a lease whereby it could use the properties which were subject to Themy's claims. It demonstrated further that, even if the broadcast equipment were ultimately foreclosed upon and unavailable, MBC possessed the funds necessary to purchase new facilities.

9. By letter of March 4, 1977, the Chief of the Broadcast Bureau, acting on delegated authority, granted the application assigning the license to MBC. In denying Themy's objections, the Bureau Chief concluded that MBC was not acquiring a bare license, but "an operating station with value as a going concern." The letter noted that Themy's objections to the assignment related to his private interests rather than public interest considerations. In denying the objection and granting the assignment application, the Bureau Chief applied the Commission's policy of not assuming jurisdiction in such private matters and stated that the appropriate forum for Themy's claims to the real and personal property of the station was the local courts. There was no evidence that Themy had sought, or was seeking, a court order to enjoin the sale to MBC pending disposition of his claims.

10. Subsequent to the assignment, MBC acquired new facilities, no longer using any of the property to which Themy claimed an interest.[4] Also, Themy continued his suit against MBC in the Utah state courts. For some unexplained reason, however, the original unamended security agreement containing the former licensee's right to take possession of the station was litigated. On November 2, 1977, the District Court of the Third Judicial District in and for Salt Lake County, State of Utah, entered a summary judgment in favor of Themy based on the unamended default provision. This judgment provided in part:

> The interest of defendants Seagull Enterprises, Inc. . . . and Murray Broadcasting Company, Inc. *in the FCC license* described in and arising out of the Purchase Agreement for sale of the broadcasting equipment and license dated June 26, 1974, are forfeited by virtue of the default of the buyer thereunder. [Emphasis added.]

An appeal was taken to the Utah Supreme Court which affirmed the District Court's finding that KPRQ's license was forfeit. *Themy* v. *Seagull Enterprises, Inc.*, 595 P.2d 526, 45 RR 2d 775 (1979). The decision was remanded to the District Court, which appointed a receiver to seek the involuntary assignment of the KPRQ license.[5]

---

[4] Also about this time, the station's call letters were changed from KMOR to KPRQ. In addition, a *pro forma* assignment of the station's license was executed from Shirley Watson d/b/a Murray Broadcasting Company to Murray Broadcasting Company, Inc.

[5] After the appeal was taken but before the Utah Supreme Court rendered its

The Receiver also filed an informal objection to MBC's 1980 application for renewal of license. The current proceeding is to determine which party has a valid claim to the KPRQ license.

Allegations

11. MBC argues that the Receiver has no interest in any of KPRQ's assets except its license. It further contends that an assignment of the license alone would be contrary to a long-standing policy of not granting "bare" authorizations. It states that all the broadcast equipment involved in the Seagull-Wilkinson transaction has been placed in storage, subject to a series of garnishments by creditors and that the station is operating solely with MBC purchased equipment. Moreover, MBC argues that the Receiver has also sought the assignment of a non-broadcast license which has no connection to the agreements defaulted upon by Seagull.[6] Furthermore, MBC questions the Receiver's authority to seek KPRQ's license since he was designated to represent Themy, at a point when Themy had already disposed of his interests. See footnote 5 *supra*. For these reasons, MBC requests that the Receiver's application be either returned, dismissed or denied. In response, the Receiver argues that he is not just seeking the assignment of a "bare" license, but the acquisition of all assets associated with that license. He points out that the Utah Supreme Court found all the assets of Seagull, including the license as well as real and personal property, to be forfeited. The Receiver also argues that the Commission's rationale for denying Themy's informal objection to the Seagull-MBC assignment requires a grant of the current assignment application. He states, "Having referred Mr. Themy to the state courts to vindicate his rights, the Commission can not now turn a deaf ear to the judgment of those courts" (referring to the letter of March 4, 1977, from the Chief of the Broadcast Bureau). See paragraph 8 *supra*. Moreover, the Receiver emphasizes that Commission policy has been not to question the final judgment of state courts in appointing receivers. *H. Edward Dillon, Receiver*, 42 FCC 2d 203 (1973). Consequently, the Receiver requests that MBC's filings be dismissed due to their being based on a misconception of fact and an erroneous interpretation of the law.

12. In an informal objection to MBC's renewal application, the Receiver reasserts his interest in the KPRQ license and refers the Commission to his pending unaccepted assignment applications.

---

decision, Themy reassigned his rights back to O. J. Wilkinson (the former licensee). Subsequently, Wilkinson again assigned the rights to Harry J. Pappas, who then assigned them to Tri-Alpha Broadcasting Corporation. Consequently, the Receiver represents the interests of Tri-Alpha, on whose behalf he has submitted the second "contingent" assignment application.

[6] MBC states that the Receiver is also requesting assignment of KPRQ's license, Aural STLWCO 518, which was licensed to MBC after it acquired the station.

Consequently, he states, "while the question of Murray Broadcasting Company's legal qualifications to continue to operate KPRQ is in litigation before the Commission, the Commission should not prejudge the issue by acting on the pending application of . . . [MBC] for renewal of KPRQ's license."[7] In a memorandum requesting renewal of its license and dismissal of the assignment applications, MBC presents additional arguments challenging the Receiver's claims. MBC asserts that the Commission has exclusive power over the licensing of broadcast stations and that local state courts may take no action conflicting with or impinging upon the agency's authority. It states, furthermore, that based on this authority, the Commission has adopted rules which prohibit former licensees from holding reversionary interests in broadcast licenses as security. MBC then asserts that the Receiver's claim is based upon just such an interest. Specifically, MBC emphasizes that, according to the Utah Supreme Court, the Receiver's claim originated when Seagull forfeited the KPRQ license to Wilkinson, the original licensee of the station. MBC maintains that this forfeiture constituted a reversionary interest prohibited by Commission rules.

13. MBC also argues that the Utah Supreme Court committed an error of fact when it reviewed the agreements' default provisions. It states that the error further supports the conclusion that the Receiver is pursuing an improper reversionary interest. Specifically, it asserts that the court only reviewed the unamended agreements which provided the former licensee with the right to repossess the station in the event of default, and not the public sale remedy which was incorporated in the amended contract.[8] Thus, MBC contends that the original default provision containing the right to repossession, the one the court actually considered, had been amended for the very reason that it contained a reversionary interest and would not have received the Commission's approval. Consequently, MBC avers that the Commission is not required to give any weight to a state court decision which not only intrudes on the agency's licensing authority and results in a disposition which is contrary to its established policies, but that is also based upon a mistake of fact.

14. In response, the Receiver argues that the Utah Supreme

---

[7] In a letter of September 25, 1980, from the Chief of the Broadcast Bureau's Renewal and Transfer Division to the Receiver's attorney, notice was given that the KPRQ renewal would remain in deferred status pending resolution of the issues concerning the unaccepted assignment applications.

[8] See paragraph 5 *supra*. In its decision, the Utah Supreme Court only made one reference to the actual wording of the default provision. The court states: "Both documents [1974 sales agreements] were closely patterned after the Standard Uniform Real Estate Contract often used in this state; for example, both provided the seller with the same alternative remedies in the event of a breach by buyer: (1) seller could, after giving five days written notice, declare the interest of the buyer to be forfeited and take possession of the premises. . . ." 595 P.2d at 528, 45 RR 2d at 775.

Court did not exceed its jurisdiction in finding the KPRQ license forfeit. In support he cites *Radio Station WOW* v. *Johnson*, 326 U.S. 120 (1945), for the proposition that a state supreme court may consider a contractual dispute affecting the disposition of a broadcast license, as long as it issues no order requiring the license's assignment. The Receiver states that in the current situation the Utah court only adjudicated the dispute between the parties and issued no order regarding the license itself. The Receiver, while admitting the court considered the wrong provision, also argues that the final versions of the 1974 sales agreements were not significantly different from those the court actually reviewed. He contends that the forfeiture provisions were identical and that only the remedy was changed in the amended version; *i.e.*, a public sale rather than repossession.

15. The Receiver further contends that, if we sustain MBC's position regarding reversionary interests, then no seller-secured party could protect itself in a broadcast assignment transaction. He states that, although real estate and personal property could be subject to security interests, the value of such assets alone without the related broadcast license would be greatly reduced. He also maintains that by ignoring the Utah court's decision, the Commission would be committing an action which would be "arbitrary, capricious and unreasonable warranting judicial review." Specifically, he argues that MBC would have the Commission decide whether the Utah Supreme Court is deprived of jurisdiction, while principles of comity and federalism require the agency to give the court due deference. He also maintains that the argument that the court reviewed the wrong default provision misses the point in that it only considered the issues of jurisdiction and forfeiture, not the actual remedy which should be imposed. The Receiver states that, in any event, the Utah courts should be given the chance of reviewing the correct agreement before MBC presses the issue before the Commission. He further contends that the several assignments of the Wilkinson interest qualify as a public sale under the amended default provision. Moreover, that even if the assignments do not qualify as such a sale, MBC is now barred by Utah law from raising it as an issue.[9] Consequently, the Receiver argues that a grant of the involuntary assignment application would serve the public interest.

---

[9] The Receiver attached to his pleadings a memorandum from Themy's Utah counsel, who argued his client's claims before the state supreme court. He admits that the court considered the wrong contracts, indicating that, inadvertently, the correct versions had not been submitted to the court for review. However, he argues that the differences between those the court reviewed and those with the amended default provisions would have made no difference to the disposition of the case. He also states that, in any event, MBC would probably be barred by the principles of equitable estoppel from raising the mistake to the court at the present time. As to the effect of the "public sale" provision, he states that Utah

Discussion

16. Generally, with respect to receivership proceedings, we do not question a court-appointed receiver's request for assignment of a license. *H. Edward Dillon, Receiver*, 42 FCC 2d 203 (1973). In cases of bankruptcy or general receivership proceedings, the Commission usually gives its consent to the temporary acquisition of the license by a trustee or receiver, pending disposition of station assets. We recognize that the operating authorization must usually accompany the physical assets, pending ultimate passage of all to a qualified applicant. This is to permit trustees or receivers to fulfill the obligations of their appointment and, in some cases, to assure the continued operation of the licensed facility. We find, however, that the current situation presents special circumstances warranting a departure from this general policy. First, unlike most receivership proceedings, the current licensee has not encountered severe financial difficulties requiring protection for its creditors. In fact, the broadcast assets of the present licensee are not the subject of the receivership proceeding. There appears to be no question that MBC is both successful and qualified to remain a Commission licensee. The issues at hand originated with MBC's predecessor in the license, Seagull. The assignment of the license from Seagull to MBC was approved in 1977 despite objections from the party then entitled to the contract rights this Receiver purports to protect. That party did not seek Commission or court review of that assignment or in any way seek to enjoin the sale of Seagull's interests to MBC pending state court resolution of his rights. Some two years elapsed between our assignment of the license from Seagull to MBC, and the filing of the application to assign the license to the present Receiver. Furthermore, as discussed below, we find that the Utah Supreme Court decision upon which the Receiver bases his claim was, by admission of the parties, based upon an incorrect contract containing a clause prohibited by FCC policy. Under the circumstances presented in this case, assignment of the license to the Receiver is inappropriate.

17. This case seemingly involves a conflict between state and federal law which requires consideration of the relationship between the Commission's disposition of an assignment application and the decision of a local state court which interprets an assignment contract. In *Radio Station WOW* v. *Johnson*, 326 U.S. 120 (1945), the United States Supreme Court discussed this relationship in overturning a decision of the state supreme court in Nebraska. Under the facts of the case, the state court had found that Nebraska's law on

---

law does not indicate what constitutes such a sale. He states further that Themy, and the others who were assigned the Wilkinson interest, attempted to act in a manner which they felt was in accordance with what the Commission would consider a public sale.

fraud had been violated in the assignment of a broadcast license. Consequently, the state court ordered the parties involved in the transaction to seek the reassignment of the license back to the original licensee. The United States Supreme Court ruled on review that the state court had exceeded its jurisdiction by controlling the conduct of parties before the Commission and that the Commission was the ultimate arbiter of matters concerning the disposition of the license. 326 U.S. at 131. However, the Court also indicated that where there is a conflict of the Commission's licensing authority with the powers of a state court over local matters, attempts should be made to reconcile both interests. Thus, the Court recognized the Commission's responsibility to establish a nationally consistent licensing policy, while it also recognized the responsibility of local courts in enforcing state laws. In emphasizing the need for reconciliation, the Court observed that "if the State's . . . [laws] can be effectively respected while at the same time reasonable opportunity is afforded for the protection of that public interest which lead to the granting of a license, the principle of fair accommodation between state and federal authority . . . should be observed." 326 U.S. at 132. Therefore, while there is no question that the Commission has exclusive authority over a station's license, we are also charged with the responsibility of accommodating state law, where appropriate.

18. For this reason we have established procedures which acknowledge bifurcated authority in certain licensing areas. For example, where a licensee is accused of breaching a contract to assign its license, the determination of whether a breach occurred is left to a local state court. *Carnegie Broadcasting Co.*, 5 FCC 2d 882 (1966). The Commission does not possess the resources, the expertise or the jurisdiction to adjudicate such claims fully. *See Regents* v. *Carroll*, 338 U.S. 586 (1950). On the other hand, we have determined that limits on the ability of licensees to hold certain types of interests and engage in certain types of contracts are required under the Communications Act. Thus, we have adopted policies and procedures which have effectively limited the ability of licensees in these areas. One example of this is our treatment of reversions, discussed earlier. Another example is in the area of media ownership and the Commission rules limiting the interests which can be held in conjunction with broadcast properties. *See* Section 73.35; 73.240; 73.636; and 76.501 of the Rules. Thus, the Commission would not approve the assignment of a license which would cause a violation of its multiple or cross-ownership rules, regardless of the contractual power of a licensee to acquire such an interest under state law. Similarly, if an assignment application's related contract of sale violated existing rules or policies, we would withhold our approval until the problem was corrected. In this way, while the interpretation and enforcement of contracts are within the jurisdiction of state courts, the Commission has established certain public interest

limitations on a licensee's contractual authority and imposes these limits by withholding its approval of a pending assignment application. Moreover, through this procedure, conflicts between Commission policy and state laws can be avoided.

19. In 1974, Wilkinson and Seagull submitted their sales agreements to the Commission for review. As a consequence, the provision which we found constituted a prohibited reversionary interest, and which the Receiver now asks us to recognize, was eliminated with a more appropriate remedy substituted in its place.[10] Nonetheless, once a dispute arose, the parties apparently inadvertently commenced to litigate their rights under the contract as originally written. Thus, the effect was to circumvent the procedure established to assure that our policies and rules are observed. If parties were allowed to make one representation to the Commission, while a contrary course was pursued at a later time, in another forum, our obligation to review license assignment transactions under the Act would be thwarted. Consequently, we find that to acknowledge the Receiver's claim at this point would be inappropriate, not only because it is derived from a reversion, but because it also jeopardizes our prior consent procedure.

20. We also reject the Receiver's argument that there is little meaningful difference between the original assignment agreement, upon which the court acted, and the amended version, which the Commission approved. The change reflects a difference in the default remedies and this change has significant impact on the question of whether the provision violates Commission rules. Under the original agreement, the former licensee was given the right to regain control automatically of the station and its license. Under the amended version, it was provided that the parties to the agreement could "after public notice, offer the pledged assets at a bona fide public sale." Thus, in the latter version, no control or automatic reacquisition of the license by the former licensee was contemplated. For the Commission to now recognize the Receiver's right to the license through the enforcement of the original agreement's provision would be tantamount to a recognition of a vested security interest in the license itself. Clearly, this is contrary to established law and policy.

---

[10] The reversionary interest provision contained in the original Wilkinson/Seagull contract clearly contradicts existing FCC policy. First, and most importantly, it treats the broadcast license as the property of the former licensee, Wilkinson. The provision allows him to "take possession of the license, reestablishing him in his "first and former estate." Second, it provides Wilkinson a right to the license in excess of the license term. The agreements indicated that Seagull was to make payments over 180 months. Thus, since a default could take place at any time during that period, Wilkinson could essentially claim a right to to license for some fifteen years. Finally, the contract provisions also allow the former licensee to take control of the license without seeking prior Commission approval. Specifically, the agreements allow Wilkinson to take possession "without legal processes." *See* Section 310(d) of the Act.

Finally, we believe the argument that the court's disposition would have been the same had it reviewed the amended contractual provisions is speculative at best. Moreover, it is not a matter for resolution in this forum. *Regents* v. *Carroll*, 338 U.S. 586 (1950).

Conclusion

21. In view of the foregoing, we find that the Receiver's interest in the KPRQ license cannot be recognized, despite a judgment of forfeiture by the Utah Supreme Court. Consequently, the Receiver's assignment applications are unacceptable for filing and his informal objection to the renewal of license of station KPRQ will be denied. Finally, we find that the public interest would be served by a grant of MBC's renewal application.

22. Accordingly, IT IS ORDERED, That the informal objection by Murray Broadcasting Company, Inc., to the acceptance for filing of the above-captioned assignment applications, IS GRANTED.

23. IT IS FURTHER ORDERED, That the application for the involuntary assignment of station KPRQ from Murray Broadcasting Company, Inc., to Kirk Merkley, Receiver, and the contingent application to assign the license from the Receiver to Tri-Alpha Broadcasting Corporation, ARE UNACCEPTABLE FOR FILING.

24. IT IS FURTHER ORDERED, That the Receiver's informal objection to the renewal of license of station KPRQ, IS DENIED.

25. IT IS FURTHER ORDERED, That the license renewal application for station KPRQ, filed by Murray Broadcasting Company, Inc., IS GRANTED.

26. IT IS FURTHER ORDERED, That the Mass Media Bureau of the Commission shall send, by Certified Mail, Return Receipt Requested, a copy of this Memorandum Opinion and Order to each of the parties to this proceeding.

FCC 82–233

BEFORE THE

FEDERAL COMMUNICATIONS COMMISSION

WASHINGTON, D.C. 20554

In re Application of
LARES BROADCASTING CORPORATION
Lares, Puerto Rico
For Construction Permit

Docket No. 20969
File No. BP-20119

MEMORANDUM OPINION AND ORDER

(Adopted: May 12, 1983; Released: May 20, 1983)

BY THE COMMISSION:

1. Presently before the Commission is a proceeding originally involving the mutually exclusive applications of Radio Lares and Lares Broadcasters[1] who filed for construction permits for a new daytime only standard broadcast station to operate on 1200 kHz from Lares, Puerto Rico. When this case was designated for hearing on November 4, 1976,[2] the Commission was faced with the problem of possible mutual interference between the proposals of the competing applicants and a station operating in the Dominican Republic, HIBS, on the same clear channel, 1200 kHz frequency. The Commission then ruled that although interference from HIBS appeared likely, it would not reduce the Lares' "service area to an unsatisfactory level." In reaching this conclusion the Commission in effect waived Section 73.37(b)(2) of its rules.[3] At the same time it

---

[1] On July 7, 1977 the two applicants were granted approval of their request to merge into Lares Broadcasting Corporation and the Radio Lares application was dismissed. *Lares Broadcasting Corp.*, FCC 77M-1193.

[2] *Radio Lares*, FCC 76–960, released November 4, 1976.

[3] Under Section 73.37(b) of the Commission's rules an application for a new daytime only standard broadcast station, which will be the first AM facility in the

conditioned grant of any construction permit on the resolution of interference that might be caused to HIBS, a situation governed by international agreement. The Commission at that time also recognized the probability that the Dominican Republic had failed to give notification of the operation of Station HIBS and that the United States had priority use of the 1200 kHz frequency, as set forth in the North American Regional Broadcasting Agreement (NARBA) to which the United States and the Dominican Republic were both signatories.[4]

2. In denying a petition for reconsideration of the designation order,[5] filed by Pepino Broadcasters, Inc. (hereinafter Pepino or WFBA), an intervenor and licensee of Station WFBA, San Sebastian, Puerto Rico,[6] the Commission reiterated its intent to permit a conditional grant. At that time the Commission ruled that "preliminary engineering studies suggested that the potential interference problem was not incompatible with our public interest responsibilities and could probably be eliminated through negotiations with the government of the Dominican Republic."

3. Thereafter the Administrative Law Judge approved an agreement between the competing applicants authorizing the merger of Radio Lares and Lares Broadcasters into Lares Broadcasting Corporation (hereinafter Lares or WGDL). At the same time the Administrative Law Judge also certified two questions to the Commission which were resolved favorably to Lares.[7] The second of these questions[8] queried whether grant of a construction permit must await the outcome of negotiations with the Dominican Republic,

---

community of license, may be granted if there is no overlap between the 1 mV/m contour of the proposed facilities and the 0.05 mV/m contour of any co-channel station. Section 73.37(b) constitutes an exception to Section 73.37(a) and is designed to facilitate local AM broadcast service to as many communities as possible. *Report and Order on Amendment of Part 73 of the Commission's Rules*, 45 FCC 1515, 1524 (1964). Accordingly, the amount of permissible interference to be received by a new local AM station under 73.37(b) may be greater than that contemplated under Section 73.37(a). Since the Lares' station would be the first AM facility in its community, 73.37(b) is applicable to this case.

[4] NARBA is a regional agreement between contracting governments and is designed to minimize interference between the broadcast stations of signatory countries.

[5] *Radio Lares*, 63 FCC 2d 305 (1977).

[6] Pepino is a potential commercial competitor of the new Lares station but will suffer no electrical interference from that station. The license and assets of Pepino Broadcasters, Inc. were assigned to Mr. Luis Raul Perez-Perez effective February 28, 1982. Upon the death of Mr. Perez-Perez, Gloria Mendez vda. de Perez succeeded to the ownership rights of her husband. On March 29, 1982, Mrs. Mendez requested that she be substituted for Pepino Broadcasters, Inc. We see no impediment to granting Mrs. Mendez's unopposed request and we hereby authorize Mrs. Mendez to participate in this proceeding in lieu of Pepino Broadcasters, Inc.

[7] *Radio Lares*, FCC 77M-1193, released July 7, 1977.

[8] *Lares Broadcasting Corporation*, 69 FCC 2d 841 (1978), *reconsideration denied*, FCC 79-191, released April 10, 1979. The first question pertained to the meaning of the word "market" as used in the Commission's regional concentration of control rule

given the probable co-channel interference to and from Station HIBS. On this point the Commission reiterated its reliance on preliminary engineering reports indicating *de minimis* interference, the priority right to the use of the channel by the United States, and the lack of notification by the government of the Dominican Republic. Based on these considerations the Commission stated that "public interest factors already exist in this case warranting a waiver of Section 73.37(b)(2) regardless of the outcome of any negotiations with the Dominican Republic."

4. The presiding Administrative Law Judge subsequently granted a conditional construction permit to Lares and terminated this proceeding.[9] Pepino thereafter filed an appeal with the United States Court of Appeals for the District of Columbia Circuit, questioning whether the Commission acted properly in granting a construction permit before resolving all problems of co-channel interference.[10]

5. While preparing its brief in the case, counsel for the Commission discovered that the earlier referenced "preliminary engineering studies", were not part of the record. Accordingly, the Commission sought and was granted remand to address this deficiency.[11]

6. Upon further analysis the Commission thereafter issued a Memorandum Opinion and Order re-affirming its grant of a conditional construction permit to Lares.[12] Noting that the Dominican Republic was acting in contravention of the North American Regional Broadcasting Agreement (NARBA), by operating on a clear channel frequency allocated to the United States for priority use and by not giving the required notification of the operation of HIBS, the Commission held that this illegal operation should not be the basis for denying grant of a lawfully authorized station operating on the same frequency.[13]

7. Again the case returned to the exclusive jurisdiction of the court, with Pepino additionally seeking review of the Commission's

---

(Section 73.35). Pepino later based its appeal to the Court on the Commission's resolution of these questions, *inter alia*.

[9] *Lares Broadcasting Corporation*, FCC 78M-1596, released October 27, 1978, *appeal denied*, FCC 79R-20, released May 14, 1979.

[10] *Pepino Broadcasting, Inc.* v. *FCC*, Case No. 79–1614 (D.C. Cir.), filed June 13, 1979.

[11] *Order* dated December 19, 1979.

[12] *Lares Broadcasting Corporation*, FCC 80–540, released September 22, 1980.

[13] "Where the only question concerning the operation of a proposed United States station arises from the existence of a foreign station which has failed to comply with the applicable provisions of NARBA, as is the case here, we believe that sound public policy warrants the waiver of Section 73.37(b)(2). Thus, whether or not negotiations ultimately render the interference question moot, it is clear that the operation of a domestic broadcast station should not be precluded because of interference emanating from a foreign station which is required under NARBA to afford protection to the dominant Class I-A station on that frequency and which is operating in contravention of that treaty obligation." (Footnote omitted). *Lares Broadcasting Corp.*, FCC 80–540, released September 22, 1980.

September 22, 1980 reaffirmation order as well. During preparation for the latest phase of the court appeal, Commission counsel discovered evidence outside the record of this proceeding suggesting that the Dominican Republic's notification of operation had in fact been sent and accepted.[14] Because of the impact this might have on the pending court case, the Commission again sought and was granted limited remand to investigate the question.[15] Accordingly, on September 1, 1981, the Commission issued an order[16] directing the parties to address the questions of whether HIBS was operating in violation of NARBA and the rights HIBS might have for protection against interference from the proposed new Lares station.[17]

8. While this case was pending, the United States was simultaneously involved in negotiating a new international treaty which would establish an overall spectrum allocation scheme among all the countries of North, Central and South America. To effectuate this scheme representatives of all interested countries convened at Rio de Janeiro, Brazil, for a Region 2 Conference held November 9, 1981 through December 19, 1981. The participating countries understood that the plan to be adopted at the Conference would replace NARBA, but that unresolved differences would still be handled through mutual negotiations between the affected countries. Since it appeared that the provisions of NARBA would no longer be governing, the Commission sought comments on what effect the tentative new international agreement might have on future negotiations and the probable consequences of any new agreement on the existing construction permit. While the responses[18] satisfactorily addressed

---

[14] Notice was published in the Federal Register of August 11, 1976, 41 F.R. 33940 and read as follows: "Although not provided strictly in accordance with notification procedures, the Commission recognizes this as a valid notification."

[15] *Order*, dated July 28, 1981.

[16] *Lares Broadcasting Corp.*, FCC 81-402, released September 1, 1981.

[17] The specific question asked were as follows:

(a) Is HIBS now operating in violation of NARBA? If so, provide specific details concerning any engineering studies and other documentation supporting this conclusion.

(b) Does HIBS have a right under NARBA or otherwise to be protected against interference from the Lares proposal?

(c) Are negotiations with the Dominican Republic concerning this matter feasible and are they likely to result in resolution of the projected interference problem?

(d) Does the proposed Region II Conference have any impact on HIBS' present rights?

[18] On October 7, 1981 Lares and the Broadcast Bureau filed their respective responses, with the Broadcast Bureau filing on erratum on October 9, 1981. On November 9, 1981 Pepino Broadcasters, Inc. filed comments on the responses of Lares and the Bureau. Thereafter, Lares filed a reply to Pepino's comments on November 19, 1981.

the first two questions, they failed to provide sufficient insight into the effect of the tentative new agreement on this proceeding. The Commission's staff therefore solicited responses to twelve additional questions centering on the impact of the Agreement reached at the Region 2 Conference on the instant proceeding.[19]

9. Before addressing the question of whether a construction permit should be granted to Lares, it is important to note that the question of whether a proposed new domestic station will be receiving excessive interference from an existing foreign station is governed by the Commission's rules.[20] Conversely, the question of whether an existing foreign station will be receiving excessive interference from a proposed United States station is governed by international treaty.[21] This demarcation reflects an appreciation of the fact that our domestic allocation rules are not designed simply to protect existing domestic stations from interference caused by new proposals.[22] Those rules are also intended to insure that applicants for new stations do not propose a service that would be receiving destructive interference from an existing broadcast station, whether domestic or foreign. Accordingly, we must look to Section 73.37 of our rules to determine if WGDL will be receiving excessive interference from HIBS and to NARBA and its tentative successor to ascertain whether HIBS will be receiving interference in excess of limits prescribed by international treaty.

10. We address first the question whether our authorization of the Lares station would violate an international treaty by causing excessive interference to an existing foreign station, HIBS. An examination of the pleadings confirms that on June 28, 1976 the government of the Dominican Republic forwarded a letter to the United States containing certain information as to the operation of Station HIBS, San Pedro de Macoris, Dominican Republic on the 1200 kHz frequency. Although this letter failed to include all of the basic information required by NARBA, the Chief of the Broadcast Bureau caused to have published in the Federal Register a public

[20] *See* C.F.R. §73.37 n.3; *AM Station Assignment Standards*, 4 RR 2d 1567, 1572-1573 (1965).

[21] *Id.*

[22] It has been the Commission's practice to enforce strictly Section 73.37 as it pertains to the question of protecting the broadcast signals of existing stations. *In re Application of ICBC Corporation*, 89 FCC 2d 447 (1982), appeal pending *sub nom. ICBC Corporation* v. *FCC*, D.C. Cir. No. 82-1342; *Major Market Stations, Inc.*, 4 Rad. Reg. (P&F) 2d 650, 651 (1965). A proposal for a new service which causes interference within a protected contour will in fact not even be accepted for filing. On the other hand, the Commission has shown a greater inclination to waive its rules in those situations where the only pertinent question is the amount of interference to be received by the new station. *See Newcastle Broadcasting Corp.*, 1 FCC 2d 1124 (1965).

notice acknowledging the operation of HIBS on 1200 kHz from the Dominican Republic.[23] The responses of the parties also reveal that on March 31, 1977 the Commission formally objected to the technical operation of Station HIBS and that the Dominican Republic never responded to this objection.

11. In light of the information contained in the parties' latest pleadings, we conclude that events subsequent to the receipt of the Dominican Republic's June 28, 1976 letter effectively nullified any claim that the Dominican Republic might otherwise have had to operate on 1200 kHz under NARBA. First, the government of the Dominican Republic failed to supply the required supplemental information,[24] including the antenna systems being used, although such information was to be filed no later than 60 days after submission of the required basic information.[25] This failure rendered the June 28, 1976 preliminary notification absolutely null and void.[26] Second, when the United States formally objected on March 31, 1977,[27] it was officially notifying the Dominican Republic that the technical operation of HIBS was unsatisfactory and incompatible with the terms of NARBA. By so acting the United States further negated its earlier response to HIBS' incomplete notification.

12. Besides not giving proper notification, the very operation of HIBS is in violation of NARBA. Under the terms of that agreement the United States is entitled to interference free operation on the 1200 kHz frequency.[28] Unchallenged engineering studies provided by the Broadcast Bureau[29] and Lares[30] both indicate that HIBS' signal

---

[23] *See* note 14, *supra*.

[24] In light of subsequent deficiencies we need not address the question of the validity of the Dominican Republic's original "letter of notification."

[25] Supplementary information shall consist of the following: (1) call sign; (2) geographical location of the midpoint of the antenna system in degrees and minutes of latitude and longitude; and (3) additional information depending on whether a directional or omnidirectional antenna system is to be used. NARBA, Part III, Section F, para. 2(a)(2), Current Service RR 41:16.

[26] "Any . . . notification of a new broadcasting station assignment or of a change in an existing broadcasting station assignment shall cease to have any effect if, within the period specified [60 days] in paragraph 2 of this Section F, the supplementary information shall not have been supplied." *Id.* at Part III, Section F, para. 8(b). Current Service RR 41:20.

[27] A protesting country must file its objection within 30 days of the receipt of supplementary information or it will be deemed to have accepted the notification. *Id.* at Part III, Section F, paras. 7(c)-(e). When it became obvious that no supplementary information would be forthcoming, the United States took the added measure of protesting the operation of HIBS, notwithstanding the Dominican Republic's failure to provide proper notice. Letter dated March 31, 1977 from the Chief of the Broadcast Bureau to the Director General of Telecommunications, Dominican Republic. Bureau's October 7, 1981 Response, Attachment 4.

[28] The 1200 kHz frequency is a designated United States Class I-A clear channel station under NARBA.

[29] Bureau Response, Attachment 2. This engineering report, dated August 11, 1976

is penetrating the border of the continental United States in violation of NARBA. For notification to be valid, the new broadcast station must be in accordance with the Agreement.[31]

13. Looking at the first two questions we thus reach the conclusion that HIBS is operating in violation of NARBA, that under NARBA HIBS is therefore not entitled to protection against interference from the Lares proposal, and that the Lares application can be granted. In sum, the Dominican Republic has failed to supply supplementary information needed to perfect its preliminary, conditional notification; it continues to broadcast a signal penetrating the border of the continental United States in contravention of NARBA; it has filed no formal objection to the valid notification of the Lares proposal; and it has not responded to the formal objection lodged by the United States on March 31, 1977.

14. Having concluded that Lares is not precluded from grant of a construction permit under NARBA, because of interference that might be caused to HIBS, two primary questions remain for consideration on this point. First, is NARBA still in effect and thus controlling? Second, if NARBA is no longer the governing treaty, can a construction permit still be granted under the new international agreement emerging from the Region 2 Administrative Conference? Previously released Commission Orders indicate that during the transition period necessary to implement the Region 2 Plan the provisions of NARBA will continue to apply to its signatories.[32] At the same time the Commission has stated its intent to conform with the procedures and protection standards contained in the Final Acts, as they pertain to interference caused to a foreign station.[33] Accordingly, an applicant such as WGDL must be able to satisfy the requirements of both international agreements. To this end we have already concluded that WGDL may be granted a construction permit under NARBA. Assuming that under the new Region 2 Agreement HIBS will be a ligitimately operating station, the question then becomes whether this change in status compels a different conclusion. In considering this question it will be helpful to review the

---

was based on the skeletal information provided by the Dominican Republic in its June 28, 1976 "notification," and shows that from the very beginning the Commission expressed concern over the deficiencies in the technical operations of HIBS.

[30] Lares' October 7, 1981 Response, Attachment B.

[31] NARBA, Part III, Section F, para. 7(b), Current Service RR 41:19.

[32] *The Administrative Conference for AM/Broadcasting in Region 2, Fourth Report (Fourth Report)*, FCC 82–93, Attachment 1 (*Report of the United States Delegation*, p.2 n.2, released March 10, 1982. See also Public Notice, FCC 82–230, released May 18, 1982, where the Commission set forth the applicable protection standards governing the respective rights between neighboring countries.

[33] *Id.* The Final Acts adopted at the Region 2 Conference comprise a Regional Agreement and its various annexes, including a Regional Plan (Annex 1) and technical criteria (Annex 2), and several Resolutions and Recommendations pertaining to post-conference procedures. *Fourth Report*, pp. 1-3.

parties' submissions concerning the degree of interference HIBS would be receiving and whether this amount is excessive under the new agreement and hence a bar to the Lares application.

15. As already noted, the Region 2 Agreement is the product of negotiations spanning the last seven years[34] and involves potentially all the countries of the Western Hemisphere.[35] Its purpose is to establish a hemisphere-wide spectrum allocation scheme for reciprocal protection of each country's AM services. One major objective of the Rio de Janeiro conference was to identify those radio stations receiving or causing no objectionable interference. Two lists of stations were prepared. Those stations placed on List A were purportedly receiving or causing no unacceptable interference while List B encompassed stations with interference problems. At the end of the Conference numerous interference problems between many countries remained outstanding. Mechanisms were thus set up to resolve these questions and to permit verification and correction of the lists, as modified during the course of the Conference. As of the conclusion of the Region 2 Conference, HIBS was on List A and WGDL was on List B.

16. Any significance attached to being on either List A or B must be considered, however, in light of the tentative nature of those lists. It should be noted initially that the specification of stations on List A is subject to verification and challenge. In this regard studies of daytime interference had not been conducted by the time of the Conference and thus this factor was not considered in the preparation of Lists A and B. The amount of acceptable and unacceptable interference caused and received by HIBS and WGDL has accordingly yet to be assessed.

17. Although no engineering studies of daytime interference were completed at the Region 2 Conference, unchallenged engineering studies submitted by Lares show that the interference to be received by HIBS "occurs approximately 37 miles from HIBS, near the southeastern tip of the Dominican Republic,"[36] with the total area of interference being approximately 38 square miles. Thus, while there may be some interference to the HIBS signal, under the circumstances of this case it appears insignificant and subject to modification following negotiations between the two countries. If this minimal amount of interference is in fact considered objectionable by the Dominican Republic, that country can seek recourse under the Region 2 Agreement to resolve any problems.[37] To date,

---

[34] Planning for the Region 2 Conference was begun in November 1975 by the Inter-American Telecommunications Conference (CITEL), which is responsible for coordinating inter-American telecommunications matters.

[35] Region 2 countries consist of those found in North, Central and South America, the Caribbean, Greenland, Hawaii and various small islands in the Atlantic and Pacific Oceans. *Fourth Report*, Attachment 1, p.2 n.2.

[36] Response of Lares Broadcast Corporation, Appendix 1, p.2, filed June 29, 1982.

the Dominican Republic has raised no formal objection to the potential operation of WGDL. We therefore conclude that grant of the Lares application is not precluded by the new Region 2 Agreement under the circumstances reflected here.[38] Moreover, since this agreement does not govern the question of the amount of overlap that can be received by WGDL, a question left to our domestic rules, the new agreement does not stand as an impediment to a grant of the Lares application.

18. We turn now to the question of whether the Lares station would receive excessive interference from HIBS under our Rule 73.37(b)(2) and, if so, whether that rule should be waived. In view of our responsibility to promote the most efficient use of the broadcast spectrum available to the United States, it would ordinarily be important that we determine, prior to authorization, the degree of interference which will be received by a proposed service. However, unless a construction permit is first granted we may never reach this question under the unique situation presented here.

19. Under the circumstances of this case it would be unreasonable to expect the government of the Dominican Republic to enter into negotiations with the United States unless its domestic radio stations were actually receiving interference from an operating United States station. At the same time it is equally unreasonable to expect the Lares applicant to bear the expense and trouble of constructing a radio station without a reasonable assurance that it will be granted a license to operate that station in the future. Our approach to this dilemma was to waive Section 73.37(b)(2) so that a construction permit could be granted. We recognize that this waiver was made without first determining the precise degree of signal

---

[37] If any problems should arise, we are confident they can be resolved through negotiation and, if necessary, modification of WGDL's facility. As explained in the attachment (*Report of the United States Delegation*) to the *Fourth Report*, "resolution of incompatibilities will depend on the results of . . . negotiations." p. 32. Indeed, this has been the Commission's position since the designation order issued and the original grant was made to Lares. More specifically, in its Designation Order the Commission included the following language:

> [Any] grant is subject to acceptance of any interference that may be caused by operation of station HIBS at San Pedro de Macoris, Dominican Republic, on 1200 kHz and the technical facilities authorized herein may be modified in any manner as may be appropriate after discussion with the Dominican Republic.

[38] In passing we note that under the Region 2 Agreement WGDL was denominated operational as of January 1, 1982 and therefore does not fall under the proscription of paragraph 12 of Annex 2, Resolution COM 4/1 which provides: "A planned station in List B may be put into operation unless it causes unaccepted interference to a station which was in operation as of January 1, 1982." Final Acts of the Regional Administrative MF Broadcasting Conference (Region 2). WFBA complains that the listing was based on a fiction since WGDL is not in reality operational. However, we cannot ignore the practical effect of the unopposed listing. In view of this listing and the other factors described above, the Final Acts do not serve as a bar to our reaffirmation of the grant to Lares.

overlap. Yet, countervailing public interest benefits justified waiver. Foremost, the applicant would be providing the first aural broadcast facility licensed to Lares, Puerto Rico.[39] Secondly, protection of our rights under international treaty must override mechanical application of our domestic allocation rules. In this regard, the ability of the United States to protect its interests under international law would be seriously undermined if we were to stand idly by and allow any country to unilaterally violate governing treaty provisions.[40] Accordingly, it is imperative that this agency adopt that position most consistent with our rights under existing treaties, even though the effect is to reduce the emphasis ordinarily placed on our domestic allocation rules.[41] By the same token it appears that the preclusive effect, if any, may be greatly ameliorated following negotiations and technical modifications.[42] Thus, there appears little reason to preclude grant on the basis of a rule that Lares may hereafter be able to satisfy.

20. In conclusion we believe it would be contrary to the public interest to foreclose an otherwise qualified applicant from an opportunity to obtain a construction permit and ultimately a license because of the improper operation of a non-protesting foreign station.[43] For these reasons we feel that waiver of Section 73.37(b)(2) which presupposes that the source of interference emanates from a legitimately operating station, is warranted.[44] Having examined the situation from all relevant perspectives we again reach the conclusion that a construction permit was properly granted to Lares

---

[39] Application of Radio Lares for a construction permit for a new broadcast station in Lares, Puerto Rico, filed June 30, 1975, Exhibit 5.

[40] The United States has long ago objected to the unauthorized operation of HIBS on the 1200 kHz frequency. As we have repeatedly stated, the unlawful status of HIBS is a relevant factor, *inter alia*, for us to take into account in deciding whether a waiver of our "interference received" rule is appropriate. Similarly, as already mentioned, under NARBA the United States has a priority right to the use of 1200 kHz and the Dominican Republic has failed to comply with the notification requirements of that treaty.

[41] The existence of the new Region 2 Agreement does nothing to undermine the rationale for granting a construction permit to the Lares application because of past treaty infractions. We reached our determination on the basis of nonconformity with international treaty. Thus, although the governing treaty may have changed, the basis for our action remains valid.

[42] Intervenor Pepino previously predicted that the prohibited overlap received by Lares from HIBS might cover as much as 35% of the area and 33% of the population falling within the protected 0.5 mv/m contour of the applicant. Petition for Reconsideration or, In the Alternative, Petition for Leave to Intervene, filed December 4, 1976, Engineering Statement, p. 4.

[43] *Cf. Newcastle Broadcasting Corp.*, 1 FCC 2d 1124 (1965), *rev'd. on other grounds*, 11 FCC 2d 523 (1968).

[44] Compare *Arroyo Broadcasting, Inc.*, 49 FCC 2d 578 (1974), where waiver was denied when the originator of the interference was not a NARBA signatory; and *Golden Gate Corp. (WHIM)*, 6 FCC 2d 825 (1967), where waiver was denied in the absence of sound public interest justification.

Broadcasting Corporation and that the Commission's action remains fully viable.

21. ACCORDINGLY, IT IS ORDERED, That the previous determination in this proceeding granting the application of Lares Broadcasting Corporation for a construction permit for a new commercial standard broadcast station to operate on the 1200 kHz frequency at Lares, Puerto Rico, IS REAFFIRMED.

22. IT IS FURTHER ORDERED, That the Petition for Substitution filed April 1, 1982 by Gloria Mendez vda. de Perez IS GRANTED.

BEFORE THE

FEDERAL COMMUNICATIONS COMMISSION

WASHINGTON, D.C. 20554

In the Matter of	
MTS and WATS Market Structure	CC Docket No. 78–72, Phase I

SUPPLEMENTAL ORDER

(Adopted May 26, 1983 Released: May 31, 1983)

BY THE COMMISSION: COMMISSIONER FOGARTY NOT PARTICIPATING; COMMISSIONER JONES DISSENTING AND ISSUING A STATEMENT; COMMISSIONER SHARP ABSENT.

1. In the *Third Report and Order* in this docket, FCC 82–579, released February 28, 1983, we established a system of access charges through which telephone companies will after January 1, 1984, receive compensation for the use of their facilities to complete interstate and foreign telecommunications. Recognizing that after that date AT&T should no longer perform its traditional role of tariff filing agent and administrator of revenue pools associated with interstate services provided by local carriers, we also mandated the creation of an exchange carrier association to assume the task of preparing and filing access charge tariffs and administering the revenue pools created by these tariffs. We concluded that membership in the association would be limited to telephone companies participating in the access charge revenue pools and that the association's governing board should be composed exclusively of representatives from these companies. In order to assure appropriate representation for different classes of carriers, we decided that a rule defining the board's membership was needed. We recognized, however, that we could not appropriately prescribe a rule to achieve

this result until we knew which carriers would choose to participate at least during 1984 in the voluntary common tariff arrangements permitted by the *Access Charge Order*.[1] With that information available, we are now prepared to prescribe the rule that will define the composition of the association's board of directors. We also take this opportunity to prescribe the steps that must be taken to elect the association's first board of directors and to perform other preliminary organizational activities.

I. *The Structure of the Association's Board of Directors*

2. In the *Third Report and Order* we established two groups of access elements for which exchange carriers might enter into a voluntary common tariff arrangement with associated voluntary revenue pools. The first group comprised the three access elements charged to end users: dedicated access line; pay telephone and end user common line, while the second included the "traffic sensitive" access elements charged to interexchange carriers: line termination; local switching; intercept; information; operator assistance; common transport; dedicated transport; special access; and billing and collection. In addition we required all exchange carriers to enter into a mandatory common tariff arrangement and revenue pool in order to recover certain non traffic sensitive costs.

3. We created the exchange carrier association to prepare and file these tariffs and to administer and distribute the three associated revenue pools. Recognizing that there was insufficient time for the association to prepare the initial access service tariffs, which must be filed by October 3, 1983, we ordered AT&T to prepare and file these tariffs. As the first step in this process, we required all exchange carriers to notify AT&T by April 9, 1983, of their decision to file tariffs separate from the association tariffs for 1984. We also required that AT&T provide periodic progress reports to us until it files the initial tariffs.

4. On April 25, 1983, AT&T filed its first progress report. That report indicated that 1202 independent telephone companies had chosen to join both voluntary pools created in the *Access Charge Order*, 47 independents and 10 Bell Operating Companies (BOCs) chose to join only the voluntary pool for carrier traffic sensitive access charges, while four independent telephone companies chose to join only the voluntary pool related to end user access charges. The remaining carriers that responded to the letter, 11 BOCs and 83 independent telephone companies, plan to file separate tariffs for all voluntary elements.

---

[1] At that time we expressed our intent to issue the rule without soliciting additional comment since we had already sought and received comment on the structure of the association's governing board in response to our Fourth Supplemental Notice of Inquiry and Proposed Rulemaking in this docket, 90 FCC 2d 135 (1982) ("Fourth Supplemental Notice"). See *Access Charge Order* at n. 117.

5. With this information we believe that we can now act to define the membership of the association's governing board so that the board's composition initially reflects and over time continues to reflect the relative interest of different classes of carriers in the association's tariff-related activities. Accordingly, we now prescribe the following rule to define the composition of the exchange carrier association's board of directors:

69.602. Board of directors.

(a) For purposes of this section, the association membership shall be divided into three subsets:

(1) The first subset shall consist of all the Bell System Operating Companies other than Cincinnati Bell Inc. and Southern New England Telephone Company;

(2) The second subset shall consist of all other telephone companies with annual operating revenues in excess of forty million dollars;

(3) The third subset shall consist of all other telephone companies.

All commonly controlled companies shall be deemed to be one company for purposes of this section.

(b) There shall be fifteen directors of the association.

(c) In 1984 and 1985, five directors shall represent the first subset, three directors shall represent the second subset and seven directors shall represent the third subset.

(d) In 1986 and 1987, four directors shall represent the first subset, three directors shall represent the second subset and eight directors shall represent the third subset.

(e) In 1988 and thereafter, six directors shall represent the first and the second subset jointly and nine directors shall represent the third subset.

(f) Each subset shall select the directors who will represent it through an annual election in which each member of the subset shall be entitled to vote for the number of directors that will represent such members subset.

(g) For each access element or group of access elements for which voluntary pooling is permitted, there shall be a committee composed only of directors from companies participating in the pooling for that element or group of access elements. Each such committee shall be responsible for the preparation of charges for the associated access elements that comply with all applicable sections of this Part.

(h) Directors shall serve for a term of one year commencing January 1 except that the initial directors shall serve from the time of election until December 3, 1984.

6. We had first raised the issue of the board's composition in the *Fourth Supplemental Notice*. In its comments responding to that *Notice*, the Rural Telephone Coalition (RTC) had presented a detailed proposal for the governing board's structure. *See* RTC's Comments at pp. 52–56. The rule we now adopt incorporates several features of that proposal and, insofar as that rule departs from RTC's plan, we believe that the board members selected in accordance with

the rule's requirements will more accurately reflect and will be more responsive to the concerns of the companies they represent. For example, the rule we adopt today creates categories of exchange carriers based upon annual operating revenue rather than number of telephones because, as deregulation of customer premises equipment continues, the ability of a local telephone company to know the number of telephones in its system will diminish. We believe that because there is a correlation between the number of lines a carrier provides and its operating revenues, the latter is an equally reasonable basis for categorizing carriers as "large" or "small." The rule also creates fewer classes of carriers than the RTC proposal. The rule recognizes, however, that while in 1984 and 1985 the larger companies will rely upon the mandatory revenue pool to recover a substantial part of their non-traffic sensitive costs, over time because the share they will recover through the pool will drop significantly, their relative interest in the association's tariffing activities will diminish in comparison to the interest of smaller companies generally, and those with high costs particularly. The rule accomplishes this by gradually reducing the representation of the larger carriers and concomitantly increasing the representation of the smaller carriers on the board. The rule also recognizes that the telephone companies choosing to enter the common tariff arrangements for the end user or the traffic sensitive access element groups share a common interest in the rate structure of the association's tariff for these elements, and that this interest is not necessarily based on a carrier's size. Accordingly the rule assigns responsibility for developing the charges for each of these groups to a committee whose membership is restricted to board members whose companies have chosen to join the common tariff to be filed for that group of elements.

7. We recognize that future developments that cannot be predicted with certainty at this time may require adjustments in the 1986–1987 or the 1988 and after formula and expect to institute proceedings at an appropriate time to consider revisions. We may also elect to designate separate representation for carriers that do or do not receive Universal Service Fund distributions at a later date. It would not be feasible to create such categories at this time because we do not have sufficient information to devise a suitable formula and this Commission has not yet received the Joint Board's Recommendations in CC Docket No. 80–286.

II. *Election of the First Board of Directors and Other Organizational Activities*

8. Once the exchange carrier association is organized, the association will conduct annual elections to select board members in accordance with the rule we adopt today. Because it will be the 1984 board members who, in fact, organize the association, the association

itself clearly cannot conduct the election of this first governing board.

9. We have been advised that USITA, the Bell Operating Companies and the Rural Telephone Coalition have formed an industry committee to advise AT&T on the development of the exchange carrier association's initial tariffs and to perform steps preliminary to the association's organization. In particular, the committee has offered to conduct and supervise the election of the association's first board of directors. The letter, dated May 9, 1983, in which the committee makes this offer is attached as an appendix to this *Order*. The alternatives to having the committee conduct the election are to order AT&T to hold the elections or for the Commission itself to conduct the election. Neither of these alternatives is preferable to having the committee conduct the election. The committee already represents the interests of all segments of the telephone industry and has the resources at its disposal to undertake this formidable task. We shall therefore authorize and direct this industry committee to conduct the election of the association's 1984 board of directors. This election should be held as soon as possible in order to create a board that can provide some policy guidance in the formulation of the initial tariffs.

10. In the election process, each carrier shall be entitled to vote for the number of directors allotted to its subset. For example, a carrier that had revenues in excess of forty million dollars in 1982 and that is not a divested BOC may vote for three different persons as association directors. Such a carrier could not cast more than one vote for any one candidate.

11. In its May 9 letter the industry committee also states that it will be necessary to perform other activities of the type described in that letter at this time. The creation of a functioning organization that will be able to perform all association functions on January 1 is, of course, essential to the success of the access charge plan. It is also desirable that representatives of independent telephone companies provide advice to AT&T in the early development of the initial access charge tariffs. In view of the time that will be required to elect the initial directors, we have concluded that the industry committee should also be authorized and directed to perform the type of activities described in the May 9 letter until the initial board of directors has been elected.

III. *Ordering Clause*

12. Accordingly, IT IS HEREBY ORDERED, That pursuant to 47 U.S.C. §§154(i) and (j) and 203, Section 69.602 IS ADDED to Part 69 of the Rules of this Commission as set forth in this Order, effective on the date following publication in the *Federal Register*.

13. IT IS FURTHER ORDERED That the industry committee described in the Appendix to this Supplemental Order is authorized

and directed to conduct an election to select the initial association directors and to perform other association activities of the type described in such Appendix until the initial directors have been elected.

FEDERAL COMMUNICATIONS COMMISSION
WILLIAM J. TRICARICO, *Secretary*

APPENDIX

May 9, 1983

Mr. Gary M. Epstein, Chief
Common Carrier Bureau
Federal Communications Commission
1919 M Street, NW
Washington, DC 20554

Dear Mr. Epstein:

Part 69, Subpart G of the FCC's Rules (adopted December 22, 1982) mandates the creation of an Exchange Carrier Association (ECA). This association will prepare and file access charge tariffs, as well as collect and distribute related revenues, on behalf of all telephone companies that participate in the Association. This letter is intended to inform the Commission of industry activities in this regard, as well as to seek counsel and/or action on matters of concern to the industry.

The Commission noted that the task of preparing and filing complex ECA access charge tariffs is formidable, particularly since such tariffs must be acceptable to all industry participants and at the same time be in compliance with the Commission's Rules. The Commission recognized that the ECA could not be created in sufficient time to prepare the initial common access charge tariffs, and accordingly required AT&T to file such tariffs on behalf of the telephone industry and report its activities in connection with access tariff preparations (paragraphs 371 and 372, FCC Third Report and Order, CC Docket No. 78-72). The FCC rendered findings that a "common tariff arrangement that most of the exchange carriers can use is clearly necessary to make any access charge rules work" and that "such arrangements would, therefore, presumably be immune from anti-trust sanctions because they are necessary to make the regulatory scheme work—" (pp. 95-96). It necessarily follows that once the ECA is established, its activities pursuant to the FCC's order would be immune from anti-trust sanctions.

If the Commission's access charge plan is to be fully functioning beginning on January 1, 1984, a significant amount of work must be done in 1983 in addition to the initial development and filing of tariffs. An ECA organizational structure must be developed and the work functions, job descriptions and personnel skill requirements specified. All of the operational plans and data systems necessary to administer tariffs and collect and disburse revenues associated with each of the access charge pools must be designed and tested, and contracts governing the relationship between the ECA and each member company have to be developed and consummated. These pool administration methods, to the greatest extent possible, should be developed by the same people who will have to make them work in 1984. Staffing policies have to be created and implemented, and the people possessing requisite skills must be identified and recruited. Office space, equipment, and furniture has to be procured. Questions which relate to people's personal lives such as work location, salary schedules, pensions and other benefits all must be resolved. Legal questions concerning issues like incorporation, tax status and insurance must be also addressed.

It is clear that if the ECA is to be operational by January 1, 1984, work on these preparatory activities cannot be delayed—in fact some initiatives in this regard have been taken by the industry and work has begun. Specifically, pending the Commission's supplemental order, the telephone industry has established an ECA Ad Hoc Committee (see attached list of members) to provide advice and support to AT&T's data collection and tariff development activities, as well as to begin the many administrative and operational activities essential to the creation of the ECA.

The members of the ECA Ad Hoc Committee believe that all of their activities have been in support of the tasks that the Commission has mandated for AT&T and the ECA. In addition, the Committee stands ready to provide the Commission with any assistance it may request in the formation of the ECA or its Board of Advisors. However, recognizing the Commission's admonition at Paragraph 344 the Ad Hoc Committee will not engage, "in activities that are not directly related to the preparation of access charge tariffs or the distribution of access charge revenues unless such additional activities are expressly authorized by . . . [the] Commission."

We would be happy to discuss the nature of our activities further, or answer any questions you may have. However, because of the urgent need to move forward with the preparatory activities we have described above we will assume that our course of action has your concurrence unless we hear otherwise.

Dissenting Statement
of
Commissioner Anne P. Jones

In Re: In the Matter of MTS and WATS Market Structure, CC Docket No. 78-72, Phase I (Exchange Carrier Association)

An essential component of the Commission's access charge plan adopted in the *Third Report and Order* in this docket last December was the Exchange Carrier Association (ECA). In effect, the ECA will replace the traditional industry mechanism of settlements and division of revenues administered by AT&T. In many respects, the ECA replicates in form and function the existing mechanism for pooling and distributing industry revenues among local exchange carriers. So long as rate averaging and arbitrary jurisdictional cost allocation remain attributes of the structure of the telephone industry, some mechanism for revenue pooling is necessary.

My objection to the ECA, both in December and now, is that such an organization is both inconsistent with and inimical to the development of a competitive telecommunications industry. As I said last December, "I object to the creation of the ECA and question the Commission's authority to mandate the existence of such an organization. As a matter of public policy, the ECA is unnecessary since pooling is unnecessary. . . . I fear, however, that the ECA organization contemplated by the Commission's [access charge plan] will prove a hazard to telecommunications competition."[1] My views on the ECA in December are unchanged today, and as a matter of policy and principle I cannot support the *Supplemental Order* presently before the Commission that defines the composition of the ECA's board of directors.

The existing industry settlements and division of revenue process and its successor, the ECA, are institutions consistent with a closed-entry, regulated monopoly industry. They are inherently mechanisms for industry cooperation and potential collusion, not vigorous competition. I think the Commission should realize that regulatory policy that attempts to preserve traditional industry practices may seriously impede the ongoing evolution of a telecommunications industry that is destined to be competitive. In a sense, the creation of the ECA reflects a certain hesitancy by the Commission to accept the full implications and consequences of its pro-competitive policies. The day is long past, however, for the Commission to second-guess the wisdom of its pro-competitive decisions. I am confident that competition is the proper foundation of our policies toward the telephone industry. Thus, the Commission should move ahead with its pro-competitive agenda, not linger over the past.

---

[1] Separate Statement of Commissioner Anne P. Jones Concurring and Dissenting in Part *In Re*: MTS and WATS Market Structure, CC Docket 78-72, Phase I, April 4, 1983, pp. 42-43.

In my view, the ECA is a vestige of the past and an impediment to the future. I can support neither the ECA in concept nor rules governing its organization. Therefore, I respectfully dissent from the Commission's decision to adopt rules for the establishment and management of the ECA.

CATV Carriage, Significant Viewing Test
Declaratory Ruling

Granted in part request of television broadcast station to be declared significantly viewed. Station met test levels in seven counties in 1976, but no longer meets levels in one county today. *–Octagon B/cing Co.*

FCC 83–308

BEFORE THE

FEDERAL COMMUNICATIONS COMMISSION

WASHINGTON, D.C. 20554

In re:	
OCTAGON BROADCASTING COMPANY Petition for Special Relief	CSR-2209

MEMORANDUM OPINION AND ORDER

(Adopted: June 29, 1983 Released: July 19, 1983)

BY THE COMMISSION: COMMISSIONER FOGARTY NOT PARTICIPATING.

1. On September 13, 1982, Octagon Broadcasting Company (hereinafter "WMBB"), licensee of Television Broadcast Station WMBB (ABC, Channel 13), Panama City, Florida, filed a "Petition for Declaratory Ruling" seeking to be declared significantly viewed in the following counties: Dale, Geneva, and Houston, Alabama; Gadsden, Jackson, and Leon, Florida; and Decatur, Georgia. WMBB's petition is opposed by Allen Communications, Inc. (hereinafter "WECA"), licensee of Television Broadcast Station WECA (ABC, Channel 27), Tallahassee, Florida, and by Southeast Alabama Broadcasting Company, Inc. (hereinafter "WDHN"), licensee of Television Broadcast Station WDHN (ABC, Channel 18), Dothan, Alabama. WMBB has replied.

2. In support of its petition, WMBB states that it became operational (as Television Broadcast Station WDTB) on October 4, 1973, which was after the surveys used to establish the Commission's list of significantly viewed signals in the *Reconsideration of the Cable Television Report and Order*, FCC 72–530, 36 FCC 2d 326, 378–463 app. B (1972). Accordingly, pursuant to Section 76.54(d) of the Commission's Rules, WMBB may utilize county-wide data to establish its status as significantly viewed, provided that such data is from the station's first three years of operations. WMBB submits Arbitron data from 1976, which reveals that WMBB achieved the following levels of viewing:

County	*Total County Share of Viewing*	*Total Net Weekly Circulation*
Dale, AL	4%	35%
Geneva, AL	7%	58%
Houstan, AL	10%	56%
Gadsden, FL	15%	76%
Jackson, FL	19%	84%
Leon, FL	14%	56%
Decatur, GA	6%	37%

Section 76.5(k) of the Rules defines a significantly viewed network affiliate as one which achieves in noncable households "a share of viewing hours of at least 3 percent (total week hours), and a net weekly circulation of at least 25 percent. . . ." Based on the above data, WMBB seeks to be declared significantly viewed in the referenced counties.

3. WECA opposed WMBB's petition on November 12, 1982, and supplemented this opposition on November 16, 1982.[1] WECA argues that Panama City, WMBB's city of license, is a separate market from both Tallahassee, Florida,[2] and Dothan, Alabama, yet WMBB seeks to require its carriage on cable systems in those latter markets. In addition, notes WECA, WMBB would be entitled, as a significantly viewed signal, to receive "full, undeleted carriage of all its programming, network and non-network," even though WECA currently receives network program nonduplication protection on cable systems in the affected counties. WECA contends that this protection is particularly vital for its survival in Tallahassee, whose cable system serves approximately 30,000 subscribers, which constitute about 20 percent of the homes in the Tallahassee Area of Dominant Influence (ADI). WECA contends that its local competitor, Station WCTV (CBS, Channel 6), Tallahassee, Florida, does not suffer from network program duplications. WECA asserts that it "has never made an operating profit in its six years of operation," and that WMBB seeks to create "an unnatural competitive situation. . . ." WECA states that in 1980–1981 it endured duplication of its network programs on the Tallahassee cable system, when Station WJHG-TV (NBC, Channel 7), Panama City, Florida, was an ABC affiliate. During this period, argues WECA, the station suffered a revenue loss, and also lost at least four advertisers to WCTV, whose programming was not duplicated. WECA maintains that marketplace forces — which are defied by the significant viewing rules — should be allowed to work undisturbed, and that the public would lose much and gain nothing from granting WMBB significantly viewed status.

4. WECA states that, while WMBB's data is technically in

---

[1] WMBB did not serve its petition on parties until October 13, 1982.

[2] WECA notes that Panama City is 85 air miles from Tallahassee, and over 100 miles distant by available highways.

compliance with Section 76.54(d) of the Rules, WECA was not on the air at the time of WMBB's survey data, nor was WMBB itself on the air when the Tallahassee system gained most of its current subscribership level. WECA estimates that it will lose 5 to 10 percent of its gross revenues if WMBB's petition is granted, and states that WECA has been able to hold its annual expense increases to between 4 and 6 percent for the past three years. WECA projects that its losses would force it: (1) to fire two persons hired to work on its daily public affairs show "A. M. Tallahassee," and perhaps to drop the program entirely; (2) to fire two persons doing general production work; and (3) to fire two or three members of the news staff and to restrict news coverage to metropolitan Tallahassee. Citing *KDUB-TV, Inc.* (Dubuque, Iowa), FCC 81–530, 88 FCC 2d 450 (1981), *recon. denied*, FCC 82–182, 89 FCC 2d 994 (1982), and *Desert Empire Television Corporation*, FCC 82–471, 52 RR 2d 798 (1982), WECA claims that it is entitled to retain nonduplication protection, and that pending rulemakings and legislative proposals should be resolved prior to ruling on WMBB's petition.

5. WDHN opposed WMBB's petition on November 12, 1982. WDHN contends that WMBB's data is out-of-date and unreliable, because of WMBB's 1982 affiliation change from NBC to ABC, and because of population shifts in the affected counties. WDHN submits the following population data:

County	*1970 Population*	*1980 Population*	*% Change*
Dale, AL	52,995	47,821	−9.8
Geneva, AL	21,924	24,293	+10.6
Houston, AL	56,574	74,632	+31.9
Gadsden, FL	39,184	41,565	+6.1
Jackson, FL	34,434	39,154	+13.7
Leon, FL	103,047	148,655	+44.3
Decatur, GA	22,310	25,496	+14.3

Citing the *Report and Order in Docket No. 20371*, FCC 75–1145, 56 FCC 2d 265, 269 (1975), WDHN contends that WMBB's data is unreasonably out-of-date and is no longer reliable.

6. WMBB replied to WECA and WDHN on December 2, 1982. WMBB contends that WECA's arguments merely echo those made by the station in the "Petition for Rulemaking" (RM-3745) filed in 1980 by the Smaller Market UHF Television Stations Group, to which WECA belongs, and are irrelevant to WMBB's demonstrated viewership levels. Citing the *Memorandum Opinion and Order in Docket No. 19995*, FCC 78–217, 67 FCC 2d 1303 (1978), *recon. denied*, FCC 78–597, 68 FCC 2d 1461 (1978), *aff'd sub nom. Spartan Radiocasting Company v. FCC*, 619 F.2d 314 (4th Cir. 1980), WMBB argues that significantly viewed signals are local signals, and that the nonduplication rules are not designed to protect network affiliates from competition from stations affiliated with other networks. WMBB notes that WECA concedes that WMBB's data

meets the Commission's requirements, and argues that its levels of viewing are in part due to Tallahassee viewers. WMBB notes that *Docket No. 20371, supra*, mandates the use of data from a station's first three years of operations, and that this data has been publicly available for years. WMBB denies that it must make a showing that its petition is in the public interest, because a significantly viewed signal is in fact a local signal, citing the *Cable Television Report and Order*, FCC 72–108, 36 FCC 2d 143 (1972). WMBB argues that WECA's opposition contains none of the factual evidence required by *KDUB-TV, Inc., supra*, and maintains that pending administrative and legislative proposals should not deter action on the instant petition.[3]

7. In order to be declared a significantly viewed signal in a particular county, WMBB must have achieved, during the first three years of its operation (*i.e.*, between October 1973 and October 1976), at least a 3 percent share of total week viewing hours and at least a 25 percent net weekly circulation. According to the data submitted, WMBB did so in each of the counties in question. The concerns raised by WDHN concerning population shifts do not affect this conclusion. WMBB must achieve a percentage of viewing, which ordinarily will not be affected by changes in total population. With regard to WDHN's allegations concerning the effect of WMBB's affiliation change, we note that the criteria for significant viewing status which the station must meet are sufficiently low to represent the signal's availability rather than its popularity. Additionally, the three major networks nationwide generally achieve similar viewing levels, and in fact WMBB remains significantly viewed in most cases (*see*note 4, *infra*.) WECA's concerns based upon Panama City's distance from Tallahassee are equally unavailing. If WMBB's signal is available beyond its city of license at the required level of viewing, it is therefore significantly viewed. To rule otherwise would be disruptive of the competitive marketplace forces WECA argues are at stake in this case. Nor does WECA offer any factual data to substantiate its hypothesized financial difficulties should WMBB's petition be granted. While WECA notes that it once before experienced a loss of non-duplication protection vis-a-vis a competing affiliate of the same network, WECA does not submit the detailed audience and financial analysis that led the Commission to grant

---

[3] In addition, WECA filed an unauthorized and untimely pleading on June 28, 1983, one day prior to this item's consideration, reiterating its earlier argument (*see*paragraph 4, *supra*) that action on the instant petition be deferred, citing in addition *KCST-TV, Inc. v. FCC*, 699 F.2d 1185 (D.C. Cir. 1983), and also noting the pendency of the July 1983 audience ratings period. WMBB opposed WECA's filing that same day. WECA offers no justification for the filing of its unauthorized pleading, nor explains why it could not have filed its pleading earlier. Furthermore, in view of our analysis herein (*see*paragraph 8, *intra*), we see no reason to postpone action today based on the pendency of future surveys. Consequently, WECA's request will be denied.

relief in both *KDUB-TV, Inc.*, *supra*, and *Desert Empire Television Corporation*, *supra*. Barring a showing of need for regulatory intervention, we see no reason why a signal significantly viewed and readily available over the air should not be carried by a local cable television system.

8. At the same time, we are aware that WMBB's data is some seven years old. During these years, certain shifts in viewing levels have occurred. While these shifts have not generally affected WMBB's status as significantly viewed in six of the counties in question, in Dale County, Alabama, we note that WMBB's total county share of viewing in 1982 has dropped to 1 percent, and that WMBB's total net weekly circulation has dropped to 11 percent.[4] Accordingly, WMBB would not today be considered to be significantly viewed in Dale County, having failed to achieve the required 3 percent share and 25 percent net weekly circulation. We realize that our rules require the submission of viewing data, in WMBB's case, from within the period 1973–1976; however, in its decision in *KCST-TV, Inc. v. FCC*, 699 F.2d 1185 (D.C. Cir. 1983), the United States Court of Appeals for the District of Columbia Circuit raised issue regarding the Commission's and other parties' reliance on old data in determining the significantly viewed status of television stations. In view of this decision, we feel it appropriate at this time to defer action on WMBB's request that we declare it to be significantly viewed in Dale County, Alabama.[5] Apart from this one exception, however, we are satisfied that the data submitted shows WMBB to be significantly viewed in the other counties in question. The issue of WMBB's status in Dale County will be resolved subsequent to our issuance of a decision responding to the Court's concerns in *KCST-TV, INC. V. FCC, supra*, and the parties will be given an opportunity to file pleadings at that time.

9. In view of the foregoing, we find that grant of WMBB's petition, to the extent indicated above, is in the public interest.

---

[4] The 1982 Arbitron figures for WMBB in all affected counties are:

County	*Total County Share of Viewing*	*Total Net Weekly Circulation*
Dale, AL	1	11
Geneva, AL	4	47
Houston, AL	8	56
Gadsden, FL	10	79
Jackson, FL	n/a[*]	n/a[*]
Leon, FL	8	54
Decatur, GA	8	46

[*] Arbitron does not place cable controls in this county, and therefore no non-cable data is available.

[5] We note, therefore, that the staff is reviewing current Arbitron data in cases of this nature pending final resolution of *KCST-TV, Inc. v. FCC, supra*.

10. Accordingly, IT IS ORDERED, That the "Petition for Declaratory Ruling" filed September 13, 1982, by Octagon Broadcasting Company IS GRANTED to the extent indicated in paragraph 8, *supra*, and in all other respects is DEFERRED.

FEDERAL COMMUNICATIONS COMMISSION
WILLIAM J. TRICARICO, *Secretary*

Reconsideration, Petition for, Partial Grant of

Order adopted granting partial reconsideration of the Commission's Report and Order (adopted November 18, 1982) in CC Docket No. 81-343, where petitioner had shown willingness to use circuit-multiplication equipment to increase the effective capacity of its cable circuits.
-Pacific Telecommunications
CC Docket No. 81-343

FCC 83-270

BEFORE THE

FEDERAL COMMUNICATIONS COMMISSION

WASHINGTON, D.C. 20554

In the Matter of	
Inquiry Into the Policies to Be Followed in the Authorization of Common Carrier Facilities to Meet Pacific Telecommunications Needs During the Period 1981-1995	CC Docket No. 81-343

MEMORANDUM OPINION AND ORDER

(Adopted: June 2, 1983; Released: June 16, 1983)

BY THE COMMISSION: COMMISSIONER FOGARTY NOT PARTICIPATING.

1. On December 3, 1982, we released our Report and Order in this proceeding, *Pacific Planning*, FCC 82-513, ___FCC 2d ___, 47 Fed. Reg. 57,040 (1982), in which we adopted policies and guidelines applicable to requests for authorization of submarine cable and satellite telecommunications facilities to meet needs in the Pacific Ocean region (POR) during the period 1982-1986. We now have before us a petition filed on January 3, 1983, by Hawaiian Telephone Company (HTC) seeking partial reconsideration of that order. Specifically, HTC requests reconsideration of (a) our authorization for it to acquire ownership of 60, rather than 120, voice-grade circuits in the ANZCAN North cable[1] for service between Hawaii

---

[1] ANZCAN is an acronym referring to the Australia/New Zealand-Canada submarine telephone cable. The ANZCAN cable is a 14 MHz facility, channelized to yield 1380 voice-grade circuits each with a nominal bandwidth of 4 KHz. The ANZCAN cable consists of two segments: ANZCAN North, linking Hawaii and Vancouver, British Columbia; and ANZCAN South, linking Australia, New Zealand, Fiji, Norfolk Island and Hawaii. The ANZCAN cable is a joint venture of the telecommunications entities of Australia, Canada, France, the Federal Republic of Germany, New Zealand, the Independent State of Papua, New Guinea, the Philippines and the United Kingdom. The ANZCAN owners will grant U.S.

READEX FICHE best copy available

and Canada, (b) our denial of authorization for it to acquire ownership of 35 circuits in the ANZCAN North cable for service between Hawaii and several points in Europe, and (c) our authorization for it to acquire ownership of 32, rather than 60, voice-grade circuits in the ANZCAN South cable for service between Australia and Hawaii. On January 18, 1983, the State of Hawaii filed an Opposition to Petition for Partial Reconsideration of HTC which supports our original decision and urges denial of HTC's requests. On January 31, 1983, HTC replied to the State of Hawaii's comments.

2. The Report and Order at issue here is the end product of the proceeding we initiated in June 1981 looking into the development of facilities construction and use guidelines for the POR for the period 1981–1995.[2] This proceeding marks our first attempt to analyze the U.S. carriers' facilities needs in the POR on a comprehensive basis. The various U.S. carriers providing service in the POR, Comsat, federal governmental entities responsible for communications matters and the State of Hawaii have been actively involved throughout the development of the comprehensive plan. These entities filed extensive comments and alternative proposed facilities plans. Further, since international communications are a cooperative venture between two or more countries, our process took cognizance of the views of the foreign entities concerned, directly or through the submissions of the U.S. participants.

3. In our Report and Order we generally found in the public interest the facilities plan proposed by the United States carriers, including the proposal to acquire a variety of permanent ownership and temporary IRU interests in circuits in the ANZCAN North and ANZCAN South cables. However, while generally approving HTC's request for circuits, we denied or modified specific requests in three particulars. First, we granted HTC authorization to acquire ownership of 60 circuits in ANZCAN North for service between Hawaii and Canada, rather than the 120 circuits HTC had requested. Second, we denied HTC authorization to acquire ownership of any circuits in ANZCAN North for service between Hawaii and various countries in Europe; HTC had requested authority for 35 such circuits. Third, we granted HTC authorization to acquire ownership of 32 circuits in ANZCAN South for service between Hawaii and Australia, rather than the 60 circuits requested.

4. With respect to the Canadian and Australian circuits, we found that HTC had shown a need for some of the requested circuits,

---

carriers full ownership in their ratable share of the circuits in which they acquire permanent interests. They will grant those carriers indefeasible right of user (IRU) in those in which they acquire temporary interests.

[2] We initiated the process with a Notice of Inquiry, 46 Fed. Reg. 31,286 (1981). That Notice was followed by a Notice of Proposed Rulemaking, 47 Fed. Reg. 21,868 (1982), which initiated the formal portion of the process leading to the adoption of the facilities plan at issue here.

but that it had not proposed to use them in the most effective way. We noted that HTC had not proposed to use circuit-multiplication equipment with either the Canadian or Australian circuits.[3] We further found that through use of such equipment HTC would be able to meet its forecasted demand to Canada with only 60 circuits and to Australia with only 32 circuits. With respect to the circuits to Europe, we found that HTC had proposed to use those circuits to route Europe-bound traffic to Canada, to transit Canada, via leased terrestrial facilities, to Canada's East Coast INTELSAT earth station at Mill Valley, and then to connect with the INTELSAT AOR (Atlantic Ocean Region) satellite. We noted that HTC had failed to justify its proposal; it argued only that such a routing is necessary to avoid a "double hop." That is, HTC argued that the only facility available to it for European service is the AOR satellite and that the only option it has to connect with that satellite is to use ANZCAN North or the U S. domestic satellite. Because carriers seek to use only one satellite link on any given circuit, HTC argued that it is compelled to use ANZCAN North.[4]

5. We disputed HTC's claim that it has no option in routing Europe-bound traffic and noted that its proposed routing is unduly expensive. We noted that HTC could route its European traffic via a U.S. domestic satellite to an earth station in Pennsylvania and connect to circuits in the TAT-7 cable. We also found that such a routing would be more direct, involve much less transiting, and would be less costly. Finally, we noted that HTC should have no trouble obtaining TAT-7 circuits since, in authorizing AT&T to construct the TAT-7 cable, we required AT&T to make circuits available to other U.S. carriers such as HTC. HTC now asks us to reconsider the above three actions.

6. *Service to Canada.* Turning first to the Canadian circuits, HTC asks us to reconsider our denial of the second 60 circuits and our requirement that it use circuit-multiplication equipment with the 60 circuits we did authorize. In support HTC notes that the Master Loading Plan it had submitted with its modified circuit requests is in need of clarification. That plan, at Table Number 21, shows a need for a total of 411 circuits to Canada by 1995, 160 to be provided over ANZCAN North and 251 via satellite. *See* HTC, Master Loading

---

[3] Circuit multiplication refers to the process by which the effective capacity of cable facilities can be increased by as much as a factor of two. Circuit-multiplication equipment exploits the fact that one party to a telephone conversation is usually silent while the other speaks, and that speakers often hesitate. The equipment senses these silences and routes portions of other calls over the momentarily idle circuits.

[4] Because satellites are located 22,300 miles above the earth, signals must travel a longer distance than they do on terrestrial facilities. This extra length of travel means that a satellite circuit has a slightly greater delay than terrestrial circuits. As a result, whenever possible, carriers seek to use only one satellite link in a given transmission.

Plan, attached to its Comments in CC Docket No. 81–343, June 28, 1982. HTC notes, however, that its Master Plan shows a need for 160 circuits in ANZCAN North, or 40 more than the 120 circuits it had requested, but that it does not make clear how HTC proposes to acquire the remaining 40 circuits. HTC asserts that under the Master Plan the 120 requested circuits will be exhausted by 1989 and will be supplemented through use of circuit multiplication equipment or by reconfiguring the ANZCAN North cable to increase its capacity by changing the bearer circuits from 4 KHz in width to 3 KHz in width. HTC states that it regrets this lack of clarity, since it appears to have misled us into believing that its needs could be satisfied with only 60 circuits.

7. HTC also noted that its correspondent for the circuits in question, Trans-Canada Telephone System (TCTS),[5] is concerned about our failure to approve all 120 circuits requested. HTC indicates that TCTS believes our action will have an adverse impact upon TCTS's investment in the ANZCAN cable. HTC also notes that TCTS has "expressed an unwillingness to consider use of [circuit-multiplication equipment] at the outset" of its use of ANZCAN North. HTC Petition for Reconsideration at p. 4. Finally, HTC notes that it does not operate directly with Canada and that the opening of such direct service is tied to the introduction of the ANZCAN cable. HTC states that it is concerned that our denial of the 60 circuits will jeopardize the introduction of direct service. HTC requests that, since this Commission is on record as favoring direct service, we reconsider our denial of the second 60 circuits to Canada. In return, HTC has revised its Master Loading Plan for Hawaii-Canada to show that circuit-multiplication equipment (more specifically TASI[6]) will be introduced in 1990.

8. *Service to Europe*. The second area in which HTC seeks reconsideration is our denial of the 35 half circuits it requested in ANZCAN North for service to Europe. HTC argues that our denial will seriously disrupt the correspondent relationships on which its ability to provide service depends. HTC notes our concern about the cost effectiveness of routing Europe-bound traffic through Canada and the INTELSAT satellite, and agrees that our alternative proposal routing European traffic through a U.S. domestic satellite and TAT-7 would be more direct, but states that such a routing would not be acceptable to its correspondents. HTC notes that its correspondents have made investments in ANZCAN North based on HTC's proposal to use the 35 circuits for service to Europe and that

---

[5] TCTS is an association composed of a number of Canadian telephone carriers plus Telesat Canada, the Canadian domestic satellite carrier.

[6] TASI is a specific type of circuit-multiplication equipment which can be used to achieve a multiplication factor of 2. TASI is an acronynm standing for Time Assignment Speech Interpolation.

those circuits would go unused if HTC were to reconfigure its network as the Commission has proposed. HTC further notes that, notwithstanding our power to order AT&T to sell HTC TAT-7 circuits, some of its European correspondents "may not" have TAT-7[7] circuits available for service with Hawaii. Finally, HTC notes that its correspondents are "upset" by our "abrupt and unilateral reconfiguration of agreed upon facilities usage." HTC Petition at 7. HTC includes with its petition telexes from its German and United Kingdom correspondents indicating their support for HTC's original proposal.

9. *Service to Australia.* Finally, HTC seeks reconsideration of our decision to authorize it only 32 circuits (instead of 60) in the ANZCAN South cable for service to Australia and our requirement that HTC use circuit-multiplication equipment on those circuits we did authorize. Again HTC notes our concern about the cost effectiveness of its circuit request, but states that its Australian correspondent, the Overseas Telecommunications Commission (OTC), refuses "to consider use of [circuit-multiplication equipment] on ANZCAN South because of the additional investment that would be required." HTC Petition at 8. HTC charcterizes this position as "understandable," since it notes that OTC has made substantial investments in "cable circuits which are now spare." HTC states that the 32 circuits we authorized are enough for its current Australia service needs, but notes that future needs will be placed in serious jeopardy, since it cannot guarantee that cable circuits will then be available to it at reasonable cost.

10. *Opposition of the State of Hawaii.* The State of Hawaii generally supports the decision in our Report and Order to limit HTC's acquisition of circuits in ANZCAN North and South and states that it believes HTC has shown nothing new which would justify changing that decision. The State of Hawaii notes that, as the representative of the users within its boundaries, it is legitimately concerned that HTC use its facilities in the most efficient way. The state also argues that such users are disserved by non-essential and non-cost-effective facilities investments.

11. With respect to HTC's proposed Canada service, the State of Hawaii notes that HTC does not dispute the finding in our Report and Order that its proposal to use 120 circuits is not the most efficient use. The State notes that even HTC's latest Master Loading Plan shows less than optimal use of TASI.[8] Further, the State argues

---

[7] TAT-7, the seventh transalantic telephone cable, connects the United States and the United Kingdom. It is scheduled to enter service on July 1, 1983.

[8] The State of Hawaii refers here to the proposed, revised Table No. 21 HTC submitted with its Petition for Partial Reconsideration. The details of that revised plan are set out in footnote 11, *infra*. In brief, revised Table 21 shows introduction of TASI on HTC's ANZCAN North circuits in 1990.

that, since HTC has not yet been authorized to serve Canada directly, the public has not had a chance to examine the cost effectiveness of any direct service to Canada at all. The State argues that such a determination can only be made at such time as HTC files an application under Section 214 of the Communication Act, 47 U.S.C. §214 (1976), and that the existing record is certainly inadequate. The State of Hawaii also notes that the agreement with TCTS on which HTC seeks to rely was entered into before HTC had presented its proposal to the Commission for review, and before it has been authorized to serve Canada, and is therefore of no decisional value.

12. With respect to European service, the State of Hawaii indicates agreement with our tentative preference for routing such traffic through a U.S. domestic satellite and TAT-7. The State further notes that HTC does not dispute our finding, and even concedes in its Petition for Partial Reconsideration that such a routing "would result in a more direct, presumably more efficient configuration." HTC Petition at p. 7. Again, the State of Hawaii notes that HTC has not yet sought authorization to serve any European points directly and that as a result the public has had no opportunity to comment on the cost of such direct service. Finally, with respect to the Australian circuits, the State of Hawaii argues that the purported unwillingness of the Australian entity to make efficient use of its cable investment should have no decisional importance before the Commission. The state of Hawaii also argues that, should it happen that the 32 circuits we authorized would at some future date be insufficient to handle all of HTC's peak traffic to Australia, HTC does not need to handle all its peak traffic over its own direct circuits, but that it can use alternate routings which assure full and efficient use of circuitry.

DISCUSSION

13. After reviewing the relevant portion of our December 3 Report and Order, HTC's petition, the State of Hawaii's comments and HTC's reply, we have decided to grant HTC partial relief. With respect to its request for 120 circuits for service to Canada, we note that HTC has now proposed to use circuit-multiplication equipment. We, therefore, shall grant HTC authority to acquire permanent interests in all 120 circuits in ANZCAN North which it had requested. With respect to the other aspects of HTC's petition, the circuits in ANZCAN North for service to Europe and in ANZCAN South for service to Australia, we find HTC has shown no reason to suggest that the analysis in our December 3 Report and Order was in error. Accordingly, we shall affirm our prior holding with respect to those circuits.

14. *Service to Canada (ANZCAN North).* Turning first to the matter of the 120 circuits in ANZCAN North for service to Canada,

we note that HTC does not challenge the analysis in our Report and Order that was based on data that it had provided prior to the Report and Order, referred to here as its June 28 comments. Rather, HTC concedes that the circuit-loading plan for Canada it submitted was ambiguous in that it did not clearly indicate how HTC proposed to use the requested circuits or specify any use of TASI or other circuit-multiplication equipment. HTC notes, however, that its correspondent, TCTS, is currently unwilling to consider use of TASI in the early years of service. As a result, the 60 circuits we authorized in our Report and Order will not be sufficient to meet HTC's forecast of demand for circuits even in the first year of operation.

15. We agree that HTC's Master Loading Plan for Canada included in its June 28 comments is ambiguous. While the plan shows a need for 160 circuits in ANZCAN North in 1993, HTC had requested authority to acquire no more than 120 bearer circuits.[9] HTC's plan does not show how it proposes to meet its claimed need for 40 additional circuits. In its Petition for Reconsideration, however, HTC indicates that it had proposed to generate the additional 40 circuits by reconfiguring its holdings in ANZCAN North to decrease the nominal bandwidth of the circuits from 4 KHz to 3 KHz.[10] As HTC notes, reconfiguration of the 120 circuits it requested would increase the number of voice-grade circuits available to it by one-third to 160 (one-third of 120 is 40 additional circuits). However, HTC included with its petition a proposed, modified Table No. 21 which it requests permission to substitute in its June 1982 Master Loading Plan. That substitute plan indicates that HTC has changed its plans and will not reconfigure its ANZCAN North holdings before 1995. Rather, the substitute schedule shows that HTC will acquire a total of 120 4 KHz circuits and that it will introduce TASI on those circuits in 1990.[11] With the

---

[9] HTC's original Master Loading Plan showed that HTC would activate the 120 requested circuits by 1985. That level of use would have held constant until 1990, when the plan called for 126 circuits. In 1991 the plan called for 141 circuits, 157 in 1992, and 160 in 1993, 1994 and 1995. The plan showed no TASI and did not explain the source of the additional 40 circuits.

[10] The ANZCAN cable owners had originally proposed to build ANZCAN North with a bandwidth of 9 MHz, channelized into 1200 voice-grade circuits. Later, they increased the size of the cable to a 14 MHz system, to be channelized into 1840 voice-grade circuits with a bandwidth of 3 KHz. However, because of declining projections of traffic growth in the Pacific, the owners concluded that they would not need 1840 circuits. As a result, they proposed to reconfigure the 14 MHz cable to reduce the number of circuits to 1380 by using different channelizing equipment to yield circuits with a bandwidth of 4 KHz. The cable owners can change the configuration again at a later date if they find they need more circuits by installing new channelizing equipment to reduce the bandwidth of the circuits to 3 KHz.

[11] Specifically, HTC's modified Table 21 shows the following use of ANZCAN North for Canada service:

proposed use of TASI, HTC will be able to increase the effective capacity of its holdings in ANZCAN North to 240 circuits, even without reconfiguration.[12]

16. The analysis in our December 3 Report Order was based upon the plans submitted in this proceeding and concerns only the period through 1995. Our conclusions were even more limited, being restricted only to year-end 1986 and construction of the ANZCAN cable. The carriers, however, are required now to acquire facilities to meet needs throughout the period and, indeed, the life of the cable. The ANZCAN North Cable will be introduced in late 1983 and will have a useful life of 24 years. The cable will, thus, be in service through roughly the end of the year 2007. Viewed over the entire life of the cable, HTC's proposal to acquire 120 4 KHz bearer circuits appears reasonable. Based on its revised Master Loading Plan, through use of TASI circuit multiplication, HTC will have sufficient cable capacity to meet projected growth in Hawaiian/Canada traffic through 1995. In the event of greater-than-projected growth on that route, or to meet larger demands beyond 1995, HTC and its Canadian correspondent will have the option of reconfiguring their 120 ANZCAN circuits to reduce their bandwidth from 4 KHz to 3 KHz to derive an additional 40 bearer circuits, and through TASI use, to derive an additional 40 effective circuits.

17. We, thus, do not find HTC's decision not to reconfigure its ANZCAN North circuits at the outset to be unreasonable. Reconfiguration will remain as an option throughout the life of the cable should traffic demands require it and we can address that question in detail in subsequent planning proceedings. For present purposes, we note that HTC's revised loading plan for Canada shows a more efficient use of the circuits it requested than the one it had previously filed. HTC's revised Table 21 projects the use of TASI

1984	109 circuits	1990	120 circuits
1985	120 circuits	1991	120 circuits
1986	120 circuits	1992	120 circuits
1987	120 circuits	1993	120 circuits
1988	120 circuits	1994	120 circuits
1989	120 circuits	1995	120 circuits

The Plan shows the following use of TASI on ANZCAN North:

1984	0 circuits	1990	24 circuits
1985	0 circuits	1991	44 circuits
1986	0 circuits	1992	72 circuits
1987	0 circuits	1993	96 circuits
1988	0 circuits	1994	120 circuits
1989	0 circuits	1995	120 circuits

[12] If HTC later decides to reconfigure its ANZCAN North circuits, it will be able to increase its available bearer circuits to 160 and, with full TASI use, their effective capacity to 320 voice circuits.

circuit multiplication on its ANZCAN North circuits beginning in 1990 and on all 120 by 1994.[13] HTC, thus, has addressed the concern we expressed in our December 3 Report and Order concerning its refusal to use circuit multiplication. We, thus, will modify our December 3 Report and Order to provide for HTC's acquisition of 120 circuits for Canada service.

18. *European Service (ANZCAN North).* We turn now to the question of HTC's request for 35 circuits in ANZCAN North for service to Europe. In our Report and Order we denied HTC authority to acquire the circuits on the grounds that its proposal to use these circuits to serve Europe by transiting Canada and the INTELSAT AOR satellite was inefficient and unduly costly. HTC does not challenge our finding. Indeed, HTC's petition acknowledges that our proposed, alternative routing via the U.S. domestic satellite and TAT-7 would be more direct, and probably more efficient than routing traffic through Canada. The only reason HTC offers for asking us to reverse our prior finding is that it believes some of its overseas correspondents "may not" be able or willing to effect the proposed, alternate routing. In the first instance, HTC does not clearly state that its correspondents have refused to use the alternate routing or that they will not have TAT-7 circuits available for such use. HTC says only that that "may" be the case. The four countries involved, France, Germany, the Netherlands and the United Kingdom are all participants in the TAT-7 cable and, thus, have TAT-7 circuits they could use with HTC if they so elected. Of these four countries, HTC is now authorized to provide service directly only to the United Kingdom and Germany and did not participate in the proceeding which planned the TAT-7 cable. The parties also did not separate Europe/Hawaii traffic from other United States service. As a result, Hawaii traffic was included in the TAT-7 partners' overall projections. HTC has shown no reason why those will not be facilities available for this traffic.

19. We note that HTC included in its petition for reconsideration comments from its German and United Kingdom correspondents indicating a preference for using ANZCAN North for Hawaii/Europe service. Those entities, however, do not refuse to consider an alternative. At most, Germany speculates that its use of a U.S. domestic satellite is likely to be more costly than routing the traffic

---

[13] As shown in footnotes 11 and 12, *supra*, HTC's revised Table 21 reflects use of 120 bearer circuits and the use of TASI to derive an additional 120 effective voice circuits. The table, however, does not reflect any change in overall circuit demand during the planning period. Table 21 shows that the traffic to be carried on these additional TASI-derived circuits is traffic which it formerly had proposed to carry over the INTELSAT Pacific Ocean Region satellite. For example, in 1994, the year in which HTC's ANZCAN circuits will be fully equipped with TASI, HTC states that it will use 135 satellite circuits, where it had previously planned to use 215, and that its cable/satellite loading ratio will go from 42.7 per cent cable to 64.0 per cent cable.

via Canada and the INTELSAT satellite system. It does not, however, state any reason for this conclusion and, indeed, asks HTC to find out which is less costly. HTC does not include any information in its pleading on this point.[14]

20. HTC notes, generally, that its European correspondents are concerned that our denying HTC authority to purchase these circuits will adversely affect their investment in ANZCAN North. As we have indicated throughout our facilities planning proceedings, we have a statutory obligation to protect the U.S. ratepayers. While we are mindful that the European owners of ANZCAN wish to use the cable in which they have invested, we do not see this as a justification for imposing too-high costs upon our own ratepayers. Further, we see no reason why the alternate routing we have proposed would not be cost-effective for both entities. Further, since HTC is not now authorized to serve France or the Netherlands directly, HTC cannot reasonably argue that those entities based their decision to build the ANZCAN cable upon HTC's desire to purchase these 35 circuits, or that our denial of these circuits will unduly adversely affect those owners' investment decision. This controversy illustrates the advantage of advance planning efforts which involve all entities who will be affected by construction of a projected facility. We hope to avoid such problems in the future.

21. *Australia Service (ANZCAN South).* We are similarly unpersuaded by HTC's arguments concerning our refusal to authorize all 60 of the circuits it requested in ANZCAN South. In our Report and Order we found that HTC could meet its demand forecasts for service to Australia and maintain service quality with the 32 circuits we authorized—if it makes appropriate use of circuit-multiplication equipment—at a substantially lower cost. HTC does not challenge our finding. The only argument it offers in support of its request is its assertion that OTC is "unwilling" to consider use of circuit-multiplication equipment on ANZCAN South and that OTC believes that its investment in the 28 circuits we disallowed will go unused. As a result, HTC notes that, although it can meet its immediate needs to Australia via the 32 circuits we authorized, without circuit multiplication, it will need more circuits at some point in the future. HTC states that our action here will jeopardize its ability to meet those needs, because it has no assurance that OTC will agree to

---

[14] As we noted in our Report and Order, HTC's argument in favor of transiting Canada is inconsistent with its arguments in favor of direct service to Canada. In that request HTC stated that routing Canada traffic through U.S.-owned cables, which land on the West Coast of the United States, is not acceptable for direct Canada service because that would require transiting the United States to the Canadian border. HTC cannot, therefore, reasonably argue in favor of routing its European traffic via ANZCAN North and the INTELSAT Atlantic satellite, which will require transisting of Canada over terrestrial facilities, when it can use a direct domestic satellite hop virtually to the TAT-7 cable head.

introduce TASI, or that, if it does not so agree, there will be cable circuits available at such time as it needs them.

22. We are not persuaded that HTC will not be able to meet its traffic projections with the 32 circuits we authorized. OTC does not completely rule out the possibility of using TASI or other circuit-multiplication equipment on ANZCAN South.[15] We note that HTC's Master Loading Plan for Australia (Table 12) does not project the use of TASI at any time during the planning period. Indeed, it does not even project activation of all 60 requested circuits in ANZCAN South until 1994[16] and does not project use of any greater number of circuits. Yet, by contrast, during the same period, OTC and AT&T project full use of TASI on their ANZCAN South circuits. *See* AT&T Master Loading Plan. As a result, we do not believe that OTC will refuse to use TASI or other circuit-multiplication equipment.

23. As we found in our Report and Order, we have a duty to assure that U.S. carriers make the most efficient use of the facilities they include in their ratebases. HTC has not shown that its proposed use of the ANZCAN South circuits it requested is efficient. Based on HTC's own figures, HTC will be able to meet its demand forecasts through 1995 with 32 bearer circuits and the timely introduction of TASI. HTC did not make any projections of circuit needs beyond 1995. With TASI, HTC will be able to derive from those 32 circuits an effective capacity of 64 circuits, more than enough to meet its projections through 1995. Beyond 1995 HTC will be able to reconfigure its ANZCAN South circuits from 4 KHz to 3 KHz in the same way as it will its ANZCAN North circuits. Reconfiguration will allow HTC to derive an additional 10 (3 KHz) bearer circuits. If HTC then applies TASI it will have a total effective capacity of 84 circuits. Based on the growth patterns in its Master Loading Plan, those 84 circuits should allow HTC to meet its circuit needs for several years beyond 1995. If, however, traffic grows faster than expected, and HTC needs more circuits than its plan shows, HTC will be able to acquire capacity in the Pacific satellite or other facility. In any

---

[15] OTC in fact, states that it had planned to use such equipment as soon as the 60 circuits it requested are filled. OTC further states that, in view of its heavy investment in ANZCAN South, it is "reluctant" to incur the additional cost of introducing such equipment at the earlier date contemplated by our Report and Order. OTC's argument is set forth in a telex attached to HTC's petition for Reconsideration, Appendix B.

[16] HTC's June 28, 1982, Master Loading Plan calls for the following use of ANZCAN South circuits

1984 – 0 circuits
1985 – 8 circuits
1986 – 13 circuits
1987 – 16 circuits
1988 – 22 circuits
1989 – 26 circuits
1990 – 32 circuits
1991 – 42 circuits
1992 – 49 circuits
1993 – 58 circuits
1994 – 60 circuits
1995 – 60 circuits

event, the likely course of events beyond 1995 is too speculative to make any firm projections at this time. It was, indeed, for that reason that we deferred such questions to a later planning process.

24. While we can understand OTC's wish to maximize the use of its investment in cable facilities, we must also expect that it will give consideration to our desire to assure efficient use of such facilities. International comity cuts two ways. We believe that our authorization of HTC to purchase 32 circuits and to require timely use of TASI represents a reasonable way for HTC to meet its service-quality and traffic requirements while preserving the efficient use of facilities. We thus find no reason to overturn our prior findings.[17]

25. Accordingly, IT IS ORDERED that the above-referenced Petition for Partial Reconsideration of Hawaiian Telephone Company is GRANTED in part, and that, subject to the conditions set forth herein, paragraph 54 of the Commission's December 3, 1982, Report and Order is MODIFIED to read as follows:

> (6)We find that Hawaiian Telephone Company's acquisition of permanent ownership interests in 120 half circuits in ANZCAN North for service between Hawaii and Canada will serve the public interest;

but that the petition is otherwise DENIED in all respects.

FEDERAL COMMUNICATIONS COMMISSION
WILLIAM J. TRICARICO, *Secretary*

---

[17] We thus find unpersuasive HTC's argument that it may not be able to find cable circuits available once the 32 circuits we authorized it have been placed into service. We note first that this argument is inconsistent with its companion argument that the 28 circuits we failed to approve will go unused. If there is no other use for those circuits, they should be "available" to HTC should it later need them. Additionally, as we have noted, reconfiguration of the 32 circuits we have approved, with TASI, will give HTC substantial additional capacity.

Remand from Court of Appeals
Standing

Commission remanded comparative proceeding to ALJ for expedited consideration of renewal applicant's qualifications. Case before Commission by virtue of Court remand order directing the Commission to inquire into impact of licensee's disqualification in a related case. Standing of competing applicant affirmed, petitions for leave to amend granted for limited purpose of complying with Rule 1.65.
–*RKO General, Inc. (KHJ-TV)*
Docket No. 16679

FCC 83–274

BEFORE THE

FEDERAL COMMUNICATIONS COMMISSION

WASHINGTON, D.C. 20554

In re Applications of	
RKO GENERAL, INC. (KHJ-TV) Los Angeles, California For Renewal of Broadcast License	Docket No. 16679 File No. BRCT-58
FIDELITY TELEVISION, INC. Norwalk, California For Construction Permit for New Television Broadcast Station	Docket No. 16680 File No. BPCT-3655

MEMORANDUM OPINION AND ORDER

(Adopted: June 2, 1983; Released: June 8, 1983)

BY THE COMMISSION: COMMISSIONER FOGARTY NOT PARTICIPATING.

1. Before the Commission for consideration is a Decision[1] by the

---

[1] *RKO General, Inc.* v. *FCC*, 670 F.2d 215 (1981), *cert. denied*, 102 S.Ct. 1974, 2931 (1982).

United States Court of Appeals, District of Columbia Circuit, remanding a Commission Order[2] finding RKO General, Inc. (RKO) unqualified to remain the licensee of Station KHJ-TV, Los Angeles.[3] In its Decision the Court affirmed that part of the Commission's action finding RKO unqualified to remain the licensee of WNAC-TV, Boston, but did so on the single ground of lack of candor.[4] Given this more restricted view of RKO's disqualifying acts, the Court has directed the Commission to assess the impact of RKO's disqualification in Boston on RKO's qualifications as the licensee of KHJ-TV, noting that RKO's misconduct on the lack of candor issue did not occur directly before the trier of fact in the Los Angeles proceeding. The Court further directed the Commission to afford RKO an opportunity to demonstrate that KHJ-TV deserved treatment different from that accorded its Boston station.

Motion to Terminate

2. Also pending before the Commission is a Motion to Terminate the Los Angeles proceeding filed by RKO.[5] RKO argues that the involvement of the competing party in the Los Angeles case, Fidelity Television, Inc. (Fidelity), with respect to the Boston case was limited to questions pertaining to reciprocal trade practices, which have now been resolved in RKO's behalf.[6] RKO contends that Fidelity has no

---

[2] *RKO General, Inc. (WNAC-TV)*, 78 FCC 2d 355 (1980).

[3] This Order accompanied a Commission Decision finding RKO unqualified to remain the licensee of WNAC-TV, Boston, Massachusetts. *RKO General, Inc. (WNAC-TV)*, 78 FCC 2d 1 (1980). The appeal of the subject Order had been consolidated by the Court with the appeals of the Commission's Boston Decision and a similar Order issued in Docket Nos. 19991–92. *RKO General, Inc. (WOR-TV)*, 78 FCC 2d 357 (1980).

[4] The Commission found RKO unqualified for its lack of candor in not reporting an investigation by the Securities and Exchange Commission (SEC) into the improper corporate practices of the General Tire & Rubber Company, the corporate parent of RKO, and for unequivocally denying charges raised by Community Broadcasting of Boston, Inc., a challenger in the Boston proceeding, when RKO knew or should have known that there was substantial truth to the allegations raised; for intentionally filing false and improper annual financial reports; and for engaging in illegal reciprocal trade practices. Reciprocal trade practices, or reciprocity, is the practice whereby one company conditions its purchases of goods from another company on the second company's willingness to purchase other products from the first.

[5] Motion of RKO General, Inc. for Termination of Pending Comparative Proceeding for Channel 9, Los Angeles and Norwalk, California filed August 25, 1982. Oppositions were filed September 17, 1982 by both Fidelity and the Broadcast Bureau, to which RKO filed a consolidated reply on October 4, 1982.

[6] After the Los Angeles case was designated for hearing, *RKO General, Inc. (KHJ-TV)*, FCC 66–503, released June 8, 1966, RKO and General Tire were charged by the Department of Justice with engaging in improper reciprocal trade practices violative of the antitrust laws. *U.S.* v. *The General Tire & Rubber Company, et al.*, Civil Action No. C-67–155, U.S.D.C., Northern District of Ohio, Eastern Division. Because of the impact these practices might have on RKO's basic qualifications, the Commission conditioned any grant of renewal in both the Los Angeles and

further role to play in this proceeding and its application for a construction permit should therefore be unconditionally denied.

3. RKO's pleading brings into sharp focus the question of whether the conditional language in the Los Angeles case was intended to cover all issues arising out of the Boston proceeding which might bear on RKO's qualifications or whether it was limited specifically to the reciprocity issues.[7] This question has been before the Commission on several occasions previosly, and it is clear that an expansive interpretation was the intention of the Commission.

4. In its Decision finding RKO unqualified to be the licensee of WNAC-TV, the Commission was faced with the question of the interrelationship between the Boston and Los Angeles proceedings. The Commission rejected RKO's contention that Fidelity's interest was limited to the pre-1975 designated issues on reciprocity and that those were the only issues bearing on RKO's qualifications to remain the licensee of KHJ-TV.[8] The Commission held that the two proceedings were interrelated because questions of reciprocity and the "matters under consideration as a result of the SEC investigation" both pertained to RKO's basic qualifications.[9] The Commission

---

Boston cases on the outcome of the antitrust suit. See *RKO General, Inc. (KHJ-TV)*, FCC 68–892, 14 RR 2d 90 (Rev. Bd. 1968) and FCC 68M-394, released March 11, 1968 and *RKO General, Inc. (WNAC-TV)*, 20 FCC 2d 846 (1969), respectively. However, the antitrust suit was terminated before questions of RKO's reciprocity were resolved. The Commission then directed that such questions should be addressed in the Boston proceeding, adding that any grant of renewal for KHJ-TV would be subject to the outcome of the Boston case. *RKO General, Inc. (KHJ-TV)*, 31 FCC 2d 70 (1971). The Commission made Fidelity a party to the Boston proceeding, and stated that final action in the KHJ-TV proceeding "would be held in abeyance pending the conclusion of the adjudicatory proceeding involving WNAC-TV Boston, Docket No. 18759, and that thereafter such action would be taken as appears to be necessary and appropriate in light of the evidence introduced in, and the outcome of, the Boston proceeding concerning the qualifications of RKO to be or to continue to be a licensee." *RKO General, Inc. (KHJ-TV)*, 44 FCC 2d 123, 137 (1973). The Administrative Law Judge in the Boston proceeding thereafter concluded that there was "no reason to either disqualify RKO as a licensee or to assess [a] comparative demerit against its proposal . . ." under the reciprocal trade practices issue. *RKO General, Inc. (WNAC-TV)*, 78 FCC 2d 147, 335 (I.D. 1974). The Commission reached a different conclusion, *RKO General, Inc. (WNAC-TV)*, 78 FCC 2d 1 (1980), but was reversed by the Court, *RKO General, Inc.* v. *FCC*, 670 F.2d 215 (D.C. Cir. 1981).

[7] Two issues based on reciprocity were designated against RKO in the Boston proceeding: 1) whether RKO had engaged in illegal reciprocal trades and 2) whether General Tire and RKO employees had testified falsely in the Los Angeles proceeding regarding their knowledge of the reciprocal trade practices of General Tire and RKO.

[8] *RKO General, Inc. (WNAC-TV)*, 78 FCC 2d at 24–25.

[9] After the parties had filed exceptions to the ALJ's Boston Decision, Community Broadcasting, Inc. (Community) filed a petition to enlarge issues against RKO. Community Petition to Reopen the Record, Enlarge the Issues and Remand for Further Hearing, filed December 10, 1975. Community charged General Tire, RKO's corporate parent, with a vast array of improper foreign and domestic practices. RKO unequivocally denied any impropriety. Opposition to Community's

also relied on the Court's earlier pronouncement that Fidelity could appeal any decision reached in Boston "and the agency's interpretation of it in deciding whether to revoke RKO's license for KHJ. . . ."[10]

5. Additionally, when RKO requested approval of its assignment application to the two competing Boston applicants, Community and The Dudley Station Corporation (Dudley), Fidelity filed a petition in that proceeding asking the Commission to refrain from taking any action that might be prejudicial to its rights against RKO in the Los Angeles proceeding.[11] RKO in turn asserted that Fidelity had no standing to participate in the Boston proceeding on questions not pertaining to reciprocity.[12] The Commission in effect rejected RKO's contention when it subsequently permitted Fidelity to participate in oral argument and to file pleadings on the impact of questions raised by the Special Report on RKO's qualifications in the Boston case.[13]

Petition to Reopen filed January 21, 1976. Meanwhile, the Securities and Exchange Commission (SEC) had, by May 1975, initiated its own investigation into the same questions raised by Community. The SEC upgraded its inquiry into a formal investigation in February 1976. General Tire reported the SEC's inquiries to its stockholders in its annual stockholders report, 1975 Annual Report of the General Tire & Rubber Company, pp. 4–5. *See* Proposed Findings and Conclusion of Fidelity Television, Inc., pp. 35–37 and Exhibit 3, submitted August 27, 1979 in the Boston proceeding. However, RKO did not report these matters to the Commission until after the SEC had filed a Complaint, *SEC* v. *The General Tire & Rubber Company and Michael Gerald O'Neil*, No. 76–0799, filed May 10, 1976, against General Tire and had negotiated a final judgment of permanent injunction (Final Judgment) ordering General Tire to cease its questionable overseas and domestic activities. Final Judgment of Permanent Injunction against the General Tire & Rubber Company and Michael Gerald O'Neil, No. 76–0799, filed May 10, 1976. The Commission ultimately concluded that RKO was unqualified to remain the licensee of WNAC-TV for, *inter alia*, its lack of candor in reporting the SEC investigation. *RKO General, Inc. (WNAC-TV)*, 78 FCC 2d 1 (1980). As a consequence of the interrelationship between the Boston and the Los Angeles proceedings, the Commission further concluded that RKO's disqualification in Boston compelled its disqualification in Los Angeles. *Id.* at 117 and *RKO General, Inc. (KHJ-TV)*, 78 FCC 2d 355 (1980).

[10] *Fidelity Television, Inc.* v. *FCC, supra*, 515 F.2d at 693 n.13.

[11] Petition to Deny Assignment Application and Comments on Joint Petition for Approval of Agreement filed October 6, 1978 by Fidelity (Docket Nos. 18759–61). Fidelity subsequently argued that it had an absolute right to participate in the Boston proceeding without any restrictions as to the issues bearing on RKO's qualifications. See, Reply to Joint Opposition to Petition to Deny filed November 13, 1978 with addendums filed November 14 and 18, 1978; Reply to Comments of RKO General, Inc. filed December 21, 1978; Comments on Joint Motion for Expeditious Disposition, filed March 5, 1979; Reply to RKO's Proposed Findings and Conclusions filed September 24, 1979. These pleadings were all submitted in the Boston proceeding.

[12] *See Joint Opposition to Petition to Deny, filed October 26, 1978; Comments on Fidelity's Reply, filed December 7, 1978; Proposed Findings, Conclusions and Proffered Evidence, filed August 27, 1979 (Appendix B); and Reply of RKO General, Inc. filed September 24, 1979. These pleadings were also filed in the Boston proceeding.*

[13] *See* Order, *RKO General, Inc. (WNAC-TV)*, FCC 79–403 released June 28, 1979.

6. We also reject RKO's assertion that this proceeding should be opened to new applicants. Fidelity has thus far been found basically qualified to be a Commission licensee.[14] Under our rules and procedures, an applicant in an adjudicatory proceeding is entitled to a final Commission decision on the merits of its application without consideration of belated challengers.[15] Other than Fidelity and RKO, no entity filed an application prior to the cut-off date. Only if both applicants were found unqualified would we have reason to entertain new applications for this station.[16]

Issues on Remand

7. Having disposed of this preliminary matter, we turn next to a discussion of the questions which must now be considered in the context of the RKO/Fidelity contest. In its Boston Decision, the Commission found three independent grounds for RKO's disqualification: 1) RKO's involvement in illegal reciprocal trade practices; 2) RKO's intentional filing of false and misleading annual financial reports; and 3) RKO's lack of candor in its dealings with the Commission.[17] Relying on the language conditioning renewal of KHJ-TV's license on the outcome of the Boston proceeding, the Commission further concluded that RKO's disqualification in Boston compelled a similar conclusion with regard to RKO's stewardship of Station KHJ-TV.[18]

8. On review, the Court rejected the Commission's conclusion that RKO's reciprocal trade practices warranted its disqualification. The Court also found an inadequate basis for the Commission's conclusion that RKO had intentionally, and with an intent to deceive, filed false annual financial statements. The Court held that it was error to premise disqualification on this ground, without holding a further evidentiary hearing. However, the Court agreed that RKO's lack of candor supported the Commission's conclusion

---

[14] *RKO General, Inc. (KHJ-TV)*, 44 FCC 2d 149 (I.D. 1969); *RKO General, Inc. (KHJ-TV)*, 44 FCC 2d 123 (1973). The Court did not disturb this conclusion. *Fidelity Television, Inc.* v. *FCC*, 502 F.2d 443 (D.C. Cir. 1974). *Fidelity Television, Inc.* v. *FCC*, 515 F.2d 684, *rehearing denied* 515 F.2d 703 (D.C. Cir.), *cert. denied*, 423 U.S. 926 (1975).

[15] *Ashbacker Radio Radio Corp.* v. *FCC*, 326 U.S. 333 (1945), and *see generally RKO General, Inc. (WNAC-TV), supra*, 78 FCC 2d at 319–321. *Ranger* v. *FCC*, 111 U.S. App. D.C. 44, 294 F.2d 240 (1961).

[16] *See, e.g., FCC* v. *Pottsville Broadcasting Co.*, 309 U.S. 134 (1940), *WORZ, Inc.* v. *FCC*, 345 F.2d 85 (D.C. Cir. 1965).

[17] *RKO General, Inc. (WNAC-TV)*, 78 FCC 2d 1 (1980).

[18] *RKO General, Inc. (KHJ-TV)*, 78 FCC 2d 355 (1980). A similar conclusion was reached in a third proceeding, which involved RKO's renewal application for Station WOR-TV, New York City. *RKO General, Inc. (WOR-TV)*, 78 FCC 2d 357 (1980). That case has since been terminated upon RKO's agreement to relocate its VHF channel in Secaucus, New Jersey. FCC 82–559, released March 29, 1983.

that RKO was unqualified to remain the licensee of WNAC-TV, Boston.

9. In light of the narrower grounds underlying RKO's disqualification, and the fact that the sole remaining basis for finding RKO disqualified occurred only in the Boston proceeding, the Court rejected the Commission's conclusion that RKO's disqualification in Boston automatically compelled a similar conclusion in the Los Angeles case. It thus remanded the Commission's Los Angeles Order for further consideration.[19]

10. *Candor*. In its Decision the Court recognized that RKO's lack of candor in the Boston proceeding is *res judicata.*[20] *Accordingly, no further evidence on this narrow question need be permitted and the parties may address the resultant legal question, i.e.*, the impact of that conclusion on RKO's qualifications to remain the licensee of KHJ-TV, by written submissions and/or oral argument, as deemed appropriate by the ALJ. Furthermore, before making this determination, RKO will have an opportunity to make a broad showing of the broadcast history and policy of KHJ-TV in mitigation of any adverse findings that might otherwise be made.[21]

11. *Barter and Trade*. General Tire kept inaccurate records of its barter and trade transactions involving exchanges of unsold air time for programming, merchandise, services and other things of value. As a direct result of these inaccurate records, RKO submitted false financial reports to the Commission. In its remand the Court stated, at page 226: "Whether RKO submitted inaccurate reports knowingly and with intent to mislead the Commission remains an unresolved and material question of fact. . . ." An issue will be specified to allow resolution of this matter.

12. A second area of concern has developed as a result of the barter and trade practices. During the course of the Boston proceeding RKO informed the Commission that the Internal Revenue Service (IRS) had initiated an audit of RKO's barter and trade transactions.[22] At that time RKO stated its belief that "it ultimately will be able to provide information satisfactory to the IRS for all but a small fraction of the total barter transactions reported to the FCC for the years [1971–76] in question. Even as to the remaining fraction for which documentation sufficient to meet IRS requirements for validating expense deductions may not be found, RKO believes it will

---

[19] The Court stated: "RKO's misconduct did not occur before the trier of fact in either the Los Angeles or New York City proceedings. Accordingly, these decisions must be remanded to the Commission for further consideration as it deems appropriate." *RKO General, Inc. (WNAC-TV) v. FCC, supra*, 670 F.2d at 236.

[20] *Id.* at 237.

[21] *Id.* See also fn. 43, *infra*.

[22] Proposed Findings, Conclusions and Proffered Evidence filed August 27, 1979 by RKO, at p. 29 (Docket Nos. 18759–61).

be able to obtain some reasonable proof as to the disposition of a portion thereof." In Reply Comments filed September 24, 1979 RKO reported that "[I]t now appears that RKO will ultimately be able to document to the satisfaction of the IRS the disposition of all but a small fraction of its barter consideration."[23]

13. Approximately a year later, and after the Commission had issued its decision finding RKO unqualified in Boston, RKO notified the Commission that the IRS examination had been completed and a report had been issued.[24] RKO then reported that the IRS proposed assessing an additional income tax against General Tire and its subsidiaries of $24,494,538, of which $20,100,000 was in dispute. Again RKO represented that it intended to submit "additional documentation with respect to the deductibility of the items disallowed by the Internal Revenue Service in the examination reports."[25]

14. On December 31, 1981, RKO filed a "Statement for the Information of the Commission" indicating that it had reached an agreement with IRS to pay $13 million in additional income tax. On April 20, 1982, RKO reported an assessment of still additional income tax for years not covered by the earlier settlement. We will not inquire into the conduct that resulted in the tax underpayment. Our concern is limited to RKO's efforts to assuage Commission concern over the then pending IRS investigation. Whether RKO had a basis for predicting an optimistic outcome to the investigation in the light of all other pertinent circumstances is critical. An appropriate candor issue will be specified.

15. We will remand this case to an ALJ for further proceedings in accordance with the Court's Order. In order to insure the earliest possible determination concerning RKO's qualifications, we will direct the presiding ALJ to consider on an expedited basis the questions concerning RKO's basic qualifications, *i.e.*, RKO's lack of candor, whether RKO intentionally filed false annual financial reports, and whether RKO was lacking in candor in its assurances regarding the IRS investigations into its past tax deficiencies. At the same time, the ALJ should also consider what impact, if any, these matters have upon RKO's comparative qualifications. Upon completion of these proceedings, the ALJ shall prepare, consistent with the need for expedition, a Supplemental Initial Decision covering the above matters. Any appeal from the Supplemental Initial Decision will be filed with the Commission.

[24] Statement for the Information of the Commission filed August 12, 1980 by RKO General, Inc.

[25] *Id.*

Remaining Considerations

16. At this time we will also dispose of a number of other pleadings which have accumulated over the course of this proceeding. The first of these is a Fidelity Motion to Expedite and to Place KHJ-TV's Profits in Escrow.[26] By our action today we are moving towards a resolution of this protracted case at the earliest possible time. With respect to the question of placing KHJ-TV's profits in escrow, such a course of action is statutorily prohibited. Under Section 307(d) of the Communications Act, 47 U.S.C. §307(d), the Commission is obliged to continue the license in effect when it has not acted upon a renewal application prior to the expiration of the previous license term. Unlike the cases relied upon by Fidelity, RKO has not been found finally disqualified. Hence, it is entitled to continue as the licensee of KHJ-TV until a final determination is reached. Accordingly, this aspect of Fidelity's petition will be denied.

17. Two petitions for Leave to Intervene are also pending before the Commission. The first of these is part of a Petition for Extraordinary Relief filed February 27, 1980 by The Committee to Eliminate the UHF Handicap on Television in Los Angeles (Committee). Section 1.223 of the Rules requires that a potential intervenor must set forth its interest in the proceeding; show how its participation will assist the Commission in its determination of designated issues; delineate any proposed new issues which should be considered; explain why it was unable to file its petition within 30 days after publication in the Federal Register of the hearing issues or any substantial amendments thereto; and submit affidavits from persons with knowledge of the facts set forth in the petition. On analysis of the Committee's pleading we conclude that the petition was untimely and totally lacking affidavits from persons having personal knowledge of the alleged facts which the Committee wishes to have the Commission consider; and has failed to explain how its participation will in any way assist the Commission in disposing of the issues before us. Having failed to make the threshold showing necessary for intervention, the Committee's request will be denied.

18. Moreover, the Committee's suggestion that new applications be accepted would require waiver of the Commission's cut-off rules. The cut-off rules are designed to permit this agency to close the door to new parties so that a choice can be made between timely filed applicants,[27] thereby giving timely filed applicants protection[28]

---

[26] Motion to Expedite Los Angeles Remand Proceeding and Place KHJ-TV Profits in Escrow filed November 4, 1982 by Fidelity. An Opposition was filed by RKO on November 16, 1982 and Comments by the Broadcast Bureau on November 23, 1982.

[27] *See RKO General, Inc. (WNAC-TV)*, 89 FCC 2d at 320–321, for a comprehensive discussion of the policy and practice underlying the cut-off rules.

[28] *Ranger* v. *FCC*, 111 U.S. App. D.C. 44, 47, 294 F.2d 240 (1961).

against opportunistic late-comers. The Committee has shown no unusual and compelling circumstances warranting waiver of this rule. The remaining aspects of the Committee's request for extraordinary relief envision combining rulemaking[29] with the present adjudicatory proceeding. In light of the different standards governing rule making and adjudicatory proceedings, it has been the Commission's policy not to consider allocation questions in the context of a comparative broadcast hearing.[30]

19. A second petition for leave to intervene has been filed by a group identifying itself as the City of Angels Broadcasting, Inc. (City of Angels).[31] The petition will be denied. City of Angels has not shown how its participation will assist the Commission in the resolution of any outstanding issues. Nor has the petitioner included affidavits from persons with knowledge of the facts set forth in its pleading. Finally, City of Angels failed to show good cause for its late filing. In sum, City of Angels has totally failed to meet the criteria for intervention prescribed in Section 1.223 of our Rules.[32]

20. Also pending before the Commission are three Fidelity Petitions for Leave to Amend,[33] which have been opposed by the Bureau and/or RKO.[34] The three opposed amendments reflect changes in Fidelity's application regarding ownership and business and broadcast interest changes of its stockholders. A fourth petition reports steps Fidelity has undertaken to assure that all future changes to its application will be timely and accurately filed.[35]

21. The subject matter of the three opposed amendments reflect voluntary events that occurred prior to the 30 day time period for reporting changes, and Fidelity has not shown good cause for its late

---

[29] Changes to the Television Table of Assignments are accomplished through rulemaking proceedings. *See* Section 1.401, 1.420 and 73.606 of the Commission's Rules. *See also Logansport Broadcasting Corp.* v. *United States*, 93 U.S. App. D.C. 342, 210 F.2d 24 (1954).

[30] *See e.g., David L. Kurtz*, 19 RR 1367 (1960).

[31] Motion for Leave to Intervene and Petition to Reopen Proceedings filed June 13, 1980.

[32] In light of our dismissal of the City of Angels' Motion for Leave to Intervene, we will dismiss as moot that petitioner's Motion for Leave to File an Additional Pleading and its accompanying Reply Comments both filed August 28, 1980.

[33] The dates of these petitions are November 27, 1979, February 22, 1980, and June 9, 1980, respectively.

[34] The Bureau filed oppositions on December 5, 1979, March 4, 1980 and June 17, 1980, respectively, with RKO limiting its objections to the first two petitions. Fidelity filed unauthorized responses to the December 5, 1979 and March 4, 1980 oppositions, which will be dismissed pursuant to Commission Rule, Section 1.294.

[35] Petition for Leave to Amend, filed September 29, 1980. This proposed amendment was filed in response to a recommendation made in the Broadcast Bureau's pleading filed August 19, 1980 pursuant to Commission Order, FCC 80–329, 78 FCC 2d 355, released June 6, 1980.

filings. Consequently, Fidelity has failed to satisfy the prerequisites of Section 73.3522(b)(1).[36] On the other hand, Fidelity is obliged to keep its application current.[37] Moreover, acceptance of these amendments will not prejudice RKO since Fidelity will not gain any comparative advantage.[38] Nor would acceptance of the amendments disrupt this proceeding. Accordingly, the amendments will be accepted,[39] but for the sole purpose of permitting compliance with 47 C.F.R. 1.65 by Fidelity.[40] Fidelity's September 29, 1980 amendment will be accepted for the same reason, to keep its application current, and with the same caveat that no comparative advantage will accrue to Fidelity.

22. A final pleading pending before the Commission is a "Motion to Strike or Dismiss" filed by RKO on October 21, 1976. Briefly, RKO filed a request on September 21, 1976 seeking to spin off RKO General, Inc. from its parent corporation, the General Tire and Rubber Company. When Fidelity opposed the spin-off request, RKO filed the instant motion. In our Decision granting a construction permit to NETV, Inc. for a new television station to operate on Channel 7, Boston, Massachusetts (Docket Nos. 18759–61),[41] we disposed of this underlying spin-off proposal as moot.[42] Accordingly, the Motion to Strike an opposition to that spin-off proposal will similarly be dismissed as moot.

23. ACCORDINGLY, IT IS ORDERED, That the record is reopened and remanded for expedited proceedings in accordance with this Memorandum Opinion and Order under the following issues:

(1) To determine whether in light of its disqualification in Docket Nos. 18759–61, RKO has the requisite qualifications to remain the licensee of Station KHJ-TV, for Los Angeles.

---

[36] Section 1.65 of the Commission's Rules imposes a continuing obligation to maintain a current application. Information no longer accurate and complete in all substantial respects must be corrected "as promptly as possible and in any event within 30 days, unless good cause is shown."

[37] Rule 73.3522(b)(2) permits acceptance of post designation amendments upon a good cause showing for late filing.

[38] *Erwin O'Conner Broadcasting Co.*, 22 FCC 2d 140 (Rev. Bd. 1970).

[39] *Cf. International Panorama TV, Inc. (KTON-TV)*, FCC 81M-850, released March 25, 1981 (ALJ).

[40] Acceptance of Fidelity's amendments does not constitute a prejudgment of the effect, if any, of the applicant's failure to amend its application in a timely fashion. This question may be addressed more fully by the Presiding Judge after a determination is made regarding RKO's basic qualifications.

[41] *RKO General, Inc. (WNAC-TV)*, 89 FCC 2d 297 (1982). *See also RKO General, Inc. (WHBQ)*, 82 FCC 2d 291, 297–305 (1980) and *RKO General, Inc. (WNAC-TV)*, 78 FCC 2d 1, 118 (1980).

[42] *RKO General, Inc. (WNAC-TV)*, 89 FCC 2d at 342. RKO's 1976 spin-off proposal was considered moot because of, *inter alia*, subsequent superseding spin-off requests filed March 13, 1980 and July 3, 1980.

(2) To determine whether RKO General, Inc. intentionally filed false and misleading financial reports with the Commission.

(3) To determine whether RKO misled the Commission or was lacking in candor in providing details of the IRS investigation into RKO's and General Tire's tax deficiencies.

(4) To determine whether KHJ-TV's history and policy mitigates any adverse conclusions reached above.[43]

(5) To determine whether, in light of evidence adduced under the foregoing issues, RKO General, Inc. possesses the requisite qualifications to remain the licensee of KHJ-TV.

(6) To determine what impact, if any, the findings with respect to the foregoing issues may have upon RKO's comparative qualifications in seeking renewal of its license for KHJ-TV.

24. IT IS FURTHER ORDERED, That the Motion to Expedite and to Place KHJ-TV's Profits in Escrow filed November 4, 1982 by Fidelity Television, Inc. IS GRANTED to the extent herein indicated and IS DENIED in all other respects.

25. IT IS FURTHER ORDERED, That the Petition for Extraordinary Relief filed February 27, 1980 by the Committee to Eliminate the UHF Handicap in Television in Los Angeles IS DENIED.

26. IT IS FURTHER ORDERED, That the Motion for Leave to Intervene and Petition to Reopen Proceedings filed June 13, 1980 by the City of Angels Broadcasting, Inc. IS DENIED.

27. IT IS FURTHER ORDER, That the Motion for Leave to File an Additional Pleading filed August 28, 1980 by City of Los Angeles Broadcasting, Inc. IS DISMISSED as moot.

28. IT IS FURTHER ORDERED, That the Petitions for Leave to Amend filed November 27, 1979, February 22, 1980, June 9, 1980 and September 29, 1980 by Fidelity Television, Inc. ARE GRANTED and the amendments ARE ACCEPTED.

29. IT IS FURTHER ORDERED, That the Motion to Strike filed December 18, 1979 by the Broadcast Bureau IS GRANTED and the Responses filed December 14, 1979 and March 14, 1980 by Fidelity Television, Inc. ARE DISMISSED.

30. IT IS FURTHER ORDERED, That the Motion to Strike or Dismiss filed October 21, 1976 by RKO General, Inc., IS DISMISSED as moot.

Memorandum Opinion and Order

(Adopted: July 14, 1983; Released: July 15, 1983)

By the Commission:

Scope of the Order

1. On June 8, 1983, the Commission released a Memorandum Opinion and Order (FCC 83-274) remanding the KHJ-TV Los Angeles, California proceeding (Docket Nos. 16679-80) to an Administrative Law Judge for further proceedings. At that time we stated our intent to limit the questions on remand to six issues[2] arising from a related Boston proceeding (Docket Nos. 18759-61) and, based on resolution of these issues, to reach a final determination as to RKO's basic and comparative qualifications to remain the licensee of KHJ-TV, Los Angeles, California. In the interest of saving time and avoiding relitigation of common issues it is our further intent to apply the findings and conclusions reached in that proceeding to the 13 other RKO proceedings insofar as they involve similar questions of RKO's basic and comparative qualifications. Accordingly, it is the purpose of this Order to fashion a procedure which will afford all interested parties an opportunity to exercise their rights in the Los Angeles proceeding. At the same time, we intend to restrict the number of counsel actually appearing before the Commission, a consideration occasioned by the filing of over 160 applications which

---

[2] These six issues are:

(1) To determine whether in light of its disqualification in Docket Nos. 18759-61, RKO has the requisite qualifications to remain the licensee of Station KHJ-TV, for Los Angeles.

(2) To determine whether RKO General, Inc. intentionally filed false and misleading financial reports with the Commission.

(3) To determine whether RKO misled the Commission or was lacking in candor in providing details of the IRS investigation into RKO's and General Tire's tax deficiencies.

(4) To determine whether KHJ-TV's history and policy mitigates any adverse conclusions reached above.

(5) To determine whether, in light of evidence adduced under the foregoing issues, RKO General, Inc. possesses the requisite qualifications to remain the licensee of KHJ-TV.

(6) To determine what impact, if any, the findings with respect to the foregoing issues may have upon RKO's comparative qualifications in seeking renewal of its license for KHJ-TV.

seek to displace RKO as the licensee of its other 13 broadcast facilities.[3]

Interrelationship between KHJ-TV Proceeding and the Thirteen Other RKO Licensed Stations

2. Before turning to the specific courses of action which we are herein adopting, a brief history of the interrelationship between the Los Angeles proceeding and the thirteen other RKO licensed stations is in order. The Los Angeles case was designated for hearing on June 8, 1966 (FCC 66–503). While that case was pending two other comparative proceedings were commenced in conjunction with RKO's renewal applications for WNAC-TV Boston and WOR-TV, New York City, respectively. Although none of RKO's other remaining thirteen licensed stations were challenged for renewal, the Commission conditionally granted renewals for those stations based on the outcome of the Los Angeles, Boston, and New York proceedings.[4] After releasing its Decision finding RKO unqualified to remain the licensee of Station WNAC-TV, Boston,[5] the Commission elected to reopen the prior conditionally granted renewals.[6] The Commission recognized that the conditions placed on those license renewals were basically the same as those placed on RKO's New York and Los Angeles renewal applications and that the underlying question pertinent to all of RKO's broadcast holdings was the impact of the Boston proceeding findings on RKO's qualifications to remain a Commission licensee. Pursuant to Court Order[7] the Commission

---

[3] The majority of these applicants are represented by forty-four different law firms. Twelve applicants are proceeding *pro se*.

[4] As we explained in our order reopening the thirteen other RKO renewal proceedings, *RKO General, Inc. (WHBQ-TV)*, 82 FCC 2d 291, 295 n.14:

> Except for 2 licenses, all of the most recently granted renewals contained the following condition or language to similar effect: "This [renewal] grant is conditioned on, and without prejudice to whatever action, if any, the Commission may deem appropriate as a result of final action in the outcome of the proceedings in Docket Nos. 16679 [Los Angeles], 18759 [Boston] and/or 19991 [New York]." The license of Station WAXY(FM), Fort Lauderdale, Florida, was renewed on January 23, 1979 for the period 1979–82 with a referral to the earlier license dated January 10, 1976. The 1976 license was conditioned on the outcome in Boston; the 1979 application was granted "on the same conditions and in accordance with the same provisions" as the 1976 license, and was valid only when posted with the earlier license. The most recent renewal of Station KFRC, San Francisco, California, was not conditioned due to administrative error. KFRC's earlier grants were conditioned, and nothing occurred during the license terms to change the condition. . . .

[5] *RKO General, Inc. (WNAC-TV)*, 78 FCC 2d 1 (1980).

[6] *RKO General, Inc. (WHBQ-TV)*, 82 FCC 2d 291 (1980), *vacated in part and remanded sub nom. New South Media Corporation v. FCC*, 685 F.2d 708 (D.C. Cir. 1982).

[7] *New South Media Corporation, supra.*

directed the filing of applications which would be mutually exclusive with RKO's thirteen reopened renewal applications.[8] One hundred sixty-four competing applications were subsequently filed by the May 12, 1983 cut-off date.

3. The question to be resolved in the Los Angeles case, *i.e.*, the impact of the Boston decision on RKO's qualifications (Issues 1, 2 and 3), is similar to that underlying RKO's thirteen remaining renewal applications. It thus follows that a consolidated proceeding involving all interested parties and focusing on the three issues common to all of RKO's outstanding renewal applications will best conduce to the efficient dispatch of the Commission's business.

Party Status

4. By separate Order[9] we will therefore make all pending applicants parties to the Los Angeles proceeding for the limited purpose of participating in the resolution of questions which are common to RKO's overall basic and comparative qualifications and which arose out of the Boston proceeding.[10] Because we are opening the door to a multitude of additional parties, certain procedures must, however, be adopted to avoid an otherwise unmanageable situation. These procedures fall along several lines.

5. Foremost, we intend to channel the participation of these applicants through representative counsel. This will forestall the presentation of repetitious questions and pleadings while assuring that the collective concerns of these parties will be fully considered during this phase of the proceeding. Hence, the parties are expected to present their arguments and to participate generally in this proceeding through representative counsel.[11] Adoption of this procedure is designed to permit resolution of Issues 1, 2 and 3 in an efficient and timely manner.

6. In this regard we believe that it is appropriate to afford the applicants the opportunity to devise a workable plan to facilitate the use of representative counsel. Given the desire to expedite resolution of this matter, those applicants who intervene will therefore be afforded 30 days from the release date of this order to submit a plan for representative counsel to the Commission for its approval.[12]

---

[8] *RKO General, Inc. (WHBQ-TV)*, FCC 83-55, released February 11, 1983.

[9] *See* Order, *RKO General, Inc. (KHJ-TV)*, FCC 83-342, adopted July 14, 1983.

[10] *See* Rule 1.221(d). *See also* Federal Rule of Civil Procedure 19. For those applicants who elect not to file a notice of appearance within the prescribed time limit, we direct attention to that part of Section 1.221(e) which reads: "Any person so named [as a party in interest] who fails to file this written statement [of appearance] within the time specified, shall, unless good cause for such failure is shown, forfeit his hearing rights."

[11] *See generally, Note, Collateral Estoppel of Nonparties*, 87 Harv. L. Rev. 1485, 1499 et seq. (1974).

[12] The procedures we are establishing are not intended to precipitate a change in

Failure of the parties to arrive at a workable solution will necessitate the specification by the Commission of appropriate procedures. This matter appears infinitely more amenable to private, voluntary resolution.[13]

Collateral Estoppel

7. The procedure herein adopted is designed to assure that the common issues in question are fully and fairly litigated in one proceeding.[14] By according all parties their day in court, the doctrine of collateral estoppel[15] will preclude any relitigation of the common designated issues (1, 2 and 3) in subsequent proceedings involving RKO's thirteen other broadcast stations.[16] If resolution of these

---

the existing scheduled date for commencement of the Los Angeles hearing. Given the Commission's desire to expedite the proceeding, we in fact urge the ALJ and parties to adhere to the strict time schedule already established.

[13] *See e.g., ASD Answer Service, Inc.*, CC Docket Nos. 82–587 et seq. where the parties voluntarily agreed to the use of representative counsel. To facilitate the applicants' efforts in this regard, the Commission Meeting Room, No. 856, 1919 M St, N.W., Washington, D.C. will be made available at 9:00 a.m. on July 26, 1983 for the purposes of a meeting of all interested parties.

[14] "[T]o preclude parties from contesting matters that they have had a full and fair opportunity to litigate protects their adversaries from the expense and vexation attending multiple lawsuits, conserves judicial resources, and fosters reliance on judicial action by reducing the possibility of inconsistent decisions." *Montana* v. *United States*, 440 U.S. 147, 153–154 (1979), cited in *Arizona* v. *California*, 51 U.S.L.W. 4325, 4329 (1983). *Cf. Parklane Hosiery Co.* v. *Shore*, 439 U.S. 322 (1979), *Blonder-Tongue Laboratories, Inc.* v. *University of Illinois Foundation*, 402 U.S. 313 (1971), *Hardy* v. *Johns-Manville Sales Corp.*, 681 F.2d 334, 338, *Teitelbaum Furs, Inc.* v. *Dominion Insurance Co.*, 58 Cal 2d 601, 606–07, 375 P. 2d 439, 441, *cert. denied*, 372 U.S. 966 (1962) and *Note, Collateral Estoppel of Nonparties, supra*, 87 Harv. L. Rev. at 1491 n.39.

[15] Invocation of the doctrine of collateral estoppel bars relitigation of the same issues in subsequent proceedings involving the same parties or their privies. 1B *Moore's Federal Practice*, ¶0.441[2], at 3777 (2d ed. 1974). Davis, relying on the Restatement (Second) of Judgments (1982), explains that the:

> traditional language of "res judicata" and "collateral estoppel" has given way to the new vocabulary of "claim preclusion" and "issue preclusion." The second restatement helpfully explains . . .: The principle underlying the rule of claim preclusion is that a party who once has had a chance to litigate a claim before an appropriate tribunal usually ought not to have another chance to do so. A related but narrower issue-that one who has actually litigated an issue should not be allowed to relitigate it-underlies the rule of issue preclusion. 4 Davis, *Administrative Law Treatise*, §21:1, at 48 (2d ed. 1983).

Other than the Los Angeles proceeding, the doctrine of *res judicata* is inapplicable, for we are not adjudicating the question of which of several competing applicants should be granted a license for any one station. Each of these matters constitutes a separate cause of action. *See RKO General, Inc. (WHBQ-TV)*, 82 FCC 2d at 291, 312, 313 (1980). Instead we contemplate relying on the doctrine of collateral estoppel which is considered "a part of the broad doctrine of res judicata . . . which prevents a second litigation of the same issues even in connection with a different claim or cause of action." 4 Davis, *Administrative Law Treatise*, Section 21:2 at 50 (2d ed. 1983).

[16] *Cf. Southwest Airline Co.* v. *Texas International Airlines*, 546 F.2d 84, 95 (5th Cir.

matters does not result in the disqualification of RKO under Issue 5, the question of the impact of the findings made under issues 1, 2, and 3 on RKO's comparative qualifications must also be addressed (Issue 6). If it is determined that a negative comparative demerit should be assessed, this determination is again common to all of RKO's licenses. Accordingly, there will be no need to relitigate that question, of whether a comparative demerit should be assessed, nor the scope of such demerit if a negative assessment is in fact levied against RKO. Instead, the parties will be bound by these determinations, although RKO will be given an opportunity to offer evidence in mitigation in each of the separate comparative proceedings when those cases become ripe for consideration. By the same token, RKO is entitled to offer relevant mitigating evidence in the Los Angeles proceeding pursuant to designated Issue 4, a right guaranteed by the Court when it remanded the KHJ-TV Los Angeles proceeding to the Commission.[17]

Deferring of Predesignation Amendments

8. As previously noted, 164 competing applications have been filed in the captioned proceedings. It is the Commission's normal practice to release a public notice announcing the acceptance for filing of the last-filed mutually exclusive application.[18] This notice serves three purposes: it informs the public of the applications that have been accepted for filing; it sets a time certain in which petitions to deny can be filed against these applications; and it establishes a time frame within which applicants can offer amendments as a matter of right.[19] The rationale for permitting amendments as a matter of right is to permit the applicants to perfect their applications prior to designation, thereby facilitating the Commission's objective of "an early stabilization of the comparative factual situation which must ultimately go to hearing."[20]

9. Once the time for filing amendments as a matter of right has expired, applicants must thereafter demonstrate good cause before a tendered amendment will be accepted. Included in this range of amendments are those filed pursuant to Sections 1.65 and 73.3514 of our rules, 47 C.F.R. §§1.65 and 73.3514. Amendments under Section

---

1977). The present state of the law suggests that even nonparties may be able to invoke the doctrine. *See* 4 Davis, *Administrative Law Treatise*, Section 21:1 at 48 (2d ed. 1983), thereby negating the requirements of mutuality that once laid at the cornerstone of the doctrine. *See Parklane Hosiery Co.* v. *Shore*, 439 U.S. 322 (1979) and *Bernhard* v. *Bank of America*, 19 Cal. 2d 807, 122 P. 2d 892 (9th Cir. 1942).

[17] *RKO General, Inc.* v. *FCC*, 670 F.2d 215, 237 (1981), *cert. denied*, 102 S.Ct. 1974, 2931 (1982). See para. 13, *infra*.

[18] See *Revised Processing of Broadcast Applications*, 72 FCC 2d 202, 207–208 (1979).

[19] See Section 73.3522(a)(2) of our Rules, 47 C.F.R. §73.3522(a)(2).

[20] *Revised Processing of Broadcast Applications*, *supra*, at 210, 211.

1.65 are "designed to keep the Commission apprised of all substantial and decisionally significant changes,"[21] while Section 73.3514 requires "applicants to provide all of the information called for in the application form."[22]

10. However, at the present time we are not concerned with the information contained in those applications. Instead, our present concern lies in the expeditious resolution of the issues stemming from the Boston proceeding. Since we are not in a position to focus on the issues that must be specified in these thirteen other proceedings, and since the Commission is not in a posture to make a public interest determination as to which applications should be granted in these thirteen other proceedings, no useful purpose will be served by requiring the applicants who are competing against RKO's other thirteen stations to tender amendments to their proposals while the KHJ-TV proceeding is in its current status. The Commission will not be acting on or processing those applictions and to require amendments would place an unnecessary burden on both the applicants and the agency.

11. Accordingly, to avoid consideration of matters that are not germane to the designated issues, we are hereby suspending the provisions of Section 73.3522(a)(2), which permits applicants to file amendments as a matter of right, and are deferring the requirement that these applicants file amendments under Sections 1.65 and 73.3514 of the Commission's Rules. After the specified issues in the Los Angeles proceeding are resolved, the Mass Media Bureau will issue an appropriate public notice ("B" cut-off list) announcing the time that amendments can be filed as a matter of right and an Order reimplementing the requirements of Sections 1.65 and 73.3514.[23]

12. Along these lines, on July 11, 1983 Magna Media Corporation, Boston Radio Corporation, Potomac Broadcasting Corporation, East Lake Communications, Inc. and Adwave Company filed joint "Comments Concerning RKO Procedures." These commentors, which have filed competing applications for construction permits in New York City, Boston, Massachusetts, Washington, D.C./Bethesda, Maryland, Chicago, Illinois and Ft. Lauderdale, Florida, respectively,

---

[21] *Payne of Virginia, Inc.*, 66 FCC 2d 633, 643 n.25 (1977).

[22] *Midwest Broadcasting Co.*, 70 FCC 2d 1489, 1490 n.2 (Rev. Bd. 1979).

[23] We recognize that a B cut-off list was issued in the WHBQ-TV, Memphis, Tennessee proceeding on June 1, 1983 (Report No. B-65) and that the time for filing amendments as of right for those applicants expired July 11, 1983. Consistent with the instant Order we will defer processing any amendments filed pursuant to that B cut-off list and will extend to those applicants a second opportunity to file amendments as of right when those proceedings become ripe for consideration. By the same token, we advise all parties that action constituting major changes to their applications, see Sections 73.3572, 73.3573 and 73.3574 of our rules, will result in the assignment of a new file number. Such applicants will be precluded from participating in any further proceedings.

suggest that the Los Angeles proceeding is the appropriate forum to resolve matters of general applicability concerning RKO's basic and comparative qualifications. These applicants urge the Commission, however, to initiate immediately thirteen parallel proceedings involving the remaining RKO renewal applications. Applicants argue that this course of action is compelled by the decision of the U.S. Court of Appeals for the District of Columbia Circuit in *New South Media Corp.* v. *FCC*, 685 F.2d 708, 52 RR 2d 1 (D.C. Cir. 1982).

13. We will deny applicants' request to initiate parallel proceedings at this time. The holding in *New South* directed the Commission to fashion a procedure which would permit competing applications to be filed against RKO's conditionally renewed license applications, but left it to the Commission to decide which procedure to adopt, stating that it was not "purporting to direct the particular mode in which the Commission should now proceed, . . ." *New South*, *supra*, at 711. By Order, FCC 83-55, released February 11, 1983, the Commission accordingly adopted a procedure which led to the filing of 164 competing applications by the May 12, 1983 cut-off date.

14. It is our determination that the most orderly and expeditious way to resolve all the questions concerning RKO's qualifications and determine who will be the licensee of the various stations is to proceed as we have outlined above without initiating parallel proceedings. We believe that conducting the 13 proceedings after resolution of the issues in KHJ will allow RKO and the applicants to avoid litigating unnecessary issues and will create improved chances for settlement. We anticipate that this approach will ultimately result in final resolutions of those proceedings being reached more rapidly than would be the case were we to institute parallel proceedings. Thus, the resolution of the 13 proceedings will not have been delayed by the procedure herein adopted.

Scope of Issues and Mitigating Evidence

15. As noted, we are limiting the present inquiry to the impact of the Boston decision, and to the facts developed in the Los Angeles proceeding, on RKO's qualifications to remain the licensee of KHJ-TV. Accordingly, requests for additional issues against RKO will be entertained only if they are based on facts and circumstances specifically growing out of the Boston proceeding.[24] By the same token, since the focus of our inquiry is on RKO's qualifications, petitions to enlarge issues against any other party will not be considered at this time. Such requests will be considered in due course, after the specified issues in the Los Angeles proceeding are first resolved.

---

[24] If RKO is found basically qualified under Issues 1, 2 and 3, the parties in the 13 renewal cases may then raise whatever other basic qualifications questions they feel are warranted and supported by the facts in their respective cases.

16. Along these lines we are specifically limiting RKO's showing of mitigation to its stewardship of KHJ-TV. Although RKO has previously adduced evidence on this question, the Court, which has had the Los Angeles proceeding before it on three earlier occasions,[25] has directed the Commission to make new findings with regard to the history and policy of KHJ-TV in Los Angeles.[26] Such evidence will serve two purposes. First, if the evidence adduced under issues 1–3 indicate that RKO is *prima facie* disqualified, evidence of KHJ's history and policies may be considered in mitigation.[27] Second, if RKO is found basically qualified, this further evidence may mitigate any adverse conclusions that might otherwise be drawn against RKO's comparative qualifications.

17. To further expedite the Los Angeles proceeding we urge the Administrative Law Judge to order submission of the parties' direct affirmative cases in writing before commencement of any oral hearing. We also strongly suggest that the parties stipulate to facts and issues not in genuine dispute, to submit affidavits on other aspects of the case whenever possible[28] and to confer on any matter, including procedure, which may aid in the prompt disposition of this case. Along these lines we expect the ALJ to exercise his broad discretion and authority in eliminating any unnecessary procedures and avoiding any unwarranted delays in the conduct of the Los Angeles proceeding. Finally, as we stated in our June 8, 1983 RKO Order, any exceptions which the parties desire to interpose shall be filed directly with the Commission for its consideration.[29]

18. ACCORDINGLY, IT IS HEREBY ORDERED, That the above-described applicants ARE DIRECTED to proceed in accordance with the provisions of this Order.

FEDERAL COMMUNICATIONS COMMISSION
WILLIAM J. TRICARICO, *Secretary*

In Re Applications of SEVEN LOCKS BROADCASTING COMPANY Has: 950 kHz, 1 kW, DA, D For Renewal of License For Station WCTN Potomac-Cabin John, Maryland.	MM Docket No. 83–667 File No. BR-810527UB
CELEBRITY BROADCASTERS, INC. Potomac-Cabin John, Maryland Req: 950 kHz, 1 kW, DA, D For Construction Permit.	MM Docket No. 83–668 File No. BP-810831AT

HEARING DESIGNATION ORDER

(Adopted: June 29, 1983 Released: July 8, 1983)

BY THE COMMISSION: COMMISSIONER FOGARTY NOT PARTICIPATING.

1. The Commission has before it for consideration the above-captioned, mutually exclusive applications of Seven Locks Broadcasting Company ("Seven Locks") for renewal of its license for station WCTN, Potomac-Cabin John, Maryland, and of Celebrity Broadcasters, Inc. ("Celebrity") for a construction permit on the frequency occupied by WCTN. The applications must be designated for comparative hearing, because they are mutually exclusive. Celebrity also filed a petition to deny Seven Locks' renewal application. Such

petitions are ordinarily considered predesignation motions to specify issues and dismissed as prematurely filed. They should be submitted to the presiding Administrative Law Judge after designation. *Revised Processing of Broadcast Applications*, 72 FCC 2d 202 (1979). In this case, however, we have elected to consider at this point Celebrity's allegations as to an unauthorized transfer of control, because a novel question has been raised that we have not recently had an opportunity to address.[1] [2]

2. Celebrity argues that an issue should be specified against Seven Locks for an alleged unauthorized transfer of control, a violation of Section 310(d) of the Communications Act of 1934, as amended.[3] All of the stock of Seven Locks is owned by Christ Church of Washington ("Church"), a non-profit organization. The Church is run by a seven-person Board of Deacons. Celebrity contends that these Deacons are the same as the board of governors of a non-profit organization and so should be considered by the Commission as the equivalent of equal owners of a for-profit organization. Four of the seven Deacons have been replaced since Seven Locks acquired the station in 1973. This constitutes a transfer of majority control, according to Celebrity, for which a transfer application must be filed and Commission consent obtained. Celebrity also contends that the former pastor of the Church controlled the affairs at the Church; that he was the driving force for the acquisition of the station; and that he was in direct control of the Church and the radio station. That pastor has since resigned his position, and a new pastor has been installed. This, according to Celebrity, resulted in a *de facto* transfer of control, which also required prior Commission approval. Celebrity concludes that a clear violation of a statutory provision has been committed by Seven Locks, and that this "shows a lack of proper qualifications to continue as a Commission licensee." Anticipating Seven Locks' response, Celebrity asserts that an absence of

---

[1] Seven Locks' opposition to the petition to deny was filed four days late. Nonetheless, we shall consider its opposition as to the issue of unauthorized transfer of control, because the pleading aids in the disposition of the allegations. Comments filed by Celebrity on June 15, 1983, to Seven Locks' Petition for Leave to Amend of August 30, 1982, and Seven Locks' reply to the comments, raise similar concerns which are pertinent to the unauthorized transfer of control issue.

[2] On August 30 and December 1, 1982, Seven Locks petitioned to amend its application to provide information required by Section 1.65 of the Commission's Rules. Similarly, Celebrity petitioned to amend its application on November 9, 1981. For good cause shown, these amendments are accepted. Nonetheless, no comparative advantage will accrue to either applicant as a result of accepting the amendments.

[3] "No . . . station license, or any rights thereunder, shall be transferred, assigned or disposed of in any manner, . . . directly or indirectly, or by transfer of control of any corporation holding such permit or license, to any person except upon application to the Commission and upon finding by the Commission that the public, interest, convenience, and necessity will be served thereby. . . ." 47 U.S.C. §310(d).

bad faith cannot mitigate this intentional violation, citing *Central Florida Enterprises, Inc.* v. *FCC.* 598 F.2d 37, 44 RR 2d 345 (D.C. Cir. 1978); *cert. den.* 441 US. 957 (1979).

3. Seven Locks first responds that a board of governors of a non-profit corporation is only equated with a corporation's owners, for want of any other standard, to compare stock and non-stock corporate applicants under various comparative criteria, such as integration of management, past experience, and diversification. It maintains that in no previous case has the same analogy been used for determining when a transfer of control took place or a transfer application was required. It continues that *Pacifica Foundation*, 41 FCC 2d 71 (Rev. Bd. 1973), with very similar facts, specifically held that it was unclear whether it was necessary to file a transfer application in a case where a majority of the board of a non-profit applicant had gradually changed. Seven Locks further argues that, in general, it is inapt to treat a board of governors as the owners of a company.[4] It claims that its own Church has a "congregational" form of government, with a register of members and a continuity of "ownership" and "control," and that its Deacons, whose membership is controlled by the congregation, are better compared to a corporation's officers. It states that the Church's pastor is responsible to the Deacons and to the congregation, and thus does not have the "substantiality of the actual control" necessary to impute actual control.[5] Finally, Seven Locks argues that if it is determined on either grounds that a technical violation has occurred, such a violation is of little consequence and does not reflect adversely on its qualifications, especially in view of its complete disclosure of all relevant facts in its various filings with the Commission. It concludes that this case is even less compelling than the *Pacifica* case above, in which no adverse action was taken.

4. No unauthorized transfer of control issue can be added against Seven Locks on the basis of the evidence presented here. The Commission has never clearly set forth the circumstances which would constitute a transfer of control, requiring the prior consent of the Commission, with regard to non-stock corporate licensees or other licensee entities comprised of a membership body which elects a governing board. We do not believe it appropriate, in the context of the instant case, to set forth a broad policy of general applicability

---

[4] Seven Locks contends that such a requirement puts an onerous and unnecessary burden on the Commission and on those institutions which have a high turnover rate in their governing bodies (for example, high schools or universities). Furthermore, the Commission's policies are not necessarily advanced, it argues, as many institutions have their control "diffused within the institution." An institution such as the Church has a continuity of "ownership" and "control" in the body of its congregation, which controls the membership of the Deacons, according to Seven Locks.

[5] *See WHDH, Inc.*, 17 FCC 2d 856 (1969).

which would adequately address the question of a transfer of control covering all non-stock licensees. This is a matter which will be explored independently. For present purposes, it is sufficient to find that the necessity for such a filing was unclear, as it was in *Pacifica Foundation, supra*.[6] There is no evidence of any bad faith or intent to deceive by Seven Locks in this matter; to the contrary, all of its Ownership Reports and its subject application are accurate in denoting the current Deacons.[7] Finally, Celebrity has not presented sufficient evidence that the former pastor of the church exercised such *de facto* control of the radio station as to require the filing of a transfer application upon his retirement from the church. It has offered no specific facts to support its general allegation that the pastor was in direct control of the radio station. Its allegations concerning the pastor's position in the Church, even if substantiated, would not alone demonstrate that the change in pastors vested in a new individual "the right to determine the manner or means of operating the licensee and determining the policy that the licensee will pursue." *WHDH, Inc., supra*.

5. Celebrity has presented no evidence of compliance with the local public notice requirements of Section 73.3580 of our Rules (47 C.F.R. §73.3580) and will be ordered to do so, *infra*.

6. Celebrity and Seven Locks appear to be qualified to operate as proposed and their applications will accordingly be set for a comparative hearing.

7. Accordingly, IT IS ORDERED, That the petition to deny filed by Celebrity Broadcasting Company IS GRANTED to the extend indicated above and DISMISSED in all other respects.

8. IT IS FURTHER ORDERED, That Celebrity Broadcasters, Inc. shall inform the presiding Admnistrative Law Judge within thirty days of the release of this Order as to whether it has complied with the public notice requirements of Section 73.3580(f) of the Commission's Rules.

9. IT IS FURTHER ORDERED, That pursuant to Section 309(e) of the Communications Act of 1934, as amended, the above-captioned

---

[6] Since no adverse action would be taken in that case, the Review Board declined to state whether a transfer application was actually required. 41 FCC 2d at 72.

[7] In *Central Florida, supra*, which Celebrity cites, the court did state that "people are held to intend the obvious consequences of their acts." *Id.* at 52. The "obvious consequences" which the court held that the licensee in that case must have intended was the *de facto* relocation of its main studio after a series of gradual shifts of activities from its nominal main studio. It continued in the next two sentences that "[the applicant] is chargeable with knowledge of the [subject] regulation. Thus, we are left with an intentional violation of a Commission Rule." *Id.* For the reasons stated above, Seven Locks cannot be chargeable with such knowledge. Celebrity also argues that because Seven Locks operates a commercial station, it is subject to some higher standard than the applicant for a noncommercial educational station in *Pacifica, supra*. We find no basis upon which to distinguish the two situations.

applications ARE DESIGNATED FOR HEARING IN A CONSOLIDATED PROCEEDING, at a time and place to be specified in a subsequent Order, upon the following issues:

> 1. To determine which of the proposals would, on a comparative basis, better serve the public interest.
>
> 2. To determine, in light of the evidence adduced pursuant to the foregoing issue, which of the applications should be granted.

10. IT IS FURTHER ORDERED, That, to avail themselves of the opportunity to be heard, the applicants herein shall, pursuant to Section 1.221(c) of the Commission's Rules, in person or by attorney, within 20 days of the mailing of this Order, file with the Commission in triplicate a written appearance stating an intention to appear on the date fixed for the hearing and to present evidence on the issues specified in this Order.

11. IT IS FURTHER ORDERED, That the applicants herein shall, pursuant to Section 311(a)(2) of the Communications Act of 1934, as amended, and Section 73.3594 of the Commission's Rules, give notice of the hearing (either individually or, if feasible and consistent with the Rules, jointly) within the time and the manner prescribed in such Rule, and shall advise the Commission of the publication of such notice as required by Section 73.3594(g) of the Rules.

12. IT IS FURTHER ORDERED, That the Secretary of the Commission shall send, by Certified Mail - Return Receipt Requested, a copy of this Hearing Designation Order to each of the parties to this proceeding.

DECISION

(Adopted: July 19, 1983; Released: July 25, 1983)

BOARD MEMBER BLUMENTHAL FOR THE REVIEW BOARD:

1. This proceeding involves the mutually exclusive applications of Superior Broadcasting of California (Superior) and The Far West Broadcasting Co., Inc. (Far West) for authority to construct a new UHF commercial television station to operate on Channel 24 at Chico, California. By *Hearing Designation Order*, 45 Fed. Reg. 79904, published December 2, 1980, their applications were designated for consolidated hearing on (1) a limited financial issue against Far West and (2) the standard comparative issue to determine which applicant would better serve the public interest.[1] By *Memorandum Opinion and Order*, FCC 81M-2284, released July 23, 1981, presiding Administrative Law Judge (ALJ) Joseph P. Gonzalez added issues to determine: (1) whether Superior had fully reported the broadcast interests and associations of its principals and the effect thereof on its basic and comparative qualifications; and, (2) whether Superior would provide the required signal strength to the entire community of license and the effect thereof on its comparative qualifications. Subsequently, the ALJ reconsidered the signal strength issue and deleted it on his own motion. *Order*, FCC 81M-3968, released December 16, 1981. By *Memorandum Opinion and Order*, FCC 81M-2509, released August 13, 1981, a public inspection file issue was added against Superior on a comparative basis only. Previously, the ALJ had granted Far West's motion for partial summary decision and favorably resolved the limited financial issue that had been designated against it. *Memorandum Opinion and Order*, FCC 81M-2238, released July 22, 1981.

2. In an *Initial Decision* (*I.D.*), FCC 83D-6, released February 4, 1983, the ALJ granted the Superior application after finding that its derelictions on the reporting issue were minor and did not detract decisionally from its basic qualifications. The *I.D.* further concluded that Superior was comparatively the best applicant because: (a) Superior warranted a substantial diversification preference inasmuch as Far West's 80% stockholder, Kelly Broadcasting Co., is the licensee of Station KRCA-TV, Sacramento, California, which has extensive over-the-air and cable audience penetration in the Chico area, whereas there is no evidence to show that the three television stations and one AM station, whose ownership is partly attributable to Superior, have any audience penetration in the Chico area; (b) Superior, which has 100% full-time integration credit, merits a substantial integration preference over Far West, which has only

---

[1] The application of Southwest Television, Ltd. (File No. BPCT-790815KQ), also designated for consolidated comparative hearing, was subsequently dismissed at the applicant's request. *Order*, FCC 81M-271, released January 28, 1981.

20% full-time credit; (c) Superior is entitled to summary decision on the public file issue; and (d) Superior should not be assessed any comparative demerit under the reporting issue because no intent to conceal or deceive was shown and because the matters not timely or accurately reported were, at most, only slightly decisionally significant.

3. The proceeding is now before the Review Board on exceptions filed by Far West and a reply brief filed by Superior. The Board has reviewed the *I.D.* in light of the exceptions and briefs, the oral argument held April 29, 1983, and our examination of the record. We adopt the findings of fact in the *I.D.*, except as modified herein, and affirm the ALJ's ultimate conclusion that a grant of the Superior application will best serve the public interest, convenience, and necessity.

4. *Reporting Issue*. The ALJ found that Superior violated Sections 1.65 and 73.3514 of the Rules, 47 CFR §§1.65 and 73.3514,[2] because: (1) it "inaccurately" reported as "non-voting" the 12% voting stock interest in KLOC Broadcasting Co., Inc. owned by Melvin J. Querio, one of two co-equal partners in Superior[3]; (2) it did not report timely the filing in August 1976 by KLOC Broadcasting of an application for a television station at Concord, California; (3) it failed to report the November 24, 1976 filing and subsequent grant on August 8, 1979 of a KLOC Broadcasting application for television Station KCBA-TV, Salinas, California; and (4) it failed to report that Querio served as a director of the licensee of Station KTXL-TV, Sacramento, California, from January 21, 1972 to June 16, 1974, was a director and vice-president of KLOC Broadcasting from July 20, 1965 to July 15, 1974, and had a 52% ownership interest in Station KTRT-AM, Truckee, California, from July 24, 1968 to January 21, 1972. *I.D.*, paras. 25, 38. Additionally, after finding that Superior had no motive or intent to conceal, deceive, or misrepresent; but exhibited only faulty judgment and carelessness and that the above matters were, at most, of slight decisional significance, he concluded that neither disqualification of Superior nor assessment of a comparative demerit was warranted. *I.D.*, paras. 39–43.

5. The gravamen of Far West's exceptions concerns the ALJ's refusal to disqualify Superior or to assess it a comparative demerit for not timely and accurately reporting the present and past

---

[2] Section 1.65 requires an applicant to amend its pending application within 30 days whenever the information furnished therein is no longer substantially accurate and complete in all significant respects, or whenever there has been a substantial change as to any other matter which may be of decisional significance. Section 73.3514 requires that an application include all information called for by the application form. *See, e.g.*, *Nuance Corp.*, 85 FCC 2d 412, 415–16 (Rev. Bd. 1981).

[3] KLOC Broadcasting is the licensee of Station KLOC-TV, Modesto, California, and KCBA-TV, Salinas, California, is a 10% owner of Station WCPT-TV, Crossville, Tennessee, and was previously the licensee of Station KLOC-AM, Ceres, California. *I.D.*, para. 14.

broadcast interests of Querio. In particular, Far West asserts that: (1) Superior intentionally misled the Commission concerning Querio's simultaneous business relationships with Stations KLOC-TV and KTXL-TV in order to avoid specification of a cross-interest issue against it; (2) Superior's reporting derelictions concerned matters of decisional significance; (3) Querio testified falsely concerning his knowledge of KLOC Broadcasting's filing of its application for Station KCBA-TV, Salinas, and the ALJ erred in denying its motion to reopen the record and add a requested misrepresentation issue; and (4) Superior's reporting derelictions were so frequent and egregious that, regardless of its motive or intent, a substantial comparative demerit, at a minimum, should be assessed against it. We address these matters below.

6. We reject Far West's contention that the desire to avoid specification of a cross-interest issue motivated Superior to camouflage Querio's simultaneous roles at Stations KLOC-TV and KTXL-TV (*see, e.g.*, Far West's Exhs. 8–17) because the record makes clear—and Far West does not contend otherwise—that any such potential cross-interest policy "violation" had ceased to exist *before* the instant Superior application was filed.[4] Consequently, no cross-interest issue could have been specified against Superior. A cross-interest issue is, by nature, a prospective one and is "grounded in concern over 'the *potential* for conflict of interest, unfair competition, and detriment to the public interest' inherent in certain types of business relationships," *Cleveland Television Corp.*, 91 FCC 2d 1129, 1134 (Rev. Bd. 1982) (*quoting Eastern Broadcasting Corp.*, 30 FCC 2d 745, 755 (Rev. Bd. 1971) (emphasis added), *review denied*, FCC 83–235, released May 18, 1983, *appeal pending sub nom. Cleveland Television Corp.* v. *FCC*, No. 83–1659 (D.C. Cir., filed June 15, 1983). It is not a character issue, and no negative qualifying or comparative implications flow from an applicant's possible past brush with the cross-interest policy. Any comparative ramifications arising from an applicant's attributable interests in mass media are properly evaluated under the diversification criterion of the standard comparative issue. *See id.*, 91 FCC 2d at 1133–35 and 1139 n.4. Here, Far West

---

[4] To state that a party might "violate" the cross-interest policy is to leave the
misimpression that the policy enunciates some hard-and-fast rule. Actually, the
cross-interest policy is a broader-based corollary to the cross-ownership rules,
which policy evinces concern whenever a party to one application presently
possesses a "meaningful relationship" to another broadcast station in the same
locale so as to create a concern that the stations involved would not be fully
competitive or would have access to each other's confidential business informa-
tion. *See generally Cleveland Television Corp.*, *infra*, 91 FCC 2d 1145–46 (concur-
ring statement) and cases cited therein. Judgments as to the applicability of the
cross-interest policy are made on a case-by-case basis depending on the nature of
the relationship between the subject party and the stations involved. *See, e.g.*,
Morris, Pierce and Pierce, 88 FCC 2d 713 (Rev. Bd. 1981), *review denied*, FCC 83–31,
released January 25, 1983.

concedes that Querio left the employ of Station KTXL-TV before Superior's application was filed with the Commission. Far West Exh. 10, at 14. Therefore, no cross-interest question emanating from that employment remained for the ALJ's (or our) consideration (*see* FCC 81M-2284, *supra*), and no motive to avoid such an issue can be imputed to Superior. To dwell any longer on the problematic question of whether Querio ever had tempted the cross-interest policy would be prodigal.

7. Conversely, we do agree, in part, with Far West's contentions concerning Superior's mischaracterization of Querio's 12% voting interest in KLOC Broadcasting as "non-voting" as well as Superior's failure to report the filing and subsequent grant of the KLOC Broadcasting application for a new television station in Salinas (*see supra* note 3). A "factor of primary significance" in choosing among comparative broadcast applicants is the criterion of diversification of control of the mass media, which "constitutes a primary objective in the licensing scheme." *Policy Statement on Comparative Broadcast Hearings*, 1 FCC 2d 393, 394 (1965). Common ownership interests in other broadcast stations are weighed more heavily against an applicant the closer they are geographically to the proposed community of license. *Id.*, at 394–95. Hence, Superior's characterization of Querio's KLOC ownership interest as "non-voting" potentially affected the outcome of the proceeding, especially when the KLOC Broadcasting television licenses in the region (Modesto and Salinas) and its attributable radio interest in Ceres, California (and, to a lesser extent, its 10% interest in a distant Tennessee television station) are considered. *See supra* note 3; *I.D.*, paras. 14, 44. There is a vital difference between the way the Commission considers non-voting stock and the way it considers voting stock. Thus, insofar as they promote diversification of media control, the Commission's rules limiting multiple ownership focus almost exclusively on voting stock, *see, e.g.*, 47 CFR §§73.35, 73.240, 73.636 NOTES 2–7, while non-voting stock is generally of considerably lesser concern. *Cleveland Television, supra*, 91 FCC 2d at 1139. *See also Evening Star Broadcasting Co.*, 67 FCC 2d 318, 324 (1978) ("ownership of preferred stock will not invoke the strictures of the multiple ownership rules absent contingent control rights"). Querio has been involved in broadcasting for many years and is the principal of a Commission licensee; he is presumptively aware of the difference between the Commission's regulatory treatment of voting and non-voting stock. We might even go so far as to infer that it was precisely because of Querio's awareness of the significance of voting stock to our diversification principles that the applicant cast his ownership interest in KLOC Broadcasting as non-voting, but for the fact that

collateral Commission records clearly list Querio's holdings in the licensee (KLOC Broadcasting) in their factual form.[5] Ergo, an intent to categorically misrepresent the actual nature of Querio's broadcast holdings is difficult to find. *Vogel-Ellington Corp., supra* note 5, 41 FCC 2d at 1010–11. The characterization of his stock as non-voting (based on Querio's later oral assertion that he refrains from voting the stock) is therefore viewed essentially as a heedless shading of his interests so as to tint those interests with the most favorable comparative coating. Nonetheless, Superior's mischaracterization of the stock as non-voting, without any explanatory annotation, was demonstrably less than candid; and it concerned a matter of decisional importance. The Commission must rely on the absolute candor of applicants—more so now than ever because our license application forms rely increasingly on bare representations and less on documentation, *see Revision of Application for Construction Permit for Commercial Broadcast Station*, 50 RR 2d 381 (1981). In terms of forthrightness in describing the broadcast ownership interests of its principals, Superior was not, and its lack of full disclosure here indicates that its reliability as a licensee expected to demonstrate full and complete candor to the Commission is somewhat less than unqualified. *See generally Fox River Broadcasting, Inc.*, 88 FCC 2d 1132, 1136–38 (Rev. Bd. 1982), *modified* 53 RR 2d 44 (1983). A slight-to-moderate demerit should have been assessed, and we penalize Superior in that degree. *See generally Radio Station WABZ, Inc.*, 90 FCC 2d 818, 825–27 (1982), *appeal pending sub nom. Victor Broadcasting, Inc.* v. *FCC*, No. 82–1964 (D.C. Cir. 1982).

8. Additionally, Superior failed to timely report in this proceeding the filing and subsequent grant of the KLOC Broadcasting television application for Salinas. *I.D.*, paras. 25, 36, 41. Because that station is an attributable regional broadcast interest, Superior's reporting failure here materially relates to the diversification comparison between the applicants. *See supra* para. 7. However, we agree with the ALJ that Superior's failure to report this matter was careless rather than misrepresentational since the Salinas grant to KLOC Broadcasting was an open matter of public record. Querio testified that he had not been aware of when the Salinas application had been filed or granted. Tr. 340–345. Far West claims that Querio misrepresented his lack of awareness concerning the Salinas application (and it also claims that the ALJ erroneously denied its motion to reopen the record to explore this alleged misrepresentation) because

---

[5] *See* Far West Exh. 8 (FCC Forms 323 (ownership) filed by KLOC Broadcasting (1974–80)). But, even when accurate information is elsewhere on file at the Commission, applicants are expected to make full and accurate disclosure in separate licensing proceedings. *See generally Vogel-Ellington Corp.*, 41 FCC 2d 1005, 1010 (Rev. Bd. 1973). The Commission's files are large indeed, and some say—well—imperfect. It is the applicant's affirmative duty to bring its other media interests to the Commission's attention and not the responsibility of a competing applicant to ferret them out. *Id.*

on November 8, 1976, and again on December 8, 1977, Querio wrote a letter guaranteeing a portion of the financing for the Salinas television applicant, KLOC Broadcasting. That application was filed on November 24, 1976, and finally granted on August 8, 1979. What emerges from Querio's testimony, however, is that he did not concern himself deeply with the actual filing of the Salinas application, and took no active part in following the application's progress through the multi-year administrative process. Notwithstanding, Querio—as a 50% principal in this proceeding and as an owner of a 12% interest in KLOC's Salinas application—was required to determine what new media interests, including the Salinas station, KLOC Broadcasting might have acquired before forwarding his own list of media interests to Superior for incorporation into the instant application. Querio's lack of intent to flatly deceive the Commission is confirmed, again, by the plain fact that his KLOC Broadcasting interests were already on public file with the Commission. *See Vogel-Ellington Corp., supra*. Still, a slight comparative demerit should have been assessed for the Salinas reporting omissions. *See generally Radio Station WABZ, supra*. In this case, though, any demerit for inaccurate reporting of Querio's broadcast interests is well-encompassed within the slight-to-moderate demerit assessed previously against Superior for reporting inaccuracies, *see supra* para. 7.

9. *Summary*. Superior has a substantial diversification preference[6] and a substantial integration preference[7] over Far West, against which must be weighed a slight-to-moderate comparative demerit for Superior's inaccurate and late reporting of the broadcast interests of its principal, Melvin J. Querio. In our view, this demerit is not of such magnitude as to overshadow the significant comparative preferences Superior enjoys and, thus, Superior remains comparatively advantaged. Hence, according to the criteria of the 1965 comparative *Policy Statement, supra*, we find that a grant of the Superior application will better serve the public interest, convenience, and necessity.

10. ACCORDINGLY, IT IS ORDERED, That the petition for

---

[6] No exception has been taken to the ALJ's award of a substantial diversification preference to Superior, and any objection to it by Far West is waived. 47 CFR §1.277(a).

[7] Far West excepts to this preference based on its view that Superior has lacked candor in this proceeding and has been unwilling to comply with the Commission's reporting requirements and, therefore—by implication—its integration is qualitatively poor. Because we have not found any intentional lack of candor or willful noncompliance, we reject this argument; Superior has received a comparative demerit for its reporting deficiencies, but its integration credit remains unscathed.

In addition, we have considered herein all of Far West's exceptions having decisional significance. *See* 47 CFR §1.282(b)(2).

leave to amend filed on April 8, 1983 by The Far West Broadcasting Co., Inc. IS GRANTED, and the amendment IS ACCEPTED; and

11. IT IS FURTHER ORDERED, That the application of Jack O. Koonce and Melvin J. Querio d/b/a Superior Broadcasting of California (File No. BPCT-781221LI) IS GRANTED, and the application of The Far West Broadcasting Co., Inc. (File No. BPCT-790815KP) IS DENIED.

THE FAR WEST BROADCASTING CO., INC. Chico, California	BC Docket No. 80-735 File No. BPCT-790815KP
For Construction Permit for New Television Station	

Appearances

Vincent J. Curtis, Jr. on behalf of Jack O. Koonce and Melvin J. Querio d/b/a Superior Broadcasting of California; *Herbert D. Miller, Jr.* on behalf of The Far West Broadcasting Co., Inc.; and *Norman Goldstein* on behalf of Chief, Broadcast Bureau, Federal Communications Commission.

INITIAL DECISION OF ADMINISTRATIVE LAW JUDGE JOSEPH P. GONZALEZ

(Issued: January 25, 1983; Released: February 4, 1983)

Preliminary Statement

1. This proceeding involves the mutually exclusive construction permit applications of Jack O. Koonce and Melvin J. Querio d/b/a Superior Broadcasting of California (Superior) and The Far West Broadcasting Co., Inc. (Far West) for a new commercial television station to operate on Channel 24 in Chico, California.[1]

2. By Hearing Designation Order released December 1, 1980 (Mimeo No. BC 04104), 45 FR 79904, published December 2, 1980, the Commission, by the Chief, Broadcast Bureau, acting pursuant to

---

[1] The application of a third party, Southwest Television, Ltd. for the new facility at Chico, California was dismissed with prejudice in a Memorandum Opinion and Order released January 28, 1981 (FCC 81M-271).

delegated authority, designated these applications for hearing in a consolidated proceeding on the following issues:[2]

> 1. To determine, with respect to Far West:
>
>   a) whether applicant has $1,369,032 available to meet its proposed expenditures;
>
>   b) whether, in light of the evidence adduced pursuant to a) above, the applicant is financially qualified.
>
> 2. To determine, on a comparative basis, which of the applications would best serve the public interest.
>
> 3. To determine, in light of the evidence adduced pursuant to the foregoing issues, which of the applications should be granted.

3. On January 2, 1981, Far West filed a Motion to Enlarge Issues, requesting the inclusion of the following issues: (1) whether Superior reported all of the broadcast interests and associations of its principals, and if not, the effect on its basic and comparative qualifications; (2) whether Querio violated the Commission's cross-ownership policy by having simultaneous interests in KTXL-TV and KLOC-TV,[3] and whether Superior attempted to conceal this violation, and its effect thereof on its basic and comparative qualifications; (3) whether the grant of Superior's application would result in excessive or increased regional concentration of control, and the effect thereof on Superior's basic and comparative qualifications; and (4) whether Superior would have the signal strength it had proposed, and if not, the effect thereof on its basic and comparative qualifications. In a Memorandum Opinion and Order released July 23, 1981 (FCC 81M-2284), the Presiding Judge granted inclusion of issues (1) and (4), and denied inclusion of issues (2) and (3).

4. In a subsequent Order released December 16, 1981 (FCC 81M-3968), the Presiding Judge indicated that he considered the issue as set forth in (4) above, as no longer relevant to the problem at hand, and it was deleted.

5. On February 12, 1981, Far West filed a Further Motion to Enlarge Issues, petitioning that an issue pertaining to the allegated improper maintenance of KLOC-TV's public inspection file be designated against Superior. Far West also petitioned that a misrepresentation issue be added against Superior. In a Memorandum Opinion and Order released August 13, 1981 (FCC 81M-2509), the Presiding Judge granted inclusion of the first issue, and denied inclusion of the second.

6. The Presiding Judge in a Memorandum Opinion and Order released July 22, 1981 (FCC 81M-2238), granted Far West's Motion

---

[2] The issues specifically designated against Southwest Television, Ltd. the dismissed applicant, have been omitted.

[3] Station KLOC-TV is now station KCSO-TV. For purposes of clarity, the station will continue to be referred to as station KLOC-TV.

for Partial Summary Decision filed June 9, 1981, and the limited financial issue set forth in 1. a) and b) above was resolved in Far West's favor.

7. Prehearing conferences were held on February 25, 1981, June 23, 1981, October 27, 1981, November 4, 1981 and December 14, 1981. An admissions session was held on March 19, 1982. Hearing sessions were held on March 23, 24 and 25, 1982. The record was held open until receipt of a Joint Stipulation on March 30, 1982, and was closed by Order of the Presiding Judge released April 2, 1982 (FCC 82M-1044). Proposed Findings of Fact and Conclusions of Law were filed by both applicants and the Broadcast Bureau on May 26, 1982, and replies were filed on June 11, 1982.

Findings of Fact

Superior Broadcasting of California

8. Superior Broadcasting of California is a general partnership between Melvin J. Querio and Jack O. Koonce. Each partner owns a 50 percent interest (Tr. 166, 250). Both men reside in California, and upon grant of Superior's application, they both plan to move to the Chico area. Currently, Mr. Koonce resides in Delano, California and Mr. Querio resides in Modesto, California (Superior Exhibits 1 and 3).

Jack O. Koonce

9. Mr. Koonce will be the Chief Engineer and Assistant Manager to Mr. Querio at the Chico TV station. He will be responsible for the hiring and scheduling of the technical staff, and the daily maintenance of all technical equipment and the FCC files. Mr. Koonce proposes to work full time (40 hours per week) at the Chico TV station (Superior Exhibit 1).

10. Mr. Koonce is presently self-employed as a broadcast technical assistant. He is also an Assistant Minister at St. Dunstan's Episcopal Church, Modesto, California. Mr. Koonce attended the Porterville Community College for two years, and the Episcopal Theological School at Claremont, California. While living in Delano, California, Mr. Koonce has served as past President and Board member of the Delano California Elementary School District; past President of Delano Rotary Club; past Director of the Delano Chamber of Commerce; member of the Quarter Century Broadcaster Club; and Council Member of the Diocese of the San Joaquin Episcopal Church of the U.S.A. He also sells real estate and manages his own rental properties (Superior Exhibit 1).

11. Mr. Koonce is currently President and 100 percent stockholder of Koonce Pacific Corporation, a broadcast consulting firm. Mr. Koonce's past media interests are as follows: (1) 50 percent interest in KXEM Radio, McFarland, California (1971–1974); (2) 100 percent

interest in KXEM (1974–1977); (3) 51 percent interest in KXEM (1977–1978); and (4) 100 percent interest in KWIP Broadcasting, Inc., Merced, California (1976–1978). Mr. Koonce has no current broadcast interests. His past work experience has been as follows: (1) General Manager of station KXEM, McFarland, California; (2) freelance work as a contract technician for a number of radio stations; (3) contract First-Class Operator for station KDNO-FM, Delano, California (1968–1969); and (4) contract engineer for station KRTN, New Mexico (5 mos., 1951). In addition, from March 1, 1977 to December 5, 1977, he was President and Director of North America Media, proposed assignee of station KOBY, Reno, Nevada (application dismissed 1978).[4] He was also an announcer and engineer at radio station KTBR, Modesto, California (1955–1956); and a part-time announcer at KTUR radio, Turlock, California (4 mos., 1952) (Superior Exhibit 1).

12. Mr. Koonce has held a First Class Radio Telephone License for more than 30 years, and an Amateur Radio License for 33 years (Superior Exhibit 1).

Melvin J. Querio

13. Mr. Querio, in the event that Superior's application is granted, will serve as General Manager of the proposed television station, devoting at least 40 hours per week to his duties at the station. He will be in charge of the daily operation of the station, including programming and sales. Mr. Querio presently resides in Modesto, California, but will relocate to Chico or the immediate Chico area if Superior is awarded the certificate. He is currently the General Manager of KLOC-TV, Channel 19, Modesto, California (Superior Exhibit 3). Mr. Querio has taken a temporary leave of absence from KLOC-TV in order to provide assistance in the coordination and sales planning of stations KLRK-TV, Vancouver-Portland, Oregon and KTMX-TV, Denver, Colorado.[5]

14. Mr. Querio owns 12 percent of the voting stock in KLOC Broadcasting Company, Inc.,[6] the licensee of KLOC-TV, Modesto, California and KCBA-TV, Salinas, California and 10 percent owner of station WCPT-TV, Crossville, Tennessee. KLOC Broadcasting was at one time the licensee of KLOC-AM, Ceres, California. In addition, Mr. Querio formerly held a 52 percent interest in KTRT-AM,

---

[4] Mr. Koonce did not have an ownership interest in Salinas Radio, Inc. or with North America Media, but acted as a manager under the conditions stipulated in the Management Agreement that was negotiated between Koonce Pacific Corporation and KWIP Broadcasting, Inc., KXEM Radio Company, Salinas Radio, Inc. and Ron T. Smith and Nancy E. Smith.

[5] Amendment to Superior's application filed on January 10, 1983.

[6] KLOC Broadcasting Company, Inc. is now Sainte Broadcasting Corporation. For purposes of clarity, however, it will continue to be referred to as KLOC Broadcasting.

Truckee, California (1968–1972). His past broadcast experience is as follows: (1) Transmitter Engineer, Sales Department, and Announcing at station KECC, Pittsburg, California (1953); (2) Sales, station KVON, Martinez, California (1953); Floor Director and Production Supervisor for station KOVR (1954–1965); (4) Operations Manager, KTXL-TV, Sacramento, California (1968–1978), and a member of KTXL Board of Directors (1972–1974); (5) General Manager, KCIK-TV, El Paso, Texas (1978–1980); and (6) General Manager, KLOC-TV, Modesto, California (1980 to present).

Far West Broadcasting Co., Inc.

15. Far West Broadcasting Co., Inc., a California corporation, has two stockholders, David E. Caldwell (20 percent owner) and Kelly Broadcasting Co. (80 percent owner) (Far West Exhibit No. 2).

16. In the event that Far West's application is granted, David Caldwell will serve as full-time general manager of the station, overseeing the daily operations of the station. As of the date of the hearing, Mr. Caldwell lived in Chester, California, approximately 55 miles from Chico, but within the service area of Far West's proposed station.[7] He does not propose to move to Chico, but intends to commute daily in his private plane (Far West Exhibit No. 1; Tr. 490).

17. Mr. Caldwell is currently the 100 percent stockholder, an officer and director of Communications By Design, Inc. He has owned this company, which designs and produces independent programming (including sports and educational programming), since 1971. Communications By Design is presently negotiating the development of a closed circuit satellite television network for the Veterans Administration and the Indian Health Service for medical education, diagnostic and therapeutic purposes. Until November 30, 1981, Communications By Design was the licensee of radio stations KBLF-AM and KSNR-FM in Red Bluff, California, and Mr. Caldwell was the general manager of these radio stations. In 1981, stations KBLF-AM and KSNR-FM were assigned to Wireless Associates (Far West Exhibit No. 1). Mr. Caldwell has never been a general manager of a television station, nor has he ever been an employee of a television station (Tr. 477).

Kelly Broadcasting Co.

18. Kelly Broadcasting Co., the 80 percent owner of Far West is composed of five partners: Jon S. Kelly and Robert E. Kelly, both of whom own 331;3 percent each of the corporation; Nina N. Kelly (Trustee of the Nina N. Kelly Trust No. 2) which owns 231;3 percent; Robert E. Kelly and Jon S. Kelly (Trustees, Suzanne Kelly Adams Trust) which owns 71;2 percent; and Robert E. Kelly and Jon S. Kelly

---

[7] By an amendment filed August 18, 1982, the Presiding Judge has been advised that Mr. Caldwell has moved to Quincy, California.

(Trustees of the Carolyn and Walter Adams Trust) which owns $2^1/_2$ percent (Far West Exhibit No. 2).

19. Kelly Broadcasting is the 100 percent owner of KCRA-TV licensed to Sacramento, California. KCRA-TV has extensive audience penetration into Butte County (where Chico is located), as well as the proximate counties of Lake, Sutter, Yuba Nevada, Sierra and Plumas. It is also available on numerous cable television systems serving Butte County (Superior Exhibits 4 and 5).

20. The principal owners of Kelly Broadcasting Co., Robert E. Kelly and Jon S. Kelly, are also equal partners in Kelly Television Co. Kelly Television Co. is the licensee of KCPQ-TV in Tacoma, Washington (Far West Exhibit No. 2).

21. None of the members of Kelly Broadcasting Co. or Kelly Television Co. proposes to perform any duties associated with the management of the proposed television station.

Special Issues

Public File Issue

22. As noted above, the Presiding Judge in a Memorandum Opinion and Order released August 13, 1981 (FCC 81M-2509), designated a public file issue against Superior. The burden of going forward on the issue was placed on Far West, and the burden of proof on Superior.

23. Far West has failed to demonstrate that Melvin Querio had any responsibility for the maintenance of KLOC-TV's public file at the time William Krum, Far West's agent, asked to inspect the file. The undisputed evidence of record indicates that from April 1980, when Mr. Querio returned to KLOC-TV as general manager, until some time after Mr. Krum's visit, Chester Smith, the 51 percent owner of KLOC-TV, had the responsibility for properly maintaining the public file (Tr. 298–300). Furthermore, Mr. Querio testified that during that period of time he did not review the public file, or in any way have any effect upon the usual maintenance of the file; and that he did not instruct anyone during that period as to proper maintenance procedures (Tr. 299). The Presiding Judge concludes, therefore, that Far West has failed to demonstrate that Mr. Querio had any responsibility for maintaining KLOC-TV's public file at the time of Mr. Krum's visit; and that the responsibility for the improper maintenance of the file cannot therefore be ascribed to Mr. Querio. In view of Far West's failure to submit any evidence to support its contention that Mr. Querio was responsible for the fact that KLOC-TV's public file was incomplete at the time of Mr. Krum's visit, summary decision of the public file issue in Superior's favor is warranted, and it is so ordered.

24. Far West's additional contention that Querio is at fault for failing to instruct the KLOC-TV staff as to the proper maintenance

of the public inspection file, after he assumed responsibility for the file, is without merit. There is no indication in the record that KLOC-TV's public file has been improperly maintained at any time since Mr. Krum's visit. In the absence of such a showing, Mr. Querio can hardly be found to have been negligent for failing to instruct the KLOC-TV staff in the proper maintenance of the file.

Failure to Report Issue

25. Far West alleges that the following broadcast interests and/or associations of Melvin J. Querio and Jack O. Koonce were either not timely, fully or accurately reported: Melvin J. Querio's ownership of 12 percent of the voting stock of KLOC Broadcasting; KLOC Broadcasting's November 24, 1976 application for a construction permit for a television station in Salinas, California, and the grant of the application on August 8, 1979; Melvin Querio's position as director of Camelia City Telecasters, Inc., the licensee of station KTXL-TV, Sacramento, California from January 21, 1972 to July 16, 1974, and his position as director and vice president of KLOC Broadcasting, the licensee of KLOC-TV, Modesto, California from July 20, 1965 to July 15, 1974; KLOC Broadcasting's August 1976 application for authority to construct a new television station in Concord, California, dismissed on December 15, 1976; Querio's 52 percent interest in the licensee of station KTRT-AM, Truckee, California from July 24, 1968 to January 21, 1972; and Jack O. Koonce's association with stations KXES, Salinas, California and KOBY-AM, Reno, Nevada.

26. Messrs. Querio and Koonce were introduced by Chester Smith, approximately one to three months before the Superior partnership was formed (Tr. 166–167, 251–252), and the two partners met on two occasions to discuss partnership business (Tr. 169, 252). Mr. Koonce was given the responsibility for completing the application for the Chico license, with Querio supplying information with respect to his past broadcast experience and interests (Tr. 170, 253). Querio indicated that he provided Koonce with the information dealing with his broadcast interests as set forth in Table II of Superior's application, but failed to mention certain other past broadcast interests and associations as well as positions of authority held with KLOC-TV and KTXL-TV, because he had either forgotten them or he considered them to be irrelevant (Tr. 254–259). Koonce testified that he did not include a specific reference in Superior's application to his past management association with station KXES in the belief that the application's reference to the Koonce Pacific Corporation was sufficient, since his association with station KXES was based on the management agreement between station KXES and the Koonce Pacific Corporation (Tr. 176, 231). As to his past association with KOBY-AM, Koonce testified that he did not specifically refer to KOBY-AM, because his association with that

particular station was conditioned on the assignment of the license for the station which was never effectuated (Tr. 176–177).

27. During an extensive pleading cycle beginning with Far West's first Petition to Enlarge Issues, filed on January 2, 1981, Far West made a series of allegations that Superior had not properly advised the Commission of all of its principals' past and present media interests and/or associations. Specifically, Far West in its initial petition charged Superior with failing to report Querio's interest in the application of KLOC Broadcasting and the grant of the license for a new television station in Salinas, California, and Koonce's past relationship with station KXES, Salinas, California and station KOBY-AM, Reno, Nevada. In addition, Far West in the same petition charged Superior with a possible cross-interest policy violation, since Querio had served as operations manager at KTXL-TV, Sacramento, California while holding a 12 percent "non-voting stock" interest in the licensee of station KLOC-TV, Modesto, California. It also noted that the Commission's ownership records did not indicate that Querio's KLOC Broadcasting stock was "non-voting" as described in Superior's application (Far West Exhibit No. 8, pp. 1–7). Superior responded by conceding that it had failed to timely report the Salinas application and grant,[8] and by indicating, in response to Far West's contention concerning the nature of Querio's KLOC stock, that Querio had never voted his stock in KLOC Broadcasting. With respect to Far West's claim that Koonce had not reported his past association with station KXES and station KOBY-AM, Superior indicated that these associations had terminated prior to the filing of Superior's application, and it noted the application's reference to the Koonce Pacific Corporation which formed the basis for these associations. It responded to Far West's cross-interest allegation by stating that the station contours for KTXL-TV and KLOC-TV cited by Far West as demonstrating an overlap were not in effect at the time Querio was manager at KTXL-TV and a stockholder in KLOC Broadcasting, and that there was no overlap and therefore no cross-interest problem during the time that Querio served as operations manager of KTXL-TV. Superior added that, in any case, Querio was "only a minority stockholder of KLOC Broadcasting and not an officer or director" (Far West Exhibit No. 9, p. 5).

28. Querio testified that he received a copy of the motion referred to above (Tr. 287), and understood at the time that Far West was alleging that he had not truthfully reported to the Commission the full extent of his various broadcast interests and associations (Tr. 408), and he indicated that he understood Far West's cross-interest allegation to mean that there was a problem with his having held an

---

[8] On February 2, 1981 Superior filed an amendment which reported that the Commission had granted the KLOC application for Salinas on August 8, 1979.

ownership interest in KLOC Broadcasting while working for KTXL-TV (Tr. 408–409). He added, however, that at the time he could not understand why Far West was alleging a cross-interest problem since in his opinion the stations in question were not competitive, since they served different markets (Tr. 354). Querio remembers discussing the pleading with counsel for Superior, but cannot recall whether they discussed his other roles at KLOC-TV and KTXL-TV (Tr. 355, 363). Their discussions, according to Querio, focused rather on the nature and the programming of these stations, and not on his role at the stations (Tr. 409–410); and that during these discussions, his positions as director of KTXL-TV and as officer and director at KLOC-TV simply did not come to mind because he considered them to be irrelevant, since they were positions in name only (Tr. 269, 289).

29. In its reply to Superior's opposition statement filed February 12, 1981, Far West made the further charge that Superior had failed to report that Querio, in addition to being a 12 percent stockholder, had been vice president and director of station KLOC-TV between 1965–1974 and, it alleged that Superior had demonstrated a lack of candor when it replied in its opposition pleading that Querio had not been an officer or director of KLOC-TV. On February 12, 1981, Far West filed a further motion to enlarge which sought the designation of a misrepresentation issue against Superior on the basis that it had misrepresented the true nature of Querio's connection with KLOC-TV.[9]

30. Querio testified that he discussed Far West's further allegations with counsel, and at the time was aware of his responsibility to report fully past and present media interests. Nevertheless, Querio indicated that his past role as director at KTXL-TV between 1972 and 1974 did not come to mind (Tr. 290–291); and that it was not until he had lunch with a friend, Jack Matranga, in late February or early March 1981, that he remembered that he had also been a director at KTXL-TV (Tr. 378–379).[10]

31. At the hearing, Messrs. Koonce and Querio were shown Superior Broadcasting Company of Texas, Inc.'s amendment filed March 23, 1981 which reported Querio's directorship at KTXL-TV (BC Docket No. 81-225, BPCT-800129KE). Neither Koonce nor Querio had any explanation as to why an amendment to the Chico

---

[9] The Presiding Judge in a Memorandum Opinion and Order released on August 13, 1981 (FCC 81M-2509), denied the petition on the basis that the failure to disclose issue previously designated against Superior (Memorandum Opinion and Order released on July 23, 1981 (FCC 81M-2284) would include an examination of whether the failure to disclose constituted a misrepresentation.

[10] On April 9, 1981, Superior filed a petition for leave to amend and associated amendment signed by Querio which reported that Querio had been a director of Camelia City Telecasters, Inc., licensee of KTXL-TV, Sacramento, California from January 21, 1972 to July 16, 1974 (Far West Exhibit No. 6).

application was not filed at the same time as the Superior Broadcasting of Texas amendment (Tr. 238, 296). As noted in footnote ten, Superior's amendment reporting Querio's directorship of the licensee of KTXL-TV was not reported until April 9, 1981.

32. Far West argues that, at the very least, Superior has demonstrated a lack of a good faith effort in providing complete and accurate information with respect to its principals' media interests and associations as required by FCC Form 301. It argues, in support of this contention, that the record demonstrates that neither Mr. Querio nor Mr. Koonce made any effort to find out what information was required by FCC Form 301, and that Mr. Koonce made no attempt to verify the completeness or accuracy of the information supplied by Querio.

33. Far West submits, however, that the evidence of record with respect to this issue, warrants Superior's disqualification. It contends that Superior deliberately attempted to minimize a cross-interest problem by withholding pertinent information; and that it failed to timely report, or correctly set forth the nature and extent of Querio's present and past media interests, in a deliberate attempt to gain a comparative advantage. Far West considers it inconceivable that the allegations made in its various pleadings did not refresh Querio's memory as to his past broadcast interests and associations or prompt a discussion of these matters between counsel and Querio which would have resulted in Superior reporting these interests and associations earlier. It submits therefore, that the only credible explanation for Superior's failure to come forward with the information in a timely fashion is that Superior made a conscious decision to proceed by misstatement, omission and concealment.

34. Superior admits that it failed to report certain information with respect to Querio's past media interests in a timely fashion; however, it attributes its failure to do so to Querio's mistaken impression that only current broadcast interests were relevant. It refers, in support of its position to Querio's testimony to the effect that he considered his positions as the president and director at KLOC-TV and director at KTXL-TV as meaningless and ancient history, and to Querio's further statement that he described his KLOC Broadcasting stock as "non-voting" as a carry-over from his earlier agreement not to vote his KLOC-TV stock while employed at KTXL-TV. As further explanation for Querio's characterization of his KLOC stock as "non-voting", Superior refers to Querio's testimony that he cannot remember ever voting his stock, and to his description of KLOC Broadcasting as essentially a one man operation, run by Chester Smith, KLOC Broadcasting's majority stockholder.

35. Superior takes issue with Far West's contention that Querio deliberately withheld information with respect to his position at KLOC-TV and KTXL-TV because of Far West's cross-interest

allegations. It notes that Querio's position as operations manager at KTXL-TV and his stock interest in KLOC Broadcasting were reported to the Commission, and that this was sufficient to raise a cross-interest question. It submits, therefore, that Superior would have had no reason to withhold additional information with respect to other positions held by Querio. Furthermore, it states that Querio's testimony indicates that he was not concerned with these cross-interest allegations since he viewed these stations as serving different broadcast markets with programming geared to different audiences, and for the additional reason that he knew each station was aware of his position with the other station.

36. Superior explains its failure to report the filing of the Salinas application by stating that at the time the application was filed, Querio had been away from KLOC-TV for approximately 10 years and was unaware of its filing. Although Querio was back at KLOC-TV when KLOC Broadcasting received the license for the Salinas station and knew of the grant, Superior notes Querio's testimony to the effect that at the time he did not "focus" on the grant and, therefore, failed to report it timely.

Discussion and Conclusions

Failure to Report Issue

37. Although Superior's application contained a reference to the Koonce Pacific Corporation, it did not specifically indicate that a management agreement existed between Koonce Pacific Corporation and stations KXES and KOBY-AM, pursuant to which Koonce agreed to assume a management role with the stations. The Presiding Judge is of the opinion, however, that the reference to the management company contained in Superior's application was sufficiently responsive to Section II of FCC Form 301 in view of the tentative nature of these associations; and that Koonce's failure to refer specifically to his past association with stations KXES and KOBY-AM did not constitute a violation of Section 73.3514 of the Commission's Rules. As noted above, Koonce's association with station KXES terminated before the station went on the air, and his association with KOBY-AM was premised on Commission approval of an assignment application which was withdrawn before the Commission had the opportunity to act on the request. The Presiding Judge concludes therefore that Superior's failure to report in detail on Koonce's past association with station KXES and with KOBY-AM does not warrant disqualification or the assessment of a comparative demerit.

38. In the case of Querio's past and present broadcast interests and associations, certain matters of potentially decisional significance were either initially not accurately reported or were not timely disclosed. As noted above, Querio's KLOC Broadcasting stock

was inaccurately described in Superior's application as "non-voting", and Superior failed to timely report the filing of an application for a television station in Concord, California, and the application and grant of KLOC Broadcasting's application for a television license in Salinas, California. In addition, Superior failed to report fully on Querio's past associations with stations KTXL-TV and KLOC-TV as well as his past interest in station KTRT-AM, Truckee, California which ended in January 1972. By failing to timely report the full extent of Querio's past and present broadcast interests and associations, Superior violated Commission Rules 1.65 and 73.3514. The question remaining for consideration here is whether these violations warrant disqualification or the assessment of a comparative demerit against Superior.

39. Far West argues that Superior deliberately sought to conceal the true nature of Querio's past associations with KLOC-TV and KTXL-TV in an attempt to minimize an apparent cross-interest problem, and that this attempt to mislead or conceal warrants disqualification. The Presiding Judge notes, initially, that Superior reported voluntarily in its application that Querio had served as operations manager at KTXL-TV, while at the same time holding 12 percent of the stock in KLOC Broadcasting, the licensee of KLOC-TV; and that Querio's ownership interest in KLOC-TV, while serving as operations manager at KTXL-TV is sufficient to raise a cross-interest question. Withholding the additional information that Querio also held, simultaneously, the positions of director with both KLOC Broadcasting and Camelia City Telecasters, Inc., the licensee of KTXL-TV, as well as vice president of KLOC Broadcasting would, therefore, have served no purpose. Accordingly, the Presiding Judge concludes that the evidence of record fails to show that Superior had any motive to conceal or misrepresent the nature and full extent of Querio's past associations with these stations.

40. Furthermore, the Presiding Judge finds that Querio's testimony, which the Presiding Judge found credible, supports the conclusion that his failure to report the extent of his past broadcast interests and associations as well as the true nature of his ownership interest in KLOC Broadcasting was not due to a desire to conceal and mislead, or to gain a comparative advantage, but was simply due to a mistaken impression of what information was required or relevant. Querio's testimony to the effect that he considered his unreported positions at KTXL-TV and KLOC-TV to be insignificant is supported by the fact that he resigned these positions unquestioningly. Similarly, his description of his KLOC stock as "non-voting", although not accurate, is indicative of his attitude towards his voting rights which he considered meaningless in view of the fact that he had agreed not to vote the stock, cannot remember ever voting the stock, and viewed KLOC Broadcasting as essentially a one man operation run by its majority stockholder.

41. By failing to fully and accurately report Querio's past and present broadcast interests, Superior violated Sections 1.65 and 73.3514 of the Commission's Rules. The Presiding Judge finds, however, that the facts which were not timely reported are of little or no decisional significance. Querio's 52 percent interest in the licensee of station KTRT-AM, Truckee, California which ended in 1972, and KLOC Broadcasting's application for a Concord, California television station which was withdrawn, are of no decisional significance. Querio's minority interest, i.e., 12 percent of the voting stock in KLOC Broadcasting, the licensee of a television station located in Salinas, California, approximately 200 miles from Chico, is of only very slight decisional significance. Similarly, the fact that his stock interest in KLOC Broadcasting is voting rather than non-voting is of only very slight decisional significance in view of Querio's minority status. Querio's past positions as vice president and director of KLOC Broadcasting and director of Camelia City Telecasters, Inc., the licensee of station KTXL-TV, Sacramento, California are of no decisional significance.

42. The Presiding Judge concludes that there has been no showing of an intent to conceal or deceive on the part of Messrs. Querio or Koonce; and that Superior's failure to timely and accurately report information with respect to its principals' broadcast interests and associations was due to faulty judgment. In view of this finding and the finding that the matters not timely or accurately reported are, at the very most, of only slight decisional significance, the Presiding Judge concludes that neither disqualification of Superior, nor the assessment of a comparative demerit against Superior are warranted. See *Webster-Baker Broadcasting Co.*, 88 FCC 2d 944 (Rev. Bd. 1982); *Merrimack Valley Broadcasting, Inc.*, FCC 82R-71, released December 8, 1982.

43. The Bureau urges the Presiding Judge to assess a substantial comparative demerit against Superior on the basis that Superior's failure to timely and accurately report the past broadcast interests and associations of its principals does not bode well for Superior's ability and/or willingness to comply with the Commission's Rules and Regulations in the future. In this instance, however, the information which was omitted or misstated is, at the very most, of only slight decisional significance, and Superior's failure to report the information fully and accurately has been found to have been due to an honest misunderstanding of the Commission's reporting requirements. The Presiding Judge believes that there is no reason to feel that in the future Superior will not make every effort to inform itself of the pertinent rules and regulations of the Commission and operate the station in conformity with these rules and regulations. The Bureau's request will be denied.

Comparative Issues

Diversification of Ownership

44. As noted above, Superior is owned in equal shares by Messrs. Koonce and Querio. Superior and Mr. Koonce have no media interests; however, Mr. Querio owns 12 percent of the voting stock in KLOC Broadcasting, the licensee of station KCBA-TV, Salinas, California, station KLOC-TV, Modesto, California, and station KLOC-AM, Ceres, California.[11] In addition, KLOC Broadcasting owns a 10 percent interest in WCPT-TV, Crossville, Tennessee.

45. Far West has no media interests. Kelly Broadcasting which owns 80 percent of Far West, owns 100 percent of KCRA-TV, Sacramento, California, and two of Kelly Broadcasting's principals are equal owners of Kelly Television Co., the licensee of KCPX-TV, Tacoma, Washington. Mr. Caldwell, who owns the remaining 20 percent of Far West, at present has no other media interests.[12]

46. The Presiding Judge considers KLOC Broadcasting's 10 percent interest in station WCPT-TV, Crossville, Tennessee to be of no decisional significance, in view of the station's considerable distance from Chico and Querio's extremely limited interest. The Presiding Judge further finds Querio's interest in KLOC-TV and the Salinas permit to be of only slight decisional significance in view of Querio's minority stock interest in KLOC Broadcasting, the licensee and permittee of these stations, and the absence of any evidence indicating that these stations have any audience penetration in the Chico area.

47. In contrast, Far West's majority and controlling stockholder, Kelly Broadcasting Co., is the 100 percent owner of station KCRA-TV, Sacramento, California, which has extensive over-the-air and cable audience penetration in the Chico area. In view thereof, the Presiding Judge finds that Kelly Broadcasting's interest in station KCRA-TV, Sacramento, California, is significant, and entitles Superior to a substantial diversification preference over Far West, since the controlling principal of Far West already has a voice in the Chico

---

[11] KLOC Broadcasting divested itself of KLOC-AM, Ceres, California on April 6, 1981, four months after the designation of the above-entitled matter for hearing. Accordingly, for comparative purposes, KLOC Broadcasting is still considered to be the licensee of KLOC-AM, Ceres, California.

[12] Far West's unopposed amendment reporting the sale of KBLF-AM and KSNR-FM by Mr. Caldwell's company, Communications By Design, Inc. was accepted on December 31, 1981 (FCC 81M-4132). Since Far West represented in its application filed August 15, 1979 that the stations would be sold, they are not attributable to Far West in this proceeding. See *Alexander S. Klein, Jr.*, 69 FCC 2d 2134 (Rev. Bd. 1978).

area. See *Colorado West Broadcasting, Inc.*, 57 FCC 2d 526 (Rev. Bd. 1976).

Integration of Ownership

48. Superior proposes to have both equal partners work full time at the proposed station. Mr. Querio will be general manager and Mr. Koonce will be the chief engineer and assistant manager. Both positions are of the required degree of responsibility to warrant integration credit, and Superior, therefore, is entitled to a 100 percent quantitative integration credit. Far West proposes to integrate full time as general manager its 20 percent owner David E. Caldwell. Far West is therefore entitled to a 20 percent quantitative integration credit. See *Policy Statement on Comparative Broadcast Hearings*, 1 FCC 2d 393 (1965).

49. In view of the 80 percent difference between the quantitative integration credits of the two applicants, the Presiding Judge does not consider it necessary to reach a conclusion as to whether either applicant is entitled to a qualitative enhancement of its integration credit, since it is well established that qualitative enhancements cannot overcome a clear quantitative difference. See *Radio Gaithersburg, Inc.*, 72 FCC 2d 820 (Rev. Bd. 1979); and *Scott & Davis Enterprises, Inc.*, 88 FCC 2d 1090 (Rev. Bd. 1982).

50. Accordingly, the Presiding Judge finds that Superior is entitled to a substantial diversification credit as well as a substantial integration preference over Far West; and that in view thereof, it is the Presiding Judge's conclusion that Superior's proposal will provide the best practicable service to the public, and Superior will therefore receive the permit for the new television station on Channel 24 in Chico, California.

Rulings

51. IT IS ORDERED that the unopposed Motion for Leave to Amend filed by Jack O. Koonce and Melvin J. Querio d/b/a Superior Broadcasting of California on January 10, 1983 IS GRANTED, and the amendment IS ACCEPTED.

52. AND IT IS FURTHER ORDERED that unless an appeal from this Initial Decision is taken by a party, or the Commission reviews this Initial Decision on its own motion in accordance with the provisions of Section 1.276 of the Commission's Rules, 47 C.F.R. 1.276, the application of Jack O. Koonce and Melvin J. Querio d/b/a Superior Broadcasting of California (BC Docket No. 80–734, File No. BPCT-781221LI) for a construction permit to operate a new television station on Channel 24 in Chico, California IS GRANTED; and the application of Far West Broadcasting Co., Inc. (BC Docket No.

80–735, File No. BPCT-790815KP) IS DENIED.[13]

FEDERAL COMMUNICATIONS COMMISSION
JOSEPH P. GONZALEZ, *Administrative Law Judge*

---

[13] In the event exceptions are not filed within 30 days after the release of this Initial Decision, and the Commission does not review the case on its own motion, this Initial Decision shall become effective 50 days after its public release pursuant to Section 1.276(d).

Application, Dismissal of

Review Board affirms ALJ's dismissal of application where applicant proposed a major change to its application within the meaning of Section 73.3572(a)(1).

MEMORANDUM OPINION AND ORDER

(Adopted: August 18, 1983; Released: August 23, 1983.)

BY THE REVIEW BOARD: BOARD MEMBER BLUMENTHAL ABSENT.

1. On June 22, 1983, Royce International Broadcasting Company appealed from the presiding Administrative Law Judge's Memorandum Opinion and Order (FCC 83M-1951), released June 15, 1983, which denied two petitions for leave to amend filed by Royce and granted a competing applicant's motion to dismiss Royce's application with prejudice. For the reasons set out below the Board will affirm the ALJ's action.

2. *Background.* Royce's original application failed to contain complete engineering information regarding its antenna site. Royce later filed an incomplete pre-designation amendment on October 20, 1982 in which it specified a new antenna site. Certain technical information called for by the application was again omitted from the amendment. The Hearing Designation Order noted that the Commission staff could not evaluate the applicant's technical proposal in the absence of the required data and directed Royce to submit such information to the presiding Administrative Law Judge (ALJ) by March 24, 1983. Hearing Designation Order, 48 Fed. Reg. 7496, published February 22, 1983. Royce, which was then proceeding *pro se*, timely submitted the engineering information but misdirected it to the Mass Media Bureau. Following the retention of counsel, Royce filed the amendment and a petition for leave to amend with the ALJ on April 21, 1983.

3. On May 2, 1983, Ponce-Nicasio Broadcasting, one of ten

competing applicants, filed a motion to dismiss Royce's application, contending that Royce's April 21 amendment proposed a major change to its application within the meaning of Section 73.3572(a)(1) of the Commission's Rules since it enlarged its Grade B contour by more than 50%, and that Royce's application must therefore be removed from the hearing docket and returned to the processing line for the assignment of a new file number as required by Section 73.3572(b) of the Rules.[1] Royce, in opposition, claimed that it had overstated the size of its Grade B contour in its April 21 amendment by 866 square miles and that the actual gain in Grade B area over that originally proposed was only 45.26%, which is less than that required to constitute a major amendment. Royce filed a second amendment May 20, 1983 to provide the correct information. Based on the data contained in Royce's opposition, Ponce-Nicasio in its reply submitted the affidavits of two engineers which pointed out errors in Royce's calculations of the area encompassed by the original Grade B contour and noted that the coverage change exceeded 50% even using the figures supplied for the new Grade B area by Royce in its opposition. One of the affidavits also stated that the reasons given by Royce for the overstated figures did not explain the differences in the sizes of its Grade B contour shown in the April 21 and May 20 amendments. Royce's sole owner, Edward Stolz, prepared the engineering section for the application as filed and for the April 21 amendment. A consulting engineer was retained when Royce filed its opposition to the motion to dismiss and the May 20 amendment. The Mass Media Bureau filed comments on June 3, 1983, agreeing with Ponce-Nicasio's engineering analysis and supporting dismissal of Royce's application from the hearing.

4. *ALJ's Ruling and Appeal.* The ALJ granted the motion to dismiss, denied both petitions for leave to amend, and dismissed Royce's application with prejudice. In so doing, he found that the proposed changes would result in a major amendment of Royce's technical proposal, that its excuse for late filing was unacceptable, and that the applicant has not supplied good cause for making the changes it now presents. FCC 83M-1951, *supra*, paras. 9–12. Both the denial of its petitions for leave to amend and the dismissal of its application are challenged by Royce in its appeal. It asserts that good cause existed for acceptance of the amendments and that the ALJ could not dismiss its application without a full hearing since the affidavits are in conflict as to whether a major change occurred. Additionally, by dismissing its application, Royce claims, the ALJ contravened the Commission's policies favoring a choice between

---

[1] Section 73.3572(b) provides that a new file number will be assigned to an application for a new station when it is amended so as to effect a major change, which includes any engineering changes resulting in a gain or loss of 50% or more of the area within the Grade B contour of the station. See also Section 73.3572(a)(1).

applicants (*see Bison City TV 49 Limited Partnership*, 91 FCC 2d 26, 29, 52 RR 2d 63, 65 (Rev. Bd. 1982)) or communities under Section 307(b) of the Communication Act (*see Mobile Broadcasting Service, Inc.*, 91 FCC 2d 1209, 52 RR 2d 670 (1982)). In any event, Royce argues, the ALJ should have at least permitted it the opportunity to withdraw its pre-designation amendment before dismissing its application, citing *Grace Missionary Baptist Church*, 80 FCC 2d 330, 337, 48 RR 2d 129, 135 (1980).

5. *Disposition*. The Board will deny the appeal. Royce's initial contention that good cause existed for acceptance of the amendments is not persuasive. Although as a general rule, the acceptability of a post designation amendment depends upon whether good cause has been demonstrated (see Section 73.3522(b); and *California Broadcasting Corp.*, 90 FCC 2d 800, 808, 51 RR 2d 1539, 1545 (1982)), that principle is not really pertinent here since the crucial amendment specifying the new site was filed prior to designation and was thus governed by Section 73.3572, which requires the return of an application to the processing line whenever a major change has occurred. See n. 1, above. Moreover, the post designation submissions were primarily clarifications of the pre-designation amendment. Thus the central question before us is the propriety of the ALJ's dismissal of Royce's application, whether or not he accepted its amendments. We believe the ALJ was correct in reaching his result.

6. First, we are unpersuaded by Royce's argument that the ALJ could not dismiss its application without holding a trial type hearing. The question of the acceptability of Royce's application could have been dealt with by the processing line without a hearing, if Royce had disclosed all the facts at the time of the pre-designation amendment. That the facts were not fully known was due solely to Royce's neglect in supplying all of the pertinent data. In this regard, we agree with the ALJ that Royce's clarifying information filed April 21 and May 20 demonstrated on its face that a major change in its application had occurred. Thus, although Royce's Grade B contour was reduced somewhat by its May amendment from that represented in the April amendment, nevertheless, the responsive affidavits of Ponce-Nicasio's two engineers showed that Royce's calculations of the original Grade B contour were incorrect and that a major change had occurred even using the reduced Grade B contour figures. While Royce argues that it could not respond to these affidavits since they were contained in a reply pleading, it never sought leave from the ALJ to respond and does not now on appeal seek to challenge the affidavits either. Moreover, the Mass Media Bureau, with the benefit of its own engineering expertise, reviewed the Ponce-Nicasio engineering analysis and concurred in its findings. The Bureau also pointed out that had all the facts been supplied by Royce at the pre-designation stage, the original October 20, 1982 amendment (as clarified on April 21 and May 20, 1983)

would not have been acceptable. In light of the above, we cannot fault the ALJ's conclusion that the applicant effected a major change in its application.

7. Nor do we discern any merit in Royce's contentions that dismissal of its application contravenes the Commission's policies favoring a choice between applicants, or, between communities under Section 307(b). The Commission's policy favors a comparative choice only among those applicants who have established their basic qualifications to be licensees. *See Midwest St. Louis, Inc.*, 79 FCC 2d 519, 531, 48 RR 2d 95, 105 (1980). This Royce has not done. Furthermore, the public would not be deprived of a choice in this case because there are ten other applicants who are competing for the facility. And with respect to 307(b), Royce's reliance on *Mobile Broadcasting Service Inc., supra*, is misplaced. That case only stands for the proposition that where the choice-of-communities objective of Section 307(b) would be impeded by the dismissal of an application through a settlement agreement, a further opportunity should be afforded for other persons to apply for that other community. *See* Section 73.3525(c)(1) of the Rules. It does not prevent the dismissal of any application. Even if there were such a rule or policy in nonsettlement Section 307(b) cases, and we are aware of none nor has Royce cited such a rule or policy, it would not prevent the return of Royce's application.

8. Finally, we disagree with Royce that under *Grace Missionary Baptist Church, supra*, the ALJ was required to afford it an opportunity to withdraw its pre-designation amendment before dismissing its application. In *Grace*, an applicant was given an opportunity to withdraw an amendment that would have resulted in the dismissal of its application because the amendment appeared to be governed by inconsistent Commission guidance. The Commission cited *Bamford* v. *F.C.C.*, 535 F.2d 78, 82 (D.C. Cir. 1976) for the proposition that "elementary fairness requires clarity of standards sufficient to apprise an applicant of what is expected" and concluded that the potential for confusion was a sufficient basis for not dismissing the application. The Commission also noted that the disputed amendment had been misplaced and that had it not been, the Bureau would also have permitted an opportunity for withdrawal. Here, however, there was no confusion with respect to the Commission's standards and no misplaced amendment. Rather, any confusion resulted from Royce's own derelictions. Furthermore, Royce's request to withdraw its amendment comes too late because it has been on notice from the time of designation that its proposal for a new site required more information before it could be evaluated. At that time, Royce could have sought to withdraw its October 20, 1982 amendment. It did not. Instead it opted to pursue the new site and continued to do so even after it had been confronted by Ponce-Nicasio. In any event, even if Royce were permitted to withdraw its

amendment now, we would still not have assurance of its technical qualifications since the information regarding the site proposed in its original application was also incomplete. See para. 2, above.

9. In sum, we affirm the dismissal of Royce's application. To do otherwise and to allow Royce to continue in this proceeding would be to condone its pre-designation neglect and post designation fumblings, which cloaked a major change in its application to the comparative detriment of the other parties. This is the third time in five months that we have had to consider serious application deficiencies involving Mr. Stolz, the sole owner of Royce, that appear to result from a lack of attentiveness to his filings with the Commission, unfamiliarity with our rules and policies, refusal to obtain (or benefit from) adequate legal and engineering advice, and possibly worse. *See George E. Cameron Jr. Communications*, 53 RR 2d 917 (Rev. Bd. 1983), *Shoblom Broadcasting, Inc.*, 53 RR 2d 1203 (Rev. Bd. 1983). This agency need not and can not indulge an applicant who continually fails to submit basic information in an orderly fashion, especially where, as here, ten other applicants are waiting for a hearing to decide which one is entitled to the one available channel and the public is waiting for service.

10. ACCORDINGLY, IT IS ORDERED, That the appeal filed June 22, 1983 by Royce International Broadcasting Company IS DENIED.

MEMORANDUM OPINION AND ORDER

(Adopted: July 5, 1983; Released: July 8, 1983)

BY THE REVIEW BOARD:

1. This proceeding involves the applications of: (a) Trio Broadcasters, Inc. (Trio), licensee of AM station WMOO, Mobile, Alabama, which seeks authority, *inter alia*, to relocate WMOO's city of license to Fairhope, Alabama; (b) Ed Winton (Winton), licensee of AM station WWLF, St. Petersburg, Florida, which seeks permission, *inter alia*, to move WWLF's city of license to Kenneth City, Florida; and (c) Holt-Robinson of Mississippi, Inc. (Holt-Robinson), which seeks authority to construct a new AM station in Ridgeland, Mississippi. The applications, which were deemed to be mutually exclusive since Trio's proposed signal strength contours overlap with those of both Holt-Robinson and Winton in violation of Section 73.37

of the Commission's Rules, 47 CFR 73.37, were designated for consolidated hearing on, *inter alia*, Section 307(b) and contingent comparative issues. Hearing Designation Order, Mimeo No. 039, released October 6, 1982. Harte-Hanks Radio, Inc. (Harte-Hanks), licensee of station WRBQ(FM), Tampa, Florida, which filed a petition to dismiss or deny Winton's application, was made a party to the proceeding.

2. Prior to the commencement of hearing, on November 30, 1982, each of the applicants filed an amendment to the engineering portion of its application purportedly designed to eliminate the electrical conflicts and mutual exclusivity among the three proposals. Thereafter, each applicant filed a separate request for severance of its application from the consolidated comparative hearing, deletion of the issues, and grant of its application. Finally, on December 9, 1982, the three applicants filed a joint request for approval of agreement which contemplated the above engineering amendments and provided that each applicant operate its facility to remove interference among the proposed stations. In a Memorandum Opinion and Order released on March 24, 1983 (FCC 83M-941), presiding Administrative Law Judge Tierney (ALJ) approved the proposed agreement, accepted the respective amendments, severed each application from this proceeding, deleted the issues as moot, and granted all three applications.

3. This proceeding is now before the Review Board on an appeal from the ALJ's Memorandum Opinion and Order filed by Harte-Hanks on April 25, 1983.[1] So far as is pertinent here, Harte-Hanks contends that the tendered amendments to the applications of Winton and Trio fail to establish that the overlap of their respective 0.5 and 0.025 mV/m signal contours, which is prohibited by Section 73.37(a) of the Commission's Rules, has been eliminated. Trio, in an opposition to the appeal, does not address the question of whether there is overlap but argues instead that it is proceeding under Section 73.37(b), which permits the grant of an application notwithstanding such overlap where, *inter alia*, the applicant is or would be the first AM broadcast station in a community such as Fairhope. Harte-Hanks points out in its reply brief, however, that Fairhope already has an AM station licensed to it and that Section 73.37(b) is therefore inapposite. It urges the Board to remand the case for a comparative hearing between Trio and Winton. The Board also has before it a motion for oral argument filed by Harte-Hanks on May 23, 1983, and an unopposed motion filed by Holt-Robinson on May 18, 1983, urging the Board to dismiss Harte-Hanks' appeal insofar as it relates to Holt-Robinson. The Mass Media Bureau, in an opposition

---

[1] Harte-Hanks' appeal, while dated April 25, was actually received by the Commission's Secretary on April 26, one day late. However, Harte-Hanks has filed a motion for acceptance of appeal and has shown good cause; we will therefore grant its motion and accept its appeal.

to the motion for oral argument, concedes that remand of the case is necessary since its prior belief that Section 73.37(b) was controlling, based on a representation by one of the parties that Fairhope had no local station, is not accurate. The Bureau points out that objectionable interference under Section 73.37(a) will exist among the stations and that the applications cannot all be granted.

4. We concur with Harte-Hanks and the Mass Media Bureau that the ALJ's Memorandum Opinion and Order must be vacated and the case remanded to him for further proceedings. It is clear from the pleadings and a review of the November 30 amendments that the factual basis upon which the ALJ relied in granting the applications was incorrect (see Memorandum Opinion and Order, paras. 4, 10); *i.e.*, that Section 73.37(b) was controlling, that the mutual exclusivity of the applications had been eliminated, and that the Section 307(b) and comparative issues were therefore mooted. The engineering statements of Holt-Robinson and Winton contained in the amendments reflect that both applicants' 0.5 and 0.025 mV/m contours continue to overlap with those of Trio in violation of Section 73.37(a), which, since Trio would not be the first AM facility licensed to Fairhope, therefore applies. Since the applications are still mutually exclusive and not all can be granted, remand of the proceeding is necessary.

5. We will also deny Holt-Robinson's motion requesting that we affirm the ALJ's severance and grant of its application. Although no one has addressed this matter and Harte-Hanks simply urges remand of Winton and Trio's applications for comparative hearing, severance and grant of Holt-Robinson's application would, under a strict reading of Section 73.37(a), have the effect of precluding Trio from obtaining a grant even if it were comparatively superior to Winton, since Trio's 0.5 and 0.025 mV/m contours overlap with those of Holt-Robinson, and Trio cannot meet the exception under Section 73.37(b). Severance and grant of Holt-Robinson's application, therefore, would make the remand a charade. However, the converse is not true: Holt-Robinson's application could apparently be granted notwithstanding the above overlap with Trio, if Trio's application were already granted, since Holt-Robinson's proposal to be the first AM station in Ridgeland, Mississippi apparently meets the exception of Section 73.37(b). Thus, the number of the applications that can be granted here appears to depend on the sequence of the grants, an anomalous situation perhaps not contemplated by Section 73.37. In any event, it is preferable to permit the ALJ to consider the question of severance of Holt-Robinson's application based on further pleadings from the parties. We note in passing that the pleadings of all parties both before the ALJ and the Board left much to be desired. Accordingly, in light of the esoteric nature of the rules in question and the confusion that already exists concerning the engineering showing necessary to eliminate the mutual exclusivity of the

proposals, the Board recommends that the ALJ consider meeting with the parties before the commencement of evidentiary hearings to explore precisely what the controlling engineering and legal standards are and how they may be met by the applicants. *Cf. GSM Media Corp.*, FCC 83R-29, 53 RR 2d 1207 (Rev. Bd. 1983).

6. ACCORDINGLY, IT IS ORDERED, That the motion for acceptance of late-filed appeal and the motion for leave to file supplement to motion for acceptance of late-filed appeal, filed April 26 and May 24, 1983, respectively, by Harte-Hanks Radio, Inc. ARE GRANTED; and

7. IT IS FURTHER ORDERED, That the motion to schedule oral argument, filed May 23, 1983, by Harte-Hanks Radio, Inc. and the motion for dismissal of appeal, severance and grant, filed May 18, 1983 by Holt-Robinson of Mississippi, Inc. ARE DENIED; and

8. IT IS FURTHER ORDERED, That the appeal filed April 25, 1983 by Harte-Hanks Radio, Inc. IS GRANTED, that Memorandum Opinion and Order, FCC 83M-941, released March 24, 1983, IS VACATED, and that this matter is REMANDED for further proceedings in accordance with this opinion.

DECISION

(Adopted: July 29, 1983; Released: August 24, 1983.)

BOARD MEMBER JACOBS FOR THE REVIEW BOARD:

1. This proceeding involves the application of United Broadcasting Company, Inc. (United) for renewal of license of Station WOOK(FM), Washington, D.C., and the mutually exclusive applications of District Broadcasting Company (District) and Hispanic Broadcasting Corporation (Hispanic) for authority to construct a new FM broadcast station in Washington, D.C. on the frequency now occupied by WOOK(FM). By Memorandum Opinion and Order, 81 FCC 2d 227, 48 RR 2d 429 (1980), the Commission designated these applications for hearing on the standard comparative issue only, cautioning, however, that it was reserving jurisdiction to consider what effect past misconduct at certain of United's other stations should have on that applicant's basic and/or comparative qualifications in this proceeding. 81 FCC 2d at 229, 48 RR 2d at 431. The Commission also stated that evidence could be adduced under the standard comparative issue concerning need for the Spanish-language programming format proposed by Hispanic upon a threshold showing to the Administrative Law Judge that the format would be specialized and unique. 81 FCC 2d at 231, 48 RR 2d at 432.

2. In a subsequent Memorandum Opinion and Order, the Commission considered the question of United's misconduct at other stations, and, focusing on its denial of license renewals for United's Stations WOOK(AM), Washington, D.C., and WFAB, Miami, Florida in prior Decisions,[1] it specified an issue to determine the effect of the findings and conclusions in those cases on United's basic and/or comparative qualifications in this proceeding. 86 FCC 2d 452, 49 RR 2d 597 (1981). Presiding Administrative Law Judge Frederic J. Coufal (ALJ) also specified an issue against United to determine the effect on its qualifications of later misconduct, involving two contests broadcast by WOOK(FM) during 1977–78 (which resulted in the imposition of a $6,000 forfeiture against United),[2] and an issue against Hispanic involving a potential Section 73.3514 reporting violation. See, respectively, Memorandum Opinion and Order, FCC

[2] Notice of Apparent Liability, FCC 78–838, November 30, 1968.

81M-1614, released May 26, 1981; Memorandum Opinion and Order, FCC 81M-746, released March 13, 1981.

3. In an Initial Decision (I.D.), FCC 82D-73, released November 9, 1982, the ALJ found all three applicants basically qualified and granted District's application under the standard comparative issue. In so doing, he concluded initially that United's past broadcast record, generally the most significant criterion in comparative renewal proceedings, was minimal and that United was therefore not entitled to a renewal expectancy. I.D., paras. 113–114. This conclusion was based, in part, on a substantial demerit given United for its previous misconduct at WOOK(AM) and WFAB, and, in part, on a finding that WOOK(FM)'s performance was substantial only after United realized that renewal of its licenses was in jeopardy. *Id.*, para. 114. District's proposal was found to be comparatively superior to United's on the diversification and integration criteria and to Hispanic on the integration criterion. The ALJ also awarded District minor credit for its proposed auxiliary power supply. Hispanic was not given any preference for its proposed Spanish-language programming format, nor was it assessed any demerit under the reporting issue.

4. This proceeding is now before the Review Board on exceptions filed by United and Hispanic and protective exceptions filed by District. Reply briefs were filed by all three applicants and the Mass Media Bureau. The Board has reviewed the I. D. in light of the exceptions and briefs, the oral argument held May 6, 1983, and our examination of the record. We adopt the findings of fact in the Initial Decision, except as modified herein, and affirm the ALJ's ultimate conclusion that grant of District's application will best serve the public interest, convenience, and necessity.

5. *Background; Relevant Renewal Period.* Richard Eaton was the founder of United and, until his death on June 1, 1981, was its sole stockholder, president, treasurer, and chief executive officer. The station now bearing the call sign WOOK(FM)[3] was first licensed to United on February 5, 1951; however, it was last renewed in 1966. The Commission deferred WOOK(FM)'s 1969 renewal application because of operational problems occurring at some of United's other stations, and United therefore filed supplemental renewal applications every three years beginning in 1972 and ending in 1978. The instant proceeding was initiated on September 30, 1980, before WOOK(FM)'s 1981 supplemental application was due.

6. At hearing, the ALJ rejected United's view that the only license period relevant to this proceeding is WOOK(FM)'s latest renewal period, 1975–1978. Tr. 467–476. Instead, he held that

---

[3] Prior to December 24, 1976, the station was identified as WFAN(FM) and broadcast in the Spanish language. On that date it switched to a Black format and became WOOK(FM). To avoid confusion we will use the call sign WOOK(FM), even when referring to the station's pre-December 1976 broadcast record.

WOOK(FM)'s performance over the entire period from 1966 through 1978 would be considered. United excepts to this conclusion (although it argues that its performance was substantial in 1966–1975, as well as in 1975–1978). We agree with the ALJ that the relevant renewal period for this proceeding is 1966–1978. It is well established that renewal applicants must literally run on their records. *See Office of Communications of the United Church of Christ* v. *FCC*, 359 F.2d 994 (D.C. Cir. 1966). And it is a bedrock principle that a license may not be renewed until a determination is made that a grant of renewal would serve the public interest, convenience and necessity. 47 U.S.C. 307(d), 309(a). Thus, since the Commission's last renewal determination for WOOK(FM) was made in 1966, it appears not only reasonable but by operation of law that WOOK(FM)'s entire operating record since then is relevant and open to scrutiny here. *See Intercontinental Radio, Inc.*, 90 FCC 2d 935 (Rev. Bd. 1982).[4] As to United's argument that it is unfair to require it to present evidence concerning programming broadcast 15 years earlier because of the difficulty of compiling such evidence, the licensee has been on notice since 1969 that its application was being held in abeyance and could (and should) have taken appropriate precautionary steps to ensure that the relevant documentation was retained. All that is required is that an applicant make a reasonable, good faith effort to establish its past broadcast record. *Cf. International Radio, Inc., supra*, Nor is the precedent cited by United, *WHCN, Inc.*, 31 FCC 2d 811, 20 RR 2d 894 (Rev. Bd. 1970); *WPIX, Inc.*, 22 RR 2d 1043 (ALJ 1971); *RKO General, Inc.*, 35 FCC 2d 100, 24 RR 2d 411 (1972); and *Hampshire County Broadcasting Co., Inc.*, 50 RR 2d 626 (ALJ 1981), in support of its contention, apposite. None of those cases involved a licensee whose renewal application was deferred beyond the regular license period, and *Hampshire County* did not involve a renewal applicant at all. Rather, *WHCN, RKO General*, and *WPIX* all stand for the proposition that post-renewal term upgrading will not be considered when evaluating a licensee's past performance.

7. *Qualifying Issues Against United: (1) Misconduct at WOOK(AM) and WFAB and (2) Misconduct at WOOK(FM)*. Before we may comparatively analyze the three applications in this proceeding, we must first determine whether United is basically qualified to be the licensee of WOOK(FM), in light of its previous misconduct at WOOK(AM), WFAB, and WOOK(FM). See paragraph 2, *supra*. In considering these matters, the Commission and the ALJ instructed that the doctrine of collateral estoppel would apply, to

---

[4] We discern no significance in United's assertion that it is Commission practice to review each supplemental application to ascertain whether the licensee is operating in the public interest. Assuming that such a review occurred here, it would undoubtedly have been limited to matters concerning the licensee's basic qualifications, and, in any event, would not foreclose our obligation to determine whether United's record entitles it to renewal of license.

prevent the relitigation of any adverse findings from the other proceedings, but that United would be permitted to introduce mitigating evidence. 86 FCC 2d at 459, 49 RR 2d at 603; Order, FCC 81M-2067, released July 7, 1981.

8. A brief summary of the adverse findings in the three previous proceedings is appropriate. In the WOOK(AM) comparative renewal case (55 FCC 2d 416, 34 RR 2d 1465 (1975)), the Commission disqualified United after finding: (a) that various ministers had used WOOK(AM) from 1966 through mid-1969 to broadcast lottery information via scriptural citations that in reality were thinly disguised "numbers game" tips (a form of gambling violative of both 18 U.S.C. 1304 and local law) in return for monetary donations; (b) that WOOK(AM) had continued to violate the Commission's technical rules until the end of 1969, despite a 1966 forfeiture of $7,500 for rule violations and a representation that its future operations would be in compliance with the technical rules—a basis for its previous renewal; and (c) that WOOK(AM) engaged in false and misleading advertising. The Commission concluded with respect to the illegal lottery that United's conduct displayed a callous disregard for its listening audience and that United (and its principal Richard Eaton) were remiss in their supervision of WOOK(AM)'s religious broadcasts (55 FCC 2d at 422, 34 RR 2d at 1473). In the WFAB noncomparative proceeding (55 FCC 2d 832, 35 RR 2d 119 (1975)), the Commission held that the public interest would not be served by renewal of United's license because WFAB'S local management had by its careless and negligent practices directly facilitated a scheme of extensive fraudulent billing, in violation of Section 73.1205 of the Commission's Rules, by a local retail appliance dealer during the period of January 1971 through May 1972. Moreover, although the Commission concluded that the evidence fell short of establishing that any United employee or principal consciously participated in the fraudulent billing scheme, it nevertheless disqualified the licensee for its indifference to Commission policies and extensive record of negligent supervision and control that allowed the scheme to occur. The Commission held that the totality of United's conduct was tantamount to an intentional disregard of the Commission's rules. 55 FCC 2d at 838, 35 RR 2d at 127.

9. The third proceeding involved WOOK(FM) itself and two contests that it aired in 1977–1978. In a Notice of Apparent Liability issued to United on November 30, 1978, the Commission alleged that certain of United's announcements and actions concerning the two contests violated Section 73.1216 of the Rules governing licensee-conducted contests and imposed a $6000 forfeiture against the station, which was uncontested. The violations regarding the "Black Book Contest," broadcast from December 1977 through January 1978, included: (a) failure to fully and accurately disclose all material contest terms, *i. e.*, WOOK(FM) did not disclose the nature and value

of the actual prizes to be awarded; (b) a false and misleading announcement that winners in the "Black Book Contest" became qualified for all station contests conducted in 1978; and (c) failure to conduct the contest substantially as announced. As to the "Thousand Dollar Dial Contest," aired during January and February 1978, a station announcement that listeners in the Washington, D.C. "area" might be called was considered false and misleading since the contestants were chosen at random from District of Columbia and Maryland telephone directories only and listeners from the Virginia suburbs of Washington were precluded from participating in the contest. District Exh. 20.

10. At the instant hearing, United offered evidence in mitigation of all of the above misconduct. This evidence included, *inter alia*, the establishment of a central billing procedure in 1973 whereby bills to advertisers on all United stations would be issued from the central office based on station logs which showed advertisements actually run; the institution of an educational program in the late 1970's to teach employees to recognize the elements of a lottery; and the development and implementation of procedures in 1978 relative to contests. I.D., para. 47. Moreover, in 1978, United's consulting engineers began to make unannounced periodic technical inspections of its various stations. I.D., para. 46.

11. In the I.D., the ALJ took into account United's mitigating evidence, but he gave it reduced weight, pointing out that the mitigating efforts only began when United knew its licenses were in jeopardy. I.D., paras. 105, 114. He also stated that the contest violations at WOOK(FM) detracted from United's improvement efforts and indicated a continuing failure by United to clean up its operations as late as 1977 and early 1978. I.D., para. 106. Nonetheless, noting that Richard Eaton was United's sole stockholder and relying on the "implications" of *Friendly Broadcasting Co.*, 90 FCC 2d 225, 51 RR 2d 1006 (1982) (where, following Eaton's death, the Commission summarily renewed two other United licenses in a noncomparative proceeding without considering the ALJ's findings of disqualifying misconduct), the ALJ concluded that United could not be disqualified in this proceeding for its misconduct at another station. I.D., para. 111. He stated that the effect of Eaton's death on United's comparative qualifications was a different matter, however, and that Eaton's departure from the managerial scene could not be used to upgrade United's comparative case. I.D., paras. 111, 112. Finding that United did not offer evidence that Eaton was solely responsible for the WFAB, WOOK(AM), and WOOK(FM) misconduct (I.D., para. 110), the ALJ assessed a substantial comparative demerit against United for its unwillingness or inability to control Stations WOOK(AM) and WFAB. I.D., para. 114. The WOOK(FM) forfeiture matter did not add to the demerit because the ALJ considered it of minor significance. *Id.*

12. In its exceptions, District contends at the outset that *Friendly Broadcasting Co., supra*, does not stand for the proposition that Eaton's death exonerates United from misconduct at WOOK(AM) and WFAB, and it argues that it was error for the ALJ to rely on that case as support for not disqualifying United. District further contends that United should have been disqualified, based on its prior misconduct at WOOK(AM) and WFAB, because individuals previously holding responsible positions in United at the time of the misconduct continue to be involved in WOOK(FM). Finally, it asserts that insufficient weight was given to the WOOK(FM) contest violations and argues that these violations should be additional grounds for disqualification. United, on the other hand, concurs with the ALJ's holding that it is basically qualified but contends that the ALJ erred in assessing a comparative demerit against it. It argues that its misconduct at WFAB and WOOK(AM) is remote in time and thus lacks probative value; that such misconduct has never occurred at WOOK(FM); that it has instituted successful remedial measures that must be given full credit; that the contest violations at WOOK(FM) are decisionally insignificant since they were minor, inadvertent, and of a technical nature; and that the effect of Eaton's death must be considered since he ran what amounted to a one-man operation.

13. We affirm the ALJ's ultimate conclusion that United should not be disqualified here and reject District's exceptions to the contrary. We agree with District, however, that the ALJ's reliance on *Friendly Broadcasting Co., supra*, as a basis for not disqualifying United is misplaced. In note 16 of *Friendly* (90 FCC 2d at 228, 51 RR 2d at 1009), the Commission unequivocally stated that its finding of nondisqualification was confined strictly to that proceeding, and made its renewal grants subject to such action as it might deem appropriate in light of the ultimate findings in the WOOK(FM) proceeding. Moreover, the very Commission order that specified the WOOK(AM) and WFAB misconduct issue here expressly contemplated the possibility of Eaton's future absence (albeit via an application for involuntary transfer of control due to illness), and emphasized that "a serious question would still remain about the soundness and reliability of the licensee's operations and, thus, about United's basic qualifications." 86 FCC 2d at 458 n. 24, 49 RR 2d at 603 n. 24. Accordingly, our conclusion that United is basically qualified does not rest on *Friendly* or on Eaton's death.

14. It is well established that disqualification of a licensee for misconduct at one station does not necessarily mean that the licensee is totally unfit to retain any existing license. That depends on the nature of the particular misconduct. *See Faulkner Radio, Inc.*, 88 FCC 2d 612, 50 RR 2d 814 (1981); *RKO General, Inc.* v. *FCC*, 670 F.2d 215, 237 (D.C. Cir. 1981) ("individual stations have different broadcast histories and policies"). The pertinent question here is

whether United's record predicts that it is able, and can be relied upon fully, to perform the obligations of a Commission licensee in the operation of WOOK(FM). *See* 86 FCC 2d at 458, 49 RR 2d at 603; *Faulkner, supra*. Thus, we find it significant (as we explain *infra*) that the misconduct at WOOK(AM) and WFAB was the result of a serious lack of supervision over operations by United's local management, rather than the personal participation by Richard Eaton in deliberate wrongdoing. Further, although serious misconduct of the magnitude found at WOOK(AM) and WFAB does not appear to have occurred at WOOK(FM), the FM station's operating record is marred somewhat by the 1977–78 contest violations which, although requiring some sanction, again reflect mostly inattentiveness. However, the ALJ held that these matters were not the result of deliberate misconduct at WOOK(FM) or sufficiently extensive to be disqualifying, and we agree.

15. On the other hand, we also conclude (as did the ALJ) that the impact of United's misconduct at WOOK(AM) and WFAB on its *comparative* qualifications is a different matter and that United deserves a substantial comparative demerit for its record of management misconduct. United's contention that no demerit is warranted because the misconduct is now remote in time is without merit. Although United is correct that the recency of misconduct is frequently a relevant factor in evaluating the impact of that misconduct on an applicant's qualifications, *RKO General, Inc.*, 78 FCC 2d 1, 27, 47 RR 2d 921, 942 (1980), that general principle is not controlling here because the misconduct at both stations was the specific reason that WOOK(FM)'s renewal application, filed in 1969, was deferred by the Commission. Under these circumstances, we are obliged to consider United's record of performance over the entire period from 1966 through 1978, even though part of that period is now "remote" in time. See paragraph 6, *supra*. Similarly, while United's post-misconduct remedial efforts may militate, in part, against disqualification of the licensee (see paragraph 14, *supra*), those belated efforts cannot, for comparative purposes, obliterate the demerit otherwise warranted for the serious misconduct that took place prior to and during the pendency of its renewal application before the Commission. A contrary policy would permit licensees to operate in a deficient manner, secure in the knowledge that subsequent remedial efforts would guarantee renewal if a challenge to their licenses should ever be mounted. This is not permitted. *See Trustees of the University of Pennsylvania*, 69 FCC 2d 1394, 1422, 44 RR 2d 747, 781 (1978).

16. Finally, United's contention that no demerit is justified in light of Richard Eaton's death is rejected. Although United offered evidence to show that Mr. Eaton exercised a substantial degree of sway over all of United's stations, it did not on the record here establish that its current principals and managers had no responsi-

bility for its previous misconduct; it merely asserts in its brief (at 52) that these individuals were not "tied in any way" with the misconduct.[5] However, the findings of fact in the WOOK(AM) and WFAB proceedings appear on their face to counter United's latest assertion. A few examples will suffice. First, in the WOOK(AM) case, the Commission did not find that Richard Eaton was personally implicated in the fraudulent schemes or that he intentionally violated rules; rather, the cause was laid primarily to unsupervised local management. *See* 55 FCC 2d at 419–25. Second, United's E. Carlton Myers and Clifton Holland were the highest management officials when the 1969 violations at WOOK(AM) occurred. 55 FCC 2d at 435, 460 (Initial Decision). Indeed, Myers, the former general manager of WOOK(AM) and current general manager of WOOK(FM), was found to have had substantial responsibility over the religious broadcasts on WOOK(AM) that contained the illegal numbers tips. *Id.* at 449. Similarly, Holland, previously WOOK(AM)'s operations manager (*id.* at 460) and now WOOK(FM)'s public affairs director, had primary responsibility for reviewing advertising to ensure that it was not misleading (*id.* at 457), conduct, in part, for which WOOK(AM) was denied license renewal. Finally, Myers and Holland were in charge of ensuring that WOOK(AM)'s power changed on time at sunrise and sunset (*id.* at 478), and the 1969 technical violations at WOOK(AM) included several instances of failure to change power in a timely manner. *Id.* at 429, exception No. 26. Notwithstanding, United proffered no evidence here concerning these individuals that would exonerate them of responsibility for the serious misconduct that occurred at WOOK(AM) while they held the highest managerial roles.[6]

17. In other words, while United now argues that Richard Eaton was *solely and personally* responsible for all of United's previous misconduct, and that WOOK(FM)'s current management (in its previous incarnations) was blameless, the record and prior Commission findings indicate otherwise. In fact, in the WOOK(AM) and WFAB cases, United argued—with some apparent success—that United's misdeeds occurred without the knowledge or intent of

---

[5] By Memorandum Opinion and Order, FCC 81M-3103, released September 30, 1981, the ALJ permitted United to adduce evidence concerning the death of Richard Eaton, the persons to whom his United stock would be transferred, and the pertinent background of each such transferee. While evidence on "new staffing, future operational plans, and similar matters" was ruled out because of concern about voluntary upgrading of United's management proposal, *id.* at para. 12, United was not prevented from explicating the current management's previous roles, if any, at United and at WOOK(AM) and WFAB. And it was permitted to offer evidence in mitigation. See paragraph 7, *supra*.

[6] Other current United principals were also involved in the United organization, but not at WOOK(AM) or WFAB, at the time of the disqualifying misconduct at those stations. *See* 55 FCC 2d at 434; United Exh. 7.

Richard Eaton, and that the responsibility, if any, lay with ineffective or careless local managers. *See, e.g.*, 55 FCC 2d at 419–25, 55 FCC 2d at 836–41. In view thereof, a substantial comparative demerit must be assessed here in evaluating United's renewal qualifications for WOOK(FM). While we are satisfied that the mitigating factors discussed in paragraph 14, *supra*, are adequate to forefend absolute disqualification, the past deficiencies of key officials in WOOK(FM)'s present management do diminish its future reliability. Where, as here, the Commission has characterized United's previous misconduct as "serious, repetitive, far-flung, and exclusively within its broadcast operations," 86 FCC 2d at 458, 49 RR 2d at 602, and has questioned whether United was "either deliberately flouting FCC rules or is irremediably incompetent," *id.*, it was incumbent upon United to dispel the Commission's stated doubts concerning WOOK(FM)'s potential reliability as a licensee. *Id.* It has not. This case is thus clearly distinguishable from *Faulkner Radio, Inc.*, *supra*, in which the licensee successfully demonstrated that "all misconduct resulted directly from the actions of *one individual* . . . who is no longer associated with [it]." 88 FCC 2d at 617, 50 RR 2d at 818 (emphasis added). Even there the Commission conditioned renewal of Faulkner's licenses (in a noncomparative proceeding) on the total exclusion of the previous malfeasor from *any* role in *any* of its stations. In the instant case, conversely, a substantial comparative demerit is the warranted effect of United's previous misconduct, particularly when that misconduct took place under the managerial aegis of several of the selfsame officials who now hold positions of high supervisory responsibility at WOOK(FM).[7] *See generally Peoples Broadcasting Corp.*, 92 FCC 2d 1303, 52 RR 2d 1617 (Rev. Bd. 1983) (substantial comparative demerit in FM proceeding where applicant official partially responsible for misconduct at "sister" AM station). United's "total indifference" (55 FCC 2d at 838) to billing irregularities at WFAB and its "gross disregard of Commission policy" (*id.*) are likewise an inextricable part of United's stewardship, and must be considered negative predictors on the scale of comparative fitness.

18. *Past Performance*. At hearing, United offered no direct case concerning its pre-1975 broadcast record—which consisted of Spanish-language programming—arguing that the only relevant license period was 1975–1978 and that evidence relating to earlier programming was difficult to locate. I.D., para. 97. The record evidence for the pre-1975 period is therefore scant, consisting essentially of

---

[7] While *Gross Telecasting, Inc.*, 92 FCC 2d 204, 52 RR 2d 851 (Rev. Bd. 1982), is cited to us as requiring license renewal even where all principals involved in previous misconduct have not severed their connections with the licensee, that case was a noncomparative proceeding and, as here, the licensee was not disqualified because of the previous misconduct. There, as here, the departure of a key management figure was considered as a mitigating factor, but the Commission had no occasion to consider whether a comparative demerit was warranted because of the past misconduct and a lack of complete change in top management.

WOOK(FM)'s composite week percentages of news, public affairs, and all other non-entertainment programming excerpted from its renewal and supplemental renewal applications, and statements by Hispanic's witnesses that the abandonment of Spanish-language programming on WOOK(FM) after 1976 was a "tragic blow" to the Washington Hispanic community. I.D., paras. 16–20, 37. There is no record evidence that would permit a comparison of WOOK(FM)'s programming performance from 1966 to 1975 with that of other stations in the area, except for the limited statistical information concerning the 1978 renewal applications taken from the Arbitron Company's "Metro Survey Area" report. I.D., para. 98.

19. In the I.D., the ALJ rejected United's argument that only the 1975–1978 period was relevant and attempted to evaluate United's broadcast record from 1966 to 1978. He compared the Arbitron 1978 figures for non-entertainment programming against United's 1969, 1972, 1975, and 1978 percentages to determine United's ranking in the market. Based on the relatively low ranking of United's non-entertainment programming other than news and a meagerness of local news coverage during the time WOOK(FM) broadcast Spanish-language programming, the ALJ found that United's pre-1975 broadcast record was minimal. I.D., paras. 98–99, 114. With respect to WOOK(FM)'s post-1975 broadcast performance, the ALJ stated that the station's record was compiled after United lost its licenses for WOOK(AM) and WFAB, see note 1, *supra*, and was therefore entitled to diminished weight on the theory that it showed only the reaction of a station to the prospect of the non-renewal of its license. I.D., paras. 103, 114. He observed, however, that WOOK(FM)'s post-1975 performance would have been considered substantial, because of dramatic improvements in its news programming, if that performance had come before United had fears for its licenses. I.D., paras. 101, 114. Based on United's minimal pre-1975 performance, the diminishment of its post-1975 broadcast record, and the substantial demerit for United's previous misconduct, the ALJ concluded that United's total broadcast performance during 1966–1978 was "no better than minimal." I.D., para. 114.

20. United contends in its exceptions that WOOK(FM)'s overall past performance was substantial and that it was therefore entitled to a renewal expectancy and a substantial comparative preference. Specifically, it argues that the only relevant period to evaluate its programming performance is the 1975–78 period; that its 1975–78 performance should not have been accorded diminished weight; that WOOK(FM)'s 1966–75 programming is not relevant to this proceeding; and that its 1966–75 broadcast record was substantial, in any event. We have already addressed and rejected United's argument on the relevant renewal period for this proceeding in paragraph 6, *supra*. However, we do agree with United that it was improper to accord diminished weight to WOOK(FM)'s 1975–78 performance.

The ALJ chose 1975, the year of the Commission's decisions denying renewal of WOOK(AM) and WFAB, as the cut-off point after which United was not entitled to full weight for its broadcast record—the rationale being that improvements taking place after a licensee is in fear of the nonrenewal of its license are valueless. We conclude that this was error. Arguably, the ALJ could just as easily have chosen any of a number of other dates in this proceeding as the point at which United first had a legitimate and reasonable concern that its license for WOOK(FM) was in jeopardy—for example, 1969, when WOOK(FM)'s application was deferred; 1973, when WFAB's application was designated for hearing and WOOK(AM)'s renewal application was denied in an Initial Decision; 1974, when WFAB's renewal application was denied in an Initial Decision; or 1977, when the WOOK(AM) Decision became final. A better approach, in our view, is to place the cut-off date for program performance evaluation at the traditional processing notice point, viz., when a competing application or petition to deny is filed. *See RKO General, Inc.*, 35 FCC 2d 100, 24 RR 2d 411 (1972). *See also Cornwall Broadcasting Corp.*, 89 FCC 2d 704, 712–713, 51 RR 2d 389, 396 (Rev. Bd. 1982) ("In general, then, and in the future, we believe that programming evidence accruing *after the filing of a competitive application* is *post litem motam* and thus entitled to reduced weight." Emphasis added, footnote omitted). Prior to this date, there are no competitors who may be prejudiced by upgrading, and adhering to a date certain will serve to eliminate in the future the kind of dispute which arose in this case.[8] Thus, since competing applications in this proceeding were not filed until August 31, 1978, full weight should have been given to WOOK(FM)'s 1975–1978 performance.

21. Nevertheless, we are unable to conclude that United's past broadcast performance, considering the entire 1966–1978 period, is sufficient to warrant a renewal expectancy and the comparative preference that accompanies it. In making this judgment and affirming the ALJ's conclusion, we are guided by the standards set out by the Commission in *Cowles Broadcasting, Inc.*, 86 FCC 2d 993, 49 RR 2d 1138 (1981), *aff'd sub nom. Central Florida Enterprises, Inc. v. FCC*, 683 F.2d 503 (D.C. Cir. 1982). An incumbent's "legitimate renewal expectancy" attaches only when his past performance has been "meritorious" or "substantial"; "minimal service" is merely adequate—sufficient to permit renewal if there are no competing applications, but not enough to yield a renewal expectancy or a

---

[8] *Lamar Life Broadcasting Co.*, 24 FCC 2d 618, 19 RR 2d 851 (1970), cited by the Mass Media Bureau in support of the ALJ's ruling, is inapposite. The licensee in that proceeding had been found previously by the United States Court of Appeals for the District of Columbia Circuit to be a licensee in name only and not entitled to the status of a renewal applicant. The Commission therefore ruled in its designation order that the licensee would not be permitted to gain a preference for its past broadcast record since that would not be competition on even terms. No similar restriction was placed on WOOK(FM).

comparative preference in the face of a challenge. *Simon Geller*, 90 FCC 2d 250, 270 and n. 99, 51 RR 2d 1019, 1037 and n. 99 (1982). In the instant case, we note first that there is insufficient record evidence to establish that WOOK(FM)'s overall performance during 1966–1978 was meritorious, because it has only provided meaningful information for the 1975–1978 period. While we tend to agree with United that its most recent license period (prior to the filing of competing applications) is the most probative in terms of predictive value, this limited showing of proficiency cannot carry WOOK(FM)'s burden of showing meritorious service over the entire 12-year period that we deem relevant, even if we were to hold with the ALJ that United's 1975–1978 performance was substantial. *See Intercontinental Radio, Inc., supra*. This point is underscored by the ALJ's conclusion that WOOK(FM)'s 1966–1975 record was only minimal.

22. Second, we agree with the ALJ that the overall performance evaluation that constitutes the renewal expectancy analysis encompasses licensee conduct as well as program performance, for both factors have important predictive value and must be weighed simultaneously. *Cf. Central Florida Enterprises, Inc., supra*; *Simon Geller, supra*. We have already concluded that United's previous misconduct and the continuing relationship of WOOK(FM)'s present management (and its future reliability) warrant a substantial comparative demerit against United. See paragraph 17, *supra*. Even if we were to conclude that the evidentiary record provided a sufficient basis for finding that WOOK(FM)'s overall programming performance during 1966–1978 was substantial, which we do *not*, that conclusion would be offset by United's past conduct, primarily at WOOK(AM). The renewal expectancy is based on a threefold concern that an incumbent's "proven performance" and "acceptable service" should not be supplanted by an inferior one; that licensees should be encouraged to ensure "quality service"; and that routine comparisons of incumbents and challengers (without adequate recognition of past performance excellence) could lead to a "haphazard restructuring of the broadcast industry." *Cowles Broadcasting, Inc., supra*, 86 FCC 2d at 1013, 49 RR 2d at 1156. When these three bases are attenuated in a particular case, the renewal expectancy is commensurately weakened. *See Central Florida, supra*, at 510 n. 40. This is such a case. United's past performance has not been adequately proven, and what has been proven is significantly marred by serious past misconduct and concerns about future reliability. Thus, we decline to award a renewal expectancy to WOOK(FM) and now proceed to examine the remaining issues in this case "just like an ordinary comparative proceeding where all applicants are competing for a new station." *Simon Geller, supra*, 90 FCC 2d at 270, 51 RR 2d at 1037.

23. *Specialized Programming*. All three applicants propose a specialized program format: Hispanic proposes a Spanish-language

format while United and District propose Black-oriented formats. However, Hispanic is the only applicant that sought a comparative advantage arising out of its proposed format. By Order, 49 RR 2d 248 (1981), the ALJ found that Hispanic had made the requisite threshold showing that its proposed format was specialized and unique and permitted it to adduce evidence respecting a need for the format. That evidence is summarized in paragraphs 75–96 of the I.D.

24. Hispanic's proposed service area includes more than 93,000 persons of Hispanic origin, which is approximately 3% of the population. I.D., paras. 75–76. Hispanic proposes to operate from 5:00 A.M. to 2:30 A.M. Monday through Saturday and from 6:00 A.M. to 1:00 P.M. on Sundays. I.D., para. 90. Over 60% of Hispanics in the Maryland suburbs of Washington use no English at home although all Hispanics surveyed spoke some English. I.D., para. 79. Moreover, approximately 25% of Hispanics in Washington are said to have no knowledge of spoken or written English. I.D., para. 80. There are six area radio stations that provide Spanish-language programming to some degree. I.D., paras. 86, 88. One of them, WMDO, a daytime-only AM station licensed to Wheaton, Maryland, broadcasts solely in Spanish. I.D., para. 88. It provides a primary signal over 96.4% of Washington and substantial portions of some of the principal Maryland and Virginia suburbs during much of the day. I.D., para. 89. During the two hours after sunrise and two hours before sunset, the station's coverage is reduced to 61% of Washington, a smaller area of the Maryland counties, and no coverage of Virginia. *Id.* The ALJ concluded that there was "meaningful" Spanish-language broadcasting in the area, based primarily on the broadcasts of WMDO, and ruled that Hispanic was not entitled to a programming preference. I.D., para. 119.

25. Hispanic argues that the ALJ erred in finding that it was not entitled to a substantial preference for its proposed format, citing *American International Development, Inc.*, 86 FCC 2d 808, 49 RR 2d 1029 (1981), where a significant preference was awarded to an applicant that proposed a first nighttime Spanish-language radio service. Hispanic urges that there is a need for both daytime and nighttime Spanish-language programming to serve the entire Washington area and that it proposes to meet that need. Additionally, Hispanic contends that the ALJ erred in not awarding it a decisionally dispositive preference for the overall quality of its programming.

26. We conclude that Hispanic is entitled to a slight preference for its specialized format. The Commission's most recent guidelines in this area are set forth in *George E. Cameron, Jr. Communications*, 71 FCC 2d 460, 465, 45 RR 2d 689, 694 (1979), where the Commission held that preferences for specialized formats would not be awarded if the proposed programming was present in the community in a substantial amount. *See also Flint Family Radio*, 69 FCC 2d 38, 41

RR 2d 1155 (Rev. Bd. 1977). Applying that standard here, we disagree with Hispanic that daytime Spanish-language programming is not available in a substantial amount in the Washington, D.C. area. *Cf. Scott & Davis Enterprises, Inc.*, 88 FCC 2d 1090, 50 RR 2d 1251 (Rev. Bd. 1982). In addition to WMDO (which provides daylong Spanish-language entertainment, local, regional, and national news, and public affairs programming), WPFW-FM, WFAX, WJMD, and WHUR broadcast various amounts of Spanish-language programming throughout the week. I.D., para. 86.[9] Thus, it is apparent that Hispanic's claim to a preference based on the daytime portion of its proposal is without merit. On the other hand, Hispanic is certainly entitled to some preference for its proposal to provide a Spanish-language nighttime service that is currently lacking. That preference is diminished, however, because the programming issue is cast in comparative terms and involves the relative need for a Spanish-language format versus the proposed Black-oriented formats, rather than general market formats. See FCC 81M-776, *supra*. United currently provides a Black-oriented format on the FM frequency being sought, and the percentage of Black population in the service area far exceeds the percentage of Hispanic population (3.0%). Moreover, the number of Black-oriented stations in the Washington area can hardly be considered abundant in relation to the large Black population in the District of Columbia.[10] Nonetheless, some credit is warranted to Hispanic, since there is no aural Spanish-language programming at night. Neither *American International Development, Inc., supra*, nor *Broadcast Communications, Inc.*, 93 FCC 2d 1162, 53 RR 2d 805 (Rev. Bd. 1983), provides support, however, for the substantial programming preference that Hispanic seeks. Both cases involve the relative need for Spanish-language formats versus general market formats, and, unlike the Black-oriented formats here, the latter were abundant in both proceedings. Hispanic will be given a slight preference for its specialized format.[11]

---

[9] The ALJ's findings as to the amount of Spanish-language programming available also included TV stations. Such findings have not been considered here since the proposed facility is an FM broadcast station. In *Cameron*, and *American*, *supra*, the Commission did not appear to weight the presence of television stations in the area and we therefore do not propose to go beyond the Commission's analysis in this case. On the other hand, AM and FM facilities have long been treated as one aural service and are both included here. *See Broadcast Station Assignment Standards*, 39 FCC 2d 645, 26 RR 2d 1189 (1973).

[10] There are three commercial radio stations and one noncommercial FM station with Black formats. Hispanic Exh. 30. The record is not clear, however, as to the number of stations carrying some Black programming.

[11] District's contention that this matter should not have been explored is rejected. Implicit in our award of a slight preference to Hispanic is the recognition that the ALJ correctly permitted the inquiry based on Hispanic's threshold showing. District would also diminish the weight of the testimony of Hispanic's witnesses regarding the number of Hispanics who cannot speak English. We disagree. Although such information inherently involves a great deal of subjectivity,

Hispanic's additional request for a decisionally dispositive preference for the overall quality of its programming is denied as being beyond the scope of the inquiry contemplated by the Commission and authorized by the ALJ, which pertains to the need for a particular format, rather than the quality of individual programs. See 49 RR 2d 248.

27. *Reporting Issue*. By Memorandum Opinion and Order, FCC 81M-476, *supra*, the ALJ specified a Section 73.3514 issue against Hispanic based on its failure to report in its application that one of its principals had been convicted of a crime. Section 73.3514 of the Rules requires that an application shall include all information called for, and paragraph 8(d), Section II, of the application form (FCC Form 301) asks whether ". . . any party to the application has been found guilty of . . . any felony or any other crime . . ." Hispanic responded to paragraph 8(d) in the negative, notwithstanding that Fernando Casillas, a Hispanic principal when the application was filed, had formerly pled guilty to violating 18 U.S.C. §209, a misdeanor, by giving money to a government employee in return for a larger share of government business. United Exh. 80.

28. Upon receipt of an obsolete questionnaire from Hispanic's communications counsel in 1978, asking whether Casillas had been convicted of a felony or lesser crime involving moral turpitude, [12] Casillas contacted his personal attorney for advice whether his prior conviction required an affirmative answer to the question. I.D., para. 71. Casillas was informed that he could answer "no" to the questionnaire since the violation was not a felony nor, in counsel's view, did it involve moral turpitude. *Id.*[13] Accordingly he completed the questionnaire with a "no" response. None of the other principals was aware of the guilty plea, and paragraph 8(d) of the application was filed with a negative answer. Subsequently, Casillas voluntarily resigned from Hispanic. Hispanic Exh. 7. The ALJ found that the conviction should have been reported by the applicant, rejected arguments by United and District that Hispanic's principals were derelict, except in a minor way, in their duty to supervise the preparation of the application, and concluded that the matter was

---

Hispanic has demonstrated that a sizable percentage of Hispanics in the Washington area have difficulty with the English language. See, *e.g.*, Hispanic Exh. 19.

[12] The questionnaire was obsolete because paragraph 8(d) of the application form had previously been broadened to inquire into "any" crime other than a felony, without regard to whether such a crime involved moral turpitude. See paragraph 27, *supra*

[13] In contending that the violation did not involve moral turpitude, Casillas' attorney rationalized that 18 U.S.C. §209 merely prohibits the payment of gratuities to government employees and that acceptance of Casillas' guilty plea did not involve a finding that Casillas had participated in any fraudulent activity or that he made any payments to a government official with the intent to defraud the government or obtain preferential treatment. Hispanic Exh. 12.

decisionally insignificant. I.D., para. 116. Both United and District except to the ALJ's conclusion and urge the Board to impose a substantial demerit against Hispanic. District also repeats its previous contention that Hispanic was grossly indifferent to the accuracy of its application, having relied solely on counsel to prepare it.

29. It is clear from the ALJ's conclusions and from the exceptions that Hispanic's failure to report Casillas' conviction was tried essentially as an ineptness issue, without emphasizing the traditional "accuracy" issue concerns of full disclosure, materiality, and intent to deceive. *Cf. Fox River Broadcasting, Inc.*, 88 FCC 2d 1132, 50 RR 2d 1321 (Rev. Bd. 1981), *modified*, 53 RR 2d 44 (1983). Thus, the ALJ found a very minor dereliction of duty to *supervise*, I.D., para. 116, but made no findings or conclusions concerning the candor/misrepresentation aspects of the issue.[14] In remedying this omission, we conclude that Hispanic must be assessed a slight comparative demerit for its reporting failure.

30. Although we agree with the ALJ that Hispanic should not be faulted for relying on counsel to help prepare its application, the applicant is ultimately responsible for the factual and biographical matter contained therein. *Lorain Community Broadcasting Co.*, 18 FCC 2d 686, 16 RR 2d 946 (1969). Thus, while Hispanic's counsel clearly erred in mailing Casillas an obsolete questionnaire, we do not believe that Casillas displayed the appropriate forthrightness in answering the (wrong) question placed before him with the single word "no". The underlying purpose of the query relating to past criminal conduct was obvious and the response, even if "technically correct" in the misjudgment of counsel, was materially deficient in the degree of forthcomingness expected of an applicant. Having pled guilty to a serious crime, Casillas' unqualified response in the negative was clearly misleading. As the court noted:

> The Commission must rely heavily on the *completeness* and accuracy of the submissions made to it, and its applicants in turn have an *affirmative duty* to inform the Commission of the facts it needs in order to fulfill its statutory mandate. This duty of candor is basic, and well known.

RKO General, Inc., supra, 670 F.2d at 232 (emphasis added). Moreover, "advice of counsel cannot excuse a clear breach of duty [to fully inform Commission of adverse facts]" (*id.* at 231), and the "legal argument" of counsel "cannot excuse the calculated omission" (*id.*) of a candid recitation of Casillas' criminal history. Hence, while Casillas' reliance on counsel in this matter may be mitigating, it cannot be wholly exculpating, lest we encourage applicants to furnish deceptively incomplete information and to fall back blamelessly on counsel in any ensuing crunch. *See generally George E. Cameron, Jr. Communications*, 53 RR 2d 917, 926 (Rev. Bd. 1983). Casillas and his counsel were obviously aware of the significance of an applicant's criminal history, and the artless evasion evident here is culpable. *Cf. Coastal Bend Family Television, Inc.*, __ FCC 2d __ , 54 RR 2d 367, 374 (Rev. Bd. 1983), Paradoxically, had Casillas candidly answered the "wrong" paragraph 8(d) question, a complete and accurate response to revised paragraph 8(d) would have appeared on Hispanic's application.

---

[14] However, in designating the issue, the ALJ observed: "It is difficult to credit anyone believing, or advising, that the bribery of a public officer does not involve moral turpitude." FCC 81M-746, *supra*, at para. 8.

31. In faulting Casillas' understatement, however, in addition to noting the slight mitigating role of advice of counsel, we also note that Hispanic's other principals were apparently unaware of Casillas' conviction and his lack of candor (I.D., para. 73); Casillas was only a 5% stockholder and was not proposed to be integrated into the station's operation (I.D., paras. 61–62 and note 15); and Casillas resigned from Hispanic shortly after these matters came to light (Hispanic Exh. 9; FCC 81M-746, *supra*). These factors further mitigate the potential decisional significance of Casillas' misconduct and result in the assessment of only a slight demerit. *See Nuance Corp.*, 85 FCC 2d 412, 49 RR 2d 147 (Rev.Bd. 1981). Although the court has held that the Commission must examine the effect of "character" questions relating even to a minor stockholder, *see TV 9, Inc.* v. *FCC*, 495 F.2d 929 (D.C. Cir. 1973) (cases remanded, *inter alia*, to assess impact on applicant of activities of 1.54% principal who was no longer actively involved), we have recently indicated our view that the isolated lack of candor of an individual principal should be regarded generally in some reasonable proportion to that principal's ownership share. *Horne Industries, Inc.*, __ FCC 2d __ , 54 RR 2d 249, 259 n.45 (Rev. Bd. 1983). Hispanic's slight comparative demerit here would seem to be an appropriate penalty for Casillas' lack of candor (as well as any residual taint associated with his personal criminal history).

32. *Integration of Ownership and Management*. District is comprised of four 25% stockholders, one of whom, Dr. Herman F. Stamp, proposes to work full time as the station's managing director. He currently is self-employed as a practicing dentist in the District of Columbia and holds various positions at Howard University. If District is successful in obtaining a grant of its application, Dr. Stamp avers that he will devote no more than six hours per week to dental consultant services and will give up his other vocational activities. I.D., paras. 50, 52. Dr. Stamp, who is Black, is a life-long resident of the District and active in civic affairs. I.D., paras. 50, 51. He has no broadcast experience. The other three District stockholders, who are also Black and residents of Washington, D.C., each propose to devote four hours per week to participating at board meetings. I.D., paras. 57–60. Hispanic is composed of seven stockholders, all of whom are Hispanic. The applicant will hire a general

manager and professional staff to operate the station on a daily basis, but six of its seven stockholders intend to devote a few hours per month to the station in a supervisory role, working on the management and financial committees. I.D., para. 62. They all live in the Washington area. United claims no integration credit.

33. The ALJ concluded that District was entitled to 25% full-time quantitative integration credit for Dr. Stamp, compared to none for Hispanic or United. He gave District minor residual enhancement credit for the minimal participation of its other principals but ruled that their proposals, as well as the minimal participation of the Hispanic principals, were not entitled to any quantitative integration credit because they were far less than 20 hours per week, citing *Midwest Broadcasting Co.*, 70 FCC 2d 1489, 45 RR 2d 1 (Rev. Bd. 1979). United excepts to the ALJ's award of any significant integration credit to District, claiming that substantial questions exist as to Dr. Stamp's commitment to devote 40 hours per week to the station. Specifically, United argues that Dr. Stamp is 60 years old, has been a dentist for 35 years, teaches dentistry, has no broadcast experience, has vaguely defined duties, was not proposed to be integrated in District's original application, and was not involved in preparing the application. Hispanic faults the ALJ for not specially crediting its 100% minority ownership.

34. We conclude that the ALJ correctly found that District was entitled to 25% full-time integration credit. United's exception that Dr. Stamp will not effectuate his commitment consists wholly of surmise and speculation and therefore does not provide adequate reason to upset the ALJ's conclusion. Dr. Stamp's age is irrelevant, absent a showing that his health will not allow him to meet his commitment, as are his present vocational activities which he proposes to curtail to ensure that he can devote 40 hours per week to the station. Moreover, broadcast experience is solely an enhancing element, and its absence does not detract from District's integration proposal. *See New Continental Broadcasting Co.*, 88 FCC 2d 830, 848; 50 RR 2d 1117, 1131 (Rev. Bd. 1981); *Webster-Baker Broadcasting Corp.*, 88 FCC 2d 944, 951–2, 50 RR 2d 1143–48 (Rev. Bd. 1982). Nor do we discern how Dr. Stamp's noninvolvement in preparing the application detracts from his commitment to work 40 hours per week at the station in the future. In addition, contrary to United's argument, Dr. Stamp's proposed functions were specifically described in considerable detail at the hearing. *See I.D.*, paras. 54–55. Finally, as noted by the ALJ (para. 125), District proposed Dr. Stamp as managing director before the comparative cut-off date, and the fact that his name was absent from the application, as originally filed, is of no legal moment. *See WHW Enterprises, Inc.*, 89 FCC 2d 799, 817, 51 RR 2d 409, 421 (Rev. Bd. 1982).[15]

---

[15] Although not formally excepting to the integration credit for Dr. Stamp, Hispanic

35. Hispanic's exception that the ALJ erred in not considering its minority ownership is also without merit. The ALJ properly concluded that those principals of Hispanic and District who plan to devote only minimal managerial attention to the station are not entitled to quantitative integration credit. *See Midwest Broadcasting Co., supra*, 70 FCC 2d at 1495, 45 RR 2d at 7 (20 hours per week held as cut-off point below which no credit will be given for part-time integration proposals). Both applicants, however, do receive some slight residual credit for their minimal participation. *Id.* at 1496 n. 14, 45 RR 2d at 9 n. 14; *see Policy Statement on Comparative Broadcast Hearings*, 1 FCC 2d 393, 396, 5 RR 2d 1901, 1911 (1965); *Webster-Baker, supra*, 88 FCC 2d at 953, 50 RR 2d at 1149. In any event, the slight residual credits to which both District and Hispanic are entitled fully offset one another, since both applicants are 100% minority owned. *See New Continental Broadcasting Co., supra*, 88 FCC 2d at 846, 50 RR 2d at 1130 (Board will not be lured down path of pitting minority against minority). With respect to Hispanic's argument that its minority ownership should be weighed as a separate comparative criterion, we note that the Commission has expressly ruled otherwise. *WPIX, Inc.*, 68 FCC 2d 381, 411–12, 43 RR 2d 278, 316 (1978). *See also Las Misiones De Bejar Television Co.*, 93 FCC 2d 191, 53 RR 2d 119, (Rev. Bd. 1983) *New Continental Broadcasting Co.*, 89 FCC 2d 631, 636, 51 RR 2d 266, 270 (Rev. Bd. 1982). We conclude that District is entitled to a moderate comparative preference under the integration criterion. *See Nuance Corp., supra.*

36. *Diversification of Control of the Media of Mass Communications.* The ALJ ranked United last under this criterion, noting that the applicant must be given a demerit for its interests in other broadcast stations, particularly in nearby Rockville and Baltimore, Maryland. I.D., para. 115. Hispanic and District were ranked equal since neither they nor their principals have any ownership interest in any medium of mass communications. I.D., para. 130. Hispanic, however, contends at length that it is entitled to a substantial preference over District under the diversification criterion. It argues that while there is no evidence that District's application will add a diverse and antagonistic source of information to those already available in Washington, grant of Hispanic's application will significantly diversify existing media ownership by bringing the first Hispanic-controlled, Spanish-language broadcast station to the area.

---

nonetheless appears to fault the ruling on the ground that Dr. Stamp's duties at the station were not determined until after the time for comparative upgrading had elapsed. Hispanic Br. at 37. We find no error in the ALJ's ruling. As indicated above, the applicant proposed Dr. Stamp's integration in a timely fashion. The subsequent formalization of the duties of his position does not detract from his quantitative integration credit since those duties are not at variance with his proposed role. *See WHW Enterprises, Inc., supra.*

We disagree. This theory concerning the meaning of diversity has been previously rejected by the Board in *Commercial Radio Institute, Inc.*, 78 FCC 2d 1016, 47 RR 2d 1307 (Rev. Bd. 1980). There we noted that the essence of the Commission's policy on diversification of control of the mass media is that diversity of programming can best be achieved by promoting *structural* diversity of ownership and control of broadcast facilities. 78 FCC 2d at 1022, 47 RR 2d at 1312. *See also TV 9, Inc.* v. *FCC, supra* (active minority involvement creates presumption that diversity of viewpoints will be enhanced). This structural approach permits the Commission to promote program diversity without entering the quagmire of evaluating the qualitative content of potential programs.[16] Thus, since neither District nor Hispanic has any attributable ownership of other media, we will apply traditional concepts and affirm the ALJ's conclusion that neither applicant is entitled to a preference over the other. Both, however, are entitled to a preference over United, which has not excepted to this conclusion.

37. *Auxiliary Power*. District proposes to install an auxiliary power source to assure continued operation of the station in the event of a power outage. Neither of the other two applicants proposes this. District is therefore entitled to a very slight preference for proposing to use auxiliary power. *See Addendum to Policy Statement on Comparative Broadcast Hearings*, 2 FCC 2d 667, 6 RR 2d 861 (1966).

38. *Petitions to Enlarge Issues*. District excepts to the ALJ's failure to add two issues it requested on November 15, 1980, and July 10, 1981, respectively: an employment practices issue against United, and an ineptness issue against Hispanic. District's exceptions are without merit. We have reviewed the ALJ's decisions denying the requested issues (FCC 81M-1614, *supra*, and FCC 81M-3104, released September 30, 1981) and conclude that they adequately and persuasively set forth sufficient reasons why the requested issues were denied. The exceptions before us raise no new matters of substance which the ALJ did not consider or additional allegations which would warrant a different result. Moreover, even if a substantial question had been raised, remand would serve no useful purpose since District has prevailed in any event.

39. *Miscellaneous Matters*. One further matter requires comment. On April 25, 1983, United filed a motion to reopen the record and to enlarge issues seeking Section 1.65 and violation of labor law issues against Hispanic. The Mass Media Bureau, on the merits, supports addition of both issues, but contends that United's motion

---

[16] *Simon Geller, supra*, 90 FCC 2d at 272, 52 RR 2d at 1038–39, cited by Hispanic is inapposite. There the licensee provided virtually no informational programming and thus was found not to qualify as a "diverse and antagonistic source" of information in the community. Here, there is no contention that District will not provide any informational programming.

should be denied as being of no decisional significance unless the Board determines that Hispanic is the preferred applicant. We concur with the Bureau that remand of this proceeding is unnecessary in light of our conclusion that District is the preferred applicant. See paragraph 40, *infra*. Without reaching the merits of United's argument, its motion will be dismissed as moot.

40. *Final Comparative Evaluation*. All exceptions having decisional significance have been considered by the Board. We have awarded District a moderate integration preference and a very slight auxiliary power preference. Hispanic receives a slight preference for its specialized program format and a slight demerit for its reporting violation. Both District and Hispanic receive a diversification preference over United. United is entitled to no preferences and no renewal expectancy because it failed to prove that its past broadcast record during the renewal period under examination was meritorious. See paragraphs 21–22, *supra*. When the preferences awarded to District and Hispanic are weighed, the comparative balance tips dispositively in District's favor. District enjoys integration and auxiliary power preferences over Hispanic and integration, auxiliary power, and diversification preferences over United. Hispanic's slight preference for specialized programming does not match in magnitude or importance District's moderate integration preference, *see Cannon's Point Broadcasting Co.*, 93 FCC 2d 643, 53 RR 2d 953, 963 (Rev. Bd. 1983), and Hispanic's position is further weakened by its reporting demerit. United, with no preferences whatever and a substantial comparative demerit (see paragraph 17, *supra*), is a distant third. We thus affirm the ALJ's determination that a grant of District's application will best serve the public interest, convenience and necessity.

41. ACCORDINGLY, IT IS ORDERED, That the petitions for leave to amend filed by United Broadcasting Company, Inc. on January 28 and March 1, 1983, ARE GRANTED, and the amendments ARE ACCEPTED;

42. IT IS FURTHER ORDERED, That the motions for leave to file addendum to brief filed by Hispanic Broadcasting Corporation on March 7 and 31, 1983, ARE GRANTED, and the addenda ARE ACCEPTED; and that the motion to reopen the record and to enlarge issues filed by United Broadcasting Company on April 25, 1983 IS DISMISSED as moot;

43. IT IS FURTHER ORDERED, That the application of District Broadcasting Company (File No. BPH-780831AY) for a construction permit to establish a new FM broadcast station at Washington, D.C., IS GRANTED, and the applications of United Broadcasting Company, Inc. (File No. BRH-589) and Hispanic Broadcasting Corporation (File No. BPH-780901AB) ARE DENIED.

INITIAL DECISION OF ADMINISTRATIVE LAW JUDGE FREDERIC J. COUFAL

(Issued November 1, 1982; Released November 9, 1982)

Prelininary Statement

1. This proceeding involves the application of United Broadcasting Company, Inc. (United) for renewal of its license for station WOOK(FM), Washington, D.C.[1] and the applications of District Broadcasting Company (District) and Hispanic Broadcasting Corporation (Hispanic) for construction permits for a new FM station in Washington, D.C., filed August 31, 1978 and September 1, 1978,

---

[1] The Commission has not acted on an United application for renewal of its license for this station since the application filed in 1966. United has filed an application every three years beginning in 1969 and ending with 1978.

respectively. All applicants propose the use of the same frequency so the applications are mutually exclusive.

2. On September 30, 1980 the Commission released *Memorandum Opinion and Order* (FCC 80-529, 81 FCC 2d 227) designating the three applications for hearing on the following issues:

> (a) To determine which of the proposals would, on a comparative basis, best serve the public interest.
>
> (b) To determine, in light of the evidence adduced pursuant to the above issue, which of the applications should be granted.

3. On April 30, 1981 the Commission released *Memorandum Opinion and Order* (FCC 81-208) adding the following issue:

> To determine whether, in light of the Commission's findings and conclusions in *United Broadcasting of Florida, Inc.*, 55 FCC 2d 832 (1975), *recon. denied*, 60 FCC 2d 816 (1976) and *United Television Co.*, 55 FCC 2d 416 (1975), *recon. denied*, 59 FCC 2d 663 (1975), *aff'd sub nom. United Broadcasting Co.* v. *FCC*, 565 F.2d 699 (D.C. Cir. 1977), *cert. denied*, 434 U.S. 1076 (1978), United Broadcasting Company has the basic and/or comparative qualifications to be the licensee of Station WOOK(FM).

The burden of proceeding with the introduction of evidence and the burden of proof with respect to this issue were placed upon United.

4. The following issue was added in *Memorandum Opinion and Order* (FCC 81M-746) released March 13, 1981:

> To determine whether Hispanic Broadcasting Corporation failed to report in its application any conviction of Fernando Casillas of a crime, and if so, the effect of such failure on Hispanic's comparative qualifications to be a Commission licensee.

5. In *Order* (FCC 81M-776) released March 17, 1981, it was directed that Hispanic "may adduce, under the general comparative issue, evidence respecting a need for its proposed format."[2]

6. *Memorandum Opinion and Order* (FCC 81M-1614) released May 26, 1981 added the following issue:

> To determine with respect to United Broadcasting Company, Inc. the effect of the misconduct found in the Commission's Notice of Apparent Liability of November 30, 1978, FCC 78-838, on United Broadcasting Company, Inc.'s absolute and/or comparative qualifications to be a Commission licensee.

7. *Memorandum Opinion and Order* (FCC 81M-3103) released September 30, 1981 directed that:

> Evidence may be adduced under the issues heretofore designated with respect to:
>
> (1) the death of Richard Eaton;
>
> (2) the person or persons to whom Richard Eaton's stock in United will be transferred under the terms of his will or the laws of intestate succession as may be applicable; and

---

[2] Spanish language.

(3) the pertinent background of each such transferee.

8. Conferences and evidentiary hearing sessions were held on various dates during the period November 18, 1980 through September 9, 1981. Proposed findings were filed January 11, 1982 and reply findings were filed January 27, 1982. The record was closed on March 4, 1982 (FCC 82M-0721).[3]

Findings of Fact

United and WOOK(FM)

9. The station now bearing the call sign WOOK(FM) was licensed to United on February 5, 1951 to operate on 95.9 MHz. In April of 1952 a license was issued authorizing the operation of the station on 100.3 MHz (United Ex. 67, p. 1). Prior to December of 1976, the station was identified as WFAN(FM); at that time the call sign was changed to WOOK(FM). WOOK was a call sign formerly used by another United AM station (District Ex. 11, p. 1).

10. Richard Eaton was the founder of United and, until his death on June 1, 1981, was its sole stockholder, president, treasurer, and chief executive officer; he was one of its directors (United Ex. 79, p. 1). The other directors, prior to Richard Eaton's death, were: Daniel Richard Eaton and Pierre Daniel Eaton, sons of Richard Eaton (United Exs. 2 and 4, p. 1); Elsa Eaton, widow of Richard Eaton (United Ex. 3); Gerald Joseph Hroblak (United Ex. 7); and Joseph George Schweighardt, Jr. (United Ex. 9). The officers other than Richard Eaton were Elsa Eaton, vice president (United Ex. 3); Clifton D. Holland, vice president (United Ex. 6); Gerald Joseph Hroblak, vice president, secretary, and controller (United Ex. 7); E. Carlton Myers, Jr., vice president (United Ex. 8); and Martha Stewart Byers, assistant secretary (United Ex. 1).

11. The general manager of WOOK(FM), at Richard Eaton's death, was E. Carlton Myers. He testified that he had served in that capacity since 1964 (United Ex. 8) but it appears that this was either a part-time or intermittent position (District Exs. 6, 8, and 9 which are United renewal applications). Gerald Hroblak apparently has no WOOK(FM) title, but acts in a management capacity in negotiating network contacts, accounting, and programming (United Ex. 7, p. 2). Clifton D. Holland, since December 1976, has been public affairs director (United Ex. 6; Tr. 694–701). Martha Stewart Byers does the WOOK(FM) routine bookkeeping as well as bookkeeping for all other United stations (United Ex. 1).

---

[3] Pages of the record will be cited as "Tr. ___ "; United's exhibits will be cited as "United Ex. ___ , p. ___ "; District's exhibits will be cited as "District Ex. ___ , p. ___ "; Hispanic's exhibits will be cited as "Hispanic Ex. ___ , p. ___ "; exhibits introduced jointly by all three applicants will be cited as "Joint Ex. ___ , p. ___ "; exhibits introduced jointly by United and District will be cited as "United/District Joint Ex. ___ , p. ___ ."

12. Richard Eaton's will was admitted to probate on June 8, 1981; on that date Suburban Trust Company and Dennison L. Mitchell were issued letters of administration (United Ex. 92, Attachments A and B). The will provides that the 311 outstanding shares of United stock are to be divided as follows: Gerald Hroblak—9 shares; William Parris—3 shares; Joseph Schweighardt—3 shares; Samuel Phillips, Jr.—3 shares (these shares are not to be distributed if the particular legatee is not a United employee at Richard Eaton's death and for five years thereafter); Suburban Trust Company and Dennison L. Mitchell as trustees—that part of the remaining 293 shares not redeemed by United for the purpose of paying taxes, funeral expenses, and administrative expenses (United Ex. 92, Attachments A and B).

13. The trust created by the will (which includes the residuary shares of United stock and other property) names 21 beneficiaries including Richard Eaton's wife, his former wife, sons Pierre and Daniel, eight daughters, eight grandchildren, and Gerald Hroblak. The trustees are authorized to pay from the income or principal of the trust such amounts as they deem appropriate to the beneficiaries. After the death of the former wife and the passage of ten years from the date of Richard Eaton's death, the trust is to be distributed to the remaining beneficiaries when each attains a stated age. The will gives the personal representatives and the trustees the power to sell United stock and to carry on the business of United. It recommends that Gerald Hroblak be the chief operating officer of United and other corporations (United Ex. 92, Attachment A).

14. STC is a publicly held Maryland bank with a trust department having experience in acting as personal representative and trustee and as such in the management of small businesses (United Ex. 92, pp. 7–9). Dennison Lewis Mitchell is a CPA and lawyer. Mitchell and his firm have represented Richard Eaton and United since 1950 (United Ex. 90).

15. On July 3, 1981, Gerald Hroblak was elected president, treasurer, and chairman of the board of United; Gary L. Gross was elected vice president; William Parris was elected vice president and secretary; Parris was also made a director.

Programming of WFAN(FM) and WOOK(FM)

16. Prior to December 24, 1976, the station broadcast in the Spanish language (District Ex. 11). The various renewal applications provide information as to programming during the periods covered by those applications. In the 1969 renewal application (District Ex. 6), the station's composite week (1966–1969) showed 21 minutes of public affairs programming, representing 0.3% of the total week.

The 1972 application (District Ex. 8) reflects public affairs programming for the 1969–1972 period as 30 minutes or 0.046%.[4] While little, if any of the 1966–1969 public affairs programming involved local affairs, the 1972 application shows that 25 minutes of the composite week 1969–1972 involved local affairs (District Ex. 8, p. 34). The 1975 application (District Ex. 9) indicates 1 hour, 30 minutes of public affairs programming (1%) during the composite week none of which was locally created.[5] The 1978 application (United Ex. 66) shows for the (1975–1978) composite week, 97 minutes of public affairs programming (1.08%) of which 57 minutes were locally produced. During this period (December 1976), the station switched from a Spanish to a Black format and the programs which were locally produced for a Spanish audience were dropped. An amended programming proposal was filed in January 1977 showing an intent to broadcast 194 minutes (2%) of public affairs programming (Ex. 16 to United Ex. 66) which was to include 2 hours, 30 minutes of local public affairs programming (Ex. 22 to United Ex. 66).

17. The 1969 application shows that for the composite week 8 hours and 49 minutes (8.2%) were devoted to news; in the 1972 application 8 hours and 15 minutes (7.48%) were so devoted; and in the 1975 application 19 hours, 38 minutes (16.0%) were shown. The 1969 application reveals that the station then utilized a Spanish-language wire service which provided news of particular interest to Spanish-speaking persons and that the news presented was about all national and inter-national news although the announcers acted as local news staff and the station broadcast some local news gathered by a sister station. The 1972 application continued a similar pattern relating to news except that there was instituted a new two-hour program beginning at 6 a.m. on Monday through Friday which included some local news (District Ex. 9, pp. 43–45). The expanded news programming reflected in the composite in the 1975 application showed 5-minute hourly broadcasts of news and that 95% of the news broadcast related to national and international events relating to Latin American countries.

18. Ivan Quinonas testified that he was employed by the station from the 1960s until the format change (Tr. 1732, 1765). He was advised by Richard Eaton that there was no money to provide more local news coverage (Tr. 1740, 1744, 1755). The station lost money in 1970, 1971, 1972, and 1975 with the losses ranging from $5,495 to $21,264. The years 1973, 1974, and 1976 were profitable with the annual net income running from $11,914 to $15,823 (United Exs. 77 and 87).

19. Copies of the logs for the periods covered by the 1969, 1972,

---

[4] An apparent error; probably should be 0.46%

[5] There is a discrepancy between pages 11 and 43 of the application with respect to whether the total is 1 hour and 13 minutes or 1 hour and 30 minutes.

and 1975 applications were not included in the exhibits (District Exs. 6, 8, and 9) so that it is difficult to tell much about the balance of the station's programming during those years. It does appear that the composite week covered in the 1969 application included 5 hours, 53 minutes (5.4%) for "all other programs, exclusive of entertainment and sports." It is also possible to ascertain that the station had some religious programming both locally produced and otherwise, a children's program in Spanish, a poetry program of both local and nonlocal origin, a program titled *Philosophy for Living*, and a locally produced sports show emphasizing Latin American sports.

20. In the 1972 application, the composite week included 9 hours, 10 minutes of "other" programming (8.49%) with components similar to those mentioned in the previous paragraph. In the 1975 application "other" programming was 5 hours, 45 minutes (5%). The components remained similar. The "other" programming reported in the 1978 application was 5 hours, 15 minutes (3.5%) (Ex. 16 to United Ex. 66).

The December 1976 Format Change

21. On December 24, 1976 the format of WFAN(FM) was changed from Spanish language to Black-oriented, the number of weekly broadcast hours was increased from 123 to 162, and the call sign became WOOK(FM). At the same time, the format of sister station WOOK(AM) was changed from Black-oriented to Spanish language programming and WOOK(AM) became WFAN(AM) (District Ex. 11, p. 1).

22. E. Carlton Myers testified that he suggested the format change to Richard Eaton in early 1975 because he felt that FM radio was emerging as a dominant medium over AM and Black listeners were moving to the suburbs where the nighttime signal of United's AM station was inadequate (Tr. 639–644). Myers believed that the Washington, D.C., Spanish-speaking population was mostly located in the Adams-Morgan area of Washington, which could be served by the AM signal. A series of meetings on the proposal were held with Myers, Richard Eaton, and other United people (Tr. 666–667, 644–647). The decision to change formats was made by Richard Eaton (Tr. 648, 1759). Myers and Hroblak denied that concern about possible adverse FCC action with respect to WOOK(AM) and WFAN(AM) motivated the changes (Tr. 644–650, 873–876).

READEX FICHE best copy available

WOOK(FM) News Programming - December 24, 1976—August 31, 1978[6]

23. At sometime during this period the station created a news staff of three full-time persons and one news director[7] (United Ex. 63, p. 73). One of the news staff was in the field daily and covered local events. The station had a newsroom with appropriate equipment, once had an affiliation with National Black Network and later with Sheridan Broadcast Network, and used Associated Press wire service (United Ex. 63, p. 74).

24. The regularly scheduled news broadcasts for the period from January 1, 1977 through August 31, 1978 were the following. From January 1 until February 22, 1978 there were 3-minute newscasts broadcast Monday through Saturday 26 times per day from 1:20 a.m. to 5:50 p.m. In addition, from February 7 through February 22, 1978 newscasts were broadcast from 6:00 a.m. to 7:00 a.m. and from 8:45 a.m. to 9:00 a.m. Monday through Saturday. From February 23, 1978 until August 31, 1978 3-minute newscasts were broadcast Monday through Saturday 22 times per day beginning at 1:20 a.m. and ending at 5:50 p.m. In addition, from February 23, 1978 until July 16, 1978 newscasts were broadcast from 5:50 a.m. to 7:00 a.m. and from 8:45 a.m. to 9:00 a.m. Monday through Saturday; and from July 17, 1978 until August 31, 1978 newscasts were broadcast from 5:45 a.m. to 7:00 a.m. and from 8:45 a.m. to 9:00 a.m. Monday through Friday, and from 5:50 a.m. to 7:00 a.m. and from 8:45 a.m. to 9:00 a.m. on Saturdays. The only regularly scheduled news program for Sunday, *Information Digest* was broadcast from 10:00 a.m. to 11:30 a.m. from February 6, 1977 to January 1, 1978; from 2:00 a.m. to 3:30 a.m. and from 10:00 a.m. to 11:30 a.m. from January 8 to July 31, 1978; and from 2:00 a.m. to 3:30 a.m. and from 6:00 a.m. to 7:30 a.m. from August 6 to August 31, 1978 (United Ex. 63, pp. 76–77).

25. Information Digest is roughly one-third locally produced by the station; the balance is Associated Press or Sheridan Broadcast Network in origin (United Ex. 63, p. 94).

26. The station also carried specially prepared news broadcasts concerning special events. In the period January 1, 1977—August 31, 1978 those broadcasts included election day coverage for the Washington area, a special report on the Supreme Court's *Bakke* decision, extended coverage of a long and newsworthy murder trial in Prince George's County, Maryland, Black History Month events, and nine over events of local interest (United Ex. 63, pp. 82–93).

27. The station, beginning in 1977, has broadcast *Commentline* on Monday through Saturday at 6:00 a.m. and 8:45 a.m. This is a

---

[6] The first date marks the format change; the second, the filing of the first competing application.

[7] The exhibit is not specific as to when the staff became as here described.

five-minute program during which listeners are asked to call in and comment on matters such as young runaways, drugs in the armed forces, treatment of patients in hospitals, mixed sexes in high school athletics, the electoral college, child molesters, etc. (United Ex. 63, pp. 109–204). A 3 $^1/_2$-minute report is given by the District Mayor's office at about 6:25 a.m. on each Tuesday (United Ex. 63, p. 205). A physical exercise program is conducted for 1 minute at 5:55 a.m. and for 2 minutes at 6:43 a.m. The frequency of the program is not stated (United Ex. 63, p. 205). A 1 $^1/_2$-minute report on job opportunities given by the D.C. Department of Employment Sources is broadcast daily with the news at 6:35 a.m. and 8:47 a.m. (United Ex. 63, pp. 205–206). From sometime in 1976 through the summer of 1980 a daily 1-minute program on how to save in the home was broadcast at about 5:45 a.m. by the District of Columbia Consumer Affairs Department (United Ex. 63, p. 206).

Relative Position of WOOK(FM) Nonentertainment Programming Among Washington, D.C. Area Radio Stations[8]

28. *Arbitron Radio Audience Estimates in the Arbitron Market of Washington, D.C.*, October/November 1980, defines the Washington, D.C. "Metro Survey Area" as Washington, D.C., Montgomery, Prince George's, and Charles Counties in Maryland, and Fairfax, Loudoun, Prince William, and Arlington Counties in Virginia. A total of 40 commercial AM and FM stations are licensed to communities within the Washington, D.C. Metro Survey Area (*id.*, p. 4). The programming analyses contained in the 1978 renewal applications of the Metro Survey Area stations for which records were available revealed that of 35 stations WOOK(FM) ranked sixth among Washington, D.C. stations and eighth overall with respect to total amount of news actually broadcast during the composite week analyzed. WOOK(FM) ranked fifth among Washington, D.C. stations, and tenth overall, with respect to the percentage of time dedicated to news programming during that composite week. Two of the four Washington, D.C. stations exceeding WOOK(FM)'s performance had formats featuring predominantly nonentertainment programming (*id.*, pp. 7–8).

29. Of 35 stations for which records were available, WOOK(FM) ranked seventh among Washington, D.C. stations and sixteenth overall with respect to the percentage of time dedicated to all nonentertainment programming during the composite week analyzed. Of the six Washington, D.C. stations whose performance exceeded WOOK(FM)'s three had specialized formats featuring predominantly nonentertainment programming. WOOK(FM) ranked ninth among Washington, D.C. stations and fifteenth overall

---

[8] Information set forth in this section is taken from United Ex. 76. Unless otherwise indicated, page references in parentheses refer to that exhibit.

with respect to the total amount of all nonentertainment programming actually broadcast during the composite week analyzed for 1978 renewal applications. Of the eight Washington, D.C. stations whose performance exceeded WOOK(FM)'s, three had specialized formats featuring predominantly nonentertainment programming (*id.*, pp. 9–10).

30. United prepared a program audit for the month of April 1978 because the composite week designated for the 1978 renewal application included dates both before and after the December 1976 WOOK(FM) format switch. The audit revealed that the percentages of all of the station's broadcast time during the month of April 1978 devoted to nonentertainment programming were as follows:

News	10.7%
Public Affairs	2.4%
Other	3.1%
Total	16.2%

31. In comparison to the percentages of such programming performed in the 1978 composite week by the 35 Washington, D.C. area stations for which records were available, WOOK(FM)'s April 1978 figures exceeded all but three other Washington, D.C. stations and three suburban stations with respect to news programming. Two of the three Washington, D.C. stations had nonentertainment formats. Similarly, WOOK(FM)'s April 1978 performance exceeded all but six Washington, D.C. stations and five suburban stations with respect to overall nonentertainment programming. Five of the stations which exceeded WOOK(FM) in this regard had formats featuring predominantly nonentertainment programming (Ex. 22 to United Ex. 66).

WOOK(FM) Community Involvement[9]

32. The following is a listing of WOOK(FM) community-related activities:

(a) From 1971 until 1979 a free class for training in radio broadcasting was held every Saturday. Two members of the current WOOK(FM) news department received their start from those classes (*id.*, p. 1).

(b) In 1977 the station assisted the Salvation Army in its Christmas-time drive to collect toys for needy children by providing announcements and other assistance in the project (*id.*).

(c) In 1977 the station co-sponsored the city-wide Community Mardi Gras Day in cooperation with the 14th Street Project Area Committee, Inc. The committee is appointed by the mayor to oversee projects undertaken to rebuild and revitalize the 14th Street corridor. WOOK(FM) assisted in recruiting help, donating awards, and planning stages of the event (*id.*, pp. 1–2).

---

[9] Information set forth in this section is taken from United Ex. 64. Unless otherwise indicated, page references in parentheses refer to that exhibit.

(d) In 1977 station WOOK(FM), in cooperation with several D.C. schools, conducted a high school attendance contest. The class achieving the best record won prizes provided by the station (*id.*, p. 2).

(e) In 1977 members of the sales and on-air staffs of the station spoke with several classes at Woodson High School on topics ranging from radio station formats to the importance of voice tone quality, and to radio advertising (*id.*, p. 2).

(f) WOOK(FM) donated 70 fight tickets to the Metropolitan Police Boys' and Girls' Clubs (*id.*, p. 3).

(g) At Christmas-time 1977, the station assisted the Temporaries Food for Christmas Collection effort through the broadcast of promotional information. The drive benefits local individuals who suffer personal disasters (*id.*, pp. 4–5).

(h) The station co-sponsored, promoted, and provided entertainment in connection with a Teen Benefit Disco co-sponsored by the D.C. Branch of the YWCA in June 1978 (*id.*, p. 7).

Community Witnesses

33. United offered the testimony of a number of community witnesses relative to WOOK(FM)'s community service. H.R. Crawford, a member of the District of Columbia City Council representing Ward 7, testified that WOOK(FM) "is one of the few remaining stations" catering to a group including some of his constituents (Tr. 1520). Charles Allison, a retired army officer now employed by the Federal Government said he was a "long-time listener" to the station and enjoyed *Commentline*. He also stated that WOOK(FM) offered good community service because it presents "the Black perspective without omitting general and important news stories" (*id.*). Warren Bartley, a counselor in a juvenile detention center, testified that the station provides useful information to the community and is aware of community needs. He singled out coverage of the juvenile justice system and the Oakhill Juvenile Detention Center, where Bartley is employed (United Ex. 44). Wallacetine Talafaro-Curtis, a program coordinator for a local alcoholism program, described the positive response she encountered with respect to her appearances in WOOK(FM) nonentertainment programming and praised the station's news service. She uses the employment information feature (United Ex. 46). Dr. Joan Hillsman, an educator in the D.C. public school system, testified that the station reaches a large number of the city's youth and provides them with a positive sense of cultural identity. She stated that she has incorporated the station's programming into her lessons (United Ex. 50). Jerome Jones, a director and former executive director of RAP, Inc., a community-based drug treatment and counseling organization, testified that WOOK(FM) has provided support for his organization's work in a number of respects and is above relative to the nature and extent of the cooperation it offers to RAP, Inc. (United Ex. 52). Joy Jones, an information and outreach specialist for Wider Opportunities for Women, testified about the greater degree of cooperation extended to

her by WOOK(FM) and the greater level of response she encounters to WOOK(FM) programming, in comparison to other stations with which she has worked, including WHUR, WOL, WMAL, WKYS, and WPGC (United Ex. 53; Tr. 769). Jasper Lawhon, a retired federal employee, testified that WOOK(FM) appeals to a broad spectrum of Blacks and is sensitive to issues that concern Blacks. It is an effective source of news and information that listeners otherwise would not get (United Ex. 56). Curtis J. Massey, an associate director for Youth Services and Advocacy at the Southeast Neighborhood House, Incorporated, testified that he is a long-time listener and a representative of an organization which has benefited from WOOK(FM)'s assistance. He said it provides excellent service to the Washington, D.C. community through its programming and its cooperation in community activities (United Ex. 57). Vickie Satern, president of an employment agency, testified that in assisting her efforts to publicize a CETA funded job program, WOOK(FM) demonstrated dedication to community service well beyond that of other stations in the area. She also ascribed much of the success of her program to WOOK(FM) (United Ex. 58). Reverend Annie Woodridge, the founder of a local community center, testified that WOOK(FM) has done an outstanding job and has brought happiness to people (United Ex. 61).

Efforts by United to Provide Spanish-Language Programming to the Washington, D.C. Area[10]

34. On April 22, 1978 when WFAN(AM) [formerly WOOK(AM)] went off the air it was providing a full-time Spanish-language radio service. Richard Eaton was experienced in Spanish-language programming, having operated WFAN(FM) as a Spanish-language station from the late 1950s through 1976. He also operated Spanish-language stations in New York, New York, San Gabriel, California, and Miami, Florida (United Ex. 77). United searched for but found no licensee willing to supply substantial blocks of programming time, including primetime or drive-time for Spanish-language programming. Station WEAM(AM), Arlington, Virginia, did contract with United for the broadcast over WEAM's facilities of Spanish-language programming from 11:00 p.m. - 6:00 a.m. Monday through Saturday.[11] United supplied and paid for the announcer and sales staff for the Spanish programming, participated in programming, and divided equally all sales revenues in excess of certain stated costs with WEAM. The arrangement, a money loser for United, was terminated by WEAM.

---

[10] Information set forth in this section is taken from United Ex. 78 unless otherwise noted.

[11] Josephine Ades, a Hispanic witness, testified that a group with which she was working in 1978 was successful in having the WEAM all-night show broadcast in Spanish (Tr. 2250).

35. Following the termination of the arrangement with station WEAM, United principals were unable to find blocks of time available for Spanish-language programming. United also held unfruitful discussions with a local Hispanic group which approached Eaton for financial help in purchasing a station (United Ex. 77, pp. 1–3; Tr. 3243).

36. On May 29, 1979 United entered into an agreement with Combined Community Communications, Inc. (Combined) under the terms of which Combined utilizes the subcarrier FM multiplex facilities of station WOOK(FM) to transmit programs and related services to the Spanish community. The service is to be provided between 6:00 a.m. and midnight. According to its president, Combined provides programming 7 days per week, with a total of 91 hours weekly. The programming, which consists of national and international news, public service announcements, religious material, sports and entertainment, is entirely in Spanish. United negotiated over a period of approximately one year with Pacifica Foundation about funding Spanish-language programming over noncommercial educational station WPFW(FM), Washington, D. C. Nothing resulted as the station was unable to provide the amount of programming which Eaton felt would be necessary.

Testimony of Hispanic Principals Relative to WFAN(FM) Service

37. Angel Roubin testified that he was "a regular listener to the Spanish-language programming of radio station WFAN for many years" and that virtually all Hispanics in the area "relied on WFAN for entertainment, information of local interest to the Hispanic community, and for international news from Hispanic countries" (Hispanic Ex. 3, pp. 2–4). Lourdes Raquel Miranda testified that she had long been a regular listener to the Spanish-language broadcasts of WFAN(FM) and WFAN(AM) and that their loss was tragic (Hispanic Ex. 4, pp. 9–10). Michael A. Erice testified that he had for many years been a regular listener to the Spanish-language programming of radio station WFAN, that he prepared and delivered a weekly 15-minute news program on the station during 1967–1968, that he utilized WFAN(FM) in the promotion of a movie theater in which he had an interest between 1962–1970 (Hispanic Ex. 5, pp. 3–6). Raquel Marquez Frankel testified that she believed the loss of the Spanish-language programming was a "tragic blow to Washington area Hispanics" (Hispanic Ex. 7, pp. 5–6). Adelina Pena Callahan testified to the same effect (Hispanic Ex. 8, p. 3).

Notice of Apparent Liability

38. On November 30, 1978 the Commission issued a Notice of Apparent Liability to United in connection with two contests, one of which, the *Black Book Contest*, was broadcast on WOOK(FM) during the period December 19, 1977 through January 29, 1978; the other,

Thousand Dollar Dial Contest, was broadcast on WOOK(FM) during the period January 20, 1978 through February 9, 1978. A forfeiture in the amount of $6,000 was assessed for three violations of the Commission's contest policies (District Ex. 20). United paid the fine with a check on the back of which was printed "Payment subject to terms & conditions set forth in letter to Federal Communications Commission of 1/19/79 which is being submitted with this check" (United Ex. 91, Attachment G). The referenced letter, from counsel for United, set forth United's position that the matters considered by the Commission in assessing the forfeiture were not violations and that: "Payment of the $6,000 fine as assessed should not be construed as either an admission by the licensee of the validity of the Commission's action or of the amount of the assessment." It also stated: "United Broadcasting recognizes that it has various avenues of appeal and challenge open to it. However, it is felt that payment of the fine, without admission of culpability, in the long run will save both the licensee and the Commission extensive amounts of time and money" (United Ex. 91, Attachment F).

Black Book Contest

39. The *Black Book Contest* instructed listeners to provide the station with their names and telephone numbers and those of three friends. Station personnel were to telephone names from those provided and, if the person called was then listening to WOOK(FM), the listener and the individual who had provided the listener's name would win a prize. The prizes to be awarded were not described.[12] The announcements indicated that winners would qualify to win in any WOOK(FM) contest conducted in 1978, when, according to the broadcast announcements relative to *Thousand Dollar Dial Contest*, that information was false (District Ex. 20).

40. The *Black Book Contest* was designed by William Parris, a United employee then serving as a programming consultant for WOOK(FM) (Tr. 3593–3594, 3609). He had experience in the design of broadcast contests (United Ex. 28; Tr. 3583). In the fall of 1977, he submitted a description of *Black Book Contest* to counsel for United who reviewed it primarily to determine whether any lottery was involved (Tr. 3634–3636; United Ex. 91, p. 1).

Thousand Dollar Dial Contest

41. The announcements broadcast for the *Thousand Dollar Dial Contest* stated that the station would telephone persons and if the person called was then listening he/she would win $1,000. One announcement repeatedly stated that calls would be placed to listeners in the Washington area, while United, in a letter to the

---

[12] WOOK(FM) said that winners were told what the prize was when they were called.

FCC, said that contestants were chosen from District of Columbia and Maryland telephone directories. Thus listeners in the Virginia suburbs of Washington could not participate.

42. *Thousand Dollar Dial Contest* was designed by United employee Parris (Tr. 3608–3609). He testified that it was his idea to use the Washington Metro Telephone Directory, although he does not know why WOOK(FM) staff used anything but the single directory captioned "Washington Metro Telephone Directory" (Tr. 3622–3623). United's Exhibit 93 contains copies of the covers of Washington, D. C. telephone directories from May 1976, May 1977, May 1978, and May 1979; each bears the legend "Washington Metropolitan Area." Whether the books contain Virginia numbers does not appear. United witness Parris testified that books with that legend contained Virginia numbers in the early 1970s (Tr. 3625).

The WOOK(AM) and WFAB(AM) Renewal Proceedings

43. The issue requires inquiry into the effect of the findings and conclusions by the Commission in two cases involving the failure to renew two United related licenses. That order also imposes the rule of collateral estoppel which bars the relitigation of "the questions surrounding (United's) operation of" WOOK(AM) and WFAB(AM). In that circumstance it is unnecessary to set out here much of what the Commission said in those cases. In order, however, to put in perspective mitigation efforts by United, the delinquencies found to exist by the Commission in United's operations of those stations will be briefly stated.

44. In the WFAB case[13] the Commission concluded that during the period January 1971-May 1972:

> . . . a violation of Section 73.1205 of our Rules had occurred because the licensee had failed to exercise reasonable diligence to see that its employees did not issue documents containing false information or misreprenting the nature or content of advertising broadcast on the station. We determined that the billing practices of WFAB's local management directly facilitated a fraudulent scheme perpetrated by a local retail appliance dealer, and that these practices of the local WFAB management were the direct result of the licensee's abandonment of control and supervision with respect to station billing practices.

The WFAB license was not renewed.

45. In the WOOK(AM) case,[14] the renewal application was denied because United was found unqualified. That conclusion was based on findings: (a) that various ministers used WOOK to broadcast offers of scripture citations which were really numbers game tips in return for donations; (b) that ministers used WOOK to broadcast offers of "roots," "baths," etc. with promises of financial

---

[13] *United Broadcasting Co. of Florida, Inc.*, 55 FCC 2d 832; reconsideration denied 60 FCC 2d 816.

[14] *United Television Co., Inc.*, 55 FCC 2d 416.

blessings and solutions to personal problems which were false and misleading and that United failed to take reasonable measures to prevent such use of its facilities; (c) that in spite of having notice from the Federal Trade Commission that it was investigating the veracity of the advertisements of Empeco, a WOOK advertiser, United failed to conduct any inquiry respecting the ads; (d) that "advertising carried for Richard Eaton's book . . . did not conform to guidelines established by the Federal Trade Commission for determining the regular selling price for items offered at discount"; (e) that United repeatedly violated Commission technical rules for which a $7,500 forfeiture was assessed. Even so "in reliance on representations that its future operations would be in compliance with the technical rules, United's license was renewed, [citation omitted]. Notwithstanding the forfeiture and its representations, the violations continued. A subsequent inspection on September 3, 1969, disclosed 19 violations of the Commission's rules [fn. omitted]." The Commission further found: "that United's past representations were of no value, that no reliance can be placed on its present promises of future compliance, and that there are no mitigating factors."

Evidence Offered by United in Mitigation

46. In the mid-1970s Richard Eaton began delegating some of his authority to a number of persons. Gerald Hroblak, assistant controller of United until 1972, became controller in 1972, a director in 1974, and secretary in 1976. William Parris, who was in charge of United's Baltimore stations, was made national program director in 1978. In October 1977, Gary Gross was hired as director of operations to develop and implement policies and procedures for United stations relative to compliance with Commission rules and policies. Gross makes regular visits to all of United stations and maintains contact with station personnel. United retained Arent, Fox, Kintner, Plotkin and Kahn (Arent Fox) as its communications counsel in December 1976. They consulted with United's headquarters personnel; station personnel were encouraged to confer with them if questions arose about which an attorney's advice might be helpful. In 1977 or early 1978, United's consulting engineers began to make unannounced periodic technical inspections of its various stations.

47. In 1973 United established a central billing procedure whereby the bills to advertisers on all United stations were issued by a headquarters office. The bills were based on station logs which showed advertisements actually run (United Ex. 79, pp. 7–10). In the late-1970s United began an educational program respecting the elements of a lottery directed to its various station employees. This was conducted by attorneys retained by United and by the United employee Gross. In addition Gross has provided written and oral direction to the local stations (*id.*, p. 10). In 1978 Gross and Arent Fox began developing and implementing procedures relative to

contests. The procedures were issued in writing in August 1978 and require that a station which wants to run a contest submit detailed information thereon to Gross or to counsel. If the contest proposal survives review it is required to be run without script changes. Employees may be, and have been reprimanded or temporarily suspended for failure to comply with these policies (*id.*, pp. 11–14). Gross and counsel are also available to local station personnel to answer inquiries respecting advertising (*id.*, pp. 15–16). Though it is not clear when the policy was adopted, United prohibits the receipt by an employee of anything of value in connection with the broadcast of any matter. Employees are required to sign an affidavit each quarter that they have complied with the policy. Visits to stations by record promoters are carefully controlled and logged. Gifts of records in excess of those needed for broadcast are not accepted (*id.*, pp. 16–17). United management persons holding first-class radio-telephone licenses check the stations for technical compliance and offer instruction (*id.*, pp. 17–18).

District Broadcasting Company

48. District is a corporation organized for the purpose of seeking the FM license here considered. It has authorized issuing 20,000 shares of stock to the following individuals, all of whom are Black; they hold the specified corporate offices and directorships:

> R. Kenneth Mundy, president, director 25% subscriber; Ridgely C. Bennett, vice president, director, 25% subscriber; Herman F. Stamps, secretary, director, 25% subscriber; Francis L. Smith, treasurer, director, 25% subscriber.

49. District's application contains a provision for a standby generator to serve as a source of power during an emergency so as to maintain broadcast service (District Ex. 1, p. 1). Neither District nor any of its officers, directors or shareholders have any ownership interest in any medium of mass communication (District Ex. 2, p. 7; Ex. 3, p. 2; Ex. 4, p. 3; Ex. 5, p. 2).

Biographies and Proposals of District Shareholders

Herman F. Stamps

50. Dr. Stamps was born in Washington, D. C., on January 20, 1924. He has resided in the District all of his life except for the time he served in the Army and some time spent in school. He graduated from Howard University with a Bachelor of Science degree in 1945 and from the College of Dentistry in 1948. Except for the period 1956–1965, Dr. Stamps has taught dentistry at Howard. He has also held various administrative positions in the College of Dentistry and has been coordinator: facilities, systems and planning since 1970 (District Ex. 2, p. 1). Stamps is also self-employed as a practicing dentist in the District of Columbia (Tr. 973; District Ex. 2, p. 1).

51. Stamps has been active in District of Columbia civic affairs;

he has been committee chairman, Armstrong Neighborhood Federal Credit Union, 1960; committee chairman, officer and director, Washington Urban League, 1957–1966; director, "We Salute" Youth Enrichment Program, 1963–1970; committee chairman, Health and Welfare Council, 1967–1969. He was a candidate for Board of Education, Washington, D.C., in 1967 (District Ex. 2, pp. 4–5).

52. If District is successful in this proceeding, Stamps will become its full-time (40 hours) station managing director. He will devote no more than six hours each week to consultant services, will no longer maintain a private dental office, and will resign his current full-time position as coordinator: facilities, systems and planning at Howard University (District Ex. 2, pp. 1–5).

53. When the District application was filed it showed no staff position for Stamps (Tr. 981) nor did it propose any other District principal for involvement in the day-to-day management of the station (Tr. 1132–1133). The applicant's proposed positions did not include a managing director (Tr. 1257–1259). On March 14, 1979 District filed an amendment which indicated that Stamps would be full-time managing director (Tr. 1008–1010). Sometime after September 1, 1978 District counsel advised the group that Hispanic had filed its application and that it contained an integration proposal. District's counsel discussed with District principals the standards pursuant to which the Commission decides comparative renewal cases and explained the Commission's integration criterion (Tr. 1130–1133, 1230–1242). A decision that Stamps would be managing director was made at a meeting which District's counsel attended; he was "overjoyed" at the idea (Tr. 1089). The group knew that Stamps' involvement would be a plus for their application (Tr. 1247–1248). When the District amendment reflecting Stamps' role as managing director was filed the District group "had not gone into detail on the exact functions of the Managing Director and did not fully discuss the functions of Dr. Stamps until early 1981" (Tr. 1216, 1252).

54. District indicates Stamps' functions will be: "(1) to direct the formulation, interpretation, and communication of corporate policies and objectives; (2) to develop and maintain a sound plan of organization and provide for management development which will assure the continuing effective management of the company; (3) to direct [District's] long-range strategic planning and determine in conjunction with the Board of Directors the allocation of corporate resources in a manner which will provide maximum public service and optimum long-term return on investment for stockholders; (4) to be the Chief Executive Officer and Financial Officer of [District]; (5) to prepare and submit to the Board of Directors recommended budgets; (6) to act as [District's] principal spokesman and liaison with the community and groups the station will be serving; (7) to be responsible for directing continuing ascertainment of the needs and interests of the communities served by [District's] station; (8) to

approve and sign, subject to the approval of the Board of Directors, agreements with employee groups and labor unions; (9) to approve personnel policies" (District Ex. 2, p. 6; Tr. 1022–1023).

55. District's staff proposal includes a general manager. However, as the managing director, Stamps will take over a number of administrative duties which one might assume would otherwise have been handled by the general manager, e.g., personnel, physical plant, budgeting, and liaison with the board (Tr. 1033–1036, 1149–1150, 1162–1168, 1218, 1221, 1258–1259). Prior to the time Stamps was proposed as the managing director, it was the general manager who would have performed these functions (Tr. 1150–1151). The general manager will report to Stamps (Tr. 1036).

56. Since 1970 Stamps has been the coordinator: facilities, systems and planning for the Howard University College of Dentistry (District Ex. 2, p. 1). He testified that his responsibilities included assuring compliance with Occupational Safety and Health Administration (OSHA) regulations (Tr. 977–979). OSHA inspected the Howard University College of Dentistry between August 31, 1978 and September 7, 1978 (United Ex. 70). As a result of that inspection, OSHA alleged that the college had committed more than 60 OSHA violations (United Ex. 70; Tr. 1048). Stamps said that the OSHA allegations were not matters which fell under his specific control as his duties as coordinator were those of a clearinghouse (Tr. 1058–1059).

Ridgely C. Bennett

57. Dr. Bennett has resided in the District of Columbia since 1950. He graduated from Howard University Medical School in 1955 and has been licensed to practice medicine in the District of Columbia since 1956. Dr. Bennett is a member of four District hospital staffs. He holds a teaching appointment at Georgetown University Medical School and has taught at Uniformed Services University School of Medicine in Bethesda, Maryland (District Ex. 3, p. 1). Dr. Bennett is a medical officer for the Food and Drug Administration and maintains an active private practice with offices in the District. He belongs to professional societies and several alumni and civic groups. In the event that District's application is granted, Bennett will serve on District's program board. He will devote four hours each week in preparing for and participating in the meetings of the board (District Ex. 3, pp. 1–2).

R. Kenneth Mundy

58. Mr. Mundy received a Bachelor of Law Degree in 1957. He has been in private law practice in the District of Columbia since 1965. He was employed as an attorney for the Federal Communications Commission from 1957–1965 (District Ex. 4, p. 1).

59. Mr. Mundy has served as: member of various bar related

committees; member, American Civil Liberties Union; member, board of directors, Merriweather Home for Children; member, board of directors and of the executive committee, Citizens Communications Center; attend as delegate/member World Peace Through Law; and member of various professional groups (District Ex. 4, pp. 1–3). In the event that District's application is granted, Mundy will serve as a member of District's program board. He will devote four hours each week in preparing for and participating in meetings of the board (District Ex. 4, p. 3).

Francis L. Smith

60. Dr. Smith has been a life-long resident of the District of Columbia. He graduated from Howard University Medical School in 1950. Smith has been employed since 1975 as a medical officer and then as chief medical officer of the District of Columbia Department of Corrections and has had an active practice in the District of Columbia in orthopedic surgery since 1957. Smith was a founder of the Independence Federal Savings and Loan Association in Washington, D.C., and has served as a director of that association since 1968. He is a member of the Washington, D.C. Chapter of the NAACP, of the Urban League, and the YMCA. He is also a member of various professional societies. In the event that District's application is granted, Smith will serve as a member of District's program board. He will devote four hours each week in preparing for and participating in meetings of the board (District Ex. 5, pp. 1–3).

Hispanic Broadcasting Corporation

61. Hispanic is a corporation formed for the purpose of filing the application under consideration. It has authorized issuance of 300 shares of stock. The stock subscribers, officers, and directors of Hispanic, all of whom are Hispanic, are:

> Angel S. Roubin, chairman, director, 80% subscriber; Fernando Casillas, treasurer, director, 5% subscriber;[15] Michael A. Erice, secretary, director, 4% subscriber; L. Miranda King, president, director, 3% subscriber; Arturo Valle, vice president, director, 5% subscriber; Adelina Pena Callahan, assistant treasurer, director, 1.3% subscriber; and Raquel Marquez Frankel, assistant secretary, director, 1.7% subscriber.

62. If the Hispanic application is granted, the corporation

---

[15] On January 15, 1981 Hispanic tendered an amendment to its application representing that Fernando Casillas had resigned as officer and director and was no longer a stockholder. For purposes of the comparative issue, Casillas is considered to retain the positions he held with the corporation as of May 2, 1979 (Tr. 1461–1464). In an amendment tendered on June 25, 1981, Hispanic represented that Arturo Valle had replaced Casillas as treasurer and that his stock interests had been acquired by L. Miranda King, Adelina Pena Callahan, and Raquel Marquez Frankel. These latter individuals now are subscribers to 15 shares (5%), 9 shares (3%), and 9 shares (3%), respectively.

intends to employ a general manager with experience in the operation of Spanish-language broadcasting stations and a staff of Spanish-speaking professionals to operate the station. The board of directors will establish policies. The president will have the primary responsibility for directing the staff on a day-to-day basis, and she will devote a minimum of one hour per day at this task. A programming committee consisting of Miranda, Roubin, Frankel, and Erice will review the programming of the station and implement changes and modifications to it. A financial committee composed of Miranda, Roubin, Erice, Callahan, and Valle will supervise the financial operation of the station (Hispanic Ex. 4, p. 13).

Angel Roubin

63. Angel Roubin was born on January 15, 1935 in Ponte Vedra, Spain. The first language he learned was Spanish. On August 20, 1951 he came to the United States and worked thereafter in construction. In 1962 he and a cousin formed a company which contracts stone construction work nationwide and does general construction in the Washington area (Hispanic Ex. 3, pp. 1–2). Roubin is a founder of the Hemisphere National Bank of Washington, D.C., and is a stockholder, a member of the executive committee, and vice chairman of its board of directors. He is also a member of the board of directors of the Greater Washington Ibero-American Chamber of Commerce of Washington, D.C. He has been president and a member of the board of the Hispanic American Contractors Association. He lives in McLean, Virginia, and has resided continuously in the Washington area since 1962 (Hispanic Ex. 3, p. 2). Roubin has no interest in any medium of mass communications (Hispanic Ex. 3, p. 4).

Lourdes Raquel Miranda (King)

64. Lourdes Raquel Miranda was born September 20, 1938 in Puerto Rico and is of Spanish descent. Spanish was the language she first learned. After graduation from high school in Puerto Rico, she entered the University of California at Los Angeles, where she received a Bachelor of Arts degree in 1959. She also has a Master of Arts degree in Spanish Language and Literature. She has lived in Washington, D.C. since 1966 except for parts of the period 1969–1971. Miranda was a founder, president, and director of the National Conference of Puerto Rican Women, an organization devoted to the equal rights of Puerto Rican women in the United States (Hispanic Ex. 4, p. 4). She organized and led the First Hispanic Community Conference, sponsored by the Montgomery County, Maryland, public schools and served as a consultant on Hispanic culture for Montgomery County and Prince George's Counties, Maryland, public schools. She was also chairperson of the Montgomery County Public Schools' Hispanic Task Force which advised the schools on programs related

to Spanish-speaking students. She has also been a frequent speaker and panelist on questions of interest to the Spanish community and on various social questions and has been a consultant on a variety of social problems. In 1975 Miranda founded an educational and social research consulting firm. She founded and is president of the Association for Cross Cultural Education and Social Studies, Inc. (ACCESS), a private educational, nonprofit organization which particularly focuses on the concerns of women, minorities, the aged, the handicapped, and the socially and economically disadvantaged (Hispanic Ex. 4, p. 7). Her civic activities include membership on the board of directors of a number of business, social, educational, and communications organizations.

Michael A. Erice

65. Erice was born on December 22, 1922 in Cuba, the son of Cuban nationals. The first language he learned was Spanish (Hispanic Ex. 5, p. 1). On January 15, 1948 he and his wife came to the United States as permanent residents. For much of the time since 1954 he has been employed in news related occupations. He has also had an ownership interest in and managed a theater in Washington, D.C., which showed Spanish, Mexican, Argentinean, Arabian, and Chinese films. Since 1971 Erice has been a health and life insurance underwriter (Hispanic Ex. 5, pp. 4-5). He has been a member of various journalistic related organizations and other Hispanic related and business related organizations. He now lives in Falls Church, Virginia, and has been a resident of the Washington area on a continuous basis since 1959 (Hispanic Ex. 5, p. 5). He will devote at least one hour of each day to the supervision of the proposed station's local sales efforts. He will be a member of the financial and programming committees of the board of directors of Hispanic and proposes to spend from three to five hours each month on the work of each of these two committees (Hispanic Ex. 5, pp. 6–7). Erice does not own or have any interest in or connection with any existing media of mass communications.

Arturo Valle

66. Arturo Valle was born in Guatemala on April 6, 1928. His parents were natives of Guatemala. The first language he learned was Spanish. In September 1947 Valle came to the United States. He became a U.S. citizen in 1953 (Hispanic Ex. 6, p. 1). Together with a partner he founded a travel agency in 1958 which existed until 1961, when he established his own travel agency which he now owns and operates. Valle resides in the Adams-Morgan section of Washington, D.C., and has resided in the Washington area continuously since 1951. He has been a member of a Washington, D.C. chapter of the Lions Club since 1961. In 1977 he was appointed to the Latino Community Development Commission by Mayor Walter Washing-

ton. In 1977 he became a founding member of the executive board of the Greater Washington Ibero-American Chamber of Commerce. From 1975 to 1977 he was a member of Inter-American Businessmen's Association of Washington, D.C. He is also a member of several professional organizations. If Hispanic's application is granted, Valle will become a member of the financial committee of the board of directors and devote a minimum of five hours per month to the work of this committee. He does not own or have any interest in or connection with any existing media of mass communications (Hispanic Ex. 6, p. 4).

Raquel Marquez Frankel

67. Raquel Marquez Frankel was born on May 14, 1923 in El Paso, Texas, the daughter of Mexican immigrants to the United States. She graduated from St. Joseph's College, Albuquerque, New Mexico, received a Master's degree in social work from Loyola University, and has done graduate work in group therapy and physco-drama at the Psychiatric Institute Foundation of Washington, D.C., at the University of Maryland, and at the Institute for Policy Studies (Hispanic Ex. 7, p. 1). In 1962 Frankel moved to Washington, D.C., where she became a probation officer for the juvenile court system. From 1964 to 1966 she was a consultant for the United States Department of State, Alliance for Progress (Hispanic Ex. 7, pp. 2-3). She is now the Washington representative for *Nuestra* magazine. She lives in the northwest section of Washington, D.C., and has resided in the Washington area continuously since 1961 (Hispanic Ex. 7, p. 4). She has engaged in numerous civic activities, many of which have been involved with the Hispanic community. Frankel will spend a minimum of five hours per month on the work of the programming committee of the board of directors for the proposed station. She does not own or have any interest in or connection with any existing media of mass communications. At the time of the hearing, Frankel's husband had an interest in a corporation which held a construction permit for an unbuilt television station in Delaware. However, that corporation has since informed the Commission that it does not desire to construct the station.

Adelina Pena Callahan

68. Adelina Pena Callahan was born on January 12, 1935 in Washington, D.C. She has lived all of her life in Washington and attended Maryland and Georgetown Universities where she studied history and languages. In 1962 she and her husband opened a restaurant in Washington which they sold in January 1981. In September 1976 they purchased a second restaurant which she now helps manage. She has agreed to serve on Hispanic's financial committee of the board of directors and will devote at least five hours

per month to the work of this committee. She does not own or have any interest in or connection with any existing media of mass communications (Hispanic Ex. 8, pp. 1-4).

The Reporting Issue Concerning Hispanic

69. The issue was added on the basis of an allegation by United that then Hispanic stockholder Fernando Casillas had been found guilty of the commission of a crime, but that paragraph 8(d) of Section II of Hispanic's application indicated that none of its principals had been found guilty by any court of any felony or other crime (Hispanic Ex. 11, p. 2).

70. In the early summer of 1978 Casillas and the other principals of Hispanic received from their counsel a questionaire which included the following question:

> 4. Have you or any firm you have been associated with ever been found guilty by any court or administrative body of (1) any felony, (2) any crime, not a felony, involving moral turpitude . . . (Hispanic Ex. 10, pp. 1-2).[18]

71. Casillas contacted his attorney, a Mr. Brennan who had represented him in a criminal investigation, and asked if a plea of guilty he had entered in that investigation should be reported in answer to the question (Hispanic Ex. 9, p. 3). Brennan informed Casillas that the court's acceptance of his plea of guilty did not amount to a conviction of either a felony or a lesser crime involving moral turpitude and Casillas could truthfully answer this question "no" (Hispanic Ex. 12, pp. 3–4).

72. During 1975 and 1976 the Office of the United States Attorney for the District of Columbia conducted an investigation into contracts for printing between various government agencies and several local printing businesses including Casillas Press principally owned by Fernando Casillas. Casillas cooperated with the government in its investigations (Hispanic Ex. 9, p. 2; Ex. 12, p. 1) and on Brennan's advice, pled guilty to a violation of 18 U.S.C. 209(a), which, defines as a crime the payment to a government employee of money in exchange for services. This is a misdemeanor. Casillas completed the questionnaire given him by Hispanic counsel and answered the question concerning criminal convictions "no" (Hispanic Ex. 9, pp. 3–4; Tr. 1666–1667, 1669, 1681, 1684–1685).

73. The Hispanic application contained the answer "no" to question 8(d) of Section II which asked if "the applicant or any party to this application [had] been found guilty by any court of (1) any felony or other crime . . . ." The application was signed by Hispanic principal Lourdes Miranda. At the time she placed her signature on the application, she believed that the answer to the question was

---

[18] The language following the number (1) tracks Form 301 as it was several years ago.

true and was not then aware that Casillas had been charged with or convicted of any crime (Hispanic Ex. 10, p. 2). Until United filed its petition to enlarge issues in this proceeding neither counsel for the applicant nor any of its principals was aware of the Casillas conviction (Hispanic Ex. 10, p. 3; Tr. 1791, 1922, 1978, 2015, 2064; United Ex. 83, pp. 25, 41; District Ex. 21, p. 12; Hispanic Ex. 9, pp. 3–4).

74. Miranda testified that Hispanic relied upon counsel to prepare the application. She had never seen counsel's forms completed by the other principals. Counsel was responsible for distributing, collecting, and ensuring the accuracy of these forms. She did not read the application carefully prior to signing it. She did not compare the counsel's forms with the questions of Form 301 (Tr. 2432–2434, 2437–2438, 2461). Michael Erice testified that "in the final analysis," counsel was responsible for the accuracy of information provided (Tr. 2072–2073).

The Washington Area Hispanic Community and Its Needs and Problems

75. Washington, D.C., Montgomery and Prince George's Counties in Maryland, Arlington, Fairfax, and Prince William Counties in Virginia, and the cities of Alexandria, Fairfax, and Falls Church in Virginia contain 91,216 people of "Spanish origin" according to the 1980 U.S. Census (Hispanic Ex. 3, p. 3; Ex. 25, p. 4; Ex. 26, pp. 4–5, 7–8). Hispanic's proposal would provide primary service to all of these people except for 164 persons of Spanish origin residing in Prince William County, Virginia and to 2,000 or more Hispanics who live beyond these areas (Hispanic Ex. 31, p. 2).

76. The census indicates that the Hispanic population of the city of Washington grew from 2% of the population in 1970 (15,108) to 2.8% of the population (17,652) in 1980. Surveys of Hispanics in the Maryland counties taken shortly before the census indicates that there were between 26,000 and 29,000 Hispanics in Montgomery County versus the 22,790 indicated by the census and about 22,000 Hispanics in Prince George's County versus the 14,421 counted by the census (Hispanic Ex. 22, p. 5; Ex. 27, p. 5; Ex. 23, p. 2).

77. The 1980 Census demonstrates a growth in the Hispanic population of the Washington area which lost in total population over the past decade. In addition to growth in Washington and the Maryland suburbs, the Hispanic population in the Virginia portion of the Washington SMSA increased from 1.6% to 3.4% of the population, a growth greater than that of the total population.

78. the educational backgrounds of Washington area Hispanics vary from the illiterate recent immigrant to the well educated and their socio-economic positions are similarly varied (Hispanic Ex. 17, pp. 1–2). Of the 18,000 persons provided service by the Spanish Catholic Center during 1980, many are from Central American

countries and are political refugees. Many are functionally illiterate, even in Spanish. Without English they remain at the lowest economic level (Hispanic Ex. 16, pp. 2–3; Tr. 2618–2619, 2397). These immigrants tend to be young adults with large families. For every funeral provided by the Catholic Church, 50 baptisms are performed (Hispanic Ex. 28, pp. 2–3; Ex. 19, p. 3; Ex. 16, p. 2). Hispanics in the Washington area tend to move from the District of Columbia to the suburbs as their economic situation improves. Slightly more than 20% of the Hispanics in the two Maryland counties moved there from the District of Columbia (Tr. 2872, 3743–3744; Hispanic Ex. 22, p. 38; Ex. 23, p. 37).

79. The foremost common trait of the population is the use of the Spanish language which is the overwhelming language of choice in the home and socially. About 90% of Hispanics in the Maryland counties spoke Spanish in the home and more than 60% spoke no English at all in the home although all Hispanics surveyed spoke some English. An overwhelming majority of Hispanics desire bilingual education (Hispanic Ex. 16, pp. 1–2; Ex. 17, pp. 4, 7; Ex. 22, pp. 21, 29, 39; Ex. 23, pp. 7, 13, 19, 39, 61; Ex. 28, p. 3; Tr. 2403, 2406–2407, 2410).

80. Father O'Malley estimates that about 25% of Hispanics in the city have no knowledge of spoken or written English and that about 50% have no knowledge of written English. Ms. Gillespie of the D.C. Office of Latino Affairs has observed similar deficiencies among Hispanics in the Adams-Morgan area of the city. Dr. Zayas of the D.C. Schools stated that these estimates are true throughout the Washington area for the most recent Hispanic immigrants (Hispanic Ex. 28, p. 3; Ex. 16, p. 2; Tr. 2403). About half of Montgomery and Prince George's Hispanics have problems in the English language. Hispanics perceive that lack of English proficiency is their most serious problem. Maryland demographic studies demonstrated a high direct correlation between English language proficiency and average income (Hispanic Ex. 22, pp. 31, 60, 64; Ex. 23, pp. 22, 39, 60, 69, 72).

81. The average annual income for Hispanic households in Montgomery County in 1980 was $14,754 as against the 1976 median annual income for all Montgomery County households of $27,850 (Hispanic Ex. 22, pp. 57–58; Ex. 23, p. 50). At the time of the Maryland surveys, 12.1% of the Hispanics in Montgomery County were unemployed versus 5% of the general population. In Prince George's County, 16% of Hispanics were unemployed versus 4% of the general population (Hispanic Ex. 22, pp. 44–45; Ex. 23, pp. 47–48). The median educational attainment of adult Hispanics in the two counties is approximately ten years. In Washington the average educational level attained by adult Hispanics is eight years and fewer than one in four Hispanics has the equivalent of a high school education. However, 37% of Montgomery Hispanics and 25% of

Prince George's Hispanics have completed more than one year of college. About 80% of Montgomery Hispanics received the major part of their education in other countries, while the figure was almost 90% for Hispanics in Prince George's County (Hispanic Ex. 19, p. 2; Ex. 22, p. 41; Ex. 23, p. 43).

82. Many Hispanics are not aware of social services which exist and many are unaware of the availability of medical and dental programs (Hispanic Ex. 19, p. 3). The Maryland studies showed that over 75% of the Hispanics in Prince George's County were unaware of rent assistance programs. Over 70% of Hispanics believed that there was a need for much improved dissemination to Hispanics of information on county programs (Hispanic Ex. 23, p. 67).

The Existing Mass Media's Efforts to Serve the Hispanic Population

83. The English language media provides poor coverage of subjects about which Hispanics desire to have information. While events in Spain and Latin America receive attention, reports on these events are cast in terms of their effect on the interests of the United States. Other developments concerning the economic, political, social and cultural life of Hispanic countries are rarely covered (Hispanic Ex. 17, pp. 7–8; Ex. 13, p. 9). Hispanics do not follow the English language media to the extent the rest of the population does (Hispanic Ex. 13, pp. 2, 6; Ex. 15, p. 5).

84. There are a substantial number of Hispanics who are functionally illiterate in Spanish. The Spanish Catholic Center publishes a monthly or sometimes bi-monthly newspaper, *El Pregono*, which carries items of interest to the Hispanic community, but it has a very limited circulation. There is also a commercially produced monthly newspaper, *Latino*. A weekly Spanish language paper *Hispano* was published for a short period of time but failed because it carried very little local news and instead concentrated on national and international events of interest to Hispanics (Hispanic Ex. 16, p. 2; Ex. 28, p. 5; Tr. 2922–2923). Two or three Spanish language papers ceased publication over the past few years. The locally published Spanish language media lacked the resources to cover the entire community and since they were not published on a daily basis, they were unable to provide Hispanics with current information (Hispanic Ex. 13, p. 4; Tr. 2234, 2236, 2258).

The Spanish Language Programming of Existing Broadcast Stations

85. Several television stations within the Washington area broadcast occasional Spanish language programming:

(a) WRC-TV broadcasts a bilingual (English/Spanish) public affairs program each Saturday morning at 7:00 a.m. and a one half hour public affairs Spanish language program, *Latin Tempo*, on each Sunday at 8:00 a.m. (Hispanic Ex. 13, p. 1; Ex. 30, p. 10).

(b) WHMM (EdTV) broadcasts *Carrascolendas* a Spanish language half hour educational network cultural program for Hispanic youth on Friday at 4:00 p.m. and *Mundo Real* a half hour network produced bilingual dramatic program broadcast Monday through Friday at 4:30 p.m. (Hispanic Ex. 30, p. 21).

(c) WETA-TV (EdTV) broadcast these Spanish language programs during the week of June 22–29, 1981: *Villa Alegre*, a bilingual half hour network produced program broadcast each Monday through Friday at 5:30 p.m. to educate Spanish youth in human relations, the environment, nutrition, energy, and man-made objects; *Mundo Real* (see preceding paragraph); *Presente*, a half hour news and entertainment program broadcast on Saturday at 2:30 p.m.; *Pochtlan*, a 30-minute weekly network produced program to teach English to Spanish speaking adults broadcast each Saturday at 2:00 p.m. During Hispanic Heritage Week, the station has broadcast four to five hours of Spanish language, network produced or syndicated programming covering Hispanic culture and arts (Hispanic Ex. 30, pp. 25–31).

(d) WJLA-TV broadcasts *Revista*, a local Spanish language public affairs/news program of one half hour length on Sundays at 2:30 p.m. and Fridays at 6:30 a.m. (Hispanic Ex. 30, pp. 13–14).

(e) WTTG-TV broadcasts a locally produced 30-minute Spanish language public affairs program at 2:00 p.m. on the last Friday of each month (Hispanic Ex. 16, p. 1; Tr. 2392).

(f) WDVM-TV broadcasts *Prisma*, a locally produced 30-minute Spanish language public affairs program each Saturday at 2:00 p.m. (Hispanic Ex. 30, p. 33).

(g) WDCA-TV has broadcast Spanish language public service announcements in the past (Hispanic Ex. 30, p. 37).

86. Several area radio stations broadcast occasional Spanish language programming. These stations and a description of that programming are:

(a) WPFW-FM broadcasts one Spanish language program, *Salsa de las Americas*, news and music from Central and South America on Sundays from 3:00 p.m.—6:00 p.m. (Hispanic Ex. 30, p. 72; Ex. 28, pp. 4–5).[17]

(b) WFAX (daytime only) broadcasts two 15-minute recorded religious programs in the Spanish language each Saturday from 2:15 p.m.—2:45 p.m. (Hispanic Ex. 30, p. 111).

(c) WJMD broadcasts public service announcements in Spanish (Hispanic Ex. 30, p. 176).

(d) WHUR broadcasts a Spanish language program, *The Latin Flavor*, on

---

[17] This station also broadcasts several English language programs designed to appeal to the Hispanic community. These programs are:

Voces Puentes, a call-in format program broadcast on Wednesdays at 1:30 p.m.; *Centro Americanas*, an English language news and information program concerning Central America broadcast at 2:30 p.m. on Wednesdays; *Caribbeana*, a news and music program broadcast in the English language on Saturdays from 2:00 p.m.—6:00 p.m.; and *Caribbean Roots*, an English language information and music program broadcast on Mondays from 5:00 a.m.—7:00 a.m. (Hispanic Ex. 30, p. 72).

Saturdays from 5:00 p.m. to 7:00 p.m. The program is predominantly music, but the host usually interviews a guest for about 10 minutes (Tr. 2665–2666; Hispanic Ex. 28, pp. 4–5).[18]

(e) WGTS broadcasts *Houra Latina*, a 1-hour Spanish language program each Monday through Thursday at 8:00 p.m. The program is locally produced and deals primarily with public service topics but includes some entertainment (Tr. 2696–2697; Hispanic Ex. 25, p. 4). It also broadcast *Domingo Radio Latina*, a 1-hour Spanish language religious program broadcast at 8:00 p.m. on Sundays.

87. There are two other communications services in the Washington area which provide Spanish language programming:

(a) Los Cerezos Tele-Vision Company operates a "Full-Time Experimental Television Translator" station on television channel 56 providing 24-hour Spanish language programming originating from studios in San Antonio, Texas. These programs include sports, entertainment, international and national news, talk and variety, children's programs and religion. Local programming is not provided. The signal is directed toward the Adams-Morgan section of D.C. (Hispanic Ex. 30, pp. 207–209, 212–214; Tr. 2309).

(b) Combined Community Communications, Inc. operates a Spanish language service delivered over-the-air on the subcarrier FM multiplex facilities of WOOK(FM) and can be received only by subscribers who pay for a special receiver (United Ex. 78, p. 3; Ex. 88, p. 1).

The Spanish Language Radio Programming Proposed by Station WMDO, Wheaton, Maryland

88. On July 6, 1981 an application was filed for permission to assign the license of daytime only AM radio station WDON, Wheaton, Maryland, to Maryland Lotus Corporation. Maryland Lotus Corporation represented that all its programming would be broadcast in the Spanish language. Included would be five minutes of local, national, and regional news, each hour, seven days a week. Also proposed were two public service announcements each hour for local service, charitable and public spirited groups. The application proposed the broadcast of public affairs programs each Sunday morning from sign-on until 9:00 a.m. and three times per day "during prime listening hours" Monday through Friday (United Ex. 85, p. 1). On September 24, 1981 the Commission granted its consent to the assignment. The new licensee has changed its call sign to WMDO and has indicated that it will broadcast a Spanish-language entertainment and information format designed for all Spanish-speaking persons, including Blacks (United/District Joint Ex. 2, pp. 2–3).

89. WMDO is authorized to use 1 kW of power between sunrise and two hours thereafter and between two hours before sunset and

---

[18] This station also broadcasts some English language programming designed to serve the Hispanic audience. It has a correspondent in Mexico who files reports from Latin America broadcast in the station's news programs at least three times per week (Tr. 2669). The station has broadcast public affairs programs dealing with subjects of interest to Hispanics (Tr. 2670).

sunset and 5 kW at other times. During those hours in which the station operates with 5 kW of power, it provides a primary signal to 96.4% of the District of Columbia, an unstated but lesser portion of Arlington County, Virginia, and substantial portions of Montgomery and Prince George's Counties, Maryland. When the station operates with 1 kW of power, it provides primary service to 61% of the District of Columbia, no portion of Virginia, and a reduced area of Montgomery and Prince George's Counties, Maryland (United/District Joint Ex. 1, pp. 1–2).

Hispanic's Proposal to Serve the Washington Area Hispanic Community

90. Hispanic proposes to operate its station from 5:00 a.m. to 2:30 a.m. Monday through Saturday and from 6:00 a.m. to 1:00 a.m. on Sundays for a total of 148 hours per week (Hispanic Ex. 13, App. A, p. 1). Hispanic's station will provide primary service to the areas and populations in the following table:

County or City	*Total Population Served*	*Persons of Spanish Origin Served*
Arlington, Va.	152,599	8,863
Fairfax, Va.	596,901	19,535
Fairfax City, Va.	191,390	379
Alexandria City, Va.	103,217	4,042
Falls Church City, Va.	9,515	315
Loudoun, Va.	22,328	168
Fauquier, Va.	3,909	28
Prince William, Va.	137,467	3,108
Washington, D.C.	637,651	17,652
Montgomery, Md.	571,053	22,737
Prince George's, Md.	664,023	14,416
Howard, Md.	34,433	588
Anne Arundel, Md.	31,543	603
Charles, Md.	51,756	998
Totals	3,035,785	93,432

91. The specific programs Hispanic will broadcast are (Hispanic Ex. 13, App. A, pp. 2–6):[19]

> *News* — Five-minute newscasts will be broadcast ten times daily Monday - Saturday. At 6:30 a.m. the applicant will broadcast a 30-minute program half of which will be news, an editorial and sports, and half will be devoted to a listing of community events. At 12:00 noon and 6:00 p.m. a 30-minute news and editorial program will be broadcast. At 6:30 p.m. there will be presented a [illegible]0-minute program on international news. At 11:00 p.m. the applicant will broadcast a 15-minute summary of the day's events. On Sunday from 11:00 a.m. until 1:00 p.m. the applicant will broadcast a program based upon a Spanish translation of the news and features appearing in the Sunday editions of Washington newspapers.

---

[19] This programming was developed after taking an ascertainment survey and receiving expert professional advice (Hispanic Ex. 17).

Public Affairs — Hispanic will devote $8^{1}/_{2}$ hours per week to public affairs including programs on local Hispanic problems, organizations, senior citizens, women, youth, questions raised on an open-line program, and citizenship.

Instructional — Hispanic will devote $5^{1}/_{4}$ hours per week to English language instruction, including everyday English.

Cultural — Hispanic will offer 1 hour per week on local cultural matters, 1 hour on Latin American cultural matters, and a 2-hour concert of classical music by living Hispanic artists.

Minority Ownership of Broadcast Facilities in the Washington, D.C. Area

92. Arbitron defines the Washington, D.C. radio market as the District of Columbia, Montgomery, Prince George's, and Charles Counties in Maryland, and Fairfax, Loudon, and Prince William Counties in Virginia (United Ex. 76, pp. 2–3). In an effort to determine the number of stations owned or controlled by minorities in this area, the applicants requested each of the radio and television stations, a transmitter television station and an FM subsidiary communications service in that area to respond to a questionnaire (Hispanic Ex. 30). While all did not respond, those who did provided the information that follows (tabulated in Hispanic's proposed findings at pp. 126–129).

93. None of the five commercial television stations licensed to the Washington area is controlled by minorities. Of the three noncommercial stations licensed to the area one is controlled by Blacks and another has both Blacks (15%) and Hispanics (2%) represented on its governing board (Hispanic Ex. 30).

94. Of the 13 commercial radio stations licensed to Washington, D.C., WYCB, a full-time AM station, is 72.88% Black owned (*id.*, p. 40); WHUR, a commercial FM station licensed to Howard University, has a governing board 70% of which is Black (*id.*, p. 17); station WOL, a full-time AM station, is 100% Black owned (*id.*, p. 75). WGAY(FM) is 50% Hispanic owned (*id.*, pp. 199–205). Three of the stations indicated that they did not know whether 10% or more of their licensee corporations were owned by Blacks or Hispanics (*id.*, pp. 60, 65, 99). All of the remaining stations indicated that 10% or more of their stock was not owned by Blacks or Hispanics.

95. Of the four noncommercial radio stations licensed to Washington, D.C., WDCU, licensed to the University of the District of Columbia, was not in operation and did not respond to the Questionnaire (*id.*, p. 4). WPFW-FM is 16% Black controlled (*id.*, p. 70); WETA-FM is 15% Black, 2% Hispanic controlled (*id.*, pp. 94, 24); WAMU-FM, licensed to American University, indicated that 10% or more of its governing board was not comprised of Blacks or Hispanics (id., p. 104).

96. Blacks do not own 10% or more of the stock of any of the radio stations licensed to communities in the Maryland or Virginia

suburbs of Washington, nor do Blacks represent more than 10% of the board of directors of any such station. Station WGAY(AM), Silver Spring, Maryland, is 50% owned by a Hispanic (*id.*, pp. 199–200, 204).

Conclusions of Law

United's Past Broadcast Record

97. United's license for the station now known as WOOK(FM) has not been renewed since 1966. It filed applications in 1969, 1972, 1975, and 1978 which were not considered in any designation order by the Commission prior to the order released September 30, 1980 (81 FCC 2d 227). That order refers to the "above captioned application of United . . . for renewal of its license." Neither the caption of the referenced application nor the balance of the designation order describes any specific application. United is of the view that the only license period relevant to this proceeding is that for the latest renewal period, 1975–1978. That view has been rejected in this proceeding (Tr. 467–476) and a similar view expressed by an United subsidiary in a related proceeding has lately been rejected by the Review Board (*Intercontinental Radio, Inc.*, 90 FCC 2d 935). Because of its position and because of its alleged difficulties in locating evidence relating to programming in earlier periods, United offered no direct case respecting its pre-1975 broadcast record (United proposed findings, para. 55). As a result, evidence of United's performance during the time it was a Hispanic-oriented station is meager. District offered the renewal applications filed in 1969, 1972, and 1975 and some oral testimony relating to these periods; there is some information which was developed on cross-examination of United witnesses as well as those for Hispanic.

98. The composite weeks shown in the 1969, 1972, and 1975 renewal applications indicate that the percentage of time devoted to news during those periods was 8.2%, 7.48%, and 16%, respectively. There is nothing specific in the record to which these percentages may be compared but United did offer some Arbitron information (United Ex. 76) derived from 1978 applications. This includes percentages of time devoted to news in the Washington Metropolitan Area by 35 radio stations during the 1975–1978 composite years. Measured against those percentages, United's station would rank 11th for the 1969 composite year, 15th for the 1972 composite year, and 4th for the 1975 composite year. This is a good showing but it is diminished because during this period the station had almost no news staff and broadcast little local news.

99. The same comparison may be made with respect to all nonentertainment programming. The composite week shown in the 1969 application would have placed United 3rd from the bottom of the 35 stations for which information was available, the 1972

composite week would have placed United 7th from the bottom, and the 1975 composite week would put United in a tie for last place.

100. A number of the witnesses for Hispanic were themselves Hispanic and were knowledgeable about the Hispanic community. They testified that during the time that the station was broadcasting with a Hispanic format they listened to the station; that most of the Hispanics in the area looked to the station for entertainment, news and information; that at sometime during the 1967–1968 period there was a weekly 15-minute Hispanic news program; and that the loss of this Spanish-language programming was a considerable loss to the Washington area Hispanic community.

101. As indicated above, United's direct case focused on the period following the changeover in 1976 to a Black format. At sometime following the format change and prior to mid-1978, the news capability for the station was dramatically improved. There were then three full-time persons on the news staff including one who worked in the field daily covering local events. The Arbitron comparisons which appear in United's Exhibit 76, indicate that the 1978 renewal application composite weeks put WOOK(FM) in 10th place among metro area stations with respect to the percentage of time devoted to news and in 16th place in percentage of broadcast time devoted to nonentertainment programming. The April 1978 program audit done by United put WOOK(FM) in 7th place among area broadcasters in percentage of time devoted to news and in 12th place in percentage of time devoted to overall nonentertainment programming.

102. United also showed some community involvement, mostly in the 1977–1978 period, and provided information from a large group of community witnesses with backgrounds in community service which indicated that WOOK(FM) with its present format reaches a large number of the Black community with valuable news and information services.

103. An issue in this case requires consideration of the effect of the Commission's failure to renew United licenses for WOOK(AM) and WFAB on its qualifications to retain the WOOK(FM) license. The basic and comparative significance of those matters will be discussed subsequently, but it is noted in connection with the evidence regarding the WOOK(FM) past record that the designation order respecting the WOOK(AM) license was released June 13, 1969 (*United Television Co., Inc.*, 18 FCC 2d 363) and the designation order respecting WFAB was released January 2, 1973 (38 FCC 2d 956); the Commission decision denying renewal of the WOOK(AM) license was released on September 12, 1975 and the Commission decision denying renewal for the WFAB license was released on September 30 of the same year. Evidence respecting licensee improvements taking place after the filing of a competing application has been

traditionally deemed valueless as showing only the reaction of a station to the fear of the nonrenewal of its license. See, for example, *RKO General, Inc.*, 35 FCC 2d 100. Under that theory the evidence with respect to United broadcast practices after the WOOK(AM) and WFAB decisions must be accorded only diminished weight.

Matters Relating to the WOOK(AM) and WFAB Renewals, Notice of Apparent Liability, and Matters in Mitigation

104. Since collateral estoppel rules bar relitigation of questions raised in the WOOK(AM) and WFAB matters, the principal questions remaining relate to material offered in mitigation and the death of Richard Eaton.

105. District argues (proposed findings p. 71) that improvements made after an alleged violation has been designated may not be considered in mitigation, citing *The Trustees of the University of Pennsylvania*, 69 FCC 2d 1394. United argues that the rule should not apply to a multiple owner because conduct found to be disqualifying at one station would automatically disqualify all other commonly owned stations, a course obviously not followed by the Commission. United's position does not necessarily follow, but in this multiple license situation, matters done to mitigate wrongdoing at another station will be considered relevant to the question of the renewability of the WOOK(FM) license because the wrongdoing at other stations [WOOK(AM) and WFAB] must, under the Commission's direction, be considered here. The question then becomes one of the weight to be given the evidence offered in mitigation. One matter offered in mitigation was that in 1973 United switched to a procedure whereby all bills for advertising are submitted by a central office and are based on station logs showing advertising that actually ran. This change followed designation by the Commission of the WFAB renewal on charges of double billing. Similarly, United's practice of checking its stations for technical compliance came after sharp criticism of its technical performance in WOOK(AM). While it cannot be said that every improvement by United with respect to control of its stations was begun as a result of a specific Commission criticism, it is true that most of United's concern with its local operations did not come until after scathing criticism of its indifference to or inability to control its stations. The mitigating effort, principally in the late 1970s, came only when United knew its licenses were in jeopardy.

106. The rule violations considered with respect to the Notice of Apparent Liability are principally significant in that they indicate a continuing failure by United to clean up its operations as late as 1977 and early 1978. These violations militate against the mitigating

effect of the United effort to improve which had begun at least a year earlier.[20]

107. The Commission's *Memorandum Opinion and Order* released April 30, 1981 (86 FCC 2d 452), which added the WOOK(AM) and WFAB issue, anticipated that there might be an involuntary transfer of control caused by Mr. Eaton's illness. If so, the order said, there would still be "a serious question . . . about the soundness and reliability of the licensee's operations, and thus, about United's basic qualifications." That order was written before Mr. Eaton died; the question posed remains.

108. United argues that "to the extent that [WOOK(AM) and WFAB] incidents reflect poorly on United's operations, it must be emphasized both that the incidents occurred during the time when United was absolutely controlled by Richard Eaton, and that the Commission itself attributed the incidents, directly or indirectly, to him. Richard Eaton is dead, and control of United has passed to a new and different generation of broadcasters. Richard Eaton represented the old United, the United founded and controlled by the efforts of a single broadcast pioneer. In the years since the WOOK(AM) and WFAB(AM) misconduct, a new United has gradually developed as Richard Eaton's health forced him to delegate some of his responsibilities. The new United has adopted stringent operating procedures to prevent the mistakes of the past from recurring and to guard against any mistakes in the future" (United proposed findings, p. 246). United has also argued: "A final point needs to be emphasized here. DBC [District] seeks to de-emphasize the importance of the death of Richard Eaton [citations omitted]. In doing so, DBC blinds itself to the fact that Richard Eaton was the only common thread connecting the WOOK(AM) and WFAB(AM) proceedings. He was, after all, United." It says further, "the fact that he died after this proceeding was underway does not relieve the Commission of the responsibility of assessing the full impact of his death on United's qualifications. That impact must be significant, since it removes the last vestigial connection between the old United which lost WOOK(AM) and WFAB(AM), and the new United, which has enjoyed a virtually unblemished record at WOOK(FM) for ten years" (United reply findings, pp. 25–26).

109. As pointed out by the Bureau and District (and by United in para. 7 of its reply findings), there are connections between the "new" United and United as it existed at the time of the WFAB and WOOK(AM) offenses. Pierre Eaton was a director of the WFAB licensee and is now a director of United. E. Carlton Myers, Jr. was the station general manager of WOOK(AM) and is now a vice president of United as well as general manager of station

---

[20] These violations are not disqualifying conduct—considered alone or as part of all relevant information.

WOOK(FM). Clifton D. Holland was a program director and vice president of WOOK(AM); he is currently a vice president of United and public affairs director of WOOK(FM). Gerald J. Hroblak was assistant controller of United prior to 1972 and in that year became controller; he is now chairman, president, and treasurer of United and actively takes part in WOOK(FM) management.

110. United did not offer evidence that Richard Eaton was the sole decision maker with respect to the stations and was therefore responsible for the WFAB, WOOK(AM), and WOOK(FM) problems. This may have been because the hearing began March 16, 1981, before Mr. Eaton's death on June 1, 1981. In any event United cannot now rely on what might have been the fact but which it did not prove.

111. Notwithstanding all that, Richard Eaton was the sole stockholder, president, chairman of the board, and active in the management of United during his lifetime. Those factors, together with the implications of the Commission's *Memorandum Opinion and Order* in *Friendly Broadcasting Company*, released June 17, 1982 (90 FCC 2d 225)[21] preclude a holding that where the sole stockholder of a multiple licensee dies, disqualifying conduct during his lifetime at one station disqualifies the company as licensee at another station. The effect of the death of Mr. Eaton on the comparative aspects of this case is another matter.

United's Comparative Case

112. The Commission's policy with respect to the post designation death of a sole owner is different in the comparative process than it is in the qualifying process. Traditionally, the death of a sole owner and the resulting involuntary transfer of his stock may not be used to change the comparative situation that existed prior to designation. See *Rose Broadcasting Company*, 68 FCC 2d 1242; *Mid-Florida Television Corporation*, 69 FCC 2d 607. Thus the death of Richard Eaton may not be used to upgrade United's comparative case.

113. In *Cowles Broadcasting, Inc.*, 86 FCC 2d 993 (1981), the

---

[21] Friendly, an United subsidiary wholly owned by Richard Eaton at his death, was licensee of two stations in Cleveland. In a noncomparative proceeding the stations' renewal licenses had been denied by an ALJ because of disqualifying conduct at one of the stations and at WFAB (FCC 77D-7). After Eaton died, the Commission terminated the proceeding without consideration of the qualifying matters. "Commission policy has been to afford relief to a licensee in a renewal proceeding after the death of the licensee's principal, even where the deceased was implicated in prior misconduct at the station, provided that there is no evidence indicating that the misconduct is likely to recur. The death of the sole proprietor of a station obviates the administrative need for an evidentiary hearing. Where there is no evidence that the improper practices would recur under the new management, the Commission will terminate a proceeding and allow the decedent's interest to pass to his estate [citation omitted]."

Commission indicated that a comparative renewal process must consider that an existing licensee is entitled to a comparative preference if its past record was substantial or better but is entitled to no preference if its past record was minimal. It is clear that past records are to be weighed in the general comparative process. See *Central Florida Enterprises, Inc.* v. *F.C.C.*, 683 F.2d 503 (1982).

114. With respect to its past record, United is entitled to a plus for the amount of time devoted to news during the years it was a Spanish-language station. It is entitled to a plus for the service that the Hispanic witnesses testified it gave to the Hispanic community. Against those two pluses is weighed a minus for the poor record that the station had for local news coverage and a minus for its poor showing in regard to the amount of time it devoted to nonentertainment programming other than news. For the years during which United was a Spanish-language station, on balance, its performance was minimal. United's performance after it adopted a Black format would be considered substantial if that performance had come at a time before United had fears for its licenses. The credit given United for those years is therefore diminished. United reaps a substantial demerit for its unwillingness or inability to control local stations WFAB and WOOK(AM). Matters shown in mitigation are somewhat discounted by their motivation. The forfeiture matter regarding WOOK(FM) is a negative but of minor significance. The total record is no better than minimal.

115. With respect to diversification, United must be given a demerit for its interest in other broadcast stations, particularly those in Rockville and Baltimore, Maryland. United claims no integration credit and on the basis of the record is entitled to none.

Hispanic's Reporting Issue

116. There is no question that Mr. Casillas' conviction was not reported and that it should have been. United and District would expand this failure by Hispanic's principals into a general inquiry into whether Hispanic kept control of its application though there is no such issue. The only matter to be decided is the specific failure mentioned. The Hispanic principals left the checking of personal histories to the Hispanic attorney. The mis-reporting was a result of an out-of-date reporting form and some advice by the personal attorney of the principal involved respecting the classification of the crime to which Casillas pled guilty. The Hispanic principals were derelict in their duty to supervise in only a very minor way and that minor failing is decisionally insignificant.

Hispanic Programming Proposal

117. Hispanic has expanded its argument that its programming proposal entitles it to a comparative preference into the following claim: "The combination of minority ownership, Spanish language

programming and overwhelming need for that programming demonstrated by the record in this proceeding requires a grant of its application without the necessity of a full comparison under the traditional comparative criteria." (See Hispanic reply findings para. 38.) Hispanic claims credit as a minority owned applicant notwithstanding the fact that District is also minority owned because there are several Black owned broadcast stations in the area but few Hispanic owned stations. The Commission has recognized minority ownership in the comparative process through the integration of ownership and management criteria and has not granted separate preferences for minority ownership standing alone (*WPIX, Inc.*, 68 FCC 2d 381, 411).

118. Events have overtaken Hispanic's programming proposal. At the time the inquiry was authorized, there was no station in the metropolitan area which specialized in Spanish-language programming and it was questionable whether the programming that then existed was "meaningful" as that term has been used in the recent cases. Two cases, *Flint Family Radio, Inc.*, 69 FCC 2d 38, and *George E. Cameron Jr. Communications*, 71 FCC 2d 460, have defined a new approach to specialized programming purposes. In *Flint* the Review Board refused to grant a preference as between proposed religious and proposed Black programming. "This is not to say that a preference in this area can never be earned, but rather that unless an applicant proposing a specialized program format can first establish that the type of programming it proposes (*e.g.*, Black-oriented, religious, foreign language, etc.) is not already available from existing stations in any meaningful amount, we see no satisfactory objective means of accessing the need for additional amounts of programming and making a comparison between competing claims of greater need. Our refusal to accord either [applicant] a preference for its specialized programming format is not a marked departure from the results reached in earlier decisions. In *La Fiesta Broadcasting Co.*, 6 FCC 2d 65, 9 RR 2d 295 (Rev. Bd. 1966), the significant preference granted to the applicant proposing Spanish language programming was based upon the absence of any locally originated Spanish language programming."

119. WMDO has begun broadcasting from Wheaton in the Spanish language from sunrise to sunset. During the first two hours after sunrise and the last two hours before sunset it is limited to 1 kW of power and may broadcast with 5 kW of power at other times. During the times it can broadcast at 5 kW it provides a primary signal to almost all of the District, parts of Arlington County, Virginia, and substantial portions of Montgomery and Prince George's Counties, Maryland. When the station operates at 1 kW it provides primary service to 61% of the District, none to Virginia, and to a lesser portion of Montgomery and Prince George's Counties. The broadcasting includes Spanish-language entertainment and

local, regional, and national news. It also provides for public affairs programming during the early hours on Sunday and three times a day during prime hours Monday through Friday. Whatever the situation with respect to the Spanish-language broadcasting now provided by other stations, it must be concluded that under the *Flint Family Radio* test, there is meaningful Spanish-language broadcasting in the area and that Hispanic is entitled to no programming preference.

120. With respect to diversification, the husband of Raquel Marquez Frankel owned an interest in a corporation which had a construction permit for a television station in Delaware. That interest is decisionally insignificant. No other Hispanic principal has any interest in any medium of mass communications.

121. Hispanic makes no claim for integration credit; its proposal includes only minimum participation by its principals. Since none of the participation approaches 20 hours per week, under the *Midwest Broadcasting Company,*; 70 FCC 2d 1489, test, it can be given no quantitative integration credit.

District Broadcasting

122. There are no special issues directed specifically to District. While it proposes to broadcast a Black format it has claimed no credit for its proposed programming. Neither District nor any of its principals have any interest in any medium of mass communications. All of District's principals are Black and each will own 25% of District. All except Herman F. Stamps propose to devote four hours a week to District programming board and so are entitled to no quantitative integration credit though the District proposal is enhanced in a minor way by reason of their participation and the fact that each is Black.

123. It is proposed that Herman F. Stamps will devote 40 hours a week as the station's full-time managing director; he is to be the executive in charge of broad management and company planning under the direction of the board of directors. The question of credit to be given for Stamps' participation is the only one needing resolution with regard to the District proposal.

124. United (and Hispanic by adoption) argues that the Stamps integration proposal should not be considered because it came late, because Stamps' track record as an administrator at Howard is marred as well as overstated, and because District and Stamps are insincere in the proposal.

125. Stamps' participation as managing director was contained in a District amendment filed March 14, 1979. The designation order was released September 30, 1980. District had a right to amend the application at the time it did and to upgrade its comparative proposal under the rules. See *Alexander S. Klein, Jr.*, 86 FCC 2d 423, 431.

126. United argued in effect that the OSHA violations charged against Howard University at the time that Stamps coordinated OSHA compliance indicate that his attitude toward regulation is questionable and that his willingness to claim responsibility in his role at Howard while disclaiming responsibility for specific violations, manifests insincerity. There is no issue with respect to OSHA violations and the record is skimpy as to what happened. There is not enough shown to prove a cavalier attitude toward regulation in general. The double attitude charged to Stamps by United reveals nothing more than a commonly observed tendency of most humans to emphasize their strengths and minimize their weaknesses. This obviously can be done to a fault but that is not the case here.

127. On the facts shown, it cannot be concluded that Stamps will not work full time at specified management duties if District's application is granted. The fact that he has no experience in the broadcast field does not lessen the integration credit which attaches to full-time employment by an owner [*Webster-Baker Broadcasting Company*, 88 FCC 2d 944 (Rev. Bd. 1981)].

128. United argues that it is unfair to deny it the opportunity to show as part of its broadcast record events which occurred after competing applications were filed while allowing District to amend its application to improve its comparative posture. Any renewal applicant is as free as any nonrenewal applicant to amend its proposal at any appropriate time in order to improve any aspect of its comparative showing except past broadcast record. Had Hispanic or District been licensees at other stations, their past broadcast records would have been examined under the same conditions as was United's.

129. District has no demerit for diversification and is entitled to 25% integration credit for participation by Dr. Stamps. It has a minor preference for its standby generator.

Ultimate Conclusions

130. It is concluded that United is basically qualified to be granted a renewal of its license for WOOK(FM). United is comparatively less qualified than either Hispanic or District because of its minimal past broadcast record, its lack of integration credit, and its relatively inferior position respecting diversification. Hispanic and District rank equally respecting diversification but District has a 25% integration credit and Hispanic has no integration credit. District has a minor credtit for its proposed emergency power supply and Hispanic is entitled to no preference for its programming proposal. Of the three applicants, District is, from a comparative point of view, best qualified.

Accordingly, IT IS ORDERED that unless an appeal from this Initial Decision is taken by a party or the Commission reviews this Initial Decision on its own motion in accordance with Section 1.276

of the rules, the application of United Broadcasting Company, Inc., for renewal of its license to operate an FM station on channel 262, Washington, D.C., IS DENIED; the application of Hispanic Broadcasting Corporation for a construction permit for a new FM station to operate on channel 262, Washington, D.C., IS DENIED; and the application of District Broadcasting Company for a construction permit for a new FM station to operate on channel 262, Washington, D.C., IS GRANTED.[22]

MEMORANDUM OPINION AND ORDER

(Adopted: July 12, 1983; Released: July 15, 1983)

BY THE REVIEW BOARD: BOARD MEMBER JACOBS ABSENT.

1. On July 5, as supplemented on July 11, 1983, the applicants in this case filed a joint request for approval of agreement proposing

the grant of the Whitco application for a new UHF construction permit in Hollywood, Florida, and the dismissal of the other applications. We will grant the joint request because it complies with the new requirements of the Communications Act and the Commission's Rules.

2. In an Initial Decision, FCC 83D-24, released April 12, 1983 (I.D.), Administrative Law Judge Conlin granted Whitco Broadcaster's application because 100% of its ownership would participate full time in the operation of the station and because "it is entirely minority owned," citing *Waters Broadcasting Corp.*, 91 FCC 2d 1260, 52 RR 2d 1063 (1982). I.D., para. 56. The parties have not filed exceptions; instead they have entered into an agreement and made the showing required by Section 311(c)(3)(a) and (b) of the Communications Act. *See Berkshire Television, Inc.*, FCC 83R-30, released Arpil 21, 1983, and cases cited therein.

3. Affidavits have been submitted by the parties showing that the dismissing applications were filed in good faith to obtain a grant and not to harass any other applicants and coerce a payment contrary to the requirements of new Section 311(c)(3)(b). They have also shown that the public and private interests would be served by approval of the agreement because it would conserve the resources of the Commission and the parties, and would expedite the institution of new service. *See* Section 311(c)(3)(a).

4. On May 12, 1983, the National Association of Business and Educational Radio, Inc. (NABER) filed comments requesting that a grant in this case be made subject to a specific condition that broadcast operation will comply with Section 73.687(i)(1) of the Commission's Rules. Thereafter, on May 27, 1983, the Mass Media Bureau filed a motion to dismiss NABER's comments on the grounds that only parties to a proceeding are permitted to file pleadings after an Initial Decision.

5. We agree with the parties that NABER's comments are unauthorized under our Rules. *See* Section 1.276(a). They will therefore be dismissed. Nonetheless, the Review Board has previously held, following Commission precedent, that such a condition is appropriate; we will, therefore, *sua sponte*, add a condition to the award of the construction permit. *See Washington's Christian Television Outreach, Inc.*, FCC 83R-23, released March 28, 1983.

6. ACCORDINGLY, IT IS ORDERED, That the motion to dismiss comments of the National Association of Business and Educational Radio, Inc., filed by the Mass Media Bureau on May 27, 1983 IS GRANTED to the extent indicated above; and that the comments filed by the National Association of Business and Educational Radio, Inc., on May 12, 1983 ARE DISMISSED; and

7. IT IS FURTHER ORDERED, That the joint request for approval of agreement filed July 5, and supplemented July 11, 1983, IS GRANTED; that the application of Whitco Broadcasters, Inc., IS

GRANTED; and that the applications of Family Television 69, Inc.; Golden East Broadcasters, Inc., and Christian Media of Florida, Inc., ARE DISMISSED; and that this proceeding IS TERMINATED; and

8. IT IS FURTHER ORDERED, That grant of the construction permit is conditioned on the permittee taking adequate measures to provide interference protection to land mobile services in the 460–470 MHz band *prior to program test authorization*. No automatic equipment or program test authority will be permitted. Prior to conducting equipment tests, the permittee shall gain Commission approval of its plan to prevent undue interference to land mobile services. The permittee will be required to file a request for program test authority along with the license application, and document that objectional interference will not be caused to land mobile services as a result of Channel 69 operation.

INITIAL DECISION OF ADMINISTRATIVE LAW JUDGE JOHN H. CONLIN

(Issued March 31, 1983; Released April 12, 1983)

Preliminary Statement

1. This proceeding involves four mutually exclusive applications for authority to construct a new commercial television broadcast station on Channel 69, Hollywood, Florida. The Hearing Designation Order released October 23, 1981 specified the following issues:

> 1. To determine with respect to Whitco Broadcasting [sic], Inc.:
>
> (a) whether applicant has an additional $855,265 available;

(b) whether, in light of the evidence adduced pursuant to (a), applicant is financially qualified.

2. To determine with respect to Golden East Broadcasters, Inc.:

(a) whether, applicant has an additional $342,438 available;

(b) whether, in light of the evidence adduced pursuant to (a), applicant is financially qualified.

3. To determine which of the proposals would, on a comparative basis, best serve the public interest.

4. To determine, in light of the evidence adduced pursuant to the foregoing issues, which of the applications should be granted.

2. By separate orders (FCC 82M-0059 and FCC 82M-0063) released January 8, 1982, the financial issues specified against Whitco Broadcasters, Inc. and Golden East Broadcasters, Inc. were resolved in favor of the applicants. Consequently, the hearing proceeded solely on the comparative issue. A prehearing conference was held on January 6, 1982 and the hearing was held on April 20–22, 1982. Proposed findings and conclusions were filed on August 9, 1982 and replies were submitted on August 30.

Findings of Fact

Whitco Broadcasters, Inc. (Whitco)

3. Whitco is a stock corporation organized under the laws of the State of Delaware and qualified to do business in the State of Florida. All of the stock is owned by two individuals: Thomas J. Coates and Eddie L. Whitehead, each of whom holds a 50% interest. Neither Coates nor Whitehead has any ownership interests in any medium of communications. Both men are black.

4. Each owns 50% of J-Pax Broadcasters, Inc. which has filed applications for TV translator stations in a number of cities throughout the country. All of these applications were subject to the low power freeze and at the time of the hearing had not been accepted for filing. The same is true of several other similar applications in which Whitehead but not Coates has an interest.

5. Coates is the president of Whitco and will serve as full-time (a minimum of 40 hours per week) general manager of the proposed station. His job will encompass all of the responsibilities normally associated with the position of general manager, including general responsibility for day-to-day programming decisions, establishment and supervision of personnel and general office practices, and coordination and supervision of all subordinate sections.

6. Coates currently is self-employed as president and 51% owner of Coates Construction and Development, Inc., an investment venture emphasizing investments in the construction field (Tr. 45–46). He also serves as a consultant to a Chicago bank. He is primarily involved in monitoring existing investments and seeking new

opportunities. The only project with which the company is now actively involved is in Louisville, Kentucky (Whitco Ex. 1). Coates intends to maintain control over the Louisville project by telephone and he estimates that maintaining his interest in Coates Construction will require a maximum of approximately 12 to 15 hours per week (Whitco Ex. 1; Tr. 71). Coates presently lives in Chicago but intends, in the event of a grant, to move to Hollywood and give priority to his managerial duties at the proposed station (Whitco Ex. 1; Tr. 53, 90–91).

7. Whitehead is vice president of Whitco and will become the station's full-time (40 hours per week) sales manager. He will be responsible for the operation of the sales staff generally, and he will be specifically responsible for the supervision and maintenance of the station's accounts, establishing rate schedules and directing sales research (Whitco Ex. 2).

8. Whitehead is self-employed as an investor, most of his investments being in real estate on the west coast where he now lives (Tr. 122–124). Whitehead will move to the Hollywood area if the application is granted and proposes to employ managers to oversee his properties in the west. He expects to spend about 15 hours per week monitoring those investments (Whitco Ex. 2).

Family Television 69, Inc. (Family)

9. Family is a Florida corporation currently comprised of eight stock subscribers, who are subscribers to the following shares of stock and who hold the following positions in the corporation:

Stock Subscriber	*No. of Shares*	*% of Shares*	*Office*
Adib Eden, Sr.	500 (950)	14.28 (27.13)	President, Director
Adib Eden, Jr.	0 (100)	0.00 (2.85)	Vice President, Director
Juan Sixto	500	14.28	None
Vicente Vadillo	150	4.28	None
Jose Concepcion	100	2.85	None
Interamerican Community Church, Inc.	800	22.85	None
Jose Luis Soto	500	14.28	None
Rafael Pena	400	11.42	None

As of the Commission's "B" cut-off, Adib Eden, Sr. had a 14.28% interest in Family and Adib Eden, Jr. had a 0% interest. The parenthetical figures referenced above reflect the actual current agreement among the subscribers of Family. Interamerican Community Church, Inc. is a nonprofit, nonstock corporation, comprised of five officers and directors, including Adib Eden, Sr. and Adib Eden, Jr.

10. Neither Family nor any of its officers, directors, subscribers, or officers or directors of its corporate subscriber have any ownership interest in any existing outlet of mass communications.

11. Of the above individuals, Adib Eden, Sr. will serve as general manager of the proposed Hollywood television station and will devote a minimum of 20 hours per week to this position. Adib Eden, Jr. will serve as operations manager and will devote a minimum of 40 hours per week to this position. Vicente Vadillo will serve as sales manager of the facility and will devote a minimum of 40 hours per week to this position. In addition, the board of directors will participate in the formulation of program policies for the applicant, meeting on a regular basis and devoting about 10 hours per week to the operations of the facility.

12. Adib Eden, Sr. resides in Hialeah, Florida. As general manager of the station proposed by Family, he would oversee and supervise all operations of the station. Eden is now pastor of La Catedral Del Pueblo Church, a position he will continue to hold if the application is granted. He is also president of Adib Eden Evangelistic-Missionary Society, a nonprofit corporation organized for the purpose of the ministry; senior minister of Interamerican Community Church of Hialeah; and head of the Childhood Development Center in Miami, a center established for child care.

13. Eden has considerable broadcast-related experience. He has produced television programming which is presented regularly over WKID(TV), Fort Lauderdale, including La Catedral Del Pueblo, a one-hour religious program that appears over WKID(TV) on Sunday afternoons from 3:00 p.m. until 4:00 p.m. In addition, Eden is responsible for the production of the program "Realidades" which appears over WQBA, Miami, Florida, on Sunday mornings from 8:00 a.m. until 8:30 a.m. He also serves as moderator for this program which has been broadcast for the last four years.

14. In the past he has produced such programs as "Voces de Inspiracion," "El Camino Infinito" and "La Catedral Del Pueblo." All of these programs are religious in nature and have appeared regularly over stations in the Miami area.

15. For purposes of resolution of the comparative issue in the instant proceeding, Adib Eden, Jr. serves as vice president of Family's proposed station. He will serve as operations manager of Family's proposed station, devoting a minimum of 40 hours per week to the discharge of his duties as such operations manager (Family Ex. 3). His cognizable ownership interest in Family is derivative, stemming from his interest in Interamerican Community Church, Inc., one of Family's stock subscribers. Eden, as one of five directors

for this nonstock corporation, will be credited with a 4.5% interest in Family.

16. Eden is now director of productions of Semae Productions where he personally directs and/or produces television programs to be aired over WKID(TV), Fort Lauderdale, Florida, as well as several special programs annually for presentation in foreign countries throughout the Caribbean area. Semae Productions is also engaged in the production of commercials and other promotional announcements. He has engaged in this endeavor since 1974.

17. Vicente Vadillo, subscriber to 4.28% of Family's stock, will serve as sales manager of Family's proposed station should Family be awarded a construction permit. A Miami resident, Vadillo will devote a minimum of 40 hours per week at the station in discharging his duties as sales manager. Vadillo is now a public accountant and operates an accounting firm with his son. If Family is awarded a construction permit, he will discontinue working at the accounting firm in order to work full time at the television facility.

Golden East Broadcasters, Inc. (Golden East)

18. Golden East was chartered by the State of Florida on September 3, 1980. The corporation is authorized to issue 1,000 shares of common stock; each share has one vote and a par value of $1.00. Fourteen shares of Golden East's common stock have been issued and are outstanding.

19. The following individuals are principals of Golden East and own shares to the extent indicated:

Stock Owner	*Office*	*No. of Shares*	*% of Shares*
Howard L. Green Northfield, New Jersey	President, Director	2	14.285
Simon Goldman Lakewood, New York	Vice President, Director	1	7.143
Marilyn Goldman Lakewood, New York	None	1	7.143
Joseph J. Jackler Fayetteville, New York	Treasurer, Director	2	14.285
Michael C. Steele Elmira, New York	Secretary, Director	2	14.285
Alfred C. Cordon Gaithersburg, Maryland	Vice President, Director	2	14.285
John B. Jacob Alexandria, Virginia	Vice President, Director	2	14.285
Donald M. Simmons Sayre, Pennsylvania	Vice President	2	14.285

20. Howard L. Green is a career broadcaster, having been involved in the industry since 1949, and having been involved in the ownership and management of broadcast stations since 1957. He currently is officer, director and 50% stockholder of the licensees of WENY(AM), WLEZ(FM) and WENY-TV, Elmira, New York; WOND(AM), Pleasantville, New Jersey; WMGM-FM, Atlantic City, New Jersey; and officer, director and 25% stockholder of the licensee of WAAT(TV), Wildwood, New Jersey. The licensee of WENY-TV is also permittee of television translator stations at Hornell and Ithaca, New York.

21. Simon Goldman has managed broadcast stations since 1936, and has owned them since 1955. He is officer, director and 80% stockholder of James Broadcasting Company, Inc., licensee of WJTN(AM) and WWSE(FM), Jamestown, New York; 100% owner of the licensee of WLKK(AM) and WLVU(FM), Erie, Pennsylvania; 79% owner of Vermont Radio, Inc., licensee of WVMT(AM), Burlington, Vermont, WSYB(AM) and WRUT-FM, Rutland, Vermont; and permittee of MDS station WFY-943, Rutland, Vermont.

22. Marilyn Goldman is the wife of Simon Goldman and is 0.76% stockholder in James Broadcasting Company, Inc.

23. Joseph J. Jackler is an accountant in Syracuse, New York. He is an officer and director of the licensee of stations WOND(AM), Pleasantville, New Jersey, and WMGM-FM, Atlantic City, New Jersey.

24. Alfred C. Cordon, Gaithersburg, Maryland, is a communications attorney, having continuously practiced in the field since 1952.

25. John B. Jacob, Alexandria, Virginia, is a communications attorney, having continuously practiced in the field since 1952.

26. Michael C. Steele is a career broadcaster and has participated in the management of broadcast stations since 1962. Steele is 6.53% owner of the parent corporation of the licensee of KWEB(AM) and KRCH-FM, Rochester, Minnesota. He is currently general manager of WENY(AM), WLEZ(FM) and WENY-TV, Elmira, New York.

27. Donald M. Simmons, Sayre, Pennsylvania, is a businessman and broadcaster, having participated in the ownership of broadcast stations since 1957. He is currently officer, director and 50% stockholder in the licensees of WENY(AM), WLEZ(FM) and WENY-TV, Elmira, New York, WOND(AM), Pleasantville, New Jersey, and WMGM-FM, Atlantic City, New Jersey. He is also an officer, director and 25% stockholder in the licensee of WAAT-TV, Wildwood, New Jersey, as well as a 25% stockholder of Ocean City Sentinel-Ledger, Inc., publisher of the Ocean City, New Jersey *Sentinel-Ledger*.

28. None of these individuals plans to participate in the day-to-day operation of the station.

Christian Media of Florida, Inc. (Christian)

29. Christian is a nonprofit, nonstock corporation organized under the laws of Florida. The business and affairs of the corporation are managed under the direction of its board of directors. Christian has reported the following officers and directors:

Name	*Office*	*Director*
Arthur L. Shell, Jr.	President	Yes
John Alessi	Secretary, Treasurer	Yes
Selwyn Scott	None	Yes
Rose Marie Pagan	None	Yes
Palmira Reyes Lozada	None	Yes

30. Neither Christian nor any of its officers or directors have any ownership interest in or exercise any control over any medium of mass communications.

31. Reverend Shell will be general manager of the proposed station and has proposed to work full time in this position (Christian Ex. 4). He is presently pastor of Trinity Church, Inc. of Miami, which has more than 500 members, and is a resident of Miami. He is also a member of the Greater Miami Ministerial Association, a member of the board of directors of Teen Challenge of Florida, and a board member of Good Samaritans, Inc. Reverend Shell has indicated that he would continue to be pastor (Tr. 263) and has not indicated any intention to give up his other activities.

32. Reverend Shell's experience in broadcasting includes three years of television ministry on a weekly basis sponsored in Miami by the Trinity Church. In connection with the Greater Miami Ministerial Association, he has been given the assignment of rotating time on Channel 10 and also has been asked to present the daily devotions for Channel 7 in Miami. Since coming to Miami in 1977 he has become a member of the Greater Miami Ministerial Association. He is presently serving as a member of the board of directors of Teen Challenge of Florida, a drug and alcohol rehabilitation program for all races. This organization has established a home for men in Miami and one for women in Avon Park, Florida. He has been active with the Miami Rescue Mission and has assisted pastors of both Black and Spanish churches in securing finances with which to purchase or build churches. He is chairman of the committee working toward the construction of a major church for Spanish people in Little Havana (Dade County, Florida). This committee appointment is from the National Home Missions Board, General Council, Assemblies of God,

Springfield, Missouri headquarters. Both American and Spanish ministers are involved. He is a member of the board of directors of Good Samaritans, Inc., a newly formed nonprofit corporation. Its stated purpose is to furnish financial assistance and supplements to the income of persons and/or families whose primary source of income has been reduced as a result of a catastrophic terminal illness and/or permanent disability.

33. John Alessi will be sales manager of the proposed television station and will serve as Christian's secretary/treasurer. Reverend Alessi proposes to be employed full time at the station (40 hours per week) and described his work as assisting in the responsibilities of day-to-day decisions, supervision and direction of the operation of the station. In 1963 Reverend Alessi founded the "Grace Church of Kendall," where he is presently senior pastor (Christian Ex. 8, p. 3). In addition to his activities as senior pastor, Reverend Alessi is president of Givani Developers, Inc., a Florida corporation apparently involved in real estate and construction (*id.*). His present civic activities include serving as vice president of New Horizon's Ministries, a nonprofit organization dealing with children. He is also a member of the Greater Miami Fellowship of Churches, the Miami Ministerial Association and the National Association of Evangelicals. There is no evidence that Reverend Alessi will discontinue his involvement in these employment and other activities should Christian receive a grant in this proceeding. He is a resident of Miami.

34. Selwyn Scott, a resident of Opa-Locka, Florida,[1] is proposed to be the full-time station manager should Christian's application be granted. In that position he will be responsible for day-to-day decisions, supervision and direction of the operation of the station under the supervision of the general manager. Scott is currently the pastor of the Revival Tabernacle Church Assembly of God in Miami, Florida. This church is located in Miami and ministers primarily to black people of varied socio-economical backgrounds. As pastor he is involved in all areas of people's lives from marital counseling to court appearances. He also holds a license to preach with Peninsular Florida District of the Assemblies of God. In 1979 he obtained a Florida real estate license and is a member of the Hollywood and Miami board of realtors.

35. Rose Pagan, a resident of Miami, Florida, is proposed to be the full-time program director and coordinator of religious affairs at the station. She will be responsible for day-to-day decisions and for the supervision and direction of her department under the general manager. Ms. Pagan has been a resident of Miami since 1979. She is currently employed as a sales person for a surgical supply company.

36. Palmira Lozada, a resident of Miami, Florida, is proposed to

---

[1] Opa-Locka is in the immediate Hollywood area.

be the full-time director of community and minority affairs and news director of the station. She will be responsible for the supervision and proper presentation of programming involving the needs of the community. She moved to Miami in 1970 and became a school teacher in the Dade County school system. She later became involved in the field of real estate. She is currently employed by Eastern Airlines as a part-time control tower agent. Her status with Eastern is such that she can control her time and be able to put her time and effort toward the advancement of her duties for Christian. She has been for the past 12 years an active member of the Grace Church of Kendall, where she served as the secretary/treasurer for 11 years.

37. Both Ms. Lozada and Ms. Pagan are Hispanics.

Comparative Analysis

38. Golden East proposes no participation by its ownership in the day-to-day management of the station and most of its principals have ownership interests in numerous broadcast facilities. None of the other applicants and none of their principals hold any interests in existing media of communications. Family's full-time integration, in the persons of Eden, Jr. and Vadillo, amounts to 8.85%, with substantial part-time participation being provided by Eden, Sr., a 14.28% owner. On the other hand, Whitco and Christian propose full-time integration in station affairs by all of their principals. Clearly, then, the outcome of this case depends on which of these two applicants is to be preferred under the integration criterion.[2]

39. *Whitco*. Whitco is owned by two black males, Coates and Whitehead, each of whom holds 50% of its stock. Coates is president of the corporation and proposes to work full time as general manager of the proposed station. Whitehead is vice president and proposes to work full time as the station's sales manager. Neither man has broadcast experience and neither resides in the Hollywood area, although both intend to move there if their application is granted.

40. Their integration proposal has been challenged by the other applicants, largely on the ground that the existing business obligations of Coates and Whitehead (see paras. 6, 8, *supra*) would preclude them from fulfilling their commitments to the station. These contentions have been carefully considered, but on the basis of the evidence of record they must be rejected.

41. While Coates currently works 40–50 hours per week, he has testified that he would no longer serve as a consultant to Central National Bank in Chicago if the Hollywood application is granted (Tr. 86). Coates also explained why his involvement with Coates

---

[2] In reaching this judgment, note has been taken of Family's local residence, broadcast experience, civic participation and the fact that its owners are members of an ethnic minority. These attributes enhance its integration but come nowhere near compensating for the vast quantitative difference between its proposal and those of Whitco and Christian.

Construction and Development, Inc., of which he is the 51% owner, will not interfere with his proposed station activities. While Coates stated that "at this point" he does not presently intend to divest himself of Coates Construction (Tr. 47), he made it clear that the reason he could and would continue this association is that it would not interfere with his responsibilities at the station. Coates testified that he has no obligation to undertake any particular number of projects on behalf of Coates Construction or to work any particular number of hours for the construction company (Tr. 86), which is primarily an investment entity (Tr. 70–71) with no employees (Tr. 54). Much of the time he presently devotes to the company involves researching potential investments for the future, an activity he does not plan to continue once the Hollywood station becomes operational because the station itself would be his major investment (Tr. 70). As stated earlier (para. 6, *supra*), Coates testified that his commitment to Coates Construction would take no more than 12–15 hours per week after grant of Whitco's application.

42. With respect to the Louisville project, the only major project with which Coates Construction is currently involved, Coates' primary area of participation is in the development phase (Tr. 80, 85), which will be "long completed" by the time the station begins operation (Tr. 80). He also stated that based upon his prior experience, he is confident that he could do whatever else might be needed for Coates Construction over the telephone (Tr. 79–80). The leasing and ultimate management of the project would be the responsibility of Coates Construction's local Louisville associates (Tr. 85).

43. In addition to explaining why his existing responsibilities would not get in the way of his ability to effectuate his commitment to the station, Coates explicitly testified that in the event of a conflict "[t]he Hollywood station would take absolute priority" over all of his other matters (Tr. 90).

44. It is also asserted that Whitehead's west coast real estate investments make his proposed integration incapable of effectuation because he has not made specific plans to retain other individuals to manage his properties in the event the application is granted. However, Whitehead testified that he would contract out much of his management responsibilities if Whitco's application is granted and that he would thereby limit the time commitment to his investments to 15 hours per week. He has explored the cost effectiveness of contracting out oversight responsibilities and intends to contract out the units he personally manages to a property management firm in the event of a grant (Tr. 140–141). He also explained that even the 15 hours per week he would devote to his investments would not interfere with his station responsibilities because the three-hour time differential between his intended residence in Hollywood, Florida and California, where his investments are located, would

permit him to do much of his real estate related work in the evenings. Finally, Whitehead testified that his commitment to the Hollywood station would take priority over his other investments to the point that he would "think in terms of divesting [himself] of those other interests" if such interests conflicted with his duties at the station (Tr. 146).

45. In short, both Coates and Whitehead have shown that they can accommodate those portions of their present activities which they will continue with their full-time integration into the station's operations, and both have also testified that the station would be their most important priority. Thus, there is an entirely reasonable likelihood that they will be able to effectuate their integration proposals. See *Central Texas Broadcasting Co., Ltd.*, 90 F.C.C. 2d 583, 586 (Rev. Bd. 1982).

46. *Christian*. Christian is a nonstock corporation with five directors. Reverend Arthur Shell is the president and Reverend John Alessi is secretary-treasurer. Both are directors, as are Selwyn Scott, Rose Pagan and Palmira Lozada. All propose to work full time at the station, Shell as general manager, Alessi as sales manager, Scott as station manager, Pagan as program director and Lozada as director of news and community affairs. Scott is black and Pagan and Lozada Hispanic. All reside within the station's service area but none in Hollywood, the community of license. Shell has appeared frequently on radio and television broadcasts and his former church once sponsored daily radio programs.

47. The credibility of Christian's integration proposal has been attacked on several grounds: that the board of directors is apt to be impermanent; that Reverend Shell's church is actually the "owner" of the applicant; and that Christian has failed to show how the directors can devote full time to the station in view of their other activities.

48. The first argument rests on speculation. Reverend Shell testified that there was always a possibility that the board might be expanded or its membership altered (Tr. 239, 262, 267–268, 271); but there is nothing in the record demonstrating that changes are presently contemplated or would be likely to occur in the near future.

49. The claim that Trinity Church would be the real owner of the station is also rejected. The church has provided substantial financial support for the applicant, and its pastor, Reverend Shell, was the moving force in the formation of the applicant (Tr. 219–221, 223–226, 303–305). As president of the corporation and general manager of the station, he is likely to remain an influential figure in the organization. However, his testimony is to the effect that while the church is supportive of the endeavor, it is understood by all that the church

would have no ownership interest (Tr. 262, 275, 281). There is nothing in the record that would contradict this testimony.[3]

50. The contention that Christian has failed to demonstrate that its integration proposal can be effectuated is more troublesome. "It is well settled that for an applicant to receive credit for the station participation of principals with other time consuming interests, the applicant must demonstrate a reasonable likelihood that the proposals would be fully effectuated." *Central Texas Broadcasting Co., Ltd.*, *supra*. The above language and the cases cited by the Board in its decision[4] make it clear that this burden is upon the applicant.

51. As previously stated, all of Christian's directors propose to work full time at the station. The record shows that Reverends Shell, Alessi and Scott are pastors of church congregations in the Miami area. They are also active in numerous religious and social service organizations, and Reverends Alessi and Scott are involved in real estate and construction activities as well (paras. 31–34, *supra*). The applicant must therefore provide "some indication of how [these] other . . . interests will be eliminated, or curtailed"[5] so as to permit these principals to fulfill their commitments to the proposed station. The record is silent on this point. Reverend Shell stated that he would not be giving up his pastoral duties (Tr. 263), and there is no evidence that he or the others propose to curtail any of their current activities. There is also no evidence as to the amount of time tye presently devote to the interests and activities described in their testimony, but it would appear that they are living full and active lives. How they would arrange their affairs in order to devote full time to the proposed station is a matter that the applicant simply does not address on this record. In sum, the showing called for in *Central Texas*, *supra*, has not been made.[6]

52. Christian contends that because these individuals have submitted sworn testimony that they will work full time and since the other applicants chose not to cross-examine them on the matter, their testimony must be accepted. However, there is an inherent conflict in Christian's direct case, one that the applicant must

---

[3] Indeed, in light of a recent Review Board decision (*Las Misiones De Bejar Television Co.*, 93 F.C.C. 2d 191, FCC 83R-10, released February 11, 1983), it would appear that the absence of a specific issue on the question of ownership precludes consideration of this matter now.

[4] *Blancett Broadcasting Co.*, 17 F.C.C. 2d 227 (Rev. Bd. 1969); *Lewis Broadcasting Corp.*, 11 F.C.C. 2d 889 (Rev. Bd. 1968).

[5] *Blancett Broadcasting Co.*, *supra*, at 230.

[6] In contrast to the absence of record evidence in this case, the principal in *Central Texas* "testified on the number of hours he would devote to his outside business interests, i.e., 5 per week; he allocated an additional 10 to 20 hours to his work week to ensure that he can meet his commitment to the broadcast station and still engage in his other interests; he presented evidence on the number of hours previously devoted to these activities; and he represented that he will terminate his positions in those outside entities should the time spent on these activities detract from his full-time duties at the broadcast station." 90 F.C.C. 2d at 586.

resolve if the testimony is to be credited. Christian's principals are described as being substantially engaged in pastoral activities and other worthy endeavors and, at the same time and without explanation, it is represented that they will devote full time to the proposed station. In the circumstances, Christian's opponents had the option to cross-examine or to let the matter rest and assert the point on the basis of the evidence already submitted.[7] In view of the record evidence regarding the proposed integration of Reverends Shell, Alessi and Scott, the following judgment reached by the Review Board in an earlier case seems appropriate here:

> [I]n view of the present . . . activities of the three . . . principals . . . and the absence of any indication these activities could or would be curtailed, it would have to be concluded that a serious doubt exists as to the amount of time which [the three principals] could effectively devote to the day-to-day operation of the station, regardless of their sincere intentions. *Lorenzo W. Milan and Jeremy D. Lansman*, 6 F.C.C. 2d 198, 204 (Rev. Bd. 1966), *aff'd sub nom. Christian Fundamental Church* v. *FCC*, 12 P&F RR 2d 2116 (D. C. Cir. 1968).

53. The presiding officer has less hesitancy in crediting the integration proposals of Lozada and Pagan. The former has addressed the problem in her testimony, which indicates that her present part-time employment would not interfere with her work at the proposed station. Pagan's testimony is less clear, but the demands on her time (para. 35, *supra*) seem less extensive than is the case with Shell, Alessi and Scott, and the credibility of her proposal seems for this reason less suspect.

54. *Ultimate Findings*. Whitco's integration proposal is preferred. Its two stockholders will work full time at the station, occupying important managerial positions, Coates in the key post of general manager and Whitehead as sales manager. Both men are presently self-employed and, unlike Christian, have explained how their current activities will be curtailed or delegated in a fashion that would permit them to fulfill their obligations to the station. From a qualitative standpoint, the integration proposal is enhanced by their proposed local residence and, more importantly, by the fact that both stockholders are black, thereby bringing to the area a broadcast facility that is wholly minority owned.

55. Christian also proposes full-time participation by all of its principals in station affairs. Its proposal suffers in comparison with Whitco's in that no evidence was introduced demonstrating how three of its directors will reconcile their numerous current activities with a full-time (i.e., 40 hours per week) commitment to work at the

---

[7] Christian also requests that official notice be taken of certain of its answers to interrogatories relating to this matter. It is well settled that answers to interrogatories are not a proper subject of judicial or official notice. 8 Wright, Federal Practice and Procedure, §2180 at 572; 4A Moores Federal Practice, p. 33-178; *Bracey* v. *Grenoble*, 494 F.2d 566, 570, n. 7 (3d Cir. 1974). To be considered such answers must be introduced into evidence at the trial. This was not done.

proposed station. Though the presiding officer has little doubt as to the sincerity with which the proposal is advanced, the record evidence simply provides less assurance than in the case of Whitco that its planned integration is capable of being effectuated. These individuals will not therefore be credited with full-time participation; their proposal will not be entirely discounted, however, but will be accepted as indicating considerable part-time involvement in the station.[8] Thus, with the full-time participation of the other two directors, Christian's quantitative integration amounts to 40% full-time participation and 60% substantial part time. Qualitatively, its showing is strong: all of its principals are area residents; at least three of them have been involved in laudable civic activities; and three, Scott, Pagan and Lozada, are members of ethnic minorities, the latter two being female as well.[9]

56. In sum, Whitco has been preferred because it has provided greater assurance that its proposed 100% full-time integration can be realized and because it is entirely minority owned. The former consideration establishes a significant margin of superiority for its quantitative integration; and the latter, together with local ownership, is at least sufficient to offset the enhancing elements of Christian's qualitative integration.[10] For the reasons stated at the beginning of this discussion (para. 38, *supra*), Family and Golden East must be rated far behind the other two applicants under the comparative issue.

Conclusions

57. It has been found that Whitco, Family and Christian, having no current ownership interests, are superior to Golden East in terms of media diversification; and as to integration of ownership with management, the only other comparative criterion relevant to this proceeding, Whitco is to be preferred. It is therefore concluded that the public interest, convenience and necessity would be best served by a grant of the Whitco application

Accordingly, IT IS ORDERED that unless an appeal from this Initial Decision is taken by a party or it is reviewed by the Commission on its own motion in accordance with Section 1.276 of the rules, the application of Whitco Broadcasters, Inc. for a permit to construct a new commercial television station on Channel 69, Hollywood, Florida IS GRANTED and the applications of Family

[9] Under the heading of broadcast experience, note is also taken of Reverend Shell's frequent appearances over radio and television.

[10] See *Waters Broadcasting Corporation*, 91 F.C.C. 2d 1260 (1982); 52 P&F RR 2d 1063, 1068 (minority ownership given "full application and significant weight" in comparative cases).

Television 69, Inc., Golden East Broadcasters, Inc. and Christian Media of Florida, Inc. for the same facility ARE DENIED.[11]

FEDERAL COMMUNICATIONS COMMISSION
JOHN H. CONLIN, *Administrative Law Judge*

---

[11] In the event exceptions are not filed *within 30 days after the release of this Initial Decision*, and the Commission does not review the case on its own motion, this Initial Decision shall become effective 50 days after its public release pursuant to Section 1.276(d).

Network Program Procurement Practices
Network Regulation
Syndication, Network

In this *Tentative Decision and Request for Further Comment* (BC Docket 82-345), the Commission reviewed its network television financial interest and syndication rules (47 C.F.R. §73.658(j)). The Commission concluded that the financial interest rule could be eliminated without adverse consequence to the public but that a modified version of the syndication rule should be retained.

I. *INTRODUCTION AND BACKGROUND*

Introduction

1. In this proceeding, through our *Notice of Proposed Rule Making in BC Docket 82–345*, 47 Fed. Reg. 32959 (1982), we sought comment on a proposal to repeal the network television financial interest and syndication rules. The rules, 47 CFR §73.658(j), regulate the rights the national television broadcast networks may acquire or retain in programming used for network distribution.

2. A brief description of the process of network program development will help place these rules and this proceeding in perspective. The prime time entertainment series that are aired on the networks are generally produced by the major film studios, major independent producers or minor independent producers. The networks serve as producers of a small number of their own programs, but their production activity is limited by the respective consent decrees that each has entered into with the Department of Justice.

3. The process of developing an entertainment series varies among the networks, although there are some common elements. In general, program ideas come from network development departments or producers. A producer can either present an idea directly to a network or to the network through an agent or major studio. A program passes through four stages of development: 1) the treatment; 2) a pilot script; 3) a pilot; and 4) series production. The network development departments finance the first three stages and may terminate the process at any point. The financial terms negotiated between networks and producers at the developmental stages vary greatly, but may include fees, delivery dates, options and possibly the license fee if the program should become a series. Since

pilots are expensive, relatively few are made in proportion to the number of treatments and scripts ordered by the networks, and only a fraction of the pilots that are made become series. For example, CBS had pilots made for 32 shows out of the 155 scripts it had ordered for the 1982–83 TV season. From these 32 pilots, 13 new prime time series were created.

4. The producer of a TV series is paid a license fee by the network for each episode produced. The license fee entitles the network to exclusive rights to air the program for a period of time. Typical license fees are about $300,000 for a half hour show and approximately $600,000 for an hour series. License fees can be renegotiated during the run of a series.

5. Successful network programs have value beyond their network run. They can be sold to individual stations through the syndication market. Syndicators may be studios, multiple station groups, advertisers or companies set up specifically to act as syndicators. Under individual contract terms, off-network syndication may begin following the expiration of the licensing network's exclusivity protection for each episode. The most important characteristic common to all off-network syndicated programs is that they have achieved successful network runs in prime time. For a program to be syndicatable, it must have run long enough on the network to have approximately 80–100 episodes. The large number of episodes is required because the off-network syndicated series is usually broadcast daily, in the same time period, a practice known as stripping.

6. The rights to syndicate a program are often negotiated early in the production process. An established producer may even be able to obtain a cash advance from a syndicator based on prospective syndication of a series. The negotiations between producers and syndicators focus on the basic arrangements for dividing syndication revenues, the duration of the syndication rights, the territory where the program may be sold, and any cash advances. A syndicator operates by contacting stations individually and, if enough stations are willing to buy a particular program, then the off-network show feasibly can go into syndication. The price a station pays for a syndicated show is largely dependent on the station's market size. In recent years, local stations in New York and Los Angeles have paid as much as $90,000 per episode for a syndicated program. Typically, syndicators keep 30% to 40% of the syndication revenues as their fee. Out of this, they pay their operating expenses, which normally include only the costs of distributing the program and the residuals fees that must be paid to actors.

7. The financial interest and syndication rules place several constraints on how the networks may behave in the process described above. The *financial interest* rule provides that no network shall:

> . . . acquire any financial or proprietary right or interest in the exhibition,

> distribution, or other commercial use of any television program produced wholly or in part by a person other than such television network, except the license or other exclusive right to network exhibition within the United States and on foreign stations regularly included within such television network . . . .

The *syndication rule* provides that no network shall:

> . . . sell, license, or distribute television programs to television station licensees within the United States for non-network television exhibition or otherwise engage in the business commonly known as "syndication" within the United States; or sell, license, or distribute television programs of which it is not the sole producer for exhibition outside the United States; or reserve any option or right to share in revenues or profits in connection with such domestic and/or foreign sale, license, or distribution . . . .

Under the rules, a network can only purchase the rights from a producer to air a program over the network's distribution system. In the absence of the rules, the networks could negotiate for a financial interest and participation in syndication rights. For programs wholly produced by the networks, the rule requires that, if the program is to be syndicated, the networks must sell their syndication rights to others.

8. The *Notice* in this proceeding questioned whether these rules could reasonably be expected to promote their intended goals of television program and outlet diversity. Comment was also sought on whether the rules were necessary in today's video marketplace given the emergence of various competitive electronic media.

9. In response to the *Notice*, more than 120 formal written comments were received, many containing detailed economic studies on the functioning of the rules and the markets affected by them. The preparation of these comments was facilitated by unusually long comment and reply comment periods. In addition to the written comments, oral proceedings were held at which 40 parties argued their positions to the Commission.

Summary of Tentative Decision and Request for Further Comments

10. Our own review of the rules and the responses to the *Notice* in this proceeding have persuaded us that the rules are in need of very substantial revision. While the continuation of some measure of regulatory control relating to the licensing and use of off-network programming does appear to be appropriate, it does not appear that the financial interest rule is either necessary or desirable. A detailed review of the analysis leading to these conclusions is set forth in the *Discussion* and *Conclusion* sections of this document. However, at this point we will provide a brief overview of the changes we are undertaking.

11. First, it does not appear that it is necessary to control the ability of the networks to bargain for and acquire passive "financial

interests" in programs purchased or produced for network exhibition.

12. Second, we will continue to prohibit network participation in the domestic syndication of prime time entertainment program series. Thus, the scope of the syndication prohibition would be narrowed to include only participation in *domestic* syndication markets and to cover only *prime time series* programs (as defined below) rather than all types of programming.

13. Third, programming in which a network retained any continuing off-network "financial interest," would in every case have to be made available for syndicated sale within six months after the end of the network exhibition "run." Moreover, for series that run for more than five years, the network would have to make the series available for syndication no later than the end of the fifth year of the network exhibition. We also believe that it may be appropriate to "sunset" the syndication restrictions that are maintained, in 1990, unless the Commission makes an affirmative public interest finding that they should continue in effect.

14. In short, our tentative decision is to eliminate the financial interest rule while narrowing the syndication rule to ensure against possible network incentives to restrict the availability of the most critical off-network programming for independent television station use. While financial and syndication rights are not unrelated, it is not uncommon in the entertainment world to separate passive profit sharing interests from interests that involve active management control and we see no reason why a similar type of separation cannot be used effectively to further our objectives here. It appears from the record that the other restraints of the rules were either initially misguided or are no longer necessary in light of evolving market conditions and we intend to eliminate them. However, we will herein seek additional comments to fine tune the syndication prohibition of the rules, to ensure that it provides appropriate protections but does not unnecessarily interfere with the conduct of normal negotiations between networks and producers. While the basic elements of these alternative forms of regulation have been set forth as options in a number of the comments received, and thus have already been the subject of some discussion, we believe replies focused more specifically on the attached rules would be useful.

Historical Background of the Rules

15. In 1959 the Commission instituted an investigatory proceeding designed to obtain information relating "to the policies and practices pursued by the networks and others in the acquisition, ownership, production, distribution, selection, sale and licensing of

programs for television exhibition . . . ." *Order for Investigatory Proceeding, Docket 12782*, 24 Fed. Reg. 1605.[1] Based on the results of this inquiry, the Commission issued a *Notice of Proposed Rule Making* in 1965 which proposed adoption of rules designed to correct a perceived competitive imbalance in the program production and distribution industries. *Competition and Responsibility in Network Television Broadcasting*, 45 F.C.C. 2146. In that *Notice* the Commission stated:

> The information and data before the Commission appear to establish that network corporations, with the acquiesence of their affiliates, have adopted and pursued practices in television program procurement and production through which they have progressively achieved virtual domination of television program markets. The result is that the three national network corporations not only in large measure determine what the American people may see and hear during the hours when most Americans view television, but also would appear to have unnecessarily and unduly foreclosed access to other sources of programs. *Id.* at 2147.

The original purposes of the proposed rules were to provide an opportunity for the entry of more competitive elements into the market for television programs for network exhibition and to encourage the growth of alternate sources of television programs for both network and non-network exhibition. *Id.*

16. The Commission stated that the undue concentration of control in the three networks over television programs was inherently undesirable because diversification of economic interests and power in this area was a cardinal principle of the public interest standard found in the Communications Act. Concentration also decreased the competitive opportunity for independent program producers and the syndication industry, the success of which was considered vital to the further development of the television service, especially UHF stations. Finally, the Commission found the networks' acquisition of financial interests and syndication rights a conflict of interest. The Commission reasoned that networks would be guided in their programming decisions more by their attainment of such interests in the programming than their objective judgments as to whether the programs were likely to serve the public interest. *Id.* at 2157. The Commission stated that the presence of networks as domestic syndicators was inherently undesirable because they were in the position of selling programs to independent stations that directly competed with the networks' affiliates.

17. Based on these concerns, the Commission adopted the

---

[1] A detailed review of the Commission's continuing interest in networking can be found in the following reports issued by the Network Inquiry Special Staff in Docket 21049: *The Historical Evolution of the Commercial Network Broadcast System Leading to Adoption of the Prime Time Access Rule, the Financial Interest Rule, and the Syndication Rule*, Dockets 12782 and 19622 (October 1979); and, *New Television Networks: Entry, Jurisdiction, Ownership and Regulation* (October 1980) (hereafter, Network Inquiry Staff Report).

financial interest and syndication rules in 1970. *Report and Order in Docket 12782*, 23 FCC 2d 382 (1970).[2] According to the Commission's statements in the *Order* affirming the financial interest and syndication rules on reconsideration, the regulations had two principal purposes: to lessen the bargaining power of the networks, and to remove the possibility that acquisition of subsidiary financial and syndication rights would become a prerequisite to network exhibition. 25 F.C.C.2d 318, 331 (1970). The Commission expressed its opinion that the rules would greatly enhance independent producers' abilities to operate in the network television program market and would also remove the possibility of networks taking advantage of their relationships with affiliates in their syndication dealings. *Id.* The Commission concluded that the rules would tend to improve the bargaining positions of producers with networks so as to bring about a desirable degree of expansion of stable and viable program sources. *Id.* at 332. On appeal the rules were sustained by the U.S. Court of Appeals for the Second Circuit in *Mt. Mansfield Television, Inc. v. F.C.C.*, 442 F.2d 470 (2nd Cir. 1971)

18. In 1972 the United States Department of Justice filed antitrust suits against the three networks, asserting that:[3]

> (a) ownership and control of television entertainment programs broadcast during prime time hours were concentrated among the three networks;
>
> (b) competition in the production, distribution, and sale of television entertainment programs, including feature films, had been unreasonably restrained;
>
> (c) competition in the sale of television entertainment programs to the three networks by outside suppliers had been unreasonably restrained; and,
>
> (d) the viewing public had been deprived of the benefits of free and open competition in the broadcasting of television entertainment programs.

NBC entered into a consent decree with the Department of Justice in 1978 and ABC and CBS entered into similar consent decrees in 1980.[4]

19. These consent decrees, which are currently in effect, impose restraints on network practices that both include and surpass the restrictions imposed by the Commission's syndication and financial interest rules. For example, while both the rules and the consent decrees permit foreign syndication of programs wholly produced by a

---

[2] At the same time, the Commission adopted the prime time access rule, 47 C.F.R. §73.658 (k), which limits the amount of network programming that can be broadcast during prime time in the top 50 markets.

[3] The suits were dismissed on procedural grounds but were refiled in 1974.

[4] *United States v. National Broadcasting Co.*, 449 F.Supp. 1127 (C.D. Cal. 1978), *aff'd mem.* No. 77-3381 (9th Cir. April 12, 1978), *cert. denied sub nom. CBS v. U.S. District Court for Central Division of Calif.*, 48 U.S.L.W. 3186 (1979); *United States v. CBS, Inc.*, Civ. No. 74-3599-RJK (C.D. Cal. July 31, 1980), *reprinted in* 45 Fed. Reg. 34465, *United States v. ABC, Inc.*, Civil No. 74-3600 (C.D. Cal.), *reprinted in* 45 Fed. Reg. 58441.

network, the consent decrees impose a requirement not contained in the Commission's rule for foreign syndication of foreign-produced programs: that the foreign syndication rights must be obtained in negotiations separate from those for domestic syndication licensing.[5] Similarly, whereas both the rules and consent decrees permit acquisition of non-broadcast rights, the consent decrees permit acquisition of such rights only when negotiated separately from those for a broadcast license.[6]

20. In 1977, the Commission instituted its latest network inquiry. *Commercial Television Network Practices*, 62 F.C.C. 2d 548 (*Notice of Inquiry* 1977). The inquiry was intended to focus specifically on the relationships between networks and affiliate stations to consider the extent to which licensee programming discretion was being subverted by the networks. A concommitant issue under consideration was whether networks had maintained anti-competitive policies which had unduly restricted the development of programming sources. 62 F.C.C. 2d at 548–49. In a *Further Notice of Inquiry* adopted the next year, the Commission summarized its concerns in the following manner:

> First, in judging the performance of the industry, we are primarily concerned with "protecting the interest of the public in receiving the best possible programming service . . . ." The economic well-being of networks, stations or program suppliers is, thus, important only to the extent that it affects their ability to serve the public. Second, while a wide variety of specific practices is identified for analysis, we are centrally concerned about whether these practices enable the existing major commercial networks, in their relations with affiliates and program suppliers, to limit the opportunities for others to compete for station broadcast time and thereby exert an anti-competitive influence upon the industry's behavior. *Further Notice of Inquiry*, 69 F.C.C. 2d 1524, 1528 (1978).

The Commission also expanded the scope of the inquiry to include an examination of the structure of the television industry and the extent to which structural remedies might be applied to ease the pressures created by the three network system of program procurement and distribution.

21. After extensive research and analysis, the Network Inquiry Special Staff made several findings which are at odds with many of the assumptions used by the Commission to justify the financial interest and syndication rules. The staff disagreed with the Commission's conclusions regarding concentration in the program supply market and argued that the market for first-run and off-network

---

[5] Although the language of the syndication rule is somewhat vague, the Commission has subsequently indicated that the rule was not intended to cover the acquisition of foreign-produced programs for foreign distribution. *Memorandum Opinion and Order*, 26 F.C.C. 2d 28, 31 n.3 (1970).

[6] The Commission explicity found that non-broadcast interests could be acquired irrespective of whether acquired in separate negotiations. Memorandum Opinion and Order, 87 F.C.C. 2d 30, 35 (1981), *petition for review denied sub nom.*, *Viacom Int'l v. F.C.C.*, 672 F.2d 1034 (2d Cir. 1982]).

syndicated programming is now and was competitively structured at the time the rules were adopted in 1970. The staff also argued that the financial interest and syndication rules might well be disrupting an efficient risk-sharing arrangement between the networks and their program suppliers. Based on its analysis of the network/supplier relationship, the staff concluded that the licensing of various program property rights such financial interests and syndication rights provides a method for producers to share the risk of unsuccessful series with the networks. Networks provided higher program development and production fees to producers when the networks had a share in after-market profits. With the rules in place, network fees to producers were reduced, thus forcing the producer to shoulder a greater financial risk initially. The staff observed that this might in fact lead to more concentration in the program production industry as small independent producers unable to absorb the greater risks are forced to merge with larger, more financially sound, producers.[7]

22. The Commission has never expressly endorsed or rejected the conclusions or recommendations of the Network Inquiry Special Staff. However, having noted the staff's conclusions that the rules were not necessary when adopted and could not possibly deter the practices they were designed to reach, we instituted the present rule making proceeding in June 1982, in order to evaluate the special staff's conclusions. Of equal import, we asked whether changes in market conditions over the past decade may have obviated the need for the financial interest and syndication rules. In this regard, we noted:

> Our professed goals of protecting licensees from the exercise of anticompetitive network practices and fostering a healthy independent production industry were established during a period when the gateway to presentation of television programming virtually required use of over-the-air facilities. The Commission became concerned when the acquisition of programming became centralized in the hands of only the three major television networks. However, the market for television programming has undergone significant change since adoption of the syndication and financial interest rule. Over the past few years, the rate of technological change in television program service has increased in a fashion which could not have been anticipated by us a decade ago. In addition the pace appears to be increasing with no peak in sight. Therefore, our concern over the abilities of the networks to act as monopsonists in the purchase of television programming may no longer be justified. *Notice* at para. 32.

23. Moreover, the *Notice* asked whether the rules are appropriate mechanisms to accomplish their stated goals. We solicited comments on whether producers, who are themselves powerful actors in today's program marketplace are in need of protection from the exercise of undue influence by the networks. More fundamental-

---

[7] For a detailed report of the special staff's findings, see "An Analysis of Television Program Production, Acquisition and Distribution," at page 293 of Volume II of Network Inquiry Staff Report.

ly, we questioned whether protection of program producers from undue influence is an appropriate subject for Commission concern. In situations where the program producer is not so large or influential, we asked whether the rules created any reasonable balance in the bargaining positions of the parties. In more general terms, we also asked parties to provide their insights into the network/program producer relationship and how the rules affect that relationship. Next, we noted that, because other media were not restricted by the financial interest and syndication rules in their dealings with producers, those entities may have a competitive advantage over the networks in their dealings with program producers. We also requested that commenters address the issue of how deletion of the rules might affect independent television stations, since networks acting as syndicators of off-network programming would be in the position of selling that programming to their direct competitors. Finally, we sought comments on the relationship between the financial interest and syndication rules and the network consent decrees.

II. *COMMENT SUMMARY*

24. This section contains a summary of the major facts and arguments contained in the comments. It is not intended to set forth every idea or notion conveyed in the comments, although every formal and informal comment was considered fully. The comment summary is divided into seven segments, each dealing with a separate aspect of the rules: (1) The effect of the rules on the production industry; (2) The effect of the rules on television broadcast stations; (3) Effects on advertising costs; (4) The effect of the rules on the networks; (5) The effect on new television networks; (6) Alternative regulatory proposals; and (7) Additional issues. Within each grouping, the arguments favoring repeal are presented first.

25. Before beginning this summary, it may be helpful to generally describe the traditional broadcast video industry in terms of its program sources. The industry is divided into two broad classes of stations: network affiliates and independents. Network affiliates are those stations that have a contractual relationship with one of the three national television networks (ABC, NBC and CBS) and serve as the local distributors of the programming obtained by the networks from their original producers. Currently, network provided programming makes up about 70% of the average affiliate's broadcast day, and virtually 100% of prime time (8–11 p.m. ET, Monday - Saturday and 7–11 p.m. ET, Sunday). While stations may preempt the network programming in favor of their own, this is rarely done. For example, the average ABC affiliate clears close to 99% of the network's shows, regardless of day-part. During those day-parts when the networks are not feeding programming to their affiliates,

typically 71;2 hours a day, the stations must either originate their own shows or purchase programs directly from program suppliers (syndicators).

26. Independent television stations broadcast programming that is either locally originated or obtained directly from program suppliers. The vast majority of independents today (116 out of 179) air general programming consisting of news, sports, movies, programs previously shown on the networks (called off-network syndicated series), and first-run programming specifically created for the syndication market. Forty-two independent stations are "specialty stations" which broadcast foreign language or religious programming aimed at a small segment of the audience. Another 21 independents are subscription television (STV) operations, at least part of whose programming is only available via subscription.

27. Prime time entertainment series programming accounts for 23% of the network schedule, 50% of its advertising revenues and 30% of its profits. It is also the major source of off-network syndicated programming. Following the network run (generally two showings of each episode), these programs may become the product available for purchase by individual stations in the syndication market. The amount of this off-network programming used by independent stations varies. Estimates range from 22% of their programming time for Turner Broadcasting, 30-35% for Taft Broadcasting and 59% for Metromedia. Off-network syndicated series are the principal type of programming aired by independents during the 4-8 p.m. ET day-part, which is considered independents' peak time. During this time, the independent station is programming opposite news and non-network programming on network affiliated stations. According to one commenter, this time period may account for as much as 60% of an independent's revenues, although the average is approximately 50%.

Effects of the Rules on the Production Industry

28. *Arguments for Repeal*. Proponents of repeal argue that the rules were unnecessary to equalize the bargaining power of networks and producers. Although, the Commission believed that the networks had monopsony power, the Network Inquiry Special Staff (NISS) found that the program supply market was in fact competitive prior to the rules' adoption. However, CBS presents data indicating that before the rules were adopted, networks acquired financial interests and syndication rights on a fully competitive basis. An empirical study conducted by Robert Crandall concludes that payments for such rights were made in the form of higher license fees, and the payments approximated the full market value of the rights. The National Telecommuncations Information Agency (NTIA) asserts that there is not historical evidence (i.e., pre-1970) that the networks took advantage of their market position.

29. NBC and ABC state that even if networks had monopsony power when the rules were promulgated, the changed marketplace has rendered the rules obsolete. Studies are submitted by CBS showing that the share of the three networks in total program expenditures dropped from 74% to almost 54% in the past decade. NBC further states that the rules clearly decrease competition in the program supply market by making small producers dependent on major Hollywood studios, their competitors, for needed financing. CBS presents data indicating the number of producers supplying prime time entertainment programming to the networks has fallen from 60 to 41 between 1969 and 1981. Further, the CBS data show that the market share for the major suppliers has increased and caused the disappearance of many small producers. The National Black Media Coalition believes the rules have led to a dwindling number of program suppliers who dislike competition and exclude minority independent producers. The ABC affiliates association suggests that, to the extent competition and program diversity exist, the prime time access rule, and not the financial interest and syndication rules, is responsible.

30. The networks contend that the rules have no relation to bargaining power. Financial interests in programming and syndication rights are merely financial terms over which the parties must bargain. Program selection does not turn on the resolution of one particular financial term. Renegotiation becomes almost continuous after the first season's exhibition. Thus, suppliers are not bound to terms negotiated at the early development stages of production, and once a show becomes a hit, producers are in a much better bargaining position. Also, the networks insist that they make programming decisions on the basis of program quality and audience appeal rather than whether they have a financial interest in the program. ABC presents a study which determines that over the past decade network program costs have risen faster than network advertising revenues. This increase in cost cannot be explained by a corresponding increase in producer input costs. ABC states that an important characteristic of the monopsonist is the ability to control its cost—the ability to extract economic rents from its suppliers. The networks obviously have not been able to do this. Thus, program producers have substantial bargaining power.

31. The Department of Justice states that any market power the networks have derives from the market structure. Regulation of one element in the bargaining process will simply cause the networks to shift their focus to other parts of the bargaining process. The networks also allege that the rules make program supply less efficient. They argue that the sale of syndication rights by program producers is an efficient risk sharing arrangement. Prohibiting this risk sharing raises the cost of programming, reduces total invest-

ment in program production, and may reduce diversity by encouraging excessive production of "tried and true" program types.

32. CBS states that the rules force suppliers who wish to sell financial interests or syndication rights to operate in a market artifically narrowed by the exclusion of three major purchasers. This results in reduced efficiency, competition, and diversity in the supply of network programming. The networks argue that they are particularly well suited to bear risk for three reasons: they each finance a large number of programs; since they also schedule their programs, they can take account of inter-program externalities (audience spillover, etc.); and, they can promote programs efficiently over time by coordinating the network and off-network runs. Thus, the program rights are worth more to the networks than to other parties. The Department of Justice and NTIA agree and argue that repeal of the rule would shift the risks to more efficient risk-bearing entities, that is, the networks. Alfred Kahn asserts that ultimately the public is harmed if private markets are not free to work efficiently.

33. CBS argues that the networks must participate in decisions on program content. The networks' participation in program development is an inseparable part of the networks' role. Networks are participants in the creative process, not merely gatekeepers. NTIA agrees, stating that the networks already have ultimate or final control over the nature of the programs they purchase for broadcast. As a licensee and with a responsibility to its affiliates, each network properly oversees the content of each program.

34. *Arguments for Retention*. Opponents of repeal contend that this proceeding is premised on faulty analyses by the Network Inquiry Special Staff and a misunderstanding of the entire program production distribution exhibition market. The central argument of those who support retention of the financial interest and syndication rules centers on the proposition that the networks now possess and will maintain substantial market power in the foreseeable future. Taft Broadcasting reminds the Commission that the Department of Justice only three years ago finalized proceedings in which the networks were found to engage in anticompetitive activity. Taft finds no change in the marketplace since then that justifies the current proceeding. Similarly, the Association of Program Distributors (APD) states that there has been no demonstration that the networks or the public have suffered under the rules. APD contends that changing the rules on the basis of abstract economic theory such as that supplied by the NISS, rather than demonstrated injury, is unfair. Cox Communications agrees and states that the network inquiry staff's conclusions were based on a misreading of the FCC's objectives and a disregard of the factual record.

35. The Committee for Prudent Deregulation (CPD), a coalition of producers, syndicators, independent television stations, artists and

others, states that repeal of the rules would limit diversity of programming sources by weakening or eliminating television program producers. CPD supports the Commission's original determination that the networks used their oligopsonistic positions to extract valuable concessions from program producers including profit shares and syndication rights. The Caucus for Producers, Writers and Directors (The Caucus) indicates that prior to the rules the networks had a financial interest in 93% of all exhibited programs and syndication rights in all popular shows. CPD states that there are more independent producers now than before the rules, and, as a result, the program supply market is healthier and more competitive. Prior to the rules the networks paid producers enough to remain in business but it was not necessarily an amount sufficient to allow producers to remain fully independent. According to Embassy Communications and Tandem Productions, the rules have achieved success in making the production industry more vital and independent as well as competitive. The Motion Picture Association of America (MPAA) states that there would be no risk of concentration in the production industry if the rules were retained. MPAA contends that few barriers currently exist to entry in the production industry, but that there would be few incentives to enter the business if the networks took control.

36. The opponents of repeal state that the producer is most vulnerable at the program development stage of production where the networks' leverage is the greatest. According to The Caucus, networks consistently force producers to violate their contracts with the craft unions with respect to creative control over a program. Moreover, the license fee provided by the networks is almost never enough to cover the production cost of the program. MCA maintains that existing network payments do not reflect true value but are the lowest payment level at which producers will produce. For the most part, producers must realize any profits from a program through syndication sales which often occur several years after production.

37. If the rules are repealed, the commenters argue that the networks will use their monopsony power against producers. Supporters of the existing rules argue that the networks provide the sole market for first-run series, and the three networks act as one when purchasing programs. Thus, the networks can pay low prices and force producers to cede valuable rights as the *quid pro quo* of every network license. This will reduce the profitability of program production, and limit access to the business.

38. Several commenters admit there may be some economies due to more efficient risk sharing and the elimination of transactions costs, but suggest that those savings are likely to be relatively small. They not that no party has provided any empirical evidence whatsoever on the size of the presumed economies. The commenters also argue that advance financing by the network is not necessary. A

commitment by a network to exhibit a proposed show is a "bankable item" that is itself sufficient to allow a producer to obtain conventional financing. CPD states that the risk-sharing inefficiency created by the rule may not be significant where producers have other means of sharing the risks of production. CPD states that the major studios and large independent producers can engage in risk-pooling. For instance, the NISS Report points out that where the probability of financial loss is assumed to be 50 percent on a single program, it falls to approximately three percent if five statistically independent programs are pooled. Independent producers can pool risk through joint ventures. ICF Incorporated, in a report commissioned by CPD, states that the number of producers of prime time programs declined from the mid-1960's until 1974/75 and increased thereafter. Similarly, concentration measured either by Herfindahl indices or the leading firms' combined market shares generally increased until 1974/75 and declined thereafter. Thus, since there is no strong evidence that risk-aversion by program suppliers exists, it is doubtful that the rules have much effect on risk-sharing efficiency.

39. In response to arguments that the rules merely shift income among major producers on one hand and the three networks on the other, The Caucus insists that this is not a battle of corporate giants. Rather, repeal would have serious effects on small, independent producers and distributors, which, in turn, would adversely affect the public interest in diversity. According to the National Association of Independent Television Producers and Distributors (NAITPD), the rules do not effectuate merely a reallocation of rents. Instead, the major achievement of the rules has been the creation of a new class of producers and distributors who are the primary sources of first-run syndicated material and who represent the only competition to the major studios in off-network syndication programming and financing new productions. These new companies account for approximately one half of the top twenty prime time entertainment series, and, according to NAITPD, are dependent on the financial interest and syndication rules for survival. From the buyer's standpoint, the National Institute for Low Power Television sees significant differences between dealing with producers on the one hand and the networks on the other. In negotiating with producers, price is the major issue; with the networks, certain anticompetitive considerations are always present.

40. With respect to the rules' effects on the creative process, members of The Caucus aver that repeal would strengthen network influence. They contend that program quality decreases as network influence increases, and this record of interference will not improve if the networks get even more power. The role of the networks is to make a profit; the role of the producer is to make a profit plus deliver a message. Repeal of the rules will eliminate both roles for the independent producer. Lorimar contends that a producer's ability to

create diverse and original programming is largely a direct result of the financial interest and syndication rules. The National Association of Black Owned Broadcasters agrees and states that repeal would grant inordinate control to the networks and decrease any chance for the development of specific programs that appeal to minority audiences. CPD states that in the past the networks have engaged in imitative programming and scheduling, and that repeal will result in more common denominator shows with tried and true formulas. This, in turn, will force producers to turn to other media.

41. *Replies*. In reply comments, CBS reiterates its contention that the rules have diminished television program diversity. According to CBS, the rules have led to increased concentration in program supply and have discouraged the production of innovative, risky programming. NBC adds that the ban on network acquisition of profit shares does not promote more suppliers, more diversity, or more creativity. The network further contends that the issue of relative bargaining strength between the parties is irrelevant. The Department of Justice states that the rules do not promote competition or diversity in the program production market. The program production market is already competitive, and the networks themselves, as the three gatekeepers of network programming, determine the diversity of prime time programming.

42. The United Church of Christ, *et. al.* (UCC) contends that repeal of the rules based on pure speculation would be disruptive and contrary to the public interest. UCC states that the present competitive program production environment is largely attributable to the success of the rules. The Association of Program Distributors echoes this thought by stating that the rules succeeded in halting the networks' concentration of control of program content thereby retaining and enlarging program markets for new competitors. Paramount adds that the rules do not provide anticompetitive advantages to large production companies. There is substantial competition among suppliers of entertainment programs, and independent producers supply 50% of the prime time viewing hours. APD attests to the fact that the rules encourage program diversity by noting that the mere pendency of the present rulemaking is affecting financing for new product. Syndicators are reluctant to commit funds to new projects with the future of the rules in doubt. On the issue of bargaining power, Paramount states that the networks can and do require major creative and financial concessions. According to Paramount, no producer has the power to resist these demands, which appear in license agreements as non-negotiable, boilerplate provisions.

43. With respect to the risk-sharing issue, the Department of Justice states that the efficiency losses imposed by the rules are not large. DOJ contends that the major studios may in fact be more efficient risk bearers than the networks due to their ability to engage

in "hedging", that is, spreading their risks by placing programs on all three networks. DOJ also points to the fact that shows selected for a network run readily attract capital as further evidence that the rules cause little efficiency losses. Paramount adds that when major production companies join with independent producers, both parties do so willingly through fair bargaining. This would not be the case if the networks were allowed to take financial interests. APD concludes that the risk-sharing problem is the major cost cited to justify repeal, but that all small producers are eager to assume those risks without network involvement. Cox adds that even if the rules create certain inefficiencies, the benefits of the rules—diversity and a healthy independent television industry—justify their continued existence.

Effects of the Rules on Television Broadcast Stations

44. *Arguments for Repeal.* Proponents of repeal state that the rules decrease the number of potential syndicators and thereby limit competition in syndication. This, asserts NBC, is harmful not only to stations purchasing syndicated programming, but also to small suppliers lacking distribution arms and to the public. According to NBC, there never were any abuses which required networks to be barred from syndication, and there is no need to do so today because the market is competitively structured. CBS adds that before the rules were adopted the three broadcast networks obtained syndication rights in only a small percentage of the programs broadcast, and it is unlikely that they could again ever achieve that level.

45. In an appendix to the CBS comment, William J. Baumol states that the rules adversely affect television stations affiliated with the networks and firms that purchase advertising time in conjunction with the networks' television broadcasts. Making the networks less efficient suppliers of broadcast material weakens the position of the affiliates, and offers advertisers a less efficient medium. The ABC Affiliates Association expands this line of reasoning by stating that the rules discourage networks from producing creative, high-risk programming. This undermines programming quality and diverts network resources to the production of programming for less encumbered media services. The Association contends that the rules act as an incentive for the networks to bypass local broadcast affiliates and encourage the migration of high quality programming from free over-the-air television to pay distribution systems. Gateway Communications states that stations were treated more fairly by syndicators before the rules. According to Gateway, small stations are currently shut out by syndicators, who sell almost exclusively to large group operators.

46. Those supporting repeal state that there was no history of affiliate favoritism in the networks' conduct of the syndication business before the rules were in place. They argue that independent

stations are the best syndication customers, and that discriminating against independent stations therefore would be bad business judgment. Withholding product from the independent stations would provide slim, if any, benefits; only a fraction of the audience diverted from independent stations would tune to the networks. The networks contend warehousing syndicated programs would be an unsound business practice that might result in civil liability to other profit participants in a program. Also, many syndication contracts call for guaranteed profits; such agreements are clearly inconsistent with warehousing practices. Warehousing is only efficient if the revenues from withholding programs are greater than the syndication revenues, which is unlikely. In fact, NBC claims that buyers have many alternative sources of similar programming, and that the loss of revenues through warehousing would be enormous.

47. Alfred Kahn opines that the networks probably have some incentive to withhold programming from independent stations, or charge them more for it than they otherwise would, because they are in competition for audiences. But the three networks are not a single entity, and they compete intensely for programming. The networks did not gain dominant control over syndication rights before the rules went into effect, but they might attempt to secure control over syndication of the programs they purchase if the rules were removed, since the syndication market has grown in importance. According to Kahn, however, the following considerations argue against the expectation that the networks would achieve monopoly power in the offer of programs to independent stations: the networks' failure to acquire syndication rights from large producers; their small share of domestic off-network syndication rights previous to the rule; the availability of substitutes for off-network programs; the fact that exercise of monopoly power would depend upon either collusion or consciously parallel policies; the fact that the syndication market is very valuable and that the interests and abilities of the networks vary greatly; and the evidence that the networks did not tend to give programs to their affiliates rather than to others. Kahn states that it may be time to turn the surveillance of this industry's conduct over entirely to the jurisdiction of the antitrust laws.

48. The Department of Justice states that a network monopolist holding syndication rights might reduce the supply of off-network programs to broadcasters and thus raise broadcast license fees or advertising rates. Consumer harm would result from substitution of less desirable programming. Whether this potential abuse warrants regulatory restriction depends on the likelihood that the networks could coordinate their actions and whether a rule would reduce competitive problems without causing inefficiencies. DOJ states that the networks may be able to collude since the industry is highly concentrated, barriers to entry are high, and cheating would be easy

to detect. The data relied on in 1970 may not predict network behavior today, since the value of syndicated programs was smaller, the growth of independent stations may have changed the networks' incentives, and syndicated programming may not have constituted a separate market. New video distribution technology may not reduce the market power of the networks. The Department states that the rules cause efficiency losses and should be eliminated, but that the Commission should consider adopting a narrow rule designed to address the potential harm to the off-network syndication market if this can be done without reducing efficiency in program production and distribution. DOJ concludes that the antitrust laws should not be relied upon to ensure against anticompetitive network practices.

49. *Arguments for Retention*. Parties favoring retention of the financial interest and syndication rules aver that, because of the rules, the market for the purchase of off-network programs is competitive. Metromedia states that there can be no public interest justification for allowing the networks to gobble up the syndication/independent station sector of the television industry. It would be contrary to the public interest to take any action that would reduce the number of sellers in the off-network syndication market, particularly when the only remaining sellers would be three dominant networks with a history of conscious parallelism. Turner Broadcasting submits that if the rules are repealed, the networks will have the power to dominate the syndication business. They have bottleneck control of the initial years of a series' broadcast; they can rely on owned and operated stations (O&Os) as buyers of last resort; they can amortize program costs across a guaranteed audience; they have the power to raise their national advertising rates as necessary; and they can spread costs over their vast broadcast empire. Viacom International adds that if the rules were repealed, network O&O stations would purchase their syndicated programming from the network. Independent producers and syndicators would be severely disadvantaged if they were unable to syndicate their programs to the network O&Os.

50. The Committee for Prudent Deregulation asserts that repeal of the rules would be detrimental to independent television stations because it would place control of a vital source of their programming in the hands of their dominant competitors. Programming is the most important element in the success of any television station. Independent stations are the most significant source of competition to the major networks and their affiliates. The Association of Independent Television Stations (INTV) states that the growth of independent stations is due in part to access to recent off-network syndicated programs, and continued access to such programming is essential to permit further development. Metromedia presents figures showing that off-network programming comprises 51 to 78 percent of its stations' broadcast schedules.

51. INTV argues that the networks have a strong incentive to withhold programming that may attract audience to their competitors. If the Commission repeals the rules it will fortify the networks' supremacy over emerging services, and will retard the development of independent stations. The networks could favor their owned and affiliated outlets in a variety of undetectable ways, and they have more incentive to use their power today than in 1970. If the networks withheld or delayed syndication of the most popular network series, independent station schedules would be weakened and the quantity and quality of free program choices would be reduced. The independent stations would also lose their principal source of revenue and the financial ability to acquire high-quality first-run material. The prospects for the creation of a fourth network would disappear. The National Council of Churches/United Church of Christ posit that the rules have important non-economic objectives. They eliminate conflicts of interest in network scheduling and syndication sales to competitors. Repeal of the rules would result in less desirable program choices for the public, less credible competition for the networks, higher advertising prices, and higher consumer prices.

52. ICF Incorporated posits four scenarios in which the networks might maximize revenues and weaken independent stations, assuming that unshown but available programs restrain the prices of more popular ones. In the first model all off-network programs are controlled by a single firm, and the sole supplier could make unshown programs unavailable so they could ensure that they would no longer limit the prices charged for the more popular programs. Station program choices would not change but program prices would increase. In the second model, programs are supplied by a dominant firm and a competitive fringe. If the program that constrains prices is owned by one of the small suppliers, then the dominant firm might increase its profits by removing from syndication programming that would otherwise be shown. The program owned by a fringe would then replace the deleted program and another program would become the best unshown program. If there is a significant difference between the value of the two programs, then prices of all programs that are sold can be raised significantly. The dominant firm loses the revenue from the program it withdraws, but gains additional revenue on each program it continues to sell.

53. In the third model, the supplier is integrated into broadcasting and earns revenues from television advertising. Under some conditions, increases in the firm's advertising rates will increase the prices at which it can sell off-network programs. In the fourth model, the integrated supplier raises off-network program prices higher than would a non-integrated firm. Independent stations would be unable to earn a profit by showing the same set of programs, so they will offer programming that attracts fewer viewers, reduce broadcast

hours, or cease operation altogether. Advertising prices would rise, and the revenues lost from selling fewer programs would be offset by higher advertising revenues. An integrated supplier is more likely than an unintegrated one to reduce the hours of programming independents offer because its affiliated stations gain viewers and can charge higher advertising rates. Television viewers will have fewer viewing options; advertisers would pay higher rates; and consumers would pay more for advertised products.

54. ICF examines the conditions underlying these models and provides evidence on several points: recent off-network program prices will not be constrained by other types of programming if the rules are repealed. The value of the stock of older programs will rapidly decrease over time, and first-run syndication and theatrical movies are imperfect substitutes for off-network programs. Independent behavior by the networks could lead to a restriction of off-network program availability, and coordinated behavior is likely. The networks have stronger incentives and more ability than other owners of off-network programs to restrict supply, and they could achieve substantial gains from acquiring market power in off-network programming. Networks did not attempt to seize market power prior to adoption of the rules because: the independent stations were unprofitable; they had a smaller share of viewers and advertising revenues; and the networks were under intense scrutiny. A significant risk exists that repeal of the rules would lead to elevation of off-network program prices, and the magnitude of the effects could run in the hundreds of millions of dollars per annum.

55. Opponents of repeal also insist that warehousing is a very real concern. INTV quotes network statements indicating that repeal of the rules will retard the "premature" syndication of hit shows. INTV interprets these remarks as an intent to delay the availability of programs that still have significant network run appeal. Metromedia, noting the importance of made for television movies, believes that networks would warehouse such movies for repeated network exhibition and would never syndicate such features.

56. *Replies*. In reply comments ABC notes that the top 15 syndicators control 75.6% of the syndication market. ABC avers that the addition of the networks as domestic syndicators would contribute to the competitiveness of the syndication business. The ABC Television Affiliates Association suggests that independent station support for the rules takes the short view. Rather a reduction in the production of high-quality network programming will ultimately affect independent stations due to their heavy reliance on off-network fare. Several commenters reject the notion that the growth of the independent stations is somehow related to the financial interest and syndication rules. NBC, for example, states that the growth of the independent stations relates primarily to the general

upturn in the economy beginning in 1976, the reduction in the UHF handicap, and the lessening of advertiser bias against independent stations.

57. Much of the reply comments were devoted to the issue of warehousing, which several parties contend is the sole issue seriously in contention. The proponents of repeal attack the warehousing scenario by asserting that none of the conditions necessary for warehousing to work would be satisfied. First, the networks would not acquire a dominant share of syndication rights. In this regard, NBC submits a study showing that if the networks began acquiring syndication rights at the same rate as they did before the rules, the networks would have a combined 14% share of the off-network universe in ten years and a 20% share by the year 2000. Second, the networks and their supporters contest the assumption that recent off-network entertainment series constitute a relevant economic market. NTIA states that various first-run programs, older off-network series, and children's programming show the same ratings success as many new off-network series. NBC adds that if marginal syndicated product is withheld, many fungible substitutes are available. Third, the networks state that collusion is not possible. Fourth, according to CBS, the networks have no incentive to monopolize off-network programming to harm independent stations and raise advertising prices. The heavist use of off-network programming by independent stations is during the 4-8 p.m. period. Because this is a little-used period for network programming, the networks have no incentive to weaken independent stations during this daypart. The ABC Television Affiliate Association states that warehousing will not occur because it would hurt affiliates outside the top 50 markets who use off-network programming during the access period (generally 7-8 p.m. E.T.).

58. NAITPD states that the television industry will be harmed if networks are allowed to enter the syndication market because the small distributor will be forced out of business. This will adversely affect price competition and will leave the networks and major production houses free to set prices. The Association of Program Distributors avers that the networks could use their power to control the syndication market by obtaining syndication rights to off-network programs and attracting first-run syndication programming by offering financing and guaranteed clearances through the O&O's and affiliates. Independent distributors could not compete with such power and would eventually be forced out of business.

59. Westinghouse states that the syndication rule is needed more now than when adopted. Deletion of the rule would adversely affect affiliates that preempt network feeds with other sources of programs. Westinghouse asserts that the networks' access to off-network product, their unique delivery systems, and their affiliate systems would quickly threaten the competitive syndication market.

Permitting networks to syndicate would also allow them indirectly to circumvent the prime time access rule; networks could program the access period with first-run syndication programming. Accordingly, Westinghouse views the syndication rule as a necessary corollary to the prime time access rule.

60. On the issue of warehousing, Citizens Communication Center (CCC) contends that warehousing could be profitable when increased audience shares outweigh the loss in syndication revenues. Second, withholding only a small amount of programming would be enough to decrease supply and raise prices. Third, the alleged duty to other profit participants to maximize syndication profits would be irrelevant if the networks owned a 100% interest. Furthermore, litigation by other profit participants would be lengthy and expensive; damages would be speculative and hard to prove. Also, damages may be less than warehousing gains. Finally, CCC states that warehousing does not require collusion but can result from parallel behavior.

61. NAITPD asserts that neither antitrust remedies nor DOJ enforcement can replace the FCC as a guardian of the public interest in broadcasting. Antitrust remedies are largely corrective, whereas FCC policies are intended affirmatively to promote the public interest. Taft and Paramount both take issue with characterizing the problem as "warehousing." Paramount contends that warehousing is unlikely only because such an extreme measure would be unnecessary to achieve the networks' anticompetitive purpose. Delays in release would be almost as effective and would make FCC oversight or antitrust enforcement virtually impossible. Taft concludes that the issues is not warehousing but control of the market.

62. In its reply comments, the Department of Justice reiterates its view that the only issue of concern in this rule making involves the effects of repeal on the syndication market. DOJ argues that the networks could control the syndication rights to enough programs to make withholding a profitable strategy, although network coordination of withholding would be difficult. DOJ also states that networks have the incentive to warehouse, and that the antitrust laws may not be effective enforcement devices. DOJ concludes that a limited syndication rule is advisable to minimize the potential adverse effects of the rules' repeal.[8]

Effects of the Rules on Advertising Costs[9]

63. The parties supporting retention of the rules assert that, if the rules are repealed, the advertisers and consumers of advertised products would suffer due to increased advertising rates. The

---

[8] DOJ's proposed syndication rule as well as other compromise solutions offered by the commenters, is summarized in a later section of this document.

[9] This issue was first raised by the opponents of repeal in the initial comments. Therefore, the positions of those favoring repeal were presented in the replies.

Association of National Advertisers believes that recision of the rule is clearly premature. Deleting the rules at this time would create a significant risk of further concentrating the television ad market when more competition is beginning to emerge. According to the commenters' analysis, advertising "inventory" value is determined by the audience that is garnered by a station for a particular program. CPD claims that the financial interest and syndication rules ensure programming availability to independent stations. These stations, therefore, have an advertising inventory that increases competition for the advertising dollar and holds advertising costs down. Both CPD and the Association of National Advertisers supply data purporting to show that the cost of advertising per 1000 viewers is 20-60% lower in markets with strong independent stations.

64. If the rules are repealed, however, networks will have the ability to restrict supply of recent programming, thereby decreasing the strength of independent stations. This decrease in independent station audience shares and the concomitant increase in network shares would allow the network affiliates to raise advertising rates. CPD states that the networks could also raise advertising rates by reducing the amount of advertising time available. Without strong independent stations to absorb advertiser demand, the networks and their affiliates alone will reap the benefits of higher advertising rates. If, on the other hand, independent stations can absorb advertiser demand and thus obtain increased revenues, the networks would be able to recapture a portion of those revenues by raising the prices of off-network programming. Polygram's Norman Horowitz adds that if networks actively engage in syndication, they would probably offer many series on a "barter" basis. This would enlarge network control of availabilities and give the networks further power to influence rates.

65. Finally, according to those parties addressing this issue, in the field of advertising there is really no comparable substitute for television exposure. Accordingly, a strong independent television service is the only identifiable entity capable of restraining the network's power to influence advertising rates.

66. In response to the charges that repeal of the rules would adversely affect advertising rates, both CBS and DOJ indicate that there is no evidence that advertisements shown during the 4:00 to 8:00 p.m. time period constitute an economic market. DOJ continues that if advertisers have reasonable substitutes for the 4:00 to 8:00 p.m. exposures, advertising rates cannot be affected by reducing such exposures. Also, because the 4:00 to 8:00 p.m. time period is not heavily programmed by the networks, DOJ suggests that the real benefit of reducing availabilities in that time period would accrue only to the network owned and operated stations.

67. The Federal Trade Commission (FTC) states that the models

used to predict harm to ad rates are based on assumptions that the networks will collude: on the purchase of rights to programs; in the distribution of off-network series to the independent stations; and in the determination of advertising rates. The FTC concludes that collusion in these three areas is highly unlikely. The FTC also notes that the ICF and ANA studies attribute changes in advertising cost per thousand (CPM) to a single factor, number of viewers delivered, but that cost also depends upon the demographic composition of the viewers, the expected number of viewers for future showings and the degree of uncertainty associated with each of these measurements. Further, a new study cited by the FTC suggests that neither lower market share for independent stations nor a reduction in the number of independents would enable networks to collude on the price of advertisements. Thus, the FTC concludes that the contention that a reduction in the competitive position of independent stations would permit networks to estabish monopsonistic advertising rates is not supported either by empirical evidence or economic analysis. With regard to barter transactions, CBS opines that networks would simply be participating in an existing syndication practice.

68. In support of the position that repeal of the rules will lead to higher advertising prices, General Mills states that competition is the single most important factor in establishing ad prices. The rules provide independent stations a continuous supply of programs that attract viewers and enable stations to compete for advertising dollars. General Mills presents data comparing network advertising prices, spot market prices, and the Consumer Price Index (CPI). These figures show that the network advertising CPM is significantly higher than the spot market CPM due to less competition. Network power to control ad prices is evidenced by 1983–84 advertising price increases ranging 15–22% higher than last year's prices, which were 13–16% higher than the year before. These increases are significantly higher than the increases in the CPI.

Effects of the Rules on Television Networks

69. *Arguments for Repeal*. The networks claim that their composite net audience share currently is declining and that projections indicate that net share will decline an additional 10–20 points by 1990. Between 1985 and 1990, program expenditures by cable television and subscription services will exceed the combined network programming expenditure. Thus, the new delivery systems are expanding and enhancing the opportunities for program suppliers. Given this situation, the networks and their affiliates argue it is fundamentally unfair to put them at a uniquely disadvantaged competitive position vis-a-vis emerging video technologies. They argue that repeal of the rules is of critical importance so the networks will be able to compete with the ever-burgeoning new purchasers of programming. Many of these new purchasers are pay

services that can outbid the networks for programming that would otherwise be shown on "free" TV. The American Legal Foundation contends that this situation eliminates programming options available to viewers unable to afford pay television. The NBC Affiliates indicate that repeal would contribute to the restoration of economic balance between the networks and the pay television industry. This is important in order to encourage the continuation of free TV, which serves the public interest by providing diversity, competition to pay services, public affairs programming, and greater opportunities for minority actors and producers.

70. NBC asserts that the rules discourage network production of high quality shows because they cannot achieve the program's full value due to their inability to engage in syndication. Television syndication is as important in amortizing programming developed initially for the new technologies as first-run network programs. Along the same lines, NTIA states that the networks need to be able to share non-network revenues generated through exploitation of subsidary rights in order to pay the high prices prime time programming demands. Shooshan and Jackson contend that the rules make the weakest network more averse to taking a risk on innovative or different programming, because it cannot reap the benefits of a successful gamble through syndication. The NBC Affiliates Association claims that this negative aspect of the rules, could filter down to affiliates and affect their economic health, especially in the network compensation area.

71. *Arguments for Retention*. The opponents of repeal see no imminent threat to network dominance. They quote network executives' speeches indicating that the networks will dominate the industry well into the 1990's. The Inter-Guild Council points out that even though network shares are predicted to decrease, the total network audience will increase due to growth in the number of television households. Golden West posits that the networks are enjoying unprecedented prosperity: the control over affiliate time is growing and there have been significant increases in network profits.

72. The opponents state that new technologies are not sufficiently powerful as yet to minimize the networks' oligopsonistic position.[10] Lorimar states that the networks are the only entities capable of high penetration and nationwide distribution, and the new media offer no adequate alternative to network coverage. Cox asserts that cable television penetration is currently around 35% of television

---

[10] The Department of Justice states that networks may continue to be the primary source of syndicatable programming because the attractiveness of programming produced by the new distribution services is as yet undetermined. DOJ also cites the CBS study that predicts network dominance through 1990. Thus, DOJ contends that it is unclear whether new technologies will reduce substantially network market power.

households and is expected to increase to 50–60% by 1990, but audience shares for pay cable are expected to be only 9% by 1990. Cox contrasts these figures to the networks and their affiliates which reach virtually every television household. According to NAITPD, the new technologies have provided mostly advances in hardware rather than competitive video software. The network loss in shares has been primarily to the independent television stations, not to new technologies. With respect to the advertising perspective, the ANA states that competition from the alternative media is more illusory than real. Recent figures show that ad-supported cable obtained a 3% share of the television advertising market and 1.7% of total television ad revenues. ANA points to the recent failure of ad-supported cable networks and states that the future of such offerings is most uncertain.

73. Both MCA and the Association of Program Distributors point out the new technologies are not a dominant force in the acquisition of entertainment series programming. According to the APD, the new media are not competing for network-type entertainment programming, but they are outbidding the networks for theatrical movies and sporting events. Since such programs have no significant syndication value, the financial interest and syndication rules are essentially irrelevant. Thus the argument that free television is being harmed somehow by the rules is misleading and erroneous.

74. Parties in favor of retaining the rules indicate that the rules have not crippled the networks but are sound structural devices to restrain the overriding power of the networks. Cox states that network participation in the new technologies is in no way restricted by the financial interest and syndication rules, which only apply to broadcast rights. In fact, the networks are participating fully in new technologies. The FCC is already facilitating this process by proposing elimination of the cable/network cross ownership rules, granting waivers, and allowing networks to seek licenses in new areas such as DBS. INTV suggests that the networks are currently reinvesting their profits in new technologies instead of public interest broadcast services. The Association of Program Distributors concludes that the primary benefit of rescinding the rules would be to eliminate the largely conjectural disadvantages suffered by the three most highly favored licensees in 50 years of Commission history.

75. *Replies*. In its reply comments, Shooshan and Jackson aver that the rules are written so broadly that they create a series of unintended and unnecessary harms which deny viewing options to the American public. They recommend at the very least that networks be permitted to engage in the following activities: syndication of first-run programming; syndication of off-network programming carried initially on other networks; foreign syndication of off-network programming carried initially on other networks; foreign syndication; syndication of non-series and special interest program-

ming; and syndication of older off-network programming. The network O&O's should also be permitted to syndicate.

76. The reply comments from those parties supporting retention of the rules focus on the allegations that the rules place the networks at a competitive disadvantage. NAITPD alleges that it is also unfair that no other entities can engage in television networking to the extent of the existing three commercial networks. Citizens Communications Center states that the rules do not threaten the financial viability of the networks and, by inference, free television. Syndication rights are investment decisions, not financial panaceas. CCC points out that the networks have alternative investment opportunities available to them, and that they are in fact actively investing in the new technologies.

77. The Department of Justice again takes the position that the new technologies alone do not justify repeal of the rules at present. According to DOJ, it is unclear how much new product produced for the new media will be good substitutes for off-network programming. Further, the ability of pay services to compete for sports, movies and specials is irrelevant to this proceeding; such programs are not generally suitable for syndication in the 4–8 p.m. time period. DOJ asserts that the disadvantages cited by the networks with respect to bidding for sports and movies are the result of differences between pay and ad-supported television, not the rules. DOJ concludes that the networks are not competitively disadvantaged by virtue of the financial interest and syndication rules.

Effects of Rules on New Television Networks

78. Shooshan and Jackson suggest the rules have the unexpected effect of restricting potentially desirable "hybrid" ventures. These hybrid networks could take the form of several broadcast stations and a cable network. Such problems could not have been foreseen when the rules were initiated, but potential networks must consider the rules and plan around the regulatory constraints.

79. Taft Broadcasting states that the rules allow entities as small as Taft to begin to compete with the networks; however, the oligopsony force of the networks has restricted Taft's potential program production and distribution of its own programming. In support, the Bolter Study states that the three dominant networks could outbid any emerging network for the best programming thereby ensuring the demise or surely hampering the growth of nascent networks. Therefore, the rules should be retained for the major networks but not for others because they do not have the economic power wielded by the big three.

Alternative Regulatory Proposals

80. In the initial comments, during the oral presentations, and in the reply comments several parties suggested various compro-

mises whereby the rules would neither be completely retained nor completely deleted. The major compromise proposals and the comments engendered by them are described below.

81. *Forced sale of syndication interests in prime time series programs*. Under this option, which would apply only to the three major commercial networks, no restrictions would be placed on a network's ability to acquire and hold financial interests in programs shown over the network. Networks would also be allowed to acquire syndication rights to any program and would be permitted to syndicate those programs during the network run. However, the networks would be required to divest themselves of the syndication rights to a program in a one-time sale without legal restrictions to a third party no later than a fixed time after the end of the network run. The period between cancellation of the network run and the forced sale would be no longer than necessary to enable the networks to sell the syndication rights efficiently. By its terms, this forced sale would apply only to domestic television broadcast distribution rights of prime time entertainment series for non-network exhibition. The rule would not apply to off-network programs from any other day-parts, to network-produced first-run syndicated programming, or to made-for-TV movies.

82. DOJ explains that the networks would be unable to warehouse programs following the network run, but any risk-sharing inefficiencies created by the present rule would be eliminated. The rule would permit the networks to capture any increase in program values created by network efforts and would give the networks incentives to invest in and promote programs nearer to their optimal levels. Finally, the rule would be self-executing. Any attempt by the networks to control any term of domestic program distribution after the network run would violate the rule.

83. Commenters note that the forced sale option increases transaction costs since it would force the networks to undertake negotiations to sell program rights that might not be undertaken in the absence of the rule. DOJ responds that these costs would not be large, because the syndication market is preexisting and competitive, and this type of sale occurs continuously today. Commenters also contend that the sale might incur certain costs because the networks might be more efficient syndicators than those to whom the rights could be sold. DOJ contends that these losses would be small because there is no reason to believe that the networks would be more efficient syndicators than the firms now in the business. The FTC, however, submits that these efficiency costs may not be small.

84. ICF states that the networks could use the forced sale to their advantage by bundling the sale of programs to a few select syndicators. Together with the networks, these few syndicators could behave anticompetitively. DOJ responds that the networks have no incentive to create an oligopoly in syndication rights because this

oligopoly could turn against the networks. ICF also contends that the forced sale would have to be closely supervised by DOJ and the FCC if it is to work properly. Further, the time period set for the forced sale would be crucial: if it is too short it represents little change from the existing rule; if it is too long it provides inadequate protection from warehousing. The forced sale could also create inefficiencies in network decision-making. For example, if the networks have to divest themselves of syndication rights after the network run, the networks might not be able to enter into multi-year syndication contracts during the first run. Finally, ICF concludes that the networks should also be forced to sell their financial interests in order to prevent anticompetitive behavior. DOJ contends that the networks could not act anticompetitively in this area without detection. Further, because there is no ready market for the transfer of financial interests, transaction costs might be substantial.

85. *Limited partnership type interests*. Westinghouse points out that the financial interest rule affects networks' dealings with producers while the syndication rule affects the network-station relationship and stations' abilities to make independent programming judgments. The Network Inquiry Report did not address the rules' effects on local stations; therefore, the NISS report may be a basis for reviewing the financial interest rule, but not the syndication rule. Based on this analysis, Westinghouse offers a compromise rule which would allow networks to obtain a passive (noncontrolling) or limited partnership financial interest in network programming. However, networks would not be permitted to have any control over syndication. In setting a limit on the amount of financial interest that a network could acquire, the following guidelines are offered: The extent of network participation must not constitute presumptive or *de facto* control; and, the syndicator must have a sufficient economic incentive to participate aggressively as an independent force.

86. Westinghouse states that this rule would reduce the risk-sharing inefficiency of the existing rule and allow networks to earn a return for the risks they incur in program development and production. Also, the bar against network syndication prevents warehousing and insulates the networks from any so-called "conflict of interest" situations. The rule is also workable from the FCC's standpoint, and it focuses the Commission's responsibilities on protecting the public's interest in receiving television service from diverse, independent sources.

87. Other commenting parties express some reservation about the Westinghouse proposal. Some commenters suggest that "control" should be defined in terms of a percentage limitation on the network's allowable financial interest. Capital Cities suggests that the networks safely could have between a 20% to 40% ownership interest without obtaining control, but further comment should be

solicited on this issue. The FTC opines that effectively precluding control may not be so easy and will require "artful" drafting. DOJ asserts that limiting a network's financial interest would prevent the networks from taking advantage of vertical efficiencies. Further, enforcement costs would be high in reviewing the multiplicity of ownership interests that might develop.

88. Some commenters oppose this approach entirely. The Association of National Advertisers states that a compromise anti-warehousing rule would not be adequate. ANA believes that some anticompetitive activities could be accomplished if the networks acquired any level of financial interest. Network influence over the distributors might still be substantial and virtually undetectable. Taft asserts that networks would have access to syndication records which might give them information about competing stations' schedules. This would provide the networks with a substantial program planning advantage. The networks would also know what competitors paid for programming. This would permit network O&O's to undercut other stations's advertising rates. Taft concludes that allowing networks to obtain a profit share would lead to network pressure on when and how a particular program could be syndicated.

89. *Graduated Ownership Proposal.* During the oral presentation, Commissioner Quello distributed copies of a compromise rule and sought comments on the proposal. The proposal would permit the networks to acquire a significant, but variable percentage of financial interests in network programs. The percentage of interests that could be acquired would be tied to the combined audience ratings of the three networks. As audience ratings declined, indicating less network market power, the percentage of interests that the networks could acquire would increase.

90. ICF contends that conceptually this proposal is the best compromise solution because it allows the networks in, but slowly, as market conditions evolve. This option deals with only the financial interest portion of the rules. Because the syndication rule would be left intact, concerns over warehousing and conflicts of interest in off-network program distribution would be satisfied. ICF also suggests, however, that networks are likely to influence syndication if they have *any* financial interest in a program. This could lead to warehousing problems. DOJ states that it would be appropriate to link entry of the networks into this market with a decline in their market power. DOJ contends, however, that changes in network market share or network audience rating will not accurately predict changes in network market power with respect to warehousing. Network market share may be irrelevant to syndicated off-network programming if the changes in market share are based on viewing shifts to movies, sports, or specials. Both DOJ and ICF suggest that such a rule would entail high enforcement costs in drafting a workable formula and then measuring and applying it. Taft states

that this option is overly complex. ICF recommends that, if this proposal is adopted, the Commission should set a specific level and periodically review its adequacy rather than try to devise a sliding scale. ABC concludes that this option still hinders efficient risk sharing and that no valid reasons have been advanced to interfere with the bargaining process between the networks and program producers.

91. *"Use or lose" proposal.* Storer suggests that the financial interest rule be dropped entirely and that the syndication rule be replaced with a narrowly drawn rule designed to prevent warehousing. Under this rule, any syndication rights in programs not produced entirely by the networks, must be exercised within a stated term of years or revert back to the owner of the program. Storer asserts that an appropriate date for the "use or lose" decision might be three years from the first network exhibition of the program. The proposal eliminates any inefficiencies inherent in the financial interest rule yet prevents warehousing. Further, the rule would be closely monitored by those entities trying to regain the syndication rights. DOJ and the FTC assert, however, that it would be very difficult for the FCC to determine whether the networks have in fact aggressively attempted to syndicate the programming. Further, treatment of syndication in selected markets and questions of reversions in others would complicate its enforcement.

92. *Percent of programs limit.* Dr. Fisher, an economic consultant to CBS, proposed a compromise version of the rules that would permit networks to own unlimited financial interest and syndication rights in a limited number of programs. Fisher proposes that the networks be allowed to obtain such rights in 60% of programs for all three networks combined or 20% of programs for each network individually. Should these limits be exceeded, the networks would be required to sell the rights to some programs. In order to monitor this rule, the networks would be required to submit periodic reports detailing the rights and interests held by them. Because networks would be able to participate fully in a fixed percentage of programming, the risk-sharing inefficiencies would be reduced. Similarly, the possibility of successfully warehousing programs would be minimized.

93. ICF argues that allowing any concentration of syndication rights in the networks would be unhealthy since it could lead to anticompetitive behavior. DOJ asserts that this option would entail significant enforcement costs. The FCC would have to to determine and then enforce the relevant universe of programs to which the limitations apply and the percentage of these programs that the networks could control. DOJ, ICF, and the FTC all note that the networks could circumvent the rules' intent by disposing of rights in shows that turn out to be unattractive in order to buy a greater percentage of rights in new programs.

94. *Dominant/Non-dominant Network Proposal.* According to this proposal, the rules would be retained in their entirety, but would be applied only to CBS, NBC, and ABC. Turner recommends that a test for defining market power should include elements measuring the scope of service and the number, health, and relative size of the companies in network competition. Operationally, at least for the present, this proposal is similar to those offered by several other commenters. For example, although the Spanish International Network takes no position on the merits of the financial interest and syndication rules, it states that if the rules are retained, they should expressly apply only to the three major commercial networks. PBS reminds the Commission that it currently is exempt from the rules and that the Commission, in fashioning some alternative formulation of the rule, should not omit that exemption. Although supporting deletion of the rules entirely, Henry Geller and Donna Lampert state that, at the very least, the rules should be revised so as not to include new, emerging networks. Restricting the rule in this way would not hamper the creation of new broadcast or "hybrid" networks but would continue to restrain the dominant big three.

95. Although citing potential harms to emerging networks as an adverse effect of the rules, Shooshan and Jackson contend that Turner's analogy to dominant/non-dominant carriers is inappropriate. According to Shooshan & Jackson, occasional, *ad hoc* networks provide substantial competition to the major networks. This competition eliminates the bottleneck in program networking. Additionally, Shooshan and Jackson find no substantial barriers to engaging in this type of *ad hoc* networking. They reason that it therefore makes no sense to classify any firm as dominant in an industry where short-term, *ad hoc* competition is a real threat.

96. With respect to all the various compromise proposals offered by the commenters, CPD states that any new formulation must meet several important objectives. First, it must prevent network control over syndication. Second, this must be accomplished without significant enforcement or compliance costs. Third, there must be no significant costs in terms of economic efficiency. And fourth, the rules must be carefully drawn to avoid overbreadth. CPD also urges the Commission to weigh any transition costs inherent in modifying the rules against any benefits that might accrue from the changes. CPD concludes that after a consideration of all these factors, the existing rules remain the most effective and efficient.

Additional Issues

97. On April 21, 1983, the Office of Communication of the United Church of Christ, the Communications Commission of the National Council of the Churches of Christ in the U.S.A., and Paulist Productions filed a Petition for Further Notice of Proposed Rule Making. The parties allege that a Further Notice is necessary

because all interested parties have not been afforded equal opportunity to address "vague and nonspecific regulatory alternatives" which "appear to go beyond those contemplated by the Commission in initiating this proceeding." UCC *et al.* accordingly request that a Further Notice be issued to seek comments on proposed options for repeal, modification, or retention of the financial interest and syndication rules and to solicit additional options as well. The petition exhaustively documents various media articles and statements by Commissioners relating to compromise solutions to this proceeding. UCC contends that, by not specifically addressing these compromises and soliciting comment thereon, the Commission is depriving many parties from meaningfully participating. Accordingly, the Commission may be violating the Administrative Procedure Act and its own rules which may lead to "unpleasant litigation at best, and reversal at worst." UCC concludes that such problems," . . . and the consequential delay, expense and loss of public confidence can be avoided by the simple expedient of soliciting further comments."

98. In response, NBC argues that the original *Notice* in fact sought comments on appropriate modifications to the financial interest and syndication rules and that the *Notice* was not cast in "all or nothing" terms. NBC then lists a number of commenters who specifically forwarded and analyzed potential compromise positions in their initial comments. NBC further argues that the APA requires only a notice containing "either the terms of or substance of the proposed rule or a description of the subjects and issues involved." Citing *California Citizens Band Association v. United States*, 375 F. 2d 43, 48 (9th Cir.), *cert. denied*, 389 U.S. 844 (1967), NBC asserts that the APA does not require an agency to publish in advance every precise proposal which it may ultimately adopt as a rule. Hence, NBC concludes that the requirements of the APA have been met in this case and that the issuance of a Further Notice is neither necessary nor desirable.

99. In their reply comments, Henry Geller and Donna Lampert allege that, while the procedures being followed by the Commission are basically fair, the Commission is committing significant procedural error by labeling, for *ex parte* purposes, this proceeding as "non-restricted". Because this rule making, in the commenters' judgments, involves "competing claims to a valuable privilege", the proceeding, under the Commission's rules, must be considered restricted. Geller and Lampert suggest that this violation of the Commission's own rules could be corrected merely by eliminating the present restricted/non-restricted dichotomy in the Commission's rules and b conducting all proceedings under the non-restricted procedures. According to Geller and Lampert, the non-restricted procedures are fair and could be applied to all informal rule makings. However, until the Commission does change its *ex parte*

procedures, it is bound by its rules. The present rules state that *ex parte* contacts are not permitted in rule making proceedings involving competing claims to a valuable privilege. Thus, the Commission is not complying with its own rules in this proceeding. The commenters note that, since the *ex parte* provisions are procedural rules, they could be amended immediately without seeking public comment.

III. *DISCUSSION*

Legal and Policy Context of the Rules

100. This proceeding encompasses important issues relating to competition, diversity and efficiency in the production and distribution of television programming. There does not generally seem to be any disagreement among the parties to this proceeding that these important goals must guide our decision on whether to retain, modify or eliminate the financial interest and syndication rules. What is disputed is how various market practices and regulatory policies further or hinder the achievement of these goals and what weight should be given to each goal in situations where they may be contradictory. A discussion of these legal and policy issues will clarify the criteria used in reaching our tentative decision in this proceeding.

101. As a general matter, the Commission is guided in its decision making by the Communications Act of 1934, as amended. As is well known, the Act mandates that the Commission promote the public interest, convenience and necessity, but it does not define with any degree of precision the meaning of this direction. Rather, the Commission, subject to oversight by the Courts, has been traditionally afforded a considerable measure of discretion to formulate precise standards based on the objectives of the Act. In particularizing the public interest in adopting the financial interest and syndication rules, the Commission relied primarily on concepts of diversity and competition.

102. That the Commission should foster diversity in broadcasting is a concept that flows from the First Amendment and has been recognized in decisions of the Commission dating back to its creation. The Supreme Court has stated that the First Amendment "rests on the assumption that the widest possible dissemination of information from diverse and antagonistic sources is essential to the welfare of the public. . . . " *Associated Press v. U.S.*, 326 U.S. 1, 20 (1943). Commission decisions of all types have relied heavily on this concept. *Policy Statement on Comparative Broadcast Hearings*, 1 FCC 2d 393 (1965); *Newspaper/Broadcast Cross-Ownership*, 50 FCC 2d 1046 (1975); *Great Lakes Broadcasting Co.* 3 F.R.C. Ann. Rep. 32, 34 (1929), *rev'd. on other grounds*, 37 F. 2d 993 (D.C. Cir. 1930), *cert. denied*, 281 U.S. 706 (1930); *Editorializing by Broadcast Licensees*, 13 FCC 2d

1246 (1949); *Commission Policy Regarding the Advancement of Minority Ownership in Broadcasting*, Gen. Docket No. 82-797, 48 Fed. Reg. 5976 (February 9, 1983).

103. The desire to increase the diversity of programming sources available to the public has been one of the reasons the Commission has moved aggressively in recent years to eliminate policies and modify rules that limit the possiblity of diversity being made available to the public. *See e.g.*, *Cable Television Distant Signal and Syndicated Exclusivity Rules*, 79 FCC 2d 663 (1980) *aff'd sub nom. Malrite T.V. of New York v. FCC*, 652 F. 2d 1140 (2nd Cir. 1981) *cert. denied* 102 S. Ct. 1002 (1982) (eliminating certain restrictions on cable television operations); *Subscription Television Service*, 90 FCC 2d 341 (1982) (increasing the availability of broadcast subscription television service); *Direct Broadcast Satellite Service*, 90 FCC 2d 676 (1982) (authorizing operation of direct broadcast satellite stations); *Low Power Television Service*, 51 RR 2d 476 (1982) (authorizing low power television service); *Report and Order in Docket 80–90*, FCC 83–229 (May 26, 1983) (authorizing the licensing of additional FM radio broadcast stations); and *Report and Order in Gen. Docket 80–112*, FCC 82–243 (May 26, 1983) (authorizing multichannel multipoint distribution service stations).

104. The concept of diversity as it has been applied to the regulation of network broadcasting has been described as embodying two concepts—source diversity, which is a measure of the number of program originators, and outlet diversity, which is a measure of the number of independent transmission systems delivering programming to the public.[11]

105. In adopting the rules here in question the Commission used as its justification these long held and often repeated diversity increasing goals and it is therefore appropriate that in re-evaluating the rules we judge them again in terms of their impact on the program diversity.

106. The second stated objective of the rules—and test for their reexamination—is their effect in fostering competition. It has long been recognized that the field of broadcasting is intended to be a competitive one. The Supreme Court has stated that " . . . the Act recognizes that the field of broadcasting is one of free competition." *FCC v. Sanders Brothers Radio Station*, 309 U.S. 470 (1940). The well known formulation is that "This Commission, although not charged with the duty of enforcing that law (Sherman Act) should administer its regulatory powers with respect to broadcasting in light of the purposes which the Sherman Act was designed to achieve." *N.B.C v. U.S.*, 63 S. Ct. 997, 1013 (1943). The Court of appeals has held that

---

[11] Program diversity, measured by the number of actual program categories or types offered is also a relevant measure from the point of view of the public. However, it generally has not been a direct focus of Commission actions due to the necessity of our avoiding direct involvement in programming decisions.

"Monopoly in the mass communication of news and advertising is contrary to the public interest, even if not in terms proscribed by the antitrust laws." *Mansfield Journal v. FCC*, 180 F. 2d 28, 33 (D.C. Cir. 1950). Thus, a critical question in re-evaluating these rules is their effect on competition.

107. The Communications Act also charges the Commission in its regulatory activities, to act so as to develop a communications system that is "rapid," "efficient," and provides service at "reasonable charges." In the context of the present proceeding, this requires that regulations adopted or continued not impose undue costs or unreasonably interfere with the efficient conduct of business, and, at the same time, that private restraints on competition not interfere with the competitive spur that keeps businesses efficient and costs reasonable. In general, this suggests that the Commission should not intervene in the market except where there is evidence of a market failure and a regulatory solution is available that is likely to improve the net welfare of the consuming public, *i.e.*, does not impose greater costs than the evil it is intended to remedy. Although a consideration of the costs imposed is implicit in every decision to impose or continue regulations, in recent years greater emphasis has been placed on identifying those costs and we believe that is particularly appropriate in this proceeding.

Economic Context of the Rules—the Video Industry

108. At the time the financial interest and syndication rules were adopted, in 1970, there were 59 million television households. Television programming was distributed by over-the-air, conventional broadcast TV and cable television. At that time, there were 690 commercial broadcast TV stations operating. Table 1 classifies those stations by channel assignment type and by status as network affiliates or independents.

Table 1
Commercial TV Stations-1970

	Total	*VHF*	*UHF*
All Stations	690	508	182
Affiliates	600	477	123
Independents[12]	90	31	59

In 1970, the average TV home received 6.8 broadcast stations. Network stations received the overwhelming preponderance of the TV viewing audience, about 90%. Independent stations attracted approximately a 9% share of the television audience. At that time, the networks had revenues of $1.1 billion, the affiliates (including those owned by the networks) had revenues of $1.4 billion and the independents received revenue of $200 million. As Table 2 shows, the networks earned $50 million and their affiliates (including the network O & O's) were profitable with income totaling approximately $400 million. The independents, as a whole, lost over $20 million, although the average VHF independent was profitable.

---

[12] Independent stations were located in 43 of the nation's approximately 200 TV markets and served about 50% of all TV households.

Table 2
Financial Data-1970[13]
($ million)

	No. of Stations	*Revenue*	*Income*
Networks		1,144.6	50.1
Network O&O's	15	312.5	117.3
Affiliates	585	1,136.8	307.2
VHF	462	1,059.2	312.6
UHF	123	77.6	(5.4)
Independents	90	214.3	(20.8)
VHF	31	167.4	19.3
UHF	59	46.9	(40.1)

109. Cable television, in 1970, was principally a retransmission technology. It was a means of either distributing signals from nearby broadcast TV stations to areas where reception was poor or importing more distant stations' signals for areas where few local stations existed. At that time, there were 2,490 cable systems serving 4.5 million TV households.

110. In the production industry, there were 60 producers who created 93 prime time entertainment series for the networks for the 1969-70 season.[14] The top 4 firms held a 32.6% share of total programming hours with the top producer representing a 12.8% share. The top 8 firms created 46.3% of the total program hours and the top 20 production companies represented 68.4% of the market, in terms of hours of programming aired.[15] In 1968, the syndication

[13] Television Broadcast Financial Data - 1970.

[14] Network Inquiry Staff Report, p. 571.

[15] CBS and CPD submitted similar estimates for the concentration of the production industry. (Source: CBS, Vol. I, Appendix I, CPD, ICF, Vol. 2, pp. 109, 133, 215, 216.)

	CBS	*CPD*
No. of producers	61	61
No. of programs	94	75
Top Firm	15.2%	12.7%
Top 4 Firms	35.9%	35.6%
Top 8 Firms	48.7%	48.7%
Top 20 Firms	69.8%	62.6%

industry was made up of 17 syndicators who distributed 67 off-network programs according to the NISS.[16] The top 4 syndicators had a 63.9% share of all off-network programming hours, with the top firm representing almost half this amount (30.9%). The leading 8 distributors of off-network series accounted for 87.9% of all such programming hours.[17] In 1967 network sales of off-network television series in domestic and foreign syndication was $26.1 million, at a time when total sales of off-network series were $100 million.[18]

111. Since 1970, two basic types of changes have taken place in the video industry. First, the older distribution technologies have shown significant growth. Second, new technologies have entered the marketplace. Table 3 shows the growth of broadcast and cable television over this period.

Table 3
Growth of Broadcast and Cable TV[19]

	1970	*1975*	*1980*	*1983*
TV Households (millions)	59	70	78	83
Commercial TV Stations	690	711	746	802
Affiliates	600	625	626	623
VHF	477	483	487	501
UHF	123	142	139	122
Independents	90	86	120	179
VHF	31	30	30	25
UHF	59	56	90	154
Cable Television				
No. of Systems	2,490	3,506	4,225	4,825
Homes Passed (millions)	9	20	35	45
Basic Subs. (millions)	4.5	9.8	16.0	28
Pay Subs. (millions)		.05	9	23

112. The average TV household now receives 9.8 signals, an increase of 3 (44%) since 1970. The growth in the number of UHF stations, many of which are independents, has been a significant factor in this increase. As more independents have become available

---

[16] *An Analysis of Television Program Production, Acquisition and Distribution*, Preliminary Report, Network Inquiry Special Staff, Federal Communications Commission, June 1980, Table F-28 and F-29.

[17] CPD has made its own estimates of these same quantities. Its data list 20 distributors for the 1968-69 season with the top firm having a 13% share of program hours and the top 4 firms accounting for 48.8% of this market. The top 8 distributors represented 73.9% of the market, in terms of program hours. (ICF, Vol. 3, pp. 168, 177, 239, 240).

[18] *Report and Order in Docket 12782*, 23 FCC 2d 393 (1970).

[19] Source: *Television Factbook*, Services Volume 50, 1981-82, pp. 75-a, 83-a, *Cablevision*, April 11, 1983, p. 69. According to the latest Commission count, there were 844 commercial TV stations. FCC news release, June 16, 1983.

to viewers, their total share of viewing has grown relative to the networks.[20] The percent of homes passed by cable increased from 15.3% in 1970 to 54.2% in 1983. In 1982, the networks share of the television audience had fallen from 90% to approximately 80%, while independents and other over-the-air TV stations achieved a 17% share. It is also apparent from Table 4 that the independents have improved financially over this period. In 1980, the last year for which financial data are available, affiliates (including the network O & O's) had total income of approximately $1.2 billion on revenues close to $4 billion. In that year, both the average VHF and UHF independent stations were profitable. These stations had a total income of nearly $160 million and revenues of more than $900 million.

Table 4

Comparative Broadcast Financial Data[21]

($ millions)

	1970		*1975*		*1980*	
	Revenue	*Income*	*Revenue*	*Income*	*Revenue*	*Income*
Networks	1,144.6	50.1	1,673.8	208.5	3,865.2	325.6
Network O&O's	312.5	117.3	395.6	105.7	700.3	208.5
Affiliates	1,136.8	307.2	1,677.0	438.1	3,311.4	960.4
VHF	1,059.2	312.6	1,534.4	432.0	3,006.6	944.3
UHF	77.6	(5.4)	142.6	6.1	304.8	16.1
Independents	214.3	(20.8)	347.8	28.0	930.8	159.1

UHF	46.9	(40.1)	120.0	3.8	585.4	23.6

113. Since 1970, cable television has become much more than a means of distributing broadcast signals. Aided by the lauch of communications satellites and the removal of several restrictions on the operation of earth stations, a wide variety of cable networks has come into being since the mid-1970's.[22] Many of these networks are highly specialized, offering only news, sports, children's or cultural programs. Of the 34 basic service networks, 23 are advertiser-supported, including 3 independent stations, WTBS, WGN and WOR, which are distributed nationally via satellite and cable and often called superstations. Another 11 networks are supported directly or indirectly by subscriber fees. Cable systems also carry pay-cable channels in addition to the basic programming. The 17 currently available pay networks include movie channels, adult entertainment and regional sports channels. The largest pay cable networks are HBO and Showtime, which began principally as movie channels but have expanded their offerings to include original programming. The

Showtime (movies, specials)	1,500	3.5
The Movie Channel (movies)	2,150	2.2

114. The rapid growth of cable in recent years (see Table 3) is also evident from its increasing revenues. As shown in Table 6, total cable industry operating income was $1.2 billion for 1981 on operating revenues of $3.6 billion. Pay cable revenues were $1.2 billion.

Table 6
Cable Television Financial Data[26]
($ billions)

	1977	*1979*	*1981*
Operating revenues	1.2	1.8	3.6
Pay cable revenues	0.2 (1978)	0.35	1.2
Ad revenues[27]	4.9	5.0	13.0
Operating income	0.5	0.7	1.2

115. Several new technologies have also become participants in the distribution of video programming. Subscription television consists of a scrambled broadcast signal available only to subscribers with decoders. That technology has grown to serve 1.4 million homes in 25 markets while it had only 20,000 subscribers at the end of 1977. Multi-point Distribution Service (MDS) is a pay service delivered to

---

[23] See, for example, ICF, Vol. 1, Appendix 2, pp. 14-15, 25, CBS, Vol. I, Appendices D, E, H, NBC, pp. 30-33, 47; 49.

[24] Source: NBC, pp. 30-33, ICF, Vol. 2, Appendix 2, Exhibit 4, *Cablevision*, August 16, 1982, p. 70.

[25] For the advertiser and subscriber services, the number of subscribers is calculated as the number of homes where the network is available. For the pay channels, that number is the actual subscriber count.

[26] Source: FCC Cable Television Industry Financial Data Annual Reports.

[27] These data represent advertising revenues paid directly to cable systems and do not include the advertising revenues of the cable networks.

consumers via a microwave signal. MDS licensees are regulated as common carriers. The first MDS service became available in 1974. There are approximately 500,000 MDS subscribers at present. The satellite master antenna system (SMATV) is primarily available to multiple dwelling units since it uses antenna systems (including satellite earth stations installed on buildings) to gather programming which is then fed to the building's occupants by cable. SMATV has shown rapid growth, and already passes approximately 500,000 homes, 150,000 of which subscribe.

116. Although perhaps of less direct relevance in this context, other new forms of visual product delivery that compete with the older technologies are video tapes and video disk players. Video tape recorders not only allow prerecorded tape to be played but also permit the operator to record programs from the other media thus enabling the consumer to view programming at his leisure. Currently, there are an estimated 2.1 million homes with video recorders or about 2.6% of all households. Video disk players now are in 300,000 TV households, and this number continues to grow as new titles become available.

117. The networks, according to unchallenged data supplied by CBS, account for only 54% of the total video product purchases today, compared to 74% at the time the financial interest and syndication rules became effective. For example, 30% of HBO and Showtime's programs currently are produced either by them or by others for them. Daytime, a cable network showing women's programming, uses only original programming and about 55% of the children's programming carried by Nickelodeon, another cable network, is original with the network. HBO expects to spend $60 million on original programming in the next two years.[28] However, at present broadcast TV remains the principal purchaser of entertainment series.

118. Today, the syndication industry generates $800 million annually in revenues.[29] A staff analysis of November 1982 data from Arbitron's *Syndicated Program Analysis Report* indicates that there are currently 25 distributors of 117 off-network syndication series. According to our estimates, the top syndicator has about a 16.5% share of available off-network programming hours, the top 4 distributors have a 48.4% share of this market and the top 8 firms represent 73.8% of off-network programming hours.[30] Others present similar estimates.[31] The available data suggest that the off-

---

[28] New York *Times*, April 3, 1983, Section 2, p. 1.

[29] CPD, p. 127.

[30] For each syndicated series, the distributor's share was weighted by program length and the number of markets where it is aired.

[31] The number of distributors of off-network syndicated entertainment series has varied little over the last decade, with the number generally between 20 and 25. The data submitted by CPD (ICF, Vol. 3, pp. 168, 189, 239, 240) and CBS (CBS

network syndication market is relatively concentrated now, just as it was a decade ago.

119. It appears that the future of the video market likely will be shaped by the growth of the new distribution technologies, including some fledging services not discussed in any detail here such as direct to home broadcast satellites and low power television, and the increasing number of cable and pay options. At least 38 new cable networks have already been announced.[32] It is widely predicted that prime time audiences will continue some shift away from the networks. However, forecasts of the prime time shares the networks will attract in 1990 vary widely, from 59% to 75% as the following table shows.

Table 7
1990 Prime Time Network Audience Share Estimates[33]

Forecaster	*Share*
CBS/Broadcast Group	70
ABC	60-70
NBC	68-70
Doyle Dane Bernback	65
J. Walter Thompson	63
Ogilvy & Mather	59
N.W. Ayer	75
Leo Burnett	70

120. The extent to which viewing patterns will change is, to a large extent, dependent on the growth of these new media. While specific predictions for 1990 vary, as Table 8 indicates, cable penetration is expected to approach 60% of all TV households with 45% of all TV homes expected to subscribe to at least one pay cable service.

Reply, Vol. I, Exhibit D, Table D-2, p. 6) for 1981-82 and the Network Inquiry Special Staff's most recent estimates (Preliminary Report, Tables F-28 and F-30) for 1977-78 are as follows:

	CPD	*CBS*	*NISS*
No. of distributors	25	NA	22
No. of programs	NA	NA	87
Top Firm	24.2%	17.8%	32.1%
Top 4 Firms	57.4%	60.9%	75.3%
Top 8 Firms	72.2%	98.3%	88.4%
Top 20 Firms	96.7%	NA	99.8%

Viacom (Appendix B) lists 23 distributors of off-network series, also. However, Metromedia lists 57 syndicators (Exhibit 5) of these programs. For purposes of comparison, CPD data for 1970 show 23 distributors, the top firm with a 15.6% share, the top 4, with 45.4%, the top 8 with 69.5%, and the top 20 with 97.9%.

[32] *Cablevision*, April 25, 1980, p. 98.

J. Walter Thompson		60		30 (1989)
Ogilvy & Mather				46
NBC		60		45

121. It is expected that this growth in cable service will result in basic cable revenues rising to as much as $6.5 billion and pay cable revenues increasing to $8 billion compared to expected network revenues of between $15 and $20 billion. The other pay services also are expected to grow, to the point where 77% of all TV homes will have some type of pay service. This growth is expected to come from currently available pay services, direct broadcast satellites (DBS), and low power TV stations (LPTV). In addition, the Commission has recently authorized the allocation of additional frequencies to the MDS service so that they may provide a multichannel MDS service. This multichannel capability makes it more like an over-the-air cable service and may enable MDS to be a stronger competitor in the video marketplace. While it is difficult to predict the future with certainty, the following "educated guesses" in table 9 present a broad sketch of the video distribution industry showing the growth of the various video alternatives including estimates for the state of the industry in 1990.

Table 9

Availability of Video Options[35]

(millions)

122. It is extremely difficult to make estimates for the production and syndication industries of 1990. It is clear that the many new

---

[34] Source: ICF, Vol. 1, pp. 20, 29; NBC, p. 27.

[35] Source: CBS, Vol. I, pp. 54–5, 79–91 and previously cited data.

outlets will require a vast supply of programming. Some of this programming, no doubt, will be similar to the general entertainment fare currently associated with network prime time television. Other programming may well respond to much more specialized needs.

Effects of the Rules on the Network-Producer Relationship

123. Based upon the foregoing description of the video industry, we now present an analysis of the effects of the financial interest and syndication rules. The analysis is performed on each component of the system of markets that together comprise the video industry. We examine the effect of the rules on: (1) the programming market involving program producers and the broadcast television networks, (2) the off-network programming market involving syndicators and television stations, (3) the competitive situation facing the broadcast television networks and (4) the possibility of new broadcast networks.

124. *Monopsony Power of the Networks.* Part of the original rationale for the financial interest and syndication rules was a concern that networks were able to use the power of their position as program purchasers to obtain rights from program producers at less than compensatory rates. Specifically, the stated concern was that the networks would not pay program producers enough for the programs, would insist on obtaining the syndication rights as a condition for airing the programs on the networks and would exert undue creative control over the final product. In order for these concerns to be realized, two conditions regarding network behavior must be met. First, the three networks must be able to act in concert, either tacitly (by parallel behavior) or collusively (by active conspiracy). Second, the three networks together must comprise the sole purchasers of the program producers' product. If either of these conditions is not met, it is not likely that the networks could exert power over program producers. This is so because, if adequate alternative program purchasers exist, any producer who may be dissatisfied with the treatment he receives by *a* single broadcast network has the option of offering his product to a different network or some other program purchaser. Competition among these program purchasers thus would ensure that the program supplier receives a competitive price (full market value) for his product.

125. After considering all the available evidence, we have concluded that the extent to which the conditions hypothesized above accurately characterize today's media marketplace is very much in doubt. First, there is evidence that the three networks do in fact compete with each other. The networks are rivals in a ratings war.[36] Ratings have been volatile in recent years, with changes

---

[36] CBS comments, p. 37.

READEX FICHE best copy available

occurring in the networks' relative positions.[37] Second, there has been an expansion in the number of television outlets and network services that has caused an increase in the number of program purchasers and an increased demand for new programming. As a result, the network share in total program expenditures has declined over the years until it has now fallen to 54% of all expenditures on programming. The total share of the audience garnered by the networks is declining, which is further evidence that other viewing outlets are effective competitors to the networks as suppliers of entertainment programming.[38] To say that networks control the programs they buy is clearly true, but alternative program purchasers are developing to which program suppliers can turn should the networks try to lower the price they offer to program suppliers.[39]

126. Empirical research indicates that program producers, and their talent inputs, are able to renegotiate their contracts and consequently receive a higher income when their television series become more popular, i.e., achieve higher ratings.[40] Thus, through the contract renegotiation process, program suppliers are able to share, with the networks, in the higher revenues that are earned as a show gains in popularity. If networks exercised collective monopsony power against their program suppliers, we would not expect them to be forced to share this added revenue with their program producers. In fact, if the networks had such collective monopsony power we might expect that they would attempt to lower the price they offer for successful programs during the network run since the amount a program would earn during its syndication run likely would be higher. Even though its network earnings would be less, a producer would be no worse off because it could recoup these revenues when the program goes into syndication. The network would have the ability to retain all the extra revenues which are earned due to a show's popularity because a producer would have no other program purchaser to whom it could sell the program, *i.e.*, the producer has no bargaining power. The networks' apparent inability to retain all the additional revenues earned by a successful television program during its network exhibition indicates that they are not exercising collective monopsony power against the program producers.

127. The available evidence also leads us to the conclusion that collusion among the networks would be difficult to achieve and maintain. Overt collusion would be hard to conceal and would be

prosecutable under the Sherman Act. With respect to tacit collusion or parallel conduct, as the Department of Justice points out, the antitrust laws might not be as effective a tool. There are reasons to believe, however, that such conduct in terms of the type of conduct here in issue would be difficult for the parties themselves. Restrictions on price competition would likely require overt conduct. However, when nonprice features of goods or services such as product quality or contract terms, are not uniform and are important determinants of the value of a product coordination problems become severe. This is clearly the case with program purchases by the networks. The Network Inquiry Final Report describes, in exhaustive detail, the complicated and delicate contracting process between networks and program producers, beginning with idea development and ending when the program goes off the air. Maintaining parallel or collusive behavior in such a complex environment would require unreasonably complicated efforts.

128. The presentations by parties alleging network market power do not persuade us that such power is sufficient to result in the deleterious effects that have been alleged. For example, evidence is presented regarding the movement of personnel from one network to another.[41] It is not clear that this movement of personnel, which purports to be evidence of network parallel behavior, occurs at higher incidence than in other industries. Moreover, such movement would make collusive activity impossible to conceal.

129. Parties also claim that failure of the networks' license fees to cover all production costs is evidence of network market power. However, it is not evident that what they term "deficit financing" is a reflection of network monopsony power. Obviously, the costs of production must in the long run be covered by revenues from all the potential uses of the program, including foreign and domestic syndication. If producer's costs were not at least met, the industry would soon be bankrupt and all producers would leave the industry. From an economic standpoint, all costs need not be covered by network payments alone simply because all costs of production are incurred before network broadcast. In fact, if the rules have any effect, they might make "deficit financing" more likely. This is so because the rules prevent the networks from purchasing the complete set of rights to a program. Consequently, producers who want to cover their production costs immediately may have difficulty in obtaining other sources of financing to replace the full financing supplied by the networks prior to the rules.

130. Finally, there is empirical evidence that networks obtained syndication rights on a fully competitive basis prior to the rules. One study, performed by Robert Crandall, concluded that payments for

---

[41] See ICF, p. 1–22.

these rights were made in the form of higher license fees, and that the payments approximated the full market value of the rights.[42] Furthermore, our analysis indicates that networks did not obtain a "monopoly" share of syndication rights when they purchased them before the rules. In fact, the networks together obtained less than a 25 percent market share.[43]

131. *Effectiveness of the Rules*. Focusing narrowly on the concerns scrutinized in this section of the analysis, we must conclude that the rules are unnecessary if the networks have no demonstrable monopsony power. Thus, it is expected that the financial arrangements arising from the normal business relationship between the networks and program producers will equitably reflect the competitive process. Of additional concern, however, is whether, even if the networks did have a significant degree of market power, the rules effectively would preclude the networks from exercising it. Our analysis leads us to believe that the financial interest and syndication rules are unlikely to curb any network market power that could exist. The fundamental reason leading us to this conclusion is that the rules do not modify the source of any such market power, *viz.*, the structure of the market. The market structure is defined by the fact that there are only three broadcast networks. Any market power that could derive from this structure could be exerted in ways other than bargaining for syndication rights. With regard to producers in particular, other aspects of their contracts with the network (such as the license fee paid to program suppliers) could reflect their inferior bargaining positions. The rules do not change the networks' control over the nature of the programs they choose to purchase for broadcast. Even with the rules in place, each network selects which program it will air and which it will not and thus holds veto power over any content it does not wish to air. Accordingly, producers' fear of losing creative control of their programs if the networks regain a financial interest appears unfounded.

132. Further, it does not seem in the best interest of the networks to behave in a manner that induces producers to exit. If there were fewer producers, they could more effectively act collectively and exercise market power with respect to their dealings with the networks. Under such an outcome, networks would be made worse off. The networks benefit from the presence of many independent producers contending for their patronage.

133. *Cost of the Rules: Inefficient Risk Sharing*. The financial interest rules prevent networks from obtaining a financial interest in programs produced by others. Therefore, the rules force suppliers who wish to permit others to have a financial interest in their

---

[42] Crandall, "FCC Regulation, Monopsony, and Network Television Program Costs," 3 *Bell J. Economics*, p. 483 (1972).

[43] *Report and Order in Docket No. 12782*, 23 FCC 2d 393 (1970).

programs to choose between: (1) selling in a market with an artificially reduced number of prospective purchasers, since three major purchasers in a position to offer favorable terms have been excluded by the rules, or (2) retaining the rights or interests they would prefer to sell, thus bearing by themselves risks they would prefer to share or shift to others. The result of this artificial altering of the program market may be to reduce efficiency, competition and diversity in the supply of network programming.

134. Financing production of a good by the sale of future interests in one or more stages of distribution is a common and accepted method to distribute risk efficiently.[44] Although other members of the program production market, to some extent, are capable of bearing and hedging risk, the networks may be in a unique situation with respect to shouldering these risks. As analysts have found, (1) networks bring together an efficient nationwide group of station outlets, (2) networks have continuous information from both advertisers and station affiliates concerning changing public tastes, (3) networks are able to pool the risks of individual programs across an entire program schedule, and (4) networks have expertise in designing overall program schedules with maximum attractiveness in the face of competing schedules.[45] Further, networks may be able to promote programs more efficiently if they can coordinate network and off-network runs. This promotional aspect is important, however, only if the behavior on the part of the networks that enhances the value of a program's network run is different from that which would enhance the value of the program during its off-network run. In other words, if a network would not promote a program any more heavily if it would benefit from the syndication run than it would otherwise, then the rule does not prevent promotional efficiencies. Even so, the rule may lead to shorter-than-optimal runs for network programs.

135. To the extent the rules prevent an efficient sharing of program risks, there is less investment in network programming than there would be in the absence of the rules and the quantity, quality, and diversity of programming is artificially limited. Also, inefficient risk-sharing could lead to higher program production costs. In turn, the cost of network time to advertisers and the cost of advertised products to consumers likely are greater than they otherwise would have been. The programs most likely affected by such risk inefficiencies are those that present the most risk. Thus, the diversity of programming actually produced may have been

---

[44] Network Inquiry, Staff Report, Vol. II, p. 406.

[45] Network Inquiry Staff Report, pp. 746–54; CBS Vol. I pp. 127–130; Franklin Fisher, CBS Vol. II, Appendix E, pp. 17–22; Alfred Kahn, p. 17; Shooshan and Jackson, pp. 5–11; FTC, pp. 31–34.

reduced because the rules have encouraged production using tried and true formulas.

136. Further, while the rules do not increase the aggregate profitability of all program producers, they may shift revenues among individual producers. Any producer less willing to bear risk than the networks might prefer to sell the rights to the network initially, but the rules bar such a producer from doing so. By making it more difficult for risk-averse producers to survive, the rules may aid those producers who are more willing and able to bear risk. Thus, if larger, established producers are better able, and hence more willing, to bear risk than smaller or new producers, the current rules work to the advantage of the larger producers who are relatively better off and insulated, to some degree, from competition and new entry. The end result may be a more concentrated and less diverse program supply industry.

137. The limitation on network-producer risk-sharing will cause significant inefficiencies only if producers are substantially less able than the networks to bear risks involved in program production. Indeed, there is some evidence that producers are currently interested in assuming some of the risk that the networks now bear.[46] This would indicate, at the least, that producers are not currently overburdened with risk. The Network Inquiry Report points out that where the probability of financial loss is assumed to be 50 percent on a single program, it falls to approximately three percent if five statistically independent programs are pooled.[47] If that level of pooling is not attained by some independent producers alone, it perhaps can be achieved through joint ventures. Further, large production companies, banks and other large corporations may have risk-spreading advantages the broadcast networks may not possess.[48] In addition to spreading investment risk across many programs, these non-broadcast entities can spread their investment risk across *networks*. Such an advantage may or may not be significant in quantitative terms. Their lack of expertise in the programming field may deter nonbroadcast entities from such investments since they may be unwilling to take large risks on projects they are unable to assess well. On the other hand, they can pool their entertainment investment risk with investments in other areas.

138. As discussed above, from a theoretical point of view the major effect of the rules as they relate to the program production industry appears to be to force inefficient risk-sharing arrangements that could cause a variety of ill effects on program producers and on

---

[46] Comments of ICF, p. I-16. ICF contends that networks have consistently rejected producer proposals with incentive clauses for successful program performance and greater producer risk on the downside.

[47] Network Inquiry Staff Report, Vol. II, p. 617.

[48] DOJ reply comments, pp. 4–5.

the programs produced. Although intended to lessen concentration in the program supply industry and thereby increase diversity in the sources of programming exhibited on the networks, a close review of the economic effects of the rules makes it appear, at least at the theoretical level, that they could actually have the opposite effect. Considerable effort has therefore been expended in this proceeding in attempting to find empirical evidence to confirm or dispute this conclusion. Having reviewed the evidence relating to concentration in the supply market both before and after the rules, we find no evidence that the rules have served to decrease concentration in the supply market or increase the diversity of program sources. Instead, it appears that the supply market was not particularly concentrated at the time the rules were adopted and that this market was and is today a competitive one. While various definitional and statistical problems and the influence of factors beyond these rules make conclusive judgments difficult, there is some evidence to support the proposition that the rules create incentives that lead toward concentration rather than away from it.

139. There seems to be no disagreement that, in the years immediately following the adoption of these rules, the number of producers supplying programming for prime time network exhibition declined rather dramatically. Using the measurement statistics preferred by the Committee for Prudent Deregulation, the number of producers declined from 61 in the 1969–1970 television season to as low as 30 in the 1974–1975 season.[49] Averaging the data supplied from before and after the rules, again using the CPD preferred data, shows an average of 66 producers per year in the pre-rule, 1964–1971, period and an average of 47 producers per year in the post-rule, 1972–1982, period—a decrease of 29 percent. The Network Inquiry Special Staff in its study of this issue, after comparing 1969–1970 and 1977–1978 data, also found some measure of increased concentration but noted that most of the increase was due to the rise in the share of the leading firm which had doubled the number of series programs it was supplying.[50]

140. CPD argues, to the contrary, that, comparing 1969–1970 and 1981–1982 data, the number of suppliers has increased from 61 to 67. It should be noted, however, that 1981–1982 is the only season of the thirteen that have passed since the rules were adopted where this comparison would show an increase. Data contained in the appendix to the CPD comments, but not cited in the body, show that the most recent data (1982–1983) demonstrate a continued decline. Thus, even using the data most preferred by the proponents of continued regulation, there is no evidence that the rules have

---

[49] ICF Vol. 2, appendix 3, p. 109.

[50] Network Inquiry Staff Report, Vol. II, p. 556. In subsequent years, the share of the leading firm declined, causing measured concentration to decrease.

decreased concentration and, indeed, there is some evidence that they may have increased it.

141. Other data supplied by other parties, evidence larger and more consistent declines in the number of producers. CBS data, for example, showed a substantial increase in concentration, with the number of prime time producers dropping to 41 in 1981–1982 from 61 in 1969–1970.[51] The reason for the difference between the CBS and CPD data is that each used a different definition of producer. CBS simply counted the number of entities who had contracted with a network for the production or delivery of a program.[52] CPD counted all those who had management and/or creative responsibility or a financial interest in the proceeds from the first-run exhibition.

142. In an effort to facilitate a comparison of the data from the two sources, the Commissison's staff prepared its own estimates. The staff established set fall schedules for both the 1969–70 and 1981–82 seasons. The data submitted by CBS and CPD were then used to arrive at producer and program counts for each methodology.[53] From these data, various estimates of production industry concentration were derived. The results are presented in the tables below.

Table 10
Summary of the Production Industry

[51] CBS comments, Vol. 1, p. 149, appendix J.

[52] CBS comments Vol. 1, p. 147, footnote 279 and data submitted April 25, 1983.

[53] More specifically, the staff methodology first defined a base fall season schedule for each year. (For 1969 the source was the *Complete Directory to Prime Time Network TV Shows 1946 - Present*, Tim Brooks and Earle March, Ballantine Books, New York, 1979. The 1981 fall schedule was derived from information in *Broadcasting*, May 4, 1981, pp. 30–1, August 17, 1981, pp. 134–5, August 24, 1981, p. 48, September 14, 1981, pp. 32–3, and November 23, 1981, p. 60.) For each program on this schedule, the producer or producers were identified from the raw data submitted by CBS and CPD. Then, for each producer and program a weight was calculated. This weight was the program length (hour, half hour, etc.) multiplied by the producer's share. For a sole producer this share was one. Where joint ventures existed, the share was equally divided among all production companies. (CPD weighted its data in this manner. CBS used the number of episodes, including reruns, as an additional factor.) Next, a total of these weights was calculated for each producer. Finally, this total was divided by the total number of prime time hours, which was equivalent to the sum of all producers' weights. The result was an estimate of each producer's market share.

Top 4	30.1%	33.9%	22.3%	31.6%

% hours	44.9	45.8	43.5	45.4

143. Comparisons of these data show relatively small changes in the level of concentration in the production industry both in terms of concentration ratios and in the Herfindahl-Hirschman Index, the measure preferred by the Department of Justice. Using any of the measures, the production industry was relatively unconcentrated in 1969 and remains so today. These studies would appear to reveal that, in the production industry, the rules may have had some negative effect.

144. If it is correct that the rules function to prohibit the networks from operating as efficient risk bearers for more risk averse producers in the production of programming, then it could be expected that, after the rules went into effect, smaller producers would be increasingly forced into joint ventures with others. The chart below, prepared using the staff methodology and CPD producer definitions, does suggest some increase in the percent of programs that are produced by the major studios in combination with independents and by independents in conjunction with other independents, as theorized.

Table 11
Joint Ventures

Effects of the Rules in the Syndication Market

145. The second market where the effects of the rules are analyzed is the syndication market in which off-network programming is sold to local television stations. The concern has been expressed in the comments that repeal of the rules would allow the networks to exercise control over the availability of off-network programming, and that television stations, particularly independent stations in competition with network affiliates, would be affected adversely by such control. Indeed, this concern underlies much of the opposition to repeal of the rules. Commenters most commonly express a fear that some off-network programs might be "warehoused," *i.e.*, withheld from the market. Their argument is, in essence, that such warehousing of off-network programs would either drive up the price of programming or would reduce the size of independents' audiences.[56] Other commenters claim that repeal of the rules would have beneficial effects on television stations because it would permit the achievement of efficiencies in the production and distribution of programming.[57] Each allegation is discussed in some detail below.

146. *Withholding of Off-Network Programs*. The most comprehensive exposition of the argument that networks would have the ability and the incentive to withhold programming in an anticompetitive manner in the absence of the rules is contained in a study by ICF Incorporated, conducted under contract and submitted by CPD.[58] Since the ICF study was a central focus of many reply commenters, it is discussed here in considerable detail. A key assumption made by ICF in its report is that a small number of firms

---

[56] Commenters expressing this view include the Committee for Prudent Deregulation (CPD), Independent Television Stations, Inc. (INTV), Metromedia, Inc., and others.

[57] These commenters include Franklin M. Fisher and William J. Baumol, in reports submitted as appendices to the comments of CBS, Inc., and the National Broadcasting Companies, Inc.

[58] ICF Incorporated, "Analysis of the Impact of Repeal of the Financial Interest and Syndication Rule," Report to the Committee for Prudent Deregulation, January 26, 1983.

would have as much power over program supply as would a single supplier. ICF asserts that, in some circumstances, those few firms would restrict the supply of programs by withholding some from the market in order to increase the price of the programming that remained on the market. Although their discussion is somewhat abstract, it is essential that a brief account of it be made here. ICF's theory runs as follows. Stations choose the programs they wish to air on the basis of the net revenues each will generate. When programs of differing quality, as indicated by the potential advertising revenues they would generate, are offered to stations, the prices of the programs chosen are held down by the prices of alternatives not selected, since stations could choose those alternatives instead of the programs actually selected. Removing the best unselected program from the market will leave a poorer unselected program as the best alternative.[59] Elimination of the best alternative program would increase the gap between the advertising revenues generated by the programs selected and the best alternative not selected. Prices of programs that are selected would then be free to rise above their original levels.[60] ICF asserts that such withholding could be accomplished by a single syndicator acting independently, and would not require collusion among syndicators.

147. ICF presents four theoretical cases in which a syndicator of television programs would elect to withhold programs from the market. In the first case, the programs withheld would not have been shown in any case, so that withholding them would not affect the programming shown. Such withholding would leave the programs

---

[59] Some commenters (INTV and TBS) have asserted that the networks would have an incentive to withhold their most popular programs from syndication in order to deny them to independent stations and thus damage the independents' competitive position. Since the most popular programs earn the highest syndication revenues, withholding them would entail higher costs to the networks than withholding other programs. As in the case of other shown programs, for withholding to be profitable, the advertising revenues gained would have to outweigh the loss of syndication revenues. Consequently most commenters rule out withholding of the best programming; even ICF states that such withholding would be less likely than withholding of less popular programming. See "Response to comments on the ICF Report," ICF Incorporated, Apr. 26, 1983, p. 14.

[60] A hypothetical example may help clarify this theory. Suppose that programs A, B, and C are available for a single time slot and would generate advertising revenues of $1,000, $800, and $600, respectively. Assume also that the cost of distributing a program (the minimum price at which any program would be sold) is $100. If program B were to sell for $100, then the maximum that could be charged for program A is $300, since A would only earn $200 more revenue than B. If the owner of program A attempted to sell it for more than $300, B would earn higher net revenues for the purchasing station. But suppose A and B are owned by the same seller. Then that seller can withhold B from the market, and if C sells for $100, A can be sold for up to $500 and still earn more revenue for the station than C. The seller has increased the price of A by $200 and lost nothing, since B would not have been sold in any case.

available to viewers unchanged and so would not affect viewer welfare. Withholding of this sort also would impose no additional cost on the syndicator who withheld the programs, since he would not forego any revenues by withholding unshown programs. The sole direct effect would be an increase in program prices and a consequent transfer of revenues from the stations to the syndicators of the programs that are shown.

148. In addition, some supporters of the rules assert that, since stations' programming costs would rise with increasing program prices, there would be a reduction in independent stations' profits, which in turn would reduce those stations' ability to acquire high-quality first-run syndicated series or theatrical features.[61] Thus, they believe, the quality of programming on independent stations would deteriorate. Their argument does not appear to be valid, however, because one would expect program acquisition decisions to be made on the basis of the expected net revenues of the programs to be acquired, and that a loss of profits as a source of funds to purchase programs would be unlikely to affect those decisions. The same supporters of the rules state that a decrease in the profits of independent stations would retard the entry of new stations and, consequently, would decrease the likelihood of formation of a fourth network.

149. The second theoretical case that ICF discusses would result in the same effects as the first except that, in addition, the programming actually shown would change as a result of warehousing. In this second case, ICF posits some small fringe suppliers in addition to the dominant firm. If the dominant supplier owned several programs, but not the best unselected program, it could have an incentive to withhold one of its own programs that otherwise would have been selected. This would mean that the best previously unselected program would be purchased instead of the program withheld, leaving a still poorer program as the best unselected show. Such withholding would cause the prices of selected programs to rise.[62] If the dominant supplier also owned the program that became the best unselected program, it could have an incentive to withhold

---

[61] Commenters expressing this opinion include TBS and INTV.

[62] Another numerical example may be useful. Suppose this time there are two time slots to be filled and programs A, B, C, and D, providing advertising revenues of $1,000, $900, $800, and $500, respectively, are available. Distribution cost is again $100. Programs A and B will be sold for at most $300 and $200, since the next best alternative is program C, which costs $100 and provides $100 less revenue than B and $200 less than A. If the owner of A does not own C, he cannot withhold it to raise the price of A and B. But if he owns B, he can withhold B so that C will be purchased instead. Then D will become the best alternative program. The price of A can rise to $600, since the best alternative costs $100 and provides $500 less revenue than A. The owner of A now earns more from selling A alone than he did from selling both A and B.

that program as well, thereby allowing the prices of selected programs to increase still further. In addition to the effects on prices, this strategy would cause stations' audiences and advertising revenues to fall, since programs would be withheld that would have attracted larger audiences than those actually shown. As a result viewers' welfare would decrease, since preferred alternatives would be unavailable to them. The syndicator who withheld the program (who also would be the dominant firm) would lose the revenues from the programs that were withheld, but all syndicators of shown programs would gain revenues from the increased prices of the programs that were shown.

150. These two strategies could be pursued by any syndicator who owned rights to the necessary programming. The third and fourth cases presented by ICF involve additional effects that ICF asserts the networks could accomplish because they are integrated into broadcasting and because they sell television advertising in competition with the independent stations. In the third case, the networks would raise advertising prices to a higher level than they would if they were not integrated into broadcasting. Raising their advertising rates would cause the networks to lose some advertisers to the independent stations, but as a consequence of the new demand for their time the independents' advertising revenues would increase and they would be able to pay more for programming. Then, according to ICF, the networks would be able to raise prices of off-network programs even higher than in the first two scenarios and could more than recover their initial losses of advertising revenues to the independents. Although independents may not be any worse off under this scenario—they would have higher costs but also higher revenues—consumers and advertisers would be adversely affected because advertising rates and prices of advertised products would rise.

151. In the fourth scenario, ICF asserts that the networks' involvement in broadcasting would give them an incentive to carry the withholding strategy further than if they merely distributed programming. Networks could reduce the quality of programming shown by independents either by making high-quality off-network programming unavailable or by raising the price of high-quality programs to the point where the expected advertising revenues from the programs would not cover their cost. This is the case about which most commenters expressed concern, and the one which yields the most detrimental alleged effects. If withholding of programming by the networks caused independent stations to show inferior programming the independents' audiences and advertising revenues would fall. Some of the viewers lost to independent stations would switch to the affiliates or owned stations of the network withholding programming, thereby potentially increasing that network's advertising revenues. In addition, if the increase in program prices or the

reduction in audiences caused independent stations to reduce their hours of operation or to cease operation, and if there were no good substitutes for television advertising, then the decrease in the quantity of advertising time available would cause an increase in its price. Thus, the networks and affiliates would gain not only from increased numbers of viewers but also from increased advertising revenues per viewer. In addition, ICF concludes that viewers would have less desirable programs from which to choose and a smaller number of choices. Finally, that part of the increase in advertising prices would be passed on to consumers in the form of increased prices for advertised products.

152. *Likelihood of Withholding Programs*. The ICF theories presented above appear consistent with economic theory. Whether or not they accurately depict reality, however, depends, on several assumptions about the characteristics of the syndication market. At the heart of the theories are the requirements that the networks both be able to affect the price of off-network syndicated programming by controlling its supply, and have an incentive to do so. We examine below the assumptions underlying the warehousing theory and the likelihood that they could all be met. While we conclude that withholding is unlikely, we find that it is impossible to rule it out entirely.

153. The first assumption is that off-network programs must constitute a separate, at least somewhat distinct, market. For control of the supply of off-network programming to enable the dominant supplier to affect its price, no good substitutes must be available near that programming's prevailing price. Otherwise, increasing the price of off-network programming would merely encourage independent stations to purchase one of the substitutes. In fact, many other forms of programming are available to independent stations, including first-run syndicated programs, sports shows, theatrical films, and locally-produced programs. Nevertheless, the half-hour segments of recent off-network shows may be somewhat better suited to this time slot.

154. ICF and others opposing repeal of the rules assert that, for important time periods, other forms of programming cannot generate net revenues as high as those of off-network programs.[63] Thus, the existence of such programming cannot constrain the prices of off-network programs. Off-network programs, they assert, cost less for similar program quality and audience ratings because their production costs have already been recouped during the network run. These parties believe that off-network programs are less risky than the alternatives because their ratings can be more readily predicted by

---

[63] See ICF, "Paper 2: The Economic Effects of the Repeal of the Rule on Advertisers and Independent Stations," pp. 3-12—3-34, and comments of the Department of Justice.

using their ratings during the network run as a guide. In addition, they argue, for the 4:00 to 8:00 p.m. time period (a period during which independents earn a considerable portion of their revenues), longer programs such as movies and sports events are unsuitable because most viewers are unwilling to commit large blocks of time to watching television. To the extent this is true, there may be a distinct submarket.

155. The study submitted by Crandall, Noll, and Owen presents evidence that many first-run syndicated programs are shown between 4:30 and 7:30 p.m., and further, that many of those shows receive ratings as high as or higher than the highest-rated off-network programs.[64] Thus it appears that first-run syndicated programming can generate revenues similar to those of off-network programs, so that from the point of view of television stations they can be considered close substitutes for off-network shows. The study also shows that while only a few of the programs shown in the 4:30 to 7:30 p.m. period have high ratings, a large number of programs receiving more or less similar lower ratings, both off-network and first-run, are shown in that period.[65] Even if many of the best unshown programs were withheld, many more with the same potential revenues would be available. Without controlling nearly every unshown program in syndication, including first-run pro-

---

[64] Robert W. Crandall, Roger G. Noll, and Bruce M. Owen, "Economic Effects of the Financial Interest and Syndication Rule: Comments on the ICF Report," Owen, Greenhalgh, & Myslinski Economists Inc., April 1983, pp. 84–5. Because the 7:30–8:00 p.m. period is omitted, the programs and ratings reported are not directly affected by the prime time access rule.

[65] *Id.*, pp. 83–86. ICF, in fact, defines the market more narrowly as recent off-network programs shown between 4:00 and 8:00 p.m. and between 11:00 p.m. and 1:00 a.m. Others, however, present evidence that programs shown in other time periods substitute readily for these programs. An FCC staff study reports that all but one of the 101 most popular syndicated programs are shown in more than one daypart. In fact, 42 percent of them appear in five or six dayparts. An implication of this fact is that while movies, sports, and the like may not be usable in the 4:00–8:00 p.m. period, they can be substituted for series shown in other dayparts that could be shifted to that period. *See* Jonathan D. Levy, "Is There a Separate Market for Off-Network Programming and How Easy Would It Be to Collude Therein?", p. 4. In a study submitted with CBS's reply comments, Joskow shows that a typical station shifts many programs between 4:00–8:00 p.m. and other dayparts. The station's audience shares, with few exceptions, appear fairly constant across dayparts. Paul L. Joskow, "Comments on the Effects of Repeal of the Financial Interest and Syndication Rule," in Reply Comments of CBS, Inc., Appendix B. Vol. 2, Table 20; ICF Exhibit 1–23. Joskow also notes that older off-network programs are good substitutes for recent ones. In a survey of ten top-rated independent stations, off-network programs in syndication more than five years accounted for about one-third of programming time between 4:00 and 8:00 p.m.; the stations broadcast an average of two programs more than ten years old during this period. *Id.*, Tables 16, 17. Joskow estimates that in a market with three affiliates and two independents, about sixty half-hour series a year—far too many to be supplied from popular, recent off-network fare—would be required to fill the 4:00–8:00 p.m. time period. *Id.*, p. 30.

grams, it would be impossible to create a gap in potential revenues between the last program shown and the best unused alternative. However, to the extent that such a gap may exist, successful warehousing, following the strategy referenced by ICF, Inc., might be practical. In this regard, it is appropriate to give some credence to the business judgment of industry practitioners. A statement by 58 managers of independent stations asserts that there are few good substitutes for off-network programs in the 4:00–8:00 p.m. period, and the revealed preference of at least one major group owner of independent stations is overwhelmingly for off-network programs in the early fringe period. Furthermore ICF, in its reply comments, cast some doubt on the homogeneity of the marginal programs asserted by Crandall, Noll, and Owen.[66]

156. A second assumption underlying ICF's warehousing theory is that the networks have the ability to acquire all syndication and financial rights to most or all off-network programs. If suppliers other than the networks controlled programs that would provide good substitutes for those over which the networks gained control, then a withholding strategy could not be effective. The ICF report asserts that the networks would have the power to extract syndication rights from program producers. CPD suggests that the broadcast networks would be able to acquire all syndication rights because there are no alternative buyers for the producers' programs, and because network program contracts are negotiated at an early stage when the producers are particularly vulnerable.[67] The fact that syndication rights are acquired early in a program's life, before the program's success is known, means that the networks would have to acquire syndication rights to most of their programs, whether they eventually went into syndication or not. While evidence concerning networks' market power in the purchase of programming appears mixed, as discussed earlier, there appears to be considerable evidence that contracts between networks and program producers

---

[66] Comments on CPD, attachment 3, comments of Metromedia, Inc. at 35 and ICF, Inc. response to comment of the ICF Report at 12–13. It is noted that while Crandall, Noll, and Owen suggest that the supply of syndicated programming is elastic and hence that witholding is impossible, their own discussion shows an inelastic curve.

[67] Cable networks have begun to buy program series, so that the networks may in fact no longer be the sole purchasers for the producers' output. At the time comments were filed in this proceeding, some parties, including the Department of Justice, questioned the significance of these alternative buyers. Indeed, ICF, Inc. stated that "not one high quality series has ever been sold to pay cable." Now many examples of such programming could be cited. For instance, Home Box Office (HBO) now has two series in production, and HBO executives expect that original series will eventually make up about one-third of its original programming schedule. *Multichannel News*, February 14, 1983. Cinemax has recently bought the program "SCTV," dropped by NBC. New York *Times*, May 18, 1983. The Disney Channel plans to show 13 original series, making up 50 percent of its daily lineup. *Variety*, April 20, 1983.

tend to be informal and flexible, allowing renegotiation if a program becomes successful.[68] Thus members of the production industry appear to retain large shares of the profits of successful shows.[69] If so, it appears likely that producers would be able to retain a financial interest in syndication rights if those rights proved valuable.

157. If the networks merely bought syndication rights in a competitive market, then they would have to pay the full market value for those rights. If the prices paid reflected the full value of the programs, warehousing would be pointless, since such prices would incorporate all the revenues the programs would be expected to generate in syndication. Consequently, all the gains from withholding programs would be lost. Even if the syndication rights were worth more to the networks than to other potential purchasers, so that the networks could outbid everyone else, price competition among the networks could result in the full market value of the rights being paid. If, however, there is collusion, either overt or tacit, among the networks in the purchase of programs, prices might not rise to their full competitive market value.

158. As a practical matter, if the rules were repealed, the networks initially would hold no syndication rights, because they have been prevented from acquiring them up to this time. If they began acquiring such rights immediately, the programs whose rights they bought would still not enter syndication for several years.[70] For some years thereafter an inventory of economically-useful older off-network programs whose syndication rights belong to non-network companies would remain to compete with the networks' programs. In the meantime, series produced for cable or other new media would reach syndication and provide additional competition. Therefore, even if it were true that the narrowly-defined off-network program market was the relevant one and even if the networks could acquire control of recent off-network programs, they would continue to face

---

[68] *See* Network Inquiry Staff Report, pp. 480–495, 515–526. See also Joskow, pp. 17–19.

[69] Stars of hit television series have been able to acquire from the networks commitments worth several million dollars to use the stars' companies for production of future series. The magnitude of the agreements suggests that in fact the production industry possesses considerable power vis-a-vis the networks. Los Angeles *Times*, January 23, 1983.

[70] As discussed earlier, about 80–100 episodes, which would require a network run of four or five years, are considered necessary for successful syndication. FCC Network Inquiry Special Staff, pp. 410–411. In a study for NBC, Booz, Allen, and Hamilton, Inc. estimate that if the networks acquired distribution rights to 50 percent of their prime time entertainment series—almost twice the percentage acquired before adoption of the rule—by the year 1993 they would jointly control less than 25 percent and by the year 2000 less than 40 percent of off-network programs shown in early and late fringe on independent stations in the top 20 markets. Reply comments of NBC, pp. 78–79.

competition from other sources. Although, as has been noted, some types of anticompetitive conduct are difficult to police, if the networks did acquire syndication rights to most off-network programs, that fact would be readily observable to the Commission, the Department of Justice, and the Federal Trade Commission.

159. A third assumption underlying the warehousing theory is that the networks must be able to collude in the sale of programs. The ICF Report asserts that a syndicator who owned even a small number of off-network programs might be able to withhold some of them and raise the price of all off-network programs that were shown.

160. As discussed above, withholding a program that would have been shown, or the best unshown program, causes a new program to become the best unshown program. If the revenue potential of the new best unshown program is substantially lower than that of the original one, then withholding can raise program prices significantly. ICF presents a hypothetical example in which program prices are driven up by a series of program withdrawals by three suppliers. However, as pointed out by Crandall, Noll, and Owen, once these programs have been withheld, the higher program prices create an incentive for individual syndicators to increase their profits by re-offering withheld programs at relatively low prices.[71] If they do so, program prices will fall to their original levels, and warehousing will fail. ICF's model prohibits such behavior, but provides no explanation of why it would not occur. In fact, collusion among program syndicators appears necessary to prevent re-offering of withheld programs.

161. This analysis leads us to believe that warehousing would require collusive behavior among syndicators in the sale as well as in the purchase of programs. It is widely believed that most collusive agreements tend to be unstable because the parties to the agreements face powerful incentives to violate them.[72] If a collusive agreement raised prices above competitive levels, a firm could secretly lower its prices or sell products instead of withholding them, and thus could expand its share of the market, and its profits, at the expense of the other parties to the agreement. Long-term maintenance of a collusive agreement requires certain conditions. Among other things, because of the incentives to violate such agreements, the colluders must be able to police each other's activities on a rather

---

[71] Crandall, Noll, and Owen, pp. 59–64. First-run programs would also become relatively more attractive, and producers would have an incentive to expand the suppllly of such programs.

[72] For a thorough presentation of current economic thought concerning the conditions facilitating and limiting oligopolistic coordination, see F.M. Scherer, *Industrial Market Structure and Economic Performance* (Chicago: Rand McNally, 1980), pp. 169–227. See also George J. Stigler, "A Theory of Oligopoly," *Journal of Political Economy* 72 (February 1964): 55–59.

detailed level. Adherence to the agreements must be visible to the colluders but, because such agreements are illegal under the Sherman Act, adherence must be invisible to everyone else. To make collusion manageable, the number of firms needs to be small and the terms of the agreement need to be simple. In addition, if the firms have differing interests, possibly as a result of their having different market shares or cost conditions, the would-be colluders may find it difficult to find terms on which they can agree. For instance, if one network held several marginal programs but few highly popular ones, it would gain little from warehousing, and side payments might be required to induce it to participate. In addition, since higher-than-competitive prices would entice new firms to enter the market, barriers to entry must exist to prevent potential new firms from offering a similar product and undercutting the prices of the existing ones.

162. An examination of the syndication industry for the presence of these necessary preconditions helps determine the likelihood of collusive warehousing in this industry. The market for syndicated programs is composed of a large number of local markets with widely differing characteristics. The number of programs sold in a given market varies with the number of stations in the market. In addition, since demographics and tastes vary from market to market, different programs will be popular in different markets, and programs' ratings will differ from market to market.[73] In addition, ratings will change over time as new programs enter the market and old ones become outdated. Moreover, the prices advertisers are willing to pay for a given audience size differ with the demographic characteristics of the audience. Thus, the revenues that will be generated by a given syndicated program depend on the many characteristics of the program and the market—and are basically unknown in advance. Given the differences in demand conditions across markets, the specific programs that would have to be withheld for the warehousing scheme to succeed would differ from market to market. Even if there were only a single syndicator, he would not know with any degree of certainty which programs to withhold from which markets. If he withheld a program that would have been sold he would forgo the revenues from the sale of that program. A successful warehousing scheme would appear to be difficult to devise even if collusion were unnecessary and all the other necessary conditions were met. However, to the extent a large fraction of markets had similar characteristics, the withholding process would be simplified.

163. In addition, accomplishing a collusive warehousing plan

---

[73] The study of Crandall, Noll, and Owen reports that program ratings depend on a large number of program and market characteristics. It also presents evidence that the ratings of off-network programs vary widely across markets. Crandall, Noll, and Owen, pp. 71–72.

would appear to require detailed, frequently-updated agreements with different provisions in different markets. The complex nature of such agreements would tend to make them difficult to reach tacitly. Collusion under such circumstances would probably require explicit negotiation and agreement, and might be highly susceptible to detection. The colluding syndicators would have to consider the gains from their collusion great enough to justify the risk of being found out and prosecuted. Moreover, a study by Owen, Beebe, and Manning suggests that, in the past, the networks may have been able to coordinate their behavior in simple matters such as the number of reruns but not on more complicated issues such as the level of program quality.[74] Warehousing may fall someplace between the extremes. Finally, FCC actions encouraging the entry of new competitors and the expansion of new media technologies such as cable, MDS, STV, and, in the future, DBS and LPTV, have provided or will provide alternatives to the networks, both in the purchase of programming from producers and as a source of programming to independent stations. Thus they have greatly reduced the likelihood that collusive agreements would be successful.[75] In short, the likelihood that the networks would be able to reach and maintain collusive agreements under all these conditions appears remote, even if off-network programs had no good substitutes and the networks held syndication rights to all of them.

164. These factors suggest that collusion among the networks would be difficult. Nevertheless, the Department of Justice, one of the two principal government agencies responsible for antitrust enforcement, indicates that the possibility of tacit collusion cannot be ruled out.[76] While noting the difficulties of coordinating withholding across many separate geographic markets, the Department suggests that crude formulae, based on the number of independent stations per market or the number of available time slots in certain markets, could be used to facilitate collusion.

165. Although the Department of Justice does suggest that the networks would have stronger incentives to "warehouse" than other syndicators,[77] it is worth remembering that, if the networks could

profit from a withholding strategy such as that described above, so too could existing syndicators. Since the syndication market appears to be moderately concentrated, collusion might also be possible there.[78] Consequently, entry into the syndication market by the networks might in fact reduce the likelihood of warehousing, since it would reduce the level of concentration in that industry.

166. The third and fourth scenarios presented by ICF require further preconditions, in addition to all those described above. As noted above, in ICF's third scenario, control of off-network programs would allow the networks to raise advertising prices higher than they would otherwise. They would lose some advertisers to independent stations, but because independents' advertising revenues would rise the independents would be able to pay more for off-network programming. The networks would then be able to raise off-network program prices and recapture some of the lost advertising revenues.

167. To affect advertising prices, the networks must be able to collude in setting advertising prices, as well as in the purchase and sale of programming. We have noted the difficulties of collusion in the sale of programs above; similar difficulties would confront an attempt to collude in the advertising market.

168. In a study submitted with CBS's reply comments, Joskow points out that even if the networks could succeed in raising advertising prices, there would be many leakages that would reduce the amount of their advertising revenue loss that the networks would be able to recapture from independent stations.[79] Only some of them are noted here. First, if advertisers consider that other forms of advertising are good substitutes for television advertising, increases in television advertising prices will merely cause advertisers to shift to radio, newspapers, or other media. Second, if advertising rates rise, some advertisers will simply choose to advertise less. Third, network stations must hold a large enough share of the advertising market so that, if they reduce the supply of advertising time to raise the price, the independents cannot counteract the effect by increasing their own supply of advertising.[80] At the same time, the smaller the independents' share the smaller the gain to the networks from

---

[78] *See* ICF, Vol. 3, Appendix 4, pp. 175–242; Joskow, pp. 10–11, Table 8.

[79] Joskow, pp. 35–47.

[80] Joskow points out that the networks' share of total television advertising is only about 40 percent, which is probably too small to give them substantial power over advertising prices. So increasing the level of television advertising prices would have to be accomplished through the affiliates and O&O's. It is not clear how the networks would induce affiliates to participate in such a strategy, since the affiliates would only lose advertising revenues and would regain nothing in the syndication market. There are only three markets with three O&O's, and there are enough independents in these markets to make it unlikely that the O&O's could exercise market power. Indeed, Fournier and Martin present evidence that local stations do not exercise market power in the sale of non-network advertising. Gary M. Fournier and Donald L. Martin, "Does Government-

increasing the prices independents must pay for programs. Fourth, off-network programming must make up a large percentage of independents' total programming. While the prices of all television advertising will rise, the networks will only be able to recapture gains from increases in advertising revenues for advertising shown during off-network programs. Fifth, as Joskow points out, the price of a program is determined by the difference between its advertising revenues and those of the best unshown program. As advertising prices rise, the revenues of both programs will rise proportionately. So the increase in program prices will only be a percentage of the increase in advertising revenues. Clearly, in the process described above leakages occur at several stages, so that the networks can extract only a fraction of the increase in independents' advertising revenues. Joskow presents calculations demonstrating that even under very favorable assumptions, the networks could at best break even pursuing this strategy. The major effect would be that independents would gain at the expense of advertisers and consumers. This scenario thus appears to be, as Joskow asserts, "a theoretical curiosity that has no empirical significance."[81]

169. In the fourth case presented by ICF, the networks would carry the withholding strategy further than would a syndicator who did not sell television advertising because they would benefit from independents' losses of audiences and advertising revenues. In this scenario, higher program prices would cause independents to show poorer-quality programs and thus lose viewers, reduce hours of operation, or both. Networks and affiliates would benefit both from larger audiences and from a reduction in the supply of audience-minutes of advertising in the market, which would raise advertising rates per viewer. For networks to be able to affect independents' audiences and advertising revenues in this manner, all the conditions required for warehousing must hold. If there are a large number of programs of equal value available to replace the last unshown program, the networks could not raise program prices and could not cause the independents to lose viewers. In addition, as in the case described above, there must be no good substitutes for television advertising, or increases in television advertising prices will cause advertisers to desert the medium.

170. If the networks withheld programs that otherwise would have been shown, the effect on advertising revenues would have to be large enough to outweigh the loss in syndication revenues from the programs withheld from the market. However, only some fraction of the audience lost to the independents would accrue to the network withholding the program; the rest would turn to affiliates of

---

Restricted Entry Produce Market Power?: New Evidence from the Market for Television Advertising," 14 *Bell Journal of Economics* (1983), pp. 44–56.

[81] *Id.*, p. 44.

other networks, other independents, cable systems, or other forms of video entertainment, or would simply do something else with their time. ICF claims that the primary effect of warehousing would occur in the 4:00–8:00 p.m. time period, since that is the only period when independents depend primarily on off-network programming. However, the evidence shows that, except for a half hour of news, the affiliates show almost no network programming during that time period. Thus, most of the gain from warehousing would accrue to the affiliates, not to the networks, except in the case of the few owned-and-operated stations. No mechanism is presented whereby the network could extract the affiliates' gains.[82]

171. ICF also argues that increases in program prices might cause independents to reduce their hours of operation or cease operation entirely. The only time period when they might cut back their hours as a result of higher-priced off-network programming is the period from 11:00 p.m. to 1:00 a.m. But Joskow points out that in a survey of independent stations, off-network programming made up only 25 percent of the programming shown during this period, and that first-run programming and movies appeared to be very good substitutes for off-network programming during this period.[83] Warehousing would not likely be successful during this period, therefore, and even if it were, audiences are sufficiently small that there would be little effect on either independents' or networks' revenues.

172. Past experience may provide useful evidence concerning the liklihood that networks would withhold programming from syndication. The only empirical evidence regarding the networks' actual acquisition of syndication rights and warehousing of programs comes from the period before the rules became effective, just over ten years ago. Prior to adoption of the rules, the networks acquired only a small percentage of the syndication rights to off-network programs.[84] None of the commenters asserts that the networks warehoused programs during this period. Some commenters state that the networks' failure to warehouse programs at that time shows either

---

[82] It is useful to remember that the third and fourth scenarios discussed above are the only cases that have been presented in which the networks might have greater power or incentive than any other syndicator to manipulate the syndication market. If these effects are considered unlikely, then any remaining possibility of warehousing is as likely to occur through existing syndicators as through the networks.

[83] *Id.*, p. 50, Table 16.

[84] NBC in its comments asserts that the networks acquired syndication distribution rights in only about 25 percent of producer-supplied prime time entertainment series programming in the period immediately before the rules were adopted. Comments of National Broadcasting Company, Inc., p. 207. ABC states that in its experience, syndication rights were almost never acquired if the producer had a syndication arm. Comments of American Broadcasting Companies, Inc., p. 114.

that they were unable to gain control of syndication rights or that it would not have been profitable to warehouse programs.[85] Thus, those commenters think that this provides good evidence that they would not do so if the rules were rescinded. ICF, on the other hand, states that the networks' behavior prior to adoption of the rules is irrelevant because the independents have become much more profitable since the introduction of the rules. Consequently, they assert, revenues from syndication have risen and the potential returns from warehousing are greater than in the past. ICF also argues that, before adoption of the rules, scrutiny by the Commission and the Department of Justice deterred the networks from engaging in warehousing.

173. It should be noted here, that if the potential revenues to be derived from withholding programming are higher, then the cost of acquiring syndication rights will also be higher than in the past, unless the networks can obtain those rights at below-market prices. We have noted above that it is unlikely that networks will be able to extract such concessions from program producers. In addition, the ratio of stations' profits to expenditures for purchased programs appears to have remained about constant between 1970 and 1980, suggesting that no great increase in the potential for syndication profits has occurred.[86] In 1967 domestic syndication sales had already reached $139.2 million, which suggests that if warehousing were a profitable strategy under any circumstances the potential returns were already far from negligible.[87] There is, therefore, no obvious reason why a withholding strategy would be profitable in the future if it was not in the past. Indeed, since the networks have a smaller share of the television audience than in 1970, less of the benefit of diversion of audiences from the independents would accrue to them. And, as a consequence of the current rulemaking, the networks are now subject to scrutiny at least as intense as before the adoption of the rules. Hence, the fact that warehousing did not occur before the adoption of the rules appears to provide useful evidence that it probably would not occur if the rules were rescinded.

174. Several commenters assert that the increasing numbers and profitability of independent stations since the adoption of the rules provide evidence that the rules have been effective and beneficial.[88] In fact, however, the number of independent television stations appears to have increased in the years 1967–1971 and again

---

after 1977, but not in the years immediately following adoption of the rules.[89] In any case, implementation of the All-Channel Receiver Act, the expansion of cable, which improved reception of UHF stations, growth in demand for television advertising, and the Prime Time Access Rule undoubtedly contributed to independent stations' success during this period. While the availability of attractive programming has no doubt been a factor in independent station growth over the last decade it would be extremely difficult to disentangle the effects of all these factors and to what extent the financial interest and syndication rules affected the growth of independent stations.

175. *Other Effects on Television Stations.* Some commenters have asserted that repeal of the rules would have effects on television stations other than through warehousing. For instance, comments by Fisher and Baumol, attached as appendices to CBS's comments, assert that if the rules reduce the efficiency of program acquisition by the networks, they will cause network programs to have lower quality or higher costs than they would have otherwise. This will reduce affiliates' audiences and revenues. In the long run, they state, the effect will spread to independents as the quality of off-network programming available in syndication declines. The effect of this will be a long-term loss of audience by broadcast television to other media. Although we have no empirical estimates of the size of this effect, it is undoubtedly detrimental to the entire broadcast television industry.

176. In addition, as noted above, entry of new competitors into the syndication industry might hold down costs of syndication and reduce prices of syndicated programming to television stations. Again, by preventing the networks from entering this industry, the rules may keep program prices higher than they would be otherwise and may adversely affect all television stations.

Effects of the Rules on Television Networks

177. This section considers the effects of the financial interest and syndication rules on the three major broadcast networks. The following section examines the likely effects of the rules on the prospects for forming additional major networks.

178. In considering the effects of the rules, it is helpful to recall the recent changes in the competitive position of the networks. As discussed above, at the time of adoption of the rules in 1970, the three broadcast networks held a commanding share, over 90 percent, of the video audience. Together with their affiliates they captured about 92 percent ($2.6 billion) of television advertising revenue. Independent television stations had 9 percent of the audience and

---

[89] Joskow, Table 1; ICF Exhibit 1–22.

about 9 percent of the revenues. Only 2500 cable systems existed; pay systems were almost nonexistent.

179. In the intervening years competitors have made significant inroads into the broadcast networks' position. The number of independent television stations has almost doubled in the past decade, and their revenues have increased more than threefold. By 1980 the number of cable systems had increased by 70 percent and the number of subscribers had grown by 250 percent. Both continue to grow rapidly. In the mid-1970's, cable networks came into being, providing programming to cable systems via satellite. Over-the-air subscription television and multipoint distribution service have experienced significant growth in major markets. The growth of these other services has eroded the networks' share of the video audience to 80 percent.[90] Even more telling is the decline in the proportion of video product purchased by the networks over this period, which has fallen from 74 percent to 54 percent since adoption of the rules. The purchasing power of the other video media has, thus, grown substantially.

180. Most observers expect the growth of these non-network video outlets to continue; in addition, new technologies, such as direct broadcast satellite (DBS) systems and low-power television, are expected to provide many additional channels in most localities. DBS in particular will provide programming on a national or regional basis, in direct competition with the broadcast and cable networks. Thus the networks' share of the total audience appears likely to continue its decline. As shown in Table 7 *infra*, industry analysts predict that by 1990 the network share of the prime time audience will lie between 59 percent and 75 percent. Revenues from pay cable are predicted to reach $8 billion by 1990, over and above an estimated $6.5 billion for basic cable. These estimates compare favorably with the $15 to $20 billion combined revenues predicted for the networks. Of course all predictions of the future contain some uncertainty, as recent setbacks experienced by pay television stations show.[91] Nevertheless, the effects of the rules must be considered in the context of a market in which the dominance of the networks is clearly eroding, and additional networks promise to provide major alternatives in the distribution of programming.

181. As discussed above, most analysts consider a primary effect of the rules to be the prohibition of voluntary arrangements to distribute the risk of program production. Since it is impossible to predict before a program is produced whether it will be successful in syndication or even go into syndication, syndication rights or

---

[90] Evidence submitted at the oral proceeding by ABC shows network audience in 36 channel cable homes in one market (Tulsa) down to a 56 percent prime time audience share.

[91] *Business Week*, May 16, 1983, p. 28.

financial interests in program production are highly risky assets. If the networks are in a better position than other entities to bear this risk, then it will be more efficient and less costly for the networks to hold these rights. If the networks are prohibited from purchasing them, the cost of programming to the networks will be higher and their competitive position relative to other program sources will be weakened. The Network Inquiry Special Staff and subsequent analysts have concluded that in fact the networks stand in a unique position to minimize the risks associated with new television series.[92] This is true for a number of reasons. First, they can ensure exposure of the programs through an efficient set of outlets. Second, they have information on viewers' tastes that gives them an unusual ability to judge the likely success of programs. Third, they can pool the risks of a large number of programs, so that the failure of any individual program will not cause them severe harm. Finally, they can choose programs and schedule them to maximize the value of the entire lineup.[93] Small producers with only one or two programs lack the risk-pooling capacity of the networks; banks or other financial institutions cannot judge as well as the networks the potential success of new programs.

182. In many situations, as a consequence, syndication rights may in fact have greater value to the networks than to any alternative holder, and prohibiting the network from holding them will cause the cost of programming to be higher and, in extreme circumstances, may prevent programming from being produced that might be produced otherwise. If less investment in programming occurs as a result, or if networks choose less risky programming than they would if they could obtain syndication rights, then the quality and diversity of network programming, and the networks' competitive position relative to the other media will be harmed.

183. Shooshan and Jackson assert, plausibly, that the rules handicap the lowest-rated network in attempting to improve its position relative to the more popular networks. The network may wish to buy what it believes to be high-quality programming in order to increase its audience. It will value the syndication rights to such programming more highly than would the producer or other holder of the rights, who would discount their value because the programs would be shown on a low-rated network. Thus the network will be deprived of an opportunity to receive the rewards from a risk it is willing to take, and will be less likely to take the risk as a consequence.

184. A further effect of the rules may be to prevent the networks from entering into lines of business that they are naturally

---

[93] CBS, p. 127.

positioned to enter and where they might operate more efficiently than other entities and might provide additional competition. Since the expansion of many new delivery modes makes the future direction of the home video industry extremely unpredictable, a sensible strategy for any participant in the market would be to hedge his bets by experimenting in various markets and with various delivery methods. The rules inhibit such efficient adaptation to changes in the market by prohibiting, or making unnecessarily costly, many reasonable ventures. For example, they prevent network owned and operated stations from syndicating their own, locally-produced programs. They prevent, for instance, CBS Records from syndicating video productions of their recording stars' performances; and they prevent a network publishing subsidiary from distributing audio-visual "tele-courses" and associated texts, through noncommercial stations. Because of the rules, programs produced and owned by networks can be distributed to cable systems but not to broadcast stations, except through the network feed, which deprives broadcast audiences of access to the programming.[94] It is difficult to see how the domestic program production or syndication markets could be harmed by any of these practices. In each case syndication could be performed by some other entity, but in cases where a network is best positioned to perform the job an efficiency loss to society is incurred if it is not allowed to do so.

Effects of the Rules on New Networks

185. The financial interest and syndication rules as currently drafted also would apply to new broadcast networks, and to the extent that the rules hinder the development of new networks they limit competition with the established networks. Companies that now engage in syndication would be barred from networking, unless they ceased their syndication activities.[95] Such companies might in fact be ideally positioned to enter networking, and requiring them to choose between networking and another important line of business may in fact provide a major deterrent to entry into networking.

186. Of particular importance, the rules could inhibit the formation of so-called hybrid networks, that is, networks serving both broadcast and cable affiliates, by deterring existing cable networks from distributing programming to broadcast stations. Viewers in areas not served by cable would be harmed, and if the cable network could not survive serving only cable outlets, cable viewers would also lose. Since a new network would probably have only a few outlets in the beginning, and in fact might never reach

---

[94] Shooshan and Jackson, pp. 28–33.

[95] The Christian Broadcasting Network had to receive a waiver from the Commission to distribute programming to stations by satellite, and is limited in the number of hours per week it can broadcast by the terms of the waiver. *Id.*, p. 27.

the coverage of existing broadcast networks, the ability to distribute programming through more than one medium might be extremely important for attaining the scale necessary to operate efficiently.

187. In addition, if a new network had the option of supplying either a broadcast station or a cable system in a given locality, competition between the two outlets for programming would improve the terms on which the network could sell the programming. Preventing cable networks from serving broadcast stations in effect protects cable system operators from competition for programming.

188. In the long run, as the foregoing suggests, an effect of the rules, as presently drafted, could be to create incentives that cause new networks to use non-broadcast means of distribution. If so, conventional broadcasters will be deprived of sources of programming that might otherwise be available, and audiences will increasingly turn to cable, DBS, and other media. To the extent that the rules affect the choice of media they prevent the broadcast networks from competing fairly with the emerging media. They also distort the market in ways that prevent programming from being distributed in the most efficient manner and by the means preferred by viewers. These effects of the rules were unforseen, indeed unforeseeable, at the time of their adoption. It would not be surprising if the rules had additional unintended and unforeseen effects reducing the efficiency of the market and service to viewers.

IV. *CONCLUSIONS AND NEW REGULATIONS*

189. In adopting the financial interest and syndication rules, the Commission stated that the rules could "readily be changed or rescinded" if they failed to achieve their intended purpose.[96] We have sought in this proceeding to determine if in fact these rules have achieved their intended purpose and have concluded that, in many respects, they have not.

190. When the rules were adopted, the Commission indicated its belief that this form of regulation would contribute to both the diversity of programming available to the viewing public and the competitiveness of the television program production and distribution systems. At that time, the Commission focused almost all of its concern on the relationships between the networks and the packagers and producers of network entertainment programming. In the present proceeding, it is also argued with considerable force that regulation is necessary to structure the relationship between the networks as potential program syndicators and the independent television segment of the broadcasting industry. Because the concerns addressed when the rules were adopted and the new rationales for their continuation are in many respects substantially different, it is appropriate that they be addressed separately.

---

[96] 23 FCC 2d at 397.

Regulation of Network/Producer Relationships

191. The set of concerns principally focused on in adopting these rules had to do with redistributing economic power from the three national television networks to that group of companies that produce and package television entertainment programs. In adopting the restrictions imposed by the rules, the Commission indicated its belief that the economic strength and ability of the program suppliers "profitably to operate" would thereby be "greatly enhanced"[97]; that the rules would insure the availability of independently produced, first-run syndicated prime time programming[98]; that a "conflict of interest" would be eliminated that had caused the networks to select for exhibition programs in which they had a financial interest, presumably in place of superior programs in which they had no interest[99]; and that diversity and competition in the program supply markets would be fostered.[100] It has also been argued that the rules were intended, in some measure, to shift creative control over programs exhibited on the networks to the program suppliers.[101]

192. Shortly after the rules were adopted, independent scholars began to criticize various aspects of the economic reasoning that led to their adoption.[102] One study of the rules, published in 1978, concluded that "the Commission seriously misunderstood the economic realities of the program procurement process, and as a result,

[102] Two articles by R.W. Crandall focused directly on the rule, while work by various others suggested that the market conditions assumed by the Commission did not in fact obtain. Crandall's research suggested that when networks purchased syndication rights to programming, they paid program producers the market value of those rights. He also found that networks made their decisions on retaining series without "favoring" programs in which they retained a financial interest. Finally, Crandall found no evidence of monopsony power in the program acquisition market. See R.W. Crandall, "The Economic Effect of Television-Network Program 'Ownership'", 14 *Journal of Law and Economics* 385–4–2 (1971) and "FCC Regulation, Monopsony, and Network Television Program Costs," 3 *Bell Journal of Economics* 483–508 (1972). Additional information on syndication markets is provided in R.G. Noll, M.J. Peck, and J.J. McGowan, *Economic Aspects of Television Regulation* (Brookings Institution: Washington, DC, 1973), pp. 63–67. They show that before the rule the networks' share in syndication profits was low, and they estimate that program producers extract approximately one-half of the "rents" associated with their product. The latter point suggests that any network monopsony power is limited. Finally, B.M. Owen, J.H. Beebe, and W.G. Manning, Jr., *Television Economics* (D.C. Health and Company: Lexington, MA, 1974), pp. 28–31 examined the program production market and found it characterized by easy entry and an ample supply of programming inputs. This suggests that whatever mix of programming is demanded will be produced, without regulatory intervention being needed.

adopted rules which had no chance whatsoever to achieve their intended result."[103] In the mid-1970's, the Commission had also come to believe that its network regulations were in need of a thorough review and therefore commenced the proceedings in Docket 21049 to complete that process.[104]

193. In the course of that proceeding a detailed analysis of the network/program supplier relationship was undertaken. Numerous participants in the process were interviewed, extensive data relating to the development of network programming was reviewed, and the contract files for a large number of network programs were examined. At the conclusion of this inquiry, a staff report was prepared and released for public comment. This report, generally agreeing with the earlier scholarly research, concluded that the rules were based on incorrect perceptions of the nature of the economic markets involved, would be ineffective in accomplishing their stated goals, and should be eliminated.

194. With respect to the Commission's attempt to readjust bargaining power between the networks and the suppliers of programming, the *Report* made the following comment:[105]

> One allegation is that networks employ bargaining power to exact "unfair" or "excessive" terms or "low" prices from program suppliers.[a] Such allegations should not be of concern to the Commission, for they raise only the question whether program suppliers have been sufficiently compensated for their work. The networks, even if exercising complete monopsony power, cannot pay less for a program than the value the suppliers' resources have in their best alternative use. The assertion that networks can or will acquire programs for less than their costs simply will not withstand scrutiny. Once it is understood that networks, no matter how powerful, cannot purchase programs at rates that are unprofitable for suppliers, contentions that contract terms harm suppliers can be seen for what they are—allegations that suppliers are not paid as much as they would prefer. Most importantly, the public interest—the interest of viewers in receiving numerous, diverse, quality programs from which to choose—is not implicated by such contentions. Moreover, even if viewers were aided, in some indirect manner, by increasing producers' income at the networks' expense, this redistribution of profits cannot be achieved without regulating substantially all terms, including the license fee, of network program supply contracts.
>
> ---
>
> [a] This allegation is often expressed in the form of a complaint that networks favor those programs in which they obtained . . . [financial interests]. Unless some policy is violated by the acquisition of these rights, however, there is no reason to fear or prohibit networks favoring programs in which they have been obtained. Thus, networks presumably favor programs for which they obtained low license fees or which they expect to attract large audiences. One cannot urge

[104] *Notice of Inquiry in Docket 21049*, 62 FCC 2d 548 (1977); *Further Notice of Inquiry in Docket 21049*, 69 FCC 2d 1524 (1978).

[105] Network Inquiry Staff Report, Vol. II, p. 793 (footnote omitted).

that this favoritism be prohibited without demonstrating that public policy is violated by networks obtaining low license fees or large audiences.

195. Neither in the responses to the Final Report of the Network Inquiry Special Staff[106] nor in the responses to the present proceeding was there any significant new evidence or analysis presented to rebut the conclusions reached by the network inquiry staff. Indeed our review in the present proceeding persuades us that the earlier criticisms of the rules, in terms of their impact on network/supplier relationships, were essentially correct. In our analysis of the responses to this proceeding we have found no credible evidence that the rules have fostered the development of first-run syndicated programming or have increased the diversity or competitiveness of the program supply market. We have found no credible argument presented as to why network financial interests in programs would lead to an improper or inappropriate selection of programs for network broadcast. While it is difficult to evaluate the impact of the rules on creative control, it is apparent that, as the principal purchasers of network programming and as licensees of stations using this programming and as responsible agents for affiliated stations that broadcast this programming, the networks have continued to maintain a significant and not improper control over the programming obtained for network exhibition.[107] Finally, we do not believe that the Commission has a proper role to play in allocating revenues or profits between the networks and those who supply programming for network use, in the absence of evidence or reason to believe that by doing so the value of the television service received by the public will be increased. Not only do we fail to find evidence that such a shift would benefit the public but it is unclear that the existing rules would cause such a shift to occur even if it were desirable. As long as program supply markets remain competitive, and it is undisputed that they were competitive before the rules were adopted and remain competitive today, the possibility of rules of this type lifting profit levels among the program suppliers and packagers above the normal competitive level is remote. To the extent the rules, by excluding efficient sources of financing from the market, create barriers to market entry or create pressures for smaller producers to join with larger firms, the rules are operating in a manner contrary to their stated purpose and serve no valid public purpose.

---

[106] See *Id.* at pp. 805–809 for a review of the response to the Report of the Network Inquiry Special Staff.

[107] With respect to the issue of creative control, it should be noted that, in initially proposing these regulations, the Commission stated directly that "Nothing in the proposed rule is intended or should be construed to limit or modify the overall program responsibility of licensees for all matter broadcast through their facilities." *Notice of Proposed Rulemaking in Docket 12782*, 45 FCC 2146, 2163 (1965).

196. We appreciate that the market into which entertainment television programming must be sold is a concentrated one and that for some particular types of programming there historically have not been more than three significant buyers. Nevertheless, the regulations in question cannot fundamentally change the bargaining power between the parties.[108] And, while the number of purchasers is limited, competition for programming is intense and no evidence of collusive conduct among the buyers is evident.

197. In sum, the rules, as they affect relationships between the networks and the suppliers of programming, appear to fail as mechanisms to increase network or first-run syndicated program diversity and fail to foster competition in the program supply and distribution markets. Furthermore, the rules risk creating incentives for greater concentration in the supply markets and introduce possible inefficiences into the creation and distribution process which could result in reduced total investment in programming. Although there are other reasons for our decision to retain some control over network participation in the syndication of off-network series programs, which are discussed below, we no longer find any reason for limiting non-controlling or passive financial interests that the television networks may obtain in the programming they acquire for network exhibition. Further, no rationale appears to remain, given the analysis above, for any restrictions on network participation in the syndication of programming in foreign markets or for other kinds of restraints on ancillary rights which the networks may invest in and receive a return from in connection with programs they exhibit.

Network Participation in Program Syndication

198. The above discussion, relating to the regulations as they impact on the network/supplier relationship, addresses most of the concerns that moved the Commission to adopt both the financial interest and syndication rules. Another rationale for the rules, touched on only briefly when the rules were adopted[109], but now the central focus of much of the current debate, relates to the question of whether the networks through participation in the syndication of programming could competitively damage independent television

---

[108] The logic of the observation that the rules cannot fundamentally alter the bargaining power between the parties appears to have received grudging acceptance even on the part of those who argue for continued regulation. The massive ICF, Inc. study, prepared for the Committee for Prudent Deregulation, begins by taking note, without disagreement, of the previous studies which concluded that, given the competitiveness of the supply markets, "rules governing the network relationships with suppliers are not likely to have significant economic effects *in the program supply market*." (Emphasis in original) (paper 2, p. 1–1). *See also* oral proceeding transcript p. 204.

[109] 23 FCC 2d at 394.

stations' operations in order to protect their affiliates and their own stations from competitive injury or otherwise cause public injury through manipulation of the syndication market.

199. The most refined argument in this regard is that presented by the Committee for Prudent Deregulation, which not only contends that growth of the independents in the last decade is a direct result of the rules, but also presents a complex theory of how repeal of the syndication rule could lead to a situation detrimental to the continued prosperity or even viability of independent stations. That so-called "warehousing" theory essentially postulates that networks would withhold certain off-network series, of a type that is normally broadcast by the independents during the 4–8:00 p.m. daypart, their most lucrative period, in order to increase the price of those programs which are aired or advertising rates.

200. CPD's theory is based on an intricate series of assumptions, which we have already described in detail. For the reasons set forth earlier, we find it unlikely that the postulated scenario would occur. For example, the networks would have to acquire syndication rights in virtually all off-network series programming. If the networks remain competitive buyers of television programming, however, the chance of this happening is small. Nothing in the record of this proceeding suggests that this outcome is plausible. In addition, the theory requires that each network possess monopsony power or that they be able to collude and maintain a collusion. For the host of reasons discussed earlier, we conclude that it is unlikely that the networks could do so. Further, networks would have to be able to control the prices of recent off-network series without fear that buyers would switch to alternative programming. In fact, however, surveys of broadcasters indicate that older series, sports, feature films, and locally produced programs can serve to some extent as alternatives, thereby exerting a constraining influence on the price of recent off-network series. Finally, CPD's warehousing theory rests, in part, on the assumption that television advertising rates are unconstrained by other advertising media. That assumption is, at best, unproven and is becoming less viable with the increase in alternative video services. In short, each necessary assumption is questionable, and when taken together—as they must under the theory posited—the probability of warehousing occurring becomes slight.

201. It is noteworthy that this theory is concerned only with the networks' conduct as syndicators. The networks' financial interest or lack thereof plays no part in this scenario. Accordingly, since the viability of the independents is the only vestigial justification for retaining the rules, we conclude that this provides no justification for a continuation of the financial interest rule. The financial interest rule has failed to increase the independent program supply, has no effect on program diversity or quality, has not decreased

network control over program content or creativity, does not represent an inherently undesirable conflict, and appears to present no threat to the well-being of the independents.

202. We believe there is room for significantly reducing the coverage of the present rule, without jeopardizing any public interest concern. As noted above, there is no reason to exclude networks from the foreign syndication market. With respect to the domestic syndication market, we have tentatively concluded that some restrictions may be necessary because we cannot be completely certain network participation in the syndication market would not result in competitive injury to the independent television segment of the industry and thus to the viewing public. While the chances of such injury, based on the above analysis, do not appear to be large, we are entering a period in which the increasing economic strength of the non-network segment of the television industry is making the television industry significantly more competitive and increasing the programming options available to the public. It is extremely important that progress in this direction not be impeded. If the CPD scenario occurs, it is possible that networks, acting as syndicators of off-network programming would fail to support these developments as vigorously as unaffiliated syndicators. While our economic analysis suggests that this would generally not be a profit maximizing course of conduct to follow, it is nevertheless a matter of sufficient concern to warrant some continued regulatory involvement. We accordingly believe a focused restriction on network participation in the syndication of off-network prime time entertainment programming should be maintained to address the residual concerns that continue to exist in this area, as well as to provide a transition to a less regulated, while at the same time more competitive, environment.

203. The revised syndication rule, which is patterned in large part after the proposal of the Department of Justice[110], is limited in scope. It covers only those programs and practices that could conceivably be employed to harm the independents if the activities predicted by CPD's warehousing theory were actually to take place. Thus, the rule is expressly limited in application to the three major national networks.[111] It applies only to prime time entertainment

---

[110] *See* Reply Comments of Department of Justice at 30. We note that, because the antitrust consent decrees that bind the three networks are generally more restrictive than the Commission's rules, the networks will remain constrained until changes in these decrees are made. The analysis developed in this proceeding suggests that changes in them ought to be made. We do not believe, however, that the consent decrees should constrain this Commission in carrying out its own responsibilities. *Cf. Second Computer Inquiry*, 77 FCC 2d 384, 492 (1982). ("Our basic premise is that the consent decree should not constrain this Commission in the adoption of regulatory policies necessary for carrying out our mandate under the Communications Act.")

series, upon which the independents rely for off-network stripping. And it applies only to domestic distribution of these series to television broadcast stations for non-network television exhibition. Participation in the distribution of programming, other than off-network programming, is not restricted since here the potential benefits of additional competition and program sources would appear to far outweigh any potential concerns relating to increased network influence.

204. To reduce any possibility of warehousing, a network will be required, within six months of a series completing its network exhibition run, to transfer all rights in that series it may hold relating to its syndication, to an unaffiliated[112] syndicator. In addition, no later than the end of the fifth year of a network series run, the network will have to transfer all syndication rights for programs in that series to an unaffiliated syndicator. The language of the rules, as proposed is set forth in Appendix A. Our objective here is not to attempt to cover every conceivable aspect of network participation in non-network distribution but to draw a line between those interests that are reasonably necessary to participation in network broadcasting and which may lead to greater investment or efficiency and those interests that are most likely to lead to injurious activities. In disposing of all rights related to syndication, the network shall retain no active interest in the syndication of the program and shall be prohibited from imposing any conditions, terms, or restrictions over the manner by which a program is syndicated.[113] For example, the networks are forbidden to choose a

---

[111] The existing rules (§73.658(j)(4)) cover all networks that offer "an interconnected program service on a regular basis for 15 or more hours per week to at least 25 affiliated television licensees in 10 or more States." The rule was intended to cover mainly the three major networks. See 25 FCC 2d at 333. The actual language of the rule, however, was more inclusive, and is therefore being revised here to be clearer in its coverage. For some of the background concerning why these revisions are considered desirable, see *Christian Broadcasting Network, Inc.*, 50 RR 2d 359 (1981).

[112] In using the term "unaffiliated" we intend a complete separation of ownership and control. Other than the passive interests that the networks may maintain, there should be no common ownership. This would not, however, preclude the transfer of syndication rights to a firm that is both a syndicator and the owner of a broadcast station distributing network programming and thus considered a network "affiliate." In general, however, we intend a strict separation of interests. *Compare, for example*, 47 C.F.R. §64.601, note 1 (rule regulating cable TV-telephone company relationships).

[113] Passive financial interests may be retained by the networks when their active syndication rights are disposed of in accordance with the requirements of the rules. It is critical that any interests retained be passive in nature so that the rule limiting network participation in program syndication is an effective barrier to any activity that might raise "warehousing" concerns. Such passive interests have been described as comparable in nature to the interest of a limited partner in a limited partnership, the interest of a nonvoting preferred stockholder in a corporation, or a contractual interest in a residual payment, in that a financial return is received but no general management power exists. At

syndicator on the basis of the time or day part in which the program will be broadcast, the frequency with which it is broadcast, the price that licensees will be charged, or the stations which will be broadcasting the programs. To ensure that these requirements are met, the networks will be required to file, within 30 days after each sale or transfer, a notice of such sale or transfer with the Commission.[114] The network shall be required to certify, in this notice, that the sale was consistent with the requirements of the Commission's rule. It is the Commission's intent that the networks comply with the spirit and purpose as well as the letter of the rule.

205. We recognize that rules of this type are subject to various types of technical criticisms for their potential inability to address every market practice or situation that might be hypothesized as well as for their constraints on practices that are otherwise reasonable and non-threatening. Clearly, definitional and coverage issues could be resolved by simply making the regulations significantly more or less inclusive. Because there are market factors which themselves present obstacles to warehousing and create incentives that weigh against many of the anticompetitive strategies postulated, what we seek here is a narrow rule to provide only an additional measure of protection. Some have argued that the programming involved is too varied in its characteristics for a rule to trigger a sale of the syndication rights either by reference to some fixed time period (i.e., as in the five year rule) or by reference to some discretionary act by the network (i.e., the six month rule).[115] In this regard, the rule proposed appears to us to fairly target the area of concern. The six month period specified would appear to provide adequate time for the requisite syndication arrangements to be consummated after a program has completed its network run and the five year period sets an outer bound by which rights in the more popular programs would have to be made available for syndication. In neither instance, however, do we anticipate that all or even many of the transactions required would be consummated in the "fire sale" atmosphere of the last days permitted by the rules.[116] Parties disagreeing with our view that the coverage of the rules is correct,

---

this point, we see no need to prohibit or require the use of any particular form of interest or limit the percentage of ownership as long as such interests conform to the basic requirement that they be passive in nature and preclude network control or participation in the syndication process itself. What we do seek here is the most effective means of ensuring a separation between "interest" and "control" consistent with the above described rule.

[114] This will permit the Commission to monitor the forced sales and will give the Department of Justice the opportunity to monitor the networks' behavior for any anticompetitive practices.

[115] See CPD reply comments p. 82.

[116] Particularly with respect to the five year provision of the rules, it is important to note, as a number of the commenting parties do, that "after the third year or so, if the show is still successful, and despite the original terms of the contract . . . the balance of power shifts considerably to the producer." ICF, Vol. 1, 1-16.

however, are encouraged to provide constructive criticism so that if alterations are necessary they can be incorporated before the rules are finally adopted.

206. Our decisions to rescind the financial interest rule and to modify the syndication rule are based on consideration of whether each rule serves the public interest. Each has been tested against the relevant criteria of fostering diversity and competition and with a view to how the service received by the public will be affected. Altering the distribution of profits among private parties is not, and never has been, a proper or desirable function of the Commission. Thus, to characterize increased profitability of producers as a goal of the rule is to misconstrue our true objective. We agree with the Network Inquiry Special Staff when it stated: "Indeed, neither the statutory nor the constitutional mandates under which the Commission operates can fairly be construed to authorize intrusion into the program supply business solely for the purpose of enhancing the profits of suppliers."[117]

207. However, the three networks are in a posture different from that of other participants in the market because programming must pass through them to enter the off-network syndication market. Consequently, they are uniquely positioned to affect their competitors' access to the off-network prime time entertainment programs which have played a major role in enhancing the viability of independent stations. While it now appears unlikely that this special position provides the power or incentive for anticompetitive conduct that could harm independent stations, it is impossible to rule out entirely.[118] The very nature of this special position warrants a cautious Commission approach to deregulation in this area. Thus, we are adopting a revised rule that is narrowly drawn to protect against any network effort to capitalize on their special position but which will not impose significant costs in foregone market efficiency.

208. It is the potential harm to the independents which is the Commission's concern. The independent television sector of the broadcasting industry is an important video service to the public. The very significant growth in the number of independent stations in recent years has contributed greatly to making local video markets more competitive and has increased the public's viewing choices greatly. Not only have these stations provided more entertainment for the public but they have multiplied the voices speaking on issues of public importance. Because we are particularly concened

---

Thus, there are market factors that will make the five year period an outer bound rather than a norm.

[117] Network Inquiry Staff Report, Vol. II, 293, at 725–31. The Special Staff found no evidence that the interests of television viewers had been furthered by the rules' effort to redistribute revenues.

[118] See Reply Comments of United States Department of Justice at 15–18 and paragraph 152 *et seq., supra.*

that this progress continue, we believe that the public interest would be served by retaining a modified version of the syndication rule. However, because the networks' financial interest in programs has no direct relationship to the possible warehousing strategies, we find no justification for retaining even a modified version of the financial interest rule. Our modified syndication rule expressly prevents the networks from using their financial interest to act as syndication "brokers," an original concern of ours in 1970.[119] Under our modified rule, a network's continued financial interest in off-network distribution of prime time entertainment series can only be a passive profit-sharing interest, without regard to or control of the terms and conditions of syndication. A network's financial interest and syndication rights are thus entirely separable. Accordingly, so are the rules.

209. Our modified syndication rule is designed to be as minimally intrusive into the program process and as low-cost as possible, while at the same time resolving all fears of network warehousing. As our summary description of the economic context in which these rules operate, which is set forth above, indicates, there are clearly going to be significant changes taking place in the years ahead. These will result in there being more buyers of original programming, more distribution outlets, and more alternatives to either off-network or, indeed, original network programming available for broadcast station use in the years ahead. In a context in which these additional alternatives exist, the rationale for the rules will be eliminated as the warehousing scenarios become increasingly unrealistic. At that point it is appropriate that the rules themselves not continue. By 1990 we believe that this modified rule can be repealed, without any danger to the independents. By then, the independent stations will be much stronger, the networks' audience share will be much lower, and the expanding communications marketplace will make anticompetitive activities in the syndiction market significantly more difficult. Hence, unless the Commission makes a determination that the public interest warrants continuation of the syndication rule, the rule will "sunset" and cease to exist on August 4, 1990.

Comments Requested on Tentative Decision

210. Given the long history of our review of these rules we are confident that our analysis of the effect of the rules in terms of the network/supplier relationship is correct. The studies on this question are numerous. The evidence collected by the Network Inquiry Special Staff is exhaustive and the opportunities for comment on the issue have been abundant. Our conclusions with respect to the proposed revised syndication rule are less definitive, however, and we are particularly concerned that, if regulation is necessary, the mechanical aspects of whatever form of regulation is adopted be

---

[119] 23 FCC 2d at 398.

workable. For this reason we are issuing this document as a *Tentative Decision* and providing an additional opportunity for comment on it. We recognize that potential problems of application may exist that are not yet resolved or identified by the rules. We ask the commenting parties to help us identify these areas and to propose solutions. For example, we seek suggestions on the question of how to define the end of the network exhibition period. We are also, to this extent granting the petitions requesting further proceedings filed by the Office of Communication of the United Church of Christ, the Communication Commission of the National Council of the Churches of Christ in the U.S.A., Paulist Productions, and the Committee for Prudent Deregulation. Although parties are free, of course, to address any point they want to, our interest and focus at this point is with the syndication issues and the proposed syndication rule. A resubmission or reiteration of arguments already made will not be useful.

211. Authority for adoption of the rule proposed herein is contained in Section 4(i) 301, 303(b), (f), (g), (i), and (j), 307(d), 308(b), 309(a), 310, 312, 313, and 314 of the Communications Act of 1934, as amended.

212. For purposes of this non-restricted notice and comment rulemaking proceeding, members of the public are advised the *ex parte* contacts are permitted from the time the Commission adopts a Notice of Proposed Rulemaking until the time a public notice is issued stating that a substantial disposition of the matter is to be considered at a forthcoming meeting or until a final order disposing of the matter is adopted by the Commission, whichever is earlier. In general, an *ex parte* presentation is any written or oral communication (other than formal written comments, pleadings and formal oral arguments) between a person outside the Commission and a Commissioner or member of the Commission's staff which addresses the merits of the proceeding. Any person who submits a written *ex parte* presentation must serve a copy of that presentation on the Commission's secretary for inclusion in the public file. Any person who makes an oral *ex parte* presentation addressing matters not fully covered in any previously-filed written comment must prepare a written summary of that presentation; on the day of the oral presentation, that written summary must be served on the Commission's Secretary for inclusion in the public file, with a copy to the Commission official receiving the oral presentation. Each *ex parte* presentation described above must state on its face that the Secretary has been served, and must also state by docket number the proceeding to which it relates. See generally, Section 1.1201 of the Commission's rules.

213. Pursuant to the procedures set out in Section 1.415 of the Commission's rules, interested parties may file comments on or before September 20, 1983. All relevant and timely comments will be

considered by the Commission before final action is taken in this proceeding. In reaching its decision, the Commission may take into consideration information and ideas not contained in the comments.

214. In accordance with the provisions of Section 1.419 of the Rules, formal participants shall file an original and 5 copies of their comments and other materials. Participants wishing each Commissioner to have a personal copy of their comments should file an original and 11 copies. Members of the public who wish to express their interest by participating informally may do so by submitting 1 copy. All documents will be available for public inspection during regular business hours in the Commission's Public Reference Room at its headquarters, Room 239, 1919 M Street, N.W., Washington, D.C. 20554.

For further information concerning this proceeding, contact Judith Herman or Marcia Glauberman (202) 632–6302.

FEDERAL COMMUNICATIONS COMMISSION
WILLIAM J. TRICARICO, *Secretary*

APPENDIX A

Proposed Rule Amendments

Part 73 of Chapter I of Title 47 of the Code of Federal Regulations is amended as follows:

Section 73.658 is amended by revising subparagraphs (j)(1) through (j)(4) and adding new subparagraphs (j)(5) through (j)(7) to read as follows:

73.658 Network Syndication and program practices

* * * * *

(j) ***

(1) No television network shall sell, license, or distribute television prime time entertainment series programs that have previously been exhibited on a television network to television station licensees within the United States for non-network television exhibition or otherwise.

(2)(i) A television network shall, no later than 180 days after a network exhibition of a prime time entertainment series is completed, make that complete series available for non-network broadcast exhibition or syndication within the United States.

(ii) In addition, a television network shall, no later than the end of the fifth year after a network exhibition of a prime time entertainment series has commenced, make all programs in that series available for non-network broadcast exhibition or syndication within the United States. On or before the anniversary of that date each year thereafter, all additional programs in the series shall be made available for non-network broadcast exhibition or syndication within the United States.

(iii) All programs shall be made available for non-network exhibition or syndication by transferring all rights held by the network that relate to syndication to an unaffiliated party that is not in any way commonly owned or controlled with the network. The terms of the transfer agreement may permit the network to receive a continuing financial return from the non-network use of such programs but shall otherwise preclude all network control or influence over the terms of license for non-network exhibition, including the specific price charged for non-network exhibition.

the scheduling of the programs and the entities to whom non-network exhibition licenses are granted.

(3) Not more than thirty days following the transfer of non-network exhibition or syndication rights pursuant to the requirement of this paragraph, the network shall notify the Commission of that transfer. That notice shall contain the name of the series, identify the programs involved, identify the party to whom the non-network exhibition or syndication rights were transferred and shall certify that the terms of the transfer comply with the requirements of this paragraph. All agreements relating to such transfers shall be provided to the Commission at the Commission's request.

(4) [*N.B.* This subparagraph is essentially unchanged from the existing rule and was not the subject of this proceeding.] If a network does not timely avail itself of any license or other exclusive right to network exhibition within the United States, the grantor of such license or right to network exhibition may, upon making a timely offer reasonably to compensate the network, reacquire such license or other exclusive right to exhibition of the program.

(5) For purposes of this paragraph and paragraph (k) of this section, the term "network" includes only the major national advertiser supported broadcast television networks (ABC, CBS, and NBC).

(6) For purposes of this paragraph a prime time entertainment series program is an entertainment program which is one of a sequence of 22 or more programs with interconnected plot or substantially the same cast of principal characters any regular episode of which has had network exhibition during the hours of 7–11 p.m. eastern time.

(7) The provisions of §73.658(1), (2), (3), and (6) shall remain in force until August 4, 1990 and shall thereafter be of no further force or effect.

August 4, 1983

Separate Statement of
FCC Commissioner James H. Quello
Concurring in Part and Dissenting in Part

In re: BC Docket No. 82–345 relating to network television, financial interest and syndication rules.

I wish to make it immediately clear that the Commission's action in this docket does not reflect a decision on my part, tentative or otherwise, that the Commission should adopt this particular proposal. Therefore, I dissent to the characterization of this document as a tentative decision. Nevertheless, I fully concur in seeking public comment on this specific proposal.

I would like to note that in reviewing the comments I shall particularly look for guidance in determining whether a narrow rule such as the one proposed here would adequately ensure that independent television stations continue to have unencumbered access to off-network syndicated programming. Such programming is a staple source of revenue for independent stations, and as such it is an important part of their ability to provide the public with a diversity of viewpoints through their news and public affairs programming.

As I made explicit when the Commission heard oral presentations on this subject, I support the concept of a compromise where the networks are not unduly restricted from participation in any market so long as the Commission continues to protect the valid interests of the independent stations. Putting this proposal out for comment will, in my view, help the Commission focus on whether a narrow approach such as is presented here can meet that goal. My support of this action should not be interpreted as suggesting that my further consideration of these matters will be limited to the boundaries of this proposal.

SEPARATE STATEMENT AND PARTIAL DISSENT OF COMMISSIONER HENRY M. RIVERA

RE: BC DOCKET 82-345—Network Financial Interest and Syndication Proceeding.

With the exception of the sunset provision, I support the Commission's tentative decision to narrow the existing financial interest and syndication rules. The substantial record compiled to date persuades me that the primary public interest goal furthered by present restrictions is the continued growth and vigor of the independent television stations. These stations are an integral component of the television diversity presently available to the American public; unimpeded access to lifeblood programming by the independents ensures their continued strength, thereby promoting the widest possible dissemination of ideas from diverse and antagonistic sources.[1]

At this juncture, I believe the proposed new syndication rules, with their associated structural restrictions on network financial interests and special reporting requirements, are reasonably calculated to preserve the independent stations' open and unrestrained access to necessary off-network programming. Given the serious consequences that would flow from a misstep in this complex area, however, subjecting the proposed rule revisions to the crucible of public comment is critical to a sound resolution of this proceeding. While reasonable people may differ about the magnitude of the risk posed by liberalization of the existing rules—indeed, I am not convinced that the potential for anticompetitive conduct is as slim as projected by the theoretical analysis herein—there is a substantial consensus that if such conduct does occur, the impact on the independent stations could be devastating and irreversible. Further public comment and analysis will provide a necessary extra measure of assurance that the rules we finally adopt will optimally serve their purpose.

---

[1] Since this proceeding began, much has been made about the extent to which the existing rules promote diversity in the program production market. My great concern about fostering diversity of broadcast ownership facilities is a matter of record and I am equally concerned about diversity in the program production market. However, based on the record before me, I do not believe a persuasive case has been made that these rules have promoted greater diversity in the program production market.

My position on the sunset proposal is unequivocal and negative. If the Commission is committed to the continued well-being of the independents, and believes that oversight of the syndication process is necessary to assure that well-being, it is illogical to decide now based on nothing more than a "guesstimate" of future competition that such oversight will no longer be required at an arbitrary future date. The independents' lifeline should not be severed in this manner. As with any other agency rule, when the conditions that lead us to regulate in this proceeding no longer exist, the rules should then be revisited.[2]

In sum, there is considerable record evidence that the financial interest and syndication rules should be revised. However, we must be certain that the basis for a recrafted rule is well-founded and that the rules ultimately adopted will work smoothly and efficiently. I therefore await with keen interest the public's comment on this tentative decision and the draft rules so that we may responsibly conclude this proceeding.

---

[2] As the Justice Department put its: "the growth of the new technologies is likely to reduce the need for a prophylactic rule at some point. [But] even the best projections can only approximate the effects of technological change on the programming marketplace [and on] the networks' position as gatekeepers in the market for syndicated programming." *See Reply Comments of the United States Department of Justice"* at 28.

Reconsideration, Petition for, Denial of
Tariff, Cost Support Material

Petition for reconsideration of recent amendments to Section 61.38 of Rules, governing cost support material required to be filed with tariffs, denied. Petitioner offered no basis for assertions that information no longer required is needed for Commission review of tariffs, nor for its contention that notice and comment were required by Administrative Procedures Act.
–Amendment of Section 61.38

FCC 83-399

BEFORE THE

FEDERAL COMMUNICATIONS COMMISSION

WASHINGTON, D.C. 20554

In the Matter of
Amendment of Section 61.38 of the Commission's Rules

MEMORANDUM OPINION AND ORDER

(Adopted: September 9, 1983; Released: September 23, 1983)

BY THE COMMISSION:

1. Before the Commission is Satellite Business Systems' (SBS) petition for reconsideration of our Memorandum Opinion and Order (Order) amending Section 61.38 of the Commission's Rules, 91 FCC 2d 1074 (1982).[1] There, we concluded that changes in industry conditions and tariff filing practices since the adoption of Section 61.38 in 1970 warrant reduction of the cost support materials that dominant carriers are required to submit with their tariff filings. Specifically, we eliminated the requirement that such filings include a "backcast" estimating what the effects of proposed revisions on a carrier's traffic and revenues would have been if the revisions had been effective during a recent 12-month period of actual operations. We also reduced from three years to one year the required cost projections and traffic and revenue forecasts. These changes were adopted by the Commission on its own motion, without notice and comment,[2] because they relate to Commission practice and proce-

---

[1] We have also considered American Telephone and Telegraph's opposition and SBS' reply.

[2] To comply with the Regulatory Flexibility Act of 1980, 5 U.S.C. §601 et seq., the Commission published a notice in the Federal Register, 46 Fed. Reg. 56466 (1981), listing the Parts of its Rules to be reviewed over the next 12 months. This general

dure. SBS contends the amendments will compromise the Commission's ability, and that of interested persons, to evaluate the underlying cost justification for tariffed service offerings. It also asserts the Commission violated the rulemaking provisions of the Administrative Procedures Act (APA), 5 U.S.C. §553, because the amendments were not preceded by notice and comment. For the reasons set forth below, we deny the petition.

2. The imposition of the Section 61.38 support requirements in 1970, explained fully in our Order, was to provide a better base of information in tariff filings to assist Commission evaluation of such filings.[3] Our experience with tariff filings at the time had convinced us that requiring standardized cost support materials would save Commission staff time by minimizing the need for frequent supplemental information requests. Over a decade later, our more recent experience with tariff administration suggested the need to modify this rule. We determined that backcasts and extended forecasts were of questionable value in a rapidly changing telecommunications marketplace. Carriers are filing tariff revisions much more frequently as they respond to technological developments, changing customer demand, and competitive offerings. In these circumstances, Commission reliance on backcasts and extended forecasts as predictive aids to our evaluation of tariffs would not significantly inform the tarif review process and would burden carriers with unnecessary costs. Rather than continue to require the routine submission by all dominant carriers of these support materials, the cost of which is ultimately borne by ratepayers, we concluded that in most cases reduced submissions would still enable effective tariff review. We emphasized, however, that we could require more extensive support materials where particular circumstances suggested their usefulness.

3. Petitioner has not explained or supported its contention that Commission evaluation of tariff filings will be compromised by the revised standards. Petitioner does not suggest that the Commission's underlying characterization of the industry and of tariffing practices is mistaken, nor does it specify why the Commission will be unable to discharge its tariff review function. The rule, as revised, still requires the submission of economic data to support new or changed tariff offerings. As noted, we retain the discretion to require supplemental information as needed. Moreover, the formal complaint process remains available under Sections 206–209 of the Communications Act, to address allegations of unjust, unreasonable, or unreasonably discriminatory provisions in effective tariffs. In any

---

notice of intent to review Part 61 occasioned specific comments suggesting and opposing possible changes in Section 61.38, but we do not reach the question whether that Notice constitutes sufficient notice for purposes of the Administrative Procedure Act, 5 U.S.C. §553.

[3] Tariffs-Evidence, 25 FCC 2d 957 (1970).

event, the requirements of Section 61.38 are not intended to charter independent tariff oversight by third parties. This section exists primarily to assist the Commission in exercising its discretion whether to suspend and investigate proposed tariffs, rather than to confer "important procedural benefits upon individuals." *Aeronautic Radio, Inc. v. FCC*, 642 F.2d 1221, 1235 (D.C. Cir. 1980), *quoting American Farm Lines v Black Ball Freight Service*, 397 U.S. 532, 538 (1970). Thus, information supplied under Section 61.38 may be sufficient to aid the Commission in its exercise of discretion, without necessarily establishing the *prima facie* lawfulness of the proposed revisions. *Associated Press v. FCC*, 448 F.2d 1095, 1104 (D.C. Cir. 1971).

4. Petitioner has also failed to present any basis for reconsidering our determination in the Order that this rule is procedural and, therefore, exempt from the notice and comment requirements of the APA.[4] As just explained, Section 61.38 exists simply to provide the Commission a data base with which to evaluate tariff filings.[5]

5. Moreover, the forecast and backcast information eliminated from Section 61.38 was not being relied upon as a useful or practical tool in most instances of tariff review. In light of this practical experience, no purpose would have been served by soliciting public comment on whether such information is useful to the Commission in performing its tariff review functions.[6] To have employed a notice and comment proceeding under such circumstances would have created unnecessary delay, and further extended the burdens of furnishing materials not generally useful to nor utilized by the staff. Accordingly, the petition for reconsideration filed by Satellite Business Systems IS DENIED.

FEDERAL COMMUNICATIONS COMMISSION
WILLIAM J. TRICARICO, *Secretary*

---

[4] In its reply, SBS asserts that paragraph 5 of the Order constitutes recognition that Section 61.38 is substantive in nature. However, the referenced passage states explicitly that the effective date provisions of the APA (§553(d)) are inapplicable because the action taken affects a procedural rule.

[5] "A useful articulation of the exemption's critical feature is that it covers agency actions that do not themselves alter the rights or interests of parties, although it may alter the manner in which the parties present themselves or their viewpoints to the agency." Batterton v. Marshall, 648 F2d 694, 702–703, 707 (D.C. Cir. 1980).

[6] Petitioners' reliance on Pickus v United States Board of Parole, 507 F.2d 1107 (D.C. Cir. 1974) is misplaced. That decision construed the APA exemption for procedural matters to exclude actions "likely to have considerable impact on ultimate agency decisions." In the present context however, the requirements for cost support material were moderated precisely because the more extensive materials are highly unlikely to have such an impact on the tariff review process. Further, Section 61.38 does not purport to establish actual standards for decision. *Pickus*, in contrast, involved formula-like standards used to calculate an inmate's remaining time in prison.

Common Carrier, Service, Resale and Shared Use of
Declaratory Ruling

Petition for declaratory ruling granted to an extent and otherwise denied. Resale or shared use restrictions may not be lawfully applied to physically intrastate WATS used in interstate communications. Commission declined to order BSOCs to offer service at particular rates or terms.

BEFORE THE

FEDERAL COMMUNICATIONS COMMISSION

WASHINGTON, D.C. 20554

In the Matter of

American Telephone and Telegraph
Company and the Bell System Operating
Companies Restrictions on the Resale and
Sharing of Switched Services used for
Completion of Interstate Communications

MEMORANDUM OPINION AND ORDER

(Adopted: January 27, 1983 Released: February 4, 1983)

BY THE COMMISSION: COMMISSIONER JONES CONCURRING IN THE RESULT.

1. Before the Commission is a petition by Satellite Business Systems (SBS) asking us to declare that resale and sharing prohibitions in intrastate Wide Area Telecommunications Service (WATS) tariffs of the Bell System Operating Companies (BSOCs) have no lawful application to the use of "physically intrastate" WATS to complete interstate calls. SBS urges us, moreover, to order the BSOCs to provide "physically intrastate" WATS to it and other OCCs for use in interstate communication at the same rates as appear in the BSOCs' state tariffs for intrastate WATS to non-reselling customers.[1] For reasons indicated below, we are granting the

---

[1] The following have filed comments in support of the petition: the Western Union Telegraph Company; MCI Telecommunications Company; U.S. Telephone Communications, Inc.; Aeronautical Radio, Inc. (a private interstate carrier); and Lexitel Corporation, Combined Network, Communications Equipment Corporation, ATS Long Distance Network, Inc., Business Telephone Systems, Inc., LDX, Inc., and Telesphere Network, Inc. all certificated interstate resale carriers filing jointly as "Resellers". The American Telephone and Telegraph Company (AT&T) (on behalf of the BSOCs); the National Association of Regulatory Utility Commissioners

petition to the extent of ruling that resale or shared use restrictions may not be lawfully applied to "physically intrastate" WATS used in interstate communication. We decline at this time, however, to order the BSOCs to offer service at particular rates or terms.

The Petition

2. SBS contends that resale restrictions in intrastate WATS tariffs adversely affect the availability, cost, and quality of interstate services by preventing interstate carriers from using resold WATS to distribute interstate calls to points within the state where access to the WATS network is obtained. It then proceeds to explain how these restrictions ostensibly affect its own offering of switched voice services. Specifically, SBS asserts that it must resell telephone company services, including private line, ENFIA, and WATS, in order to compete successfully with AT&T because it is unable, for practical reasons, to extend its own facilities throughout the United States. It states that it generally terminates MTS/WATS - equivalent calls in local exchange areas in which its earth stations are located by means of ENFIA trunk connections obtained under BSOC Tariff F.C.C. No. 9. To terminate all calls via ENFIA connection, however, would assertedly require ENFIA access lines to each of the seventeen thousand local exchanges nationwide. This, SBS maintains, would be economically infeasible. Because it has not been able to obtain direct WATS connections between its earth stations and points within the same state, SBS asserts that it usually completes calls to points outside the exchange areas where its earth stations are located by routing to earth stations in other states in order to use interstate WATS, which is not subject to resale restrictions.[2] According to petitioner, the use of direct intrastate WATS connections would result in more efficient utilization of AT&T's public switched network facilities by eliminating unnecessary use of long haul interexchange circuits.

3. SBS next maintains that this Commission clearly has jurisdiction to rule as requested. In support of its contention in this regard SBS refers to Commission and judicial decisions which hold that even though a carrier's facilities may be located within a single state,

---

(NARUC); the United Telephone System, Inc. (United); and the public utilities commissions of the states of California, Michigan, New York, Kansas, and Alabama have filed comments in opposition.

[2] For example, in order to complete calls from New York to Flagstaff, Arizona—where it has no earth station—SBS states that it first routes traffic to Los Angeles, the site of its closest earth station outside Arizona. The calls are then "backhauled" the 400 miles to Flagstaff via resold WATS obtained under the interstate WATS tariff (AT&T's Tariff F.C.C. No. 259). SBS maintains that this "backhauling" over an extended terrestrial link introduces unnecessary deterioration in transmission quality, most of which could be avoided if a WATS connection could be established directly from the Phoenix earth station, which is only 110 miles from Flagstaff.

when the facilities are used as an integral link in the transmission of communications by wire or radio between points in different states the service thus provided is jurisdictionally interstate.[3] SBS sees good cause for the Commission to assert its jurisdiction where, as here, the provisions in the BSOCs' intrastate WATS tariffs are said to operate in effect to restrict the resale and sharing of jurisdictionally interstate service. SBS emphasizes in this regard that the Commission has held that restrictions on the resale and sharing of interstate private line and public switched network services are unjust and unreasonable, in violation of Section 201(b) of the Communications Act[4] and unreasonably discriminatory, in violation of Section 202(a).[5] *Resale and Shared Use of Common Carrier Services*, 60 FCC 2d 261 (1976), *recon.*, 62 FCC 2d 588 (1977), *aff'd sub nom. AT&T* v. *F.C.C.* 572 F.2d 17 (2d Cir.), *cert. denied*, 439 U.S. 875 (1978); *Resale and Shared Use of Domestic Public Switched Network Services*, 83 FCC 2d 167 (1980). These determinations, SBS notes, derive from the Commission's perception that a number of public and private benefits might ensue from resale and sharing of interstate services, among them the fostering of innovation and new technology, better network management, and a wider variety of services. The benefits which the Commission sought to bring about by requiring the elimination of interstate resale and sharing restrictions will remain partly unfulfilled, according to SBS, so long as local carriers can prevent the use of resold physically intrastate services for the distribution of interstate communications.

Summary of Comments

4. In opposition to the petition for declaratory ruling, United and the public utilities commissions of California, Michigan, Kansas, and Alabama argue that the Commission lacks jurisdiction to rule as SBS requests. They contend that "physically intrastate" WATS service, even when used in connection with other facilities to terminate interstate communications, is explicitly exempt from FCC regulation by operation of Section 2(b) of the Communications Act.[6]

5. NARUC and AT&T, on the other hand, do not dispute petitioner's contention that "physically intrastate" WATS service used in the manner described is subject to Commission jurisdiction. Instead, they contend that the Commission should decline to exercise jurisdiction at this time to avoid disrupting the orderly processes of state regulation. Since a number of states have already approved resale of intrastate WATS and many others have taken the issue under investigation NARUC asserts that it would be premature for the FCC to preempt state regulation in this area now. For its part, AT&T asserts that existing intrastate WATS rates are insufficiently usage-sensitive; in consequence, AT&T contends, to require resale of intrastate WATS under current rate structures would result in serious net contribution losses for intrastate services.[7] AT&T therefore urges the Commission to accord state authorities a reasonable time to review and implement revised intrastate WATS rates that would be compatible with full resale and shared use. To this end, AT&T asserts that restructured "tapered" WATS schedules have already been filed in twenty-five states, and that similar filings will be made in the remaining states by the end of the first quarter of 1983. AT&T asserts, moreover, that most of the BSOCs expect to file additional revisions to permit resale and sharing of intrastate WATS, once restructured rates have been implemented.[8] Thus, AT&T maintains, the issue which SBS is raising is moving toward resolution at the state level without the necessity for Commission intervention. Moreover, according to AT&T, other common carriers will not be prejudiced in the interim since there are several means by which the OCCs can presently complete interstate calls within any state: *e.g.*, ENFIA, ENFIA with intrastate MTS toll completion, dedicated connections to customer locations obtained under the BSOC OCC facilities tariffs, and interstate WATS.

6. As a separate matter, AT&T contends that even if the Commission declares the resale restrictions unlawful, it cannot prescribe the provision of physically intrastate WATS to reselling interstate carriers at existing intrastate rates, as SBS requests,

---

jurisdiction with respect to (1) charges, classifications, practices, services, facilities, or regulations for or in connection with intrastate communication service by wire or radio of any carrier. . . .

[7] AT&T does not explain why resale at current "non-usage sensitive" rates would allegedly lead to "serious net contribution losses." Presumably, its assertion to this effect is based on the assumption that if resale were permitted at the current relatively low rates, a substantial amount of arbitrage would occur, leading many customers to substitute resold intrastate WATS for other AT&T services.

[8] AT&T notes that resale and sharing of intrastate WATS is now permitted under recently - implemented state tariff revisions in Idaho, Ohio, and New York, and that resale and sharing is permitted on measured WATS in Iowa and South Dakota.

without first finding that the resulting state rates under resale would each be just and reasonable[9] Moreover, AT&T maintains that if "physically intrastate" WATS termination of interstate communications were required to be offered to resellers at the regular intrastate rates, it would become difficult if not impossible to enforce lawful resale restrictions on purely intrastate uses of WATS.

7. The remaining commenters express general agreement with SBS's contentions, but advocate a broader ruling. ARINC contends that the Commission should be concerned with the detrimental impact of these resale and shared use restrictions on private system operators as well as on carriers and accordingly asks us to declare the restrictions void as applied to physically intrastate WATS connected to any interstate communications system, whether of a common carrier or private entity. Further, the collective resellers urge us to declare all resale restrictions in state tariffs—not merely those pertaining to WATS—unlawful for all purposes inconsistent with the Commission's interstate resale objectives, and to preempt state certification requirements for resellers of intrastate facilities.

Discussion

8. It is by now well-established that communication service provided by means of wire or radio facilities located within a single state is subject to the jurisdiction of this Commission when serving as a link in an interstate channel of transmission established through interconnection. *See, e.g., U.S. v. Southwestern Cable Co.*, *Telerent*, and *New York Telephone Company, supra*. Simply put, jurisdiction turns on the nature of the communications, rather than the location of the facilities links through which they pass. *Id.* In this case, it is undisputed that the intrastate WATS connections sought here would be used to terminate communications which originate in other states. Thus, the question confronting us is whether the BSOCs should be permitted to continue to invoke resale and sharing restrictions in their intrastate WATS tariffs where the effect is to bar resale and shared use of interstate communications.

9. This Commission recently issued a prescription concerning resale and shared use restrictions on the provision of interstate communications. *See* Report and Order in *Regulatory Policies Concerning Resale and Shared Use of Common Carrier Domestic Public Switched Network service*, Docket No. 80-54, 83 FCC 2d 167 (1980). There, we declared tariff provisions restricting resale and shared use of domestic public switched network services to be unjust, unreasonable, and unjustly discriminatory under Sections 201(b) and 202(a) of the Act. Moreover, we ordered all carriers subject to our

---

[9] As authority for this proposition, AT&T cites AT&T v. F.C.C., 449 F.2d 439, 450-1 (2d Cir. 1971); Nader v. F.C.C. 520 F.2d 182, 204 (D.C. Cir. 1975); and MCI Telecommunications Corp. v. F.C.C., 627 F. 2d 322, 337 (D.C. Cir. 1980).

jurisdiction to file revised tariffs eliminating all such restrictions from their domestic public switched network services. In the case of AT&T in particular, we ordered it to withdraw Section 2.2.1 of Tariff FCC No. 259 (WATS) and Section 2.2.1 of Tariff No. 263 (Message Telecommunications Service), and to file appropriate tariff revisions. 83 FCC 2d at 194.

10. In the course of our general discussion in the Report and Order in Docket No. 80–54, we did not explicitly consider the case of resale and sharing restrictions on intrastate WATS used to terminate interstate communications. Moreover, because these restrictions do not appear in tariffs on file with this Commission they were not technically subject to the filing directives of the Report and Order. Nonetheless, it was not our intention that resale and sharing restrictions would continue to be imposed on any form of domestic public switched network service used in interstate communication. Indeed, none of those commenting here argue that the stated grounds for our holding in Docket No. 80–54 are any less applicable in the case of resale and sharing restrictions on WATS used for intrastate termination of interstate calls than in regard to restrictions of this kind on other interstate public network services. So as to remove any doubt on this point, however, we now affirm that our policy encompasses resale and sharing restrictions on WATS used for the intrastate distribution of interstate communications, whether by a common carrier or a private entity.

11. This brings us, then, to the contention by AT&T and NARUC that we should in effect defer application of the policy we adopted in Docket No. 80–54 in these circumstances by permitting resale and sharing restrictions to continue to be imposed on intrastate WATS termination of interstate calls until the BSOCs have implemented restructured intrastate WATS rates. It is important to bear in mind here that in Docket 80–54 we concluded that extensive public benefits could reasonably be anticipated from resale and sharing of public switched network services, without significant adverse consequences. 83 FCC 2d at 193. We also concluded that our policy favoring unlimited resale and sharing of such services should be implemented swiftly after a short adjustment period. To defer ruling here pending implementation of restructured intrastate WATS rates pursuant to diverse state proceedings would entail an indeterminate delay in full realization of the benefits which we anticipated from the resale and sharing of interstate services, and hence would be contrary to the public interest. While AT&T suggests that alternative means are presently available to the OCCs for completing interstate calls, it has not controverted the petitioner's contention that within-state WATS terminations are superior from the standpoint of efficiency and economy. No convincing showing has been made, on the other hand, that the resale and sharing of WATS used in this way would harm the network as a whole. Although AT&T and

NARUC assert in this regard that eliminating these restrictions on WATS used to terminate interstate calls would render it difficult to prevent resale and sharing of jurisdictionally intrastate WATS at the current non-usage-sensitive rates, in consequence of which intrastate revenues would diminish drastically, they fail to adequately state and support their reasons for supposing that this would prove to be the case.[10] These assertions do not warrant a delay in implementation of our important federal policy determination that unrestricted resale and sharing of interstate services would serve the public interest objectives which this Commission is mandated by statute to foster. *See North Carolina Utilities Commission v. F.C.C., supra.* In any event, if it does develop that resale and sharing of interstate services occurring as the result of our policy initiatives have incidental consequences of concern to those charged with regulating jurisdictionally intrastate services, we have no reason to suppose that state commissions would be unable to take prompt curative action.

12. Since SBS' proposed use of physically intrastate WATS is jurisdictionally interstate, we would under normal circumstances expect FCC tariff provisions to be filed for this service. In this way we would ensure that the interstate character of this WATS usage is recognized by the separations process (47 CFR Part 67) and that interstate costs are fully recovered by the rates which customers pay. On the other hand, it would likely be some months before FCC tariff revisions could be expected to take effect, in view of the time required for tariff preparation, public comment, staff review, and possible suspension. This course would delay the implementation of our resale policy and deprive SBS of this service for an even longer period. Furthermore, the Modified Final Judgment and our recent prescription of an access charge plan in Docket No. 78–72 require that any such tariff would soon after have to be reformed to reflect the new method of compensating local telephone companies for exchange access. In any case, because of the Joint Board's decision to freeze the Subscriber Plant Factor at 1981 levels for all factors in the formula[11] it is of little consequence how this usage of physically intrastate WATS is treated for separations purposes.

13. Accordingly, IT IS ORDERED, That the petition for declaratory ruling filed by Satellite Business Systems filed on June 7, 1982 IS GRANTED to the extent indicated, and is otherwise DENIED.[12]

---

[10] We emphasize in this regard that our ruling here does not extend to restrictions which pertain solely to the provision of WATS used in intrastate communication. The request by the collective resellers that we preempt state regulation to the extent of outlawing resale restrictions on purely intrastate services and abrogating state certification requirements will be denied, as it is beyond the scope of the matters on which comment was sought.

[11] See, In the Matter of Amendment of Part 67 of the Commission's Rules and Establishment of a Joint Board, Docket No. 80–286, 89 FCC 2d 1 (1982).

14. IT IS FURTHER ORDERED, That this order will take effect thirty days from the release date.

FEDERAL COMMUNICATIONS COMMISSION
WILLIAM J. TRICARICO, *Secretary*

---

[12] We decline to grant relief to the extent of ordering the BSOCs to provide "physically intrastate" WATS to OCCs and resellers at the currently effective intrastate rates, no justification having been shown here for departing from the procedure normally contemplated under Title II of leaving it to providing carriers to develop rates in the first instance.

In the Matter of AMERICAN TELEPHONE AND TELEGRAPH Co. Manual and Procedures for the Allocation of Costs	CC Docket No. 79-245

ORDER

(Adopted: August 4, 1983; Released: August 22, 1983)

BY THE COMMISSION: COMMISSIONER DAWSON ISSUING A SEPARATE STATEMENT.

I. Introduction

1. On May 18, 1983, the Commission released a Notice of Proposed Rulemaking in this proceeding. 48 F.R. 23854 (May 27, 1983). That Notice contained our proposals to modify the *Interim Cost Allocation Manual* (*ICAM*) for AT&T's interstate services so that the *ICAM* would reflect changes brought about by our Access Charge Order[1] and the divestiture of the Bell Operating Companies.[2] This proceeding is intended to make changes to the *ICAM* necessitated by those events. As we stated in the Notice, there are other issues pending in this docket which are not addressed here. Our intention is to reach those issues later. This Order makes adjust-

---

[1] MTS/WATS Market Structure Inquiry, Third Report and Order 48 F.R. 10319 (March 11, 1983).

[2] Modification of Final Judgment (MFJ), United States v. American Telephone and Telegraph Co., 552 F. Supp. 131 (D.D.C. 1982) aff'd sub nom. Maryland v. United States, 51 U.S.L.W. (March 1, 1983).

ments to the *Manual* to enable the American Telephone & Telegraph Co. (AT&T) to file new interstate tariffs in October 1983, to be effective at divestiture proposed for January 1, 1984.

II. Summary of the Comments

2. Comments and replies were received from seven parties. AT&T agreed for the most part with the changes in the *ICAM* described in the *Notice*. It observed, however, that it does not believe that *ICAM* is an appropriate long-term regulatory tool. AT&T further stated that even for the October 3, 1983 filing the Commission may have to consider not holding AT&T to the strict equalized rate of return requirements associated with the *ICAM*. These "equalization" requirements require AT&T to attempt to earn the same rate of return from MTS, WATS and private lines. The Commission may have to consider a "permissable zone of reasonableness" for the rates of return of the individual services because changes in the *ICAM* and changes resulting from the divestiture may affect the allocations of cost in unexpected ways.

3. AT&T states that with one major exception (premium access) it has chosen the same allocation methodology for its October 3, 1983 filings as that proposed in the Notice. Further, because of time constraints, if the *ICAM* amendments finally adopted differ substantially from AT&T's assumptions, it will have to take account of such changes in early 1984.

4. AT&T has argued against the premium access charge in *Access Reconsideration*. Regarding the allocation of the premium access charge, AT&T states that there is "no method that is not arbitrary for allocating an expense which is itself determined in an uneconomic manner." AT&T Comments, p. 6. The use of conversation minutes proposed in the *Notice* as an allocator for the premium access element will cause major shifts in the allocation of costs between MTS and WATS thus compounding the premium access problem as viewed by AT&T. If the requirement to equalize the rates of return of MTS and WATS is enforced by the Commission, the major shift in cost allocation would give improper and transitory price signals. To avoid such an abrupt shift in the cost allocation, AT&T recommends the use of the relative number of MTS and WATS messages as a basis of allocation. AT&T says that the use of messages would give the desired result by not changing significantly the relative allocation of costs to these services, ameliorating customer impact related to the premium access expense. The use of minutes would cause a "temporary but dramatic shift in cost assignments and rates, if an inflexible equialization requirement is imposed." AT&T Comments, p. 8. AT&T further argues that, to the extent that there are differences in access provided to it and the OCCs, these differences deal with call "setup," not a call's duration,

thus arguing for the use of messages as an allocator rather than minutes.

5. AT&T asserts that the Exchange Contract Services Category proposed in the Notice is not appropriate to the *ICAM*. The revenues and costs of the services and facilities provided to the divested Bell Operating Companies will not be part of AT&T interstate common carrier operations and thus will not be part of the interstate rate base or cost of service. These revenues and costs will be identified on its books of account, AT&T declares, and the FCC may monitor those amounts through means other than the *ICAM*.

6. AT&T then presents arguments supporting its position that *ICAM* "will serve no useful purpose in 1984 and beyond." AT&T Comments, p. 11. AT&T cites what it calls "pervasive competition" and low entry barriers to bolster its arguments.

7. GTE Sprint Communications Corporation, formerly Southern Pacific Communications Corporation, points to a "lack of clarity in a number of access expense allocation procedures [which] will inevitably lead to an overallocation of costs to the MTS category and an under allocation of costs to the WATS category." In particular GTE Sprint points to the lack of a reason for using only the open-end minutes of WATS in the allocation of the premium access charge. GTE Sprint contends that MTS will be burdened with greater expenses while the WATS rate base would be artificially decreased, thus eventually increasing the rate differential between the two services. This would be "inimical to promotion of full and fair competition." GTE Sprint Comments, p. 6. GTE Sprint recommends that the Commission either count both the open and closed ends of WATS lines or allocate the premium access amount based on the number of MTS and WATS calls.

8. GTE Sprint also argues that the allocation of common and dedicated transport expenses do not account for the distance factor discussed in the *Third Report and Order* in CC Docket No. 78-72 (Access Charge decision). GTE Sprint Comments, p. 8. It also asserts that the allocation of billing and collection costs is not specific enough. GTE Sprint believes that the "obscure language" will allow AT&T "to interpret the allocation procedures in a variety of ways which subsequently would allow it to vary the share of expenses allocated among the three service categories." GTE Sprint Comments, p. 9. In addition, GTE Sprint claims that the allocation procedure for transitional surcharges is more general than it should be and the difference in detail between their descriptions in the *Notice* in this proceeding and the *Third Report and Order* could lead to inconsistent allocations. "The Commission should consider allocating directly according to the percentages of credit card, collect calls and 800 Service to AT&T's respective service categories," argues GTE Sprint. Comments, p. 11.

9. United States Transmission Systems, Inc. (USTS) argues that

this proceeding is misconceived, noting that it may prejudice outstanding issues in the Access Charge proceeding. Further, if changes need to be made in the *ICAM* because of reconsideration of access charges, another Notice would be needed here. This is a procedure the Commission said it will not follow, declares USTS. The interim procedures are flawed and amending them to aid divestiture is uncalled for, says USTS. USTS argues that AT&T can file new tariffs effectuating divestiture without changing the *ICAM*. USTS asserts that the Commission should apply accounting and costing procedures to the BOCs. USTS characterizes the FCC's proposal as "treacherous" and urges that the Notice be dropped.

10. ABC, CBC and NBC (the Networks) note that the program transmission facilities provided to them by AT&T are treated separately in the access charge plan and point out that they have asked that a separate category for those costs be created in the access rules "to eliminate the possibility of confusion" concerning the Commission's intent. Networks' Comments, p. 4. The *ICAM* should conform to the Commission's intent in the *Third Report and Order* and the Commission should "ensure that only the costs which are actually attributable directly to program transmission are allocated to these services." Networks' Comments, p. 7, footnote omitted.

11. Satellite Business Systems (SBS) "strongly urges the Commission to provide for continued reporting by the divested BOCs as to their interstate access-related investments, expenses and revenues." SBS Comments, p. 1. It urges the Commission to promptly issue a Notice in this matter.

12. SBS argues for the collection of data on time-of-day (peak/off-peak) network utilization to support and evaluate the FCC's network efficiency-related decisions. Expenses, investments, revenues and rates of return should be calculated by the time of day in any permanent cost manual and in the *ICAM* if possible.

13. SBS argues that AT&T will end up paying a premium access charge that is actually far less than the nominal $1.4 billion amount stated in the Access Charge Order. SBS suggests that AT&T report, parenthetically, the actual amount of a premium charge it is paying over what it would otherwise pay. Also, the FCC should not anticipate Joint Board action as it does in the *Notice*, says SBS. Only actual, not planned separations, changes should be dealt with. Finally, SBS argues that more detailed rules should be promulgated for Exchange Contract Services.

14. The Ad Hoc Telecommunications Users Committee (Committee) generally agrees with the changes proposed with three major exceptions. First, the FCC should include any material changes from the access charge reconsideration in the *ICAM* and not accept the *Third Report and Order* as "given" as the Committee interprets the *Notice*. Second, the *ICAM* language should be more precise concerning Local Switching, Dedicated Transport and Special Access. Third,

"General Services and Licenses" cost procedures should not be changed as they were in the *Notice*.

15. The Committee suggests that the revised *ICAM* should specify that LS-1 switching "should be allocated among all *ICAM* services that utilize such switching in proportion to the relative incidence of line termination costs among those same services." The Committee also believes that the *ICAM* should recognize that an open-end private line service may someday be offered over a higher feature trunk-side type switching arrangement. This would require the reallocation of some LS-2 costs, the Committee asserts. Finally, the Committee argues that the "General Services and Licenses" changes sacrifice detail, and suggests that they should be retained at least as they are now. In fact, the Committee declares the *ICAM* should be amended to require AT&T "to allocate such costs to the service categories and specific service offerings on the same cost causative basis and level of disaggregation as exist in AT&T's internal cost allocation systems." Committee Comments, p. 17.

16. In its Reply, the Committee writes that it agrees with the allocation of the premium access charge based on messages rather than minutes. The Committee remarks that while it "firmly is of the view that NTS costs are best recovered through flat rate charges, premium access does relate more directly to the costs of establishing an individual message than to the duration of the message." Committee Reply, p. 2. The Committee also observes that AT&T's "facts" concerning the "competitiveness" of the interexchange transmission services market are not undisputed at this time. The Committee opines that the Commission needs to continue to rely on the *ICAM* and other aspects of tariff regulation of AT&T well into any transition period toward freer pricing.

17. MCI Telecommunications Corporation (MCI) points out that no matter what the Commission adopts, "apparently AT&T will ignore any Commission action resulting from this proceeding." Reply, p. 2. The FCC "must resist AT&T's attempt to steamroll it into actions that clearly benefit AT&T and AT&T alone . . . [N]o new policies should be adopted in this docket at this time." MCI Reply, p. 3. The FCC did not adopt an allocation procedure for premium access in the Access Charge Order. MCI argues that adopting one here would be proposing a new policy despite the FCC's statement in the *Notice* that no new policies are being adopted here. MCI urges the FCC to first decide the size and components of the premium access charge on reconsideration in CC Docket No. 78–72 and thereafter seek public comment on the method of its allocation between MTS and WATS.

18. MCI wants the FCC to scrutinize AT&T's earnings ratios to minimize cross-subsidies despite AT&T's arguments that uncertainty over the outcome of the cost allocation process should cause the FCC to use a "permissable zone of reasonableness." Not only shoul

the FCC strictly enforce the *ICAM* requirements now but MCI suggests that the FCC develop a cost manual for exchange communication in the future. Finally, MCI argues against institution of any proceeding looking toward deregulation of AT&T's basic transmission services.

19. In its reply, GTE Sprint objects to the AT&T proposal for continued use of message minute miles to allocate Interexchange Central Office Equipment. GTE Sprint believes that the number of circuits dedicated to MTS and WATS at the peak period should be used as a means of allocation. It also argues for a separate cost allocation manual for the Bell Operating Companies (BOCs), and claims that AT&T's market power in the interexchange industry makes a cost allocation manual necessary for the future.

20. AT&T, in its reply, begins by noting the similarity between its position and that of GTE Sprint concerning allocation of the premium access charge. It disagrees with GTE Sprint's proposal to include a distance factor in the allocation of common and dedicated transport expenses. AT&T argues that this is an unnecessary complication and the bills rendered to AT&T will not identify common or dedicated access by reporting category. AT&T could do this after the fact, but it would be complex. Besides, these costs will be "only about four percent of total reporting category costs in 1984" according to AT&T.

21. AT&T interprets the *ICAM* provision for billing and collection services costs to mean that these expenses should be directly assigned to the categories identified for AT&T by the exchange carriers (i.e., MTS, WATS, or private line). AT&T believes this answers GTE Sprint's objection concerning that access expense element. As for transitional surcharges, AT&T claims that it interprets the proposed *ICAM* language consistently with GTE Sprint's suggestion.

22. As for the Networks, AT&T alleges that they want a new reporting category for program transmission services. AT&T declares that the FCC rejected this approach before and that the questions raised by the Networks are better addressed in individual tariff filings and not the *ICAM*.

23. AT&T's reply says the SBS suggestion concerning time-of-day reporting should be rejected because it would contribute nothing to *ICAM's* purpose as a regulatory tool. AT&T dismisses SBS's suggestion concerning the parenthetical reporting of "actual" premium access expenses, noting that the *ICAM* deals only with actual amounts paid.

24. AT&T agrees with the Committee's recommendations dealing with LS-1 and LS-2 access facilities. On the other hand, AT&T faults the Committee's proposal to disaggregate dedicated Transport to distinguish between interface and conditioning costs that may apply differentially to MTS and WATS. This is inappropriate, AT&T

asserts, because dedicated Transport facilities will be shared by MTS and WATS and no interface or conditioning costs in the dedicated Transport element will be associated only with MTS or WATS. AT&T also argues that the Committee's suggestion to segregate private line special access by individual types of private lines should be rejected because disaggregation below the broad private line category is inconsistent with the intent and structure of the *ICAM*.

25. With respect to the Committee's arguments regarding General Services and Licenses, AT&T observes that it will "disaggregate these amounts into categories based on directly incurred expenses and investments in a manner similar to the current procedure." AT&T Reply, p. 13. AT&T asserts, though, that it is premature to propose a detailed list of new categories which reflect the divestiture. AT&T believes that the proposed language gives it the flexibility to handle this problem, writes AT&T.

DISCUSSION

I. *Investments and Reserves*

General Instructions

26. In the Notice, we deleted references to the BOCs to reflect the divestiture of these entities from AT&T. This prompted several questions in the comments. The main issue was the applicability of the *ICAM* to the divested companies. See the Comments of SBS, for example. MCI also raised the possibility of a future exchange company cost allocation manual.

27. This proceeding is designed for the sole purpose of modifying the *ICAM* for use by the AT&T interexchange entity. While we recognize that the BOCs will also offer some interstate service, we are not prepared now to promulgate a manual for their interstate services. Persons who believe that such a manual would be desirable may file a petition for rulemaking. Our immediate need is to prepare for the October 1983 tariff filings of AT&T which will reflect the divestiture and the institution of interstate access charges.[3]

Reporting Categories

28. AT&T argues against the new category for "Exchange Contract Services to Divested Companies" which we proposed in the *Notice*. AT&T claims that none of the costs will be in the interstate rate base and that the revenues and costs associated with these will be accounted for separately, thus meeting the FCC's information needs for monitoring these relationships. See comment summaries above.

29. It appears likely that most AT&T revenues from such

---

[3] MCI stated that an exchange manual should be developed at some time next year. We will handle that question if and when MCI files a petition seeking such action.

contract services relating to regulated operations will be intrastate revenues. If this is the case, we do not need a separate reporting category in the *ICAM* for exchange contract services. The separate accounting for these services by AT&T will allow for our review of these agreements as we now understand them. We note that our staff is now examining these sharing arrangements in connection with the divestiture-related Section 214 proceeding.[4] We will not require AT&T to report these as a separate *ICAM* category at this time. If we determine after further investigation of the post-divestiture arrangements that separate reporting is required, we will act to change the *ICAM*.

30. GTE Sprint and AT&T have both commented on the proposed change in the allocation of interexchange COE circuit equipment. We proposed that this investment would be allocated on the basis of the allocation of interexchange circuits rather than message minute-miles. GTE Sprint supports the change with the understanding that the relative number of circuits assigned to each service would be determined at the peak. AT&T claims that the change could not be implemented because there is no way to differentiate between MTS and WATS interexchange circuits.

31. The proposed change in the allocation of the interexchange COE circuit equipment has certain appeal from the standpoint that circuit equipment costs should be related to (and allocated according to) the assignment of those circuits to specific uses to provide certain services. For the purposes of this proceeding, we will accept AT&T's statement that there is no method to differentiate between the MTS and WATS circuits. However, further changes in the *ICAM* may be necessary in the future. We reserve the right to revisit this issue and pursue the use of surrogate measures at that time.

32. References to the allocation of certain BOC switchboard investment were deleted in the *Notice* with the idea that AT&T would not do its own billing. AT&T observes that some switchboards will be transferred from the BOCs to AT&T whether AT&T does its own billing or not. We agree that the wording should be restored to account for the transferred switchboards which were originally covered under that wording in the *ICAM*. AT&T also notes that the deletion of references to the BOCs left only references to Long Lines in this section of the *ICAM*. This wording change apparently will exclude certain interstate costs which will reside in the AT&T interexchange companies (IXCs). These IXCs, according to AT&T, "will be formed to receive the BOC interLATA services." Besides omitting certain costs, the deletion of specific BOC or Long Line references also misallocates certain investments. For example, deleting the reference to Long Lines message switchboard invest-

---

[4] See the letter from the Chief of the Common Carrier Bureau to Alfred Green of AT&T dated July 8, 1983, p.3.

ment, which is used to provide overseas MTS, inadvertently would have the effect of allocating all interstate message switchboard investment to MTS, even that used for WATS. This was certainly not the effect we wanted to achieve. We will adopt the specific language changes proposed by AT&T to remedy this oversight.

II. *Allocation of Access Expenses*

33. Since we issued the *Notice* in this proceeding, we have reconsidered the access charge decision set out in the *Third Report and Order* in CC Docket 78–72. While many changes were made on reconsideration, certain ones are especially relevant to this revision of the *ICAM*. First, we have changed the nature of the premium access charge. Our original proposal would have levied a $1.4 billion premium on AT&T. In *Access Reconsideration*, we have determined that the premium access amount will be implemented on the basis of a per minute differential in Carrier Common Line charges between AT&T[5] and Other Common Carriers. By accounting for premium access in this way, there is no longer a discrete premium amount which must be allocated among AT&T's services. Therefore, no further action is required for purposes of the *ICAM* except to delete the premium access charge as a separate expense category. All Carrier Common Line expenses will be allocated to AT&T services on the basis of relative access minutes.[6] We are also eliminating the assignment of the Operator Assistance charges because that rate element has been eliminated in the *Reconsideration Order*.[7] The *Access Reconsideration Order* also creates a category called "Coinless Pay Phones" for which a rule of allocation has to be developed. We understand that these phones are used almost exclusively for MTS calls. For the purposes of the October filing, we will have AT&T allocate this access expense exclusively to MTS because of the nature of the use of these coinless pay phones.

34. It will also be necessary to apportion the Special Access surcharges, which have been created by the Access Reconsideration

---

[5] The differential applies to users of certain services. For the purpose of the *ICAM*, we are concerned with the differential that applies to AT&T's services.

[6] In Access Reconsideration, we have defined "access minutes of use" as the usage attributable to interexchange carriers for the purpose of calculating chargeable usage. In connection with the originator of an interstate foreign call, usage is to be charged from the time the originating end user's call is delivered by the telephone company and acknowledged as received by the interexchange carrier's facilities in the originating exchange area. In connection with the terminator of an interstate or foreign call, usage is to be charged from the time the call is received by the end user in the terminating exchange. Timing of usage at both the originating or terminating end of an interstate or foreign shall terminate when the calling or called party disconnects, whichever event is first recognized in the originating and terminating end exchanges.

[7] The merger of the Dedicated Access Line and Special Access elements does not require any change in the apportionment of AT&T Special Access expense.

Order, between the Private Line and WATS categories. This does not present a difficult problem because such surcharges will be assessed to a private line or a WATS access line and can be directly assigned to those categories.

35. Now we turn to specific suggestions made by the parties concerning various aspects of access expense allocation. The Networks have proposed that we create a new access category for program transmission in the access reconsideration. We did not create such a category on reconsideration. Alternatively, the Networks asked that we create a new *ICAM* category for program transmission if no separate access category is established. We reject this request. The *ICAM* is intended to reflect broad service categories. Any subdivision of the private line category such as that proposed by the Networks can be considered when we conduct further proceedings to determine whether a different Manual would be appropriate for the long run. This is not the proceeding in which to make such a determination.

36. GTE Sprint argues that the proposed allocation of common and dedicated transport expenses does not conform with the access charge scheme because the proposed *ICAM* rule does not account for the distance weighting used in the development of the transport charges. While GTE Sprint's point is well taken, we must point out that it is unlikely that bills from local exchange carriers will specify this distance information. While the exchange carriers will use such information in developing their tariffed access charges, we have no requirement that they identify the transport billings by *ICAM* categories. We did not institute such a requirement because the exchange carriers cannot identify the service nature of the traffic being carried over what are truly "common" lines. However, if an appropriate, easier method can be suggested for the allocation of this expense, we will consider such a change for the future.

37. The GTE Sprint objection to what it characterizes as the "obscure language" directing the allocation of the "billing and collection" element is unfounded. If exchange carriers perform billing for MTS and WATS or MTS, WATS and private line, we understand that access charges for each will be separately stated where possible. Therefore, such expenses can be directly assigned to each category.[8] The cause of confusion here or any suggested method of correcting it is not immediately apparent from the GTE Sprint presentation.

38. GTE Sprint also requests that the transitional surcharge allocation be made more specific and directly allocated according to the percentages of credit card, collect calls and 800 Service to AT&T's respective service categories. The Access Reconsideration

---

[8] In the event that the access charges are not separately stated, they will be allocated as expressly stated in the *ICAM*.

Order eliminates those surcharges and therefore GTE Sprint's arguments on this point are moot.

39. The Committee made a recommendation for changes to the local switching 1 (LS-1) and local switching 2 (LS-2) elements. It observes that, unlike the current situation, future "MTS" offerings might use line side connections and future "private line" offerings might use trunk side connections. Such offerings would require changes in the proposed methods of allocation. LS-1 for example is allocated only to private line today because the only A&T service using them is private line. Such contingencies conceivably might warrant changes in access charge classifications at some point in the future, but these suggested changes would not be consistent with the access charge rules as modified in the Reconsideration Order. Therefore, we are not adopting those suggestions.

40. The Committee's suggestions for (1) disaggregating the Dedicated Transport element, (2) segregating Special Access WATS and private line and (3) segregating the Special Access Costs of individual types of private line are inappropriate here. The first two recommendations are topics for consideration in the formulation of access categories, not the allocation of already aggregated expenses. The third suggestion is appropriate for the tariff process. These revisions to the *ICAM* are concerned with the broad, existing categories. Future disaggregation may be desirable, but for now we leave this to future proceedings.

41. AT&T also notes that the definition of minutes of use in footnote 2 on page 3 of the Manual should only apply to carrier common line; that is, the computation of minutes of use which counts only open-end WATS. We are deleting that footnote because changes in the access charge rules adopted in the Reconsideration Order provide the necessary clarification.

42. AT&T further says that Dedicated Transport can apply to private line as well as MTS and WATS. That statement is incorrect. Private line facilities that perform a parallel function are classified as Special Access under the access charge rules. Therefore, we reject the proposed revision.

43. While the nature of the premium access charge has changed, we recognize that there is still concern over the ultimate relative allocation of MTS and WATS costs. The *ICAM* methodology has yet to be tested in the divestiture and access environment. It is conceivable that the procedures that were adequate during relatively stable periods may not easily adapt to the new industry structure and associated changes in the way interstate costs are incurred. Consequently, until we are provided with concrete information about the effects this methodology has on service category costs, and particularly on rates, we shall keep an open mind about the suitability of these procedures and, more generally, the future of *ICAM* as a regulatory tool. For purposes of its October tariff filings,

should AT&T find that application of the Manual will cause unacceptable delay in preparing tariffs, or produce distorted results or undesirable rate impacts as it learns more about the cost shifts associated with divestiture and access charges, it may wish to seek a waiver of the Manual or the earnings equalization requirement. Of course, other parties are not precluded from petitioning this Commission to voice their concerns.

III *Expenses Not Related to Access and Income - Description of FDC Methodologies*

44. In the Notice, we deleted many portions of this final section of the *ICAM* which in our view at that time would not apply to AT&T after divestiture. There are some which should not have been deleted, and at AT&T's suggestion we are restoring them. The major deletion of the methods for allocation General Services and Licenses was criticized by the Committee. We proposed to delete dozens of very specific allocation rules and replace them with a general instruction which would have indirectly allocated these expenses to the categories in the same way as directly incurred expenses. We did not mean to reduce the specificity of the allocations, only to give AT&T the opportunity to provide such a listing which reflects those activities which are actually undertaken at the time it files rates and in the June reports. We agree with the Committee that such detail is important. We will retain the language proposed in the *Notice* in view of AT&T's statement in its replies that "Any annual FDC reports filed by AT&T allocating GS&L expenses will disaggregate those amounts into categories based on directly incurred expenses and investments in a manner similar to the current procedure." If AT&T's filings do not contain sufficient detail, we can amend the *ICAM* at a later date to require more detail.

Other Matters

45. There are some suggestions made in the comments which we have not addressed yet. SBS recommended that time-of-day data be developed in the *ICAM*. This suggestion is inappropriate to our limited purposes of updating the *ICAM* to reflect access charges and the divestiture. For this reason, we reject the suggestion. SBS also stated that we should not anticipate Joint Board actions in this item. MCI also said that changes to the *ICAM* are premature until the premium access question is settled. The changes which we are making in the Manual will make it consistent with access charges and the AT&T divestiture. We believe these changes are appropriate and necessary to permit timely filing of access charges. As a final matter, AT&T has argued for an end to *ICAM* after 1984 and also begins making a case for deregulation. Whether such arguments are valid or not, they do not fit into the narrow focus of this proceeding and, therefore, merit no further discussion.

46. Accordingly, IT IS HEREBY ORDERED, pursuant to 47 U.S.C. §§154(i), 154(j) and 201–205, That the AT&T Cost Allocation Manual IS AMENDED as noted above and in the attachment to this *Order*.

FEDERAL COMMUNICATIONS COMMISSION
WILLIAM J. TRICARICO, *Secretary*

Cost Allocation Manual

This manual contains general instructions for allocating the annual interstate investment and expense costs less any amounts for exchange contract services to divested companies to the following reporting categories for AT&T.

Private Line
Message Telecommunications Service (MTS)
Outward WATS and 800 Service (collectively, WATS)

For each of the reporting categories, an earnings ratio will be developed according to this formula:

$$\text{Earnings Ratio} = \frac{\text{Revenues minus (expenses and taxes)}}{\text{Gross investment minus reserves}}$$

These earnings ratios, plus supporting documents, will be filed with the Commission during June following the reporting year ("central submission"). These earnings ratios will be subject to final interpretation by the Commission.

The process for making changes to this manual shall be determined by the Chief, Common Carrier Bureau. Minor changes (such as changes in account names) may be made providing these changes are approved by the Chief, Common Carrier Bureau prior to filing of the central submission. Substantive changes, which may be requested by any party, will require appropriate procedures.

I. *Investments and Reserves*

Instructions in this section are to be used to allocate interstate investments and reserves to the reporting categories.

A. *General Instructions*

Using Jurisdictional Separations Process (JSP) data, principles and AT&T accounting records, investment and reserves for the company and any wholly owned carrier subsidiaries will be divided between private line and message categories. Message investments will be grouped into interexchange and "other" categories to be used in further allocation to MTS and WATS. Those portions of investment associated with the switching function will be allocated separately as described below.

B. Reporting Categories

Private Line

This category contains investments and reserves associated with private line services.

MTS and WATS

Investment and reserve amounts for the message category, as developed above, will be allocated to MTS and WATS. Message telephone plant (defined here as Account 100.1 less private line investment, land, buildings, furniture and office equipment, and vehicles and other work equipment) will be identified. Interexchange Toll Dial Switching and Switchboard investment will also be separately identified. Interexchange outside plant and COE amounts will be allocated between MTS and WATS based on network message minute miles. Toll Dial Switching investment will allocated on the basis of switched message minutes. The determination of investment in the various switchboard types will be based on JSP data. Investment in overseas/international message switchboards will be directly assigned to the MTS reporting category. Investment in switchboards used to provide 800 Service information will be assigned to the WATS category. Investment in other switchboards will be identified as serving billed or non-billed messages, using traffic unit data. Investment serving billed messages will be allocated between MTS and WATS based on the relative number of MTS and WATS messages served by such investment. Investment serving non-billed messages will be allocated based on the relative number of total MTS and Outward WATS messages. International satellite associated earth station investment (Account 100.5) and its associated depreciation and amortization account (Account 175) will be allocated on the basis of international satellite rents.

Interexchange, international satellite and switching telephone plant developed separately for MTS and WATS will be added together to form total message telephone plant amounts for MTS and WATS. The percentage which MTS and WATS telephone plant each makes of total message plant (as defined above) will be used as a distributive ratio to allocate all remaining investment ("other") and reserve accounts between MTS and WATS.[1]

II. *Allocation of Access Expenses*

Procedures in this section are used to allocate the expenses associated with payments to local exchange carriers for access to their local facilities. The allocation of all other expense accounts is contained in Section III, below. "Private line" use referred to in categories allocated directly or indirectly among MTS, WATS and private line on a message or minute basis means FX, CCSA, SCAN and CCSA equivalent Open End traffic.

---

[1] Included in these remaining investment and reserves portions are the following accounts: Land and Buildings; Furniture and Office Equipment; Vehicles and Other Work Equipment; Telephone Plant Under Construction; Property Held For Future Telephone Use; Materials and Supplies; Customer Deposits; Organization, Franchise and Patent Rights; Depreciation Reserve and Accumulated Deferred Income Tax Reserve; Amortization Reserve; and Cash Working Capital.

Access Expense	*Allocation Procedures*
Carrier Common Line Usage	Apportion among MTS, WATS and Private Line on the basis of the relative access minutes attributed to each category for purposes of such access charge billings.
Line Termination	Apportion among MTS, WATS and Private Line on the basis of the relative access minutes attributed to each category for purposes of such access charge billings.
Local Switching 1	Assign to the Private Line category.
Local Switching 2	Apportion between MTS and WATS in the same proportions as Line Termination charges apportioned to such categories.
Intercept	Apportion among MTS, WATS and Private Line in the same proportions as Line Termination charges apportioned to such categories.
Information	Assign to MTS and WATS on the basis of the relative proportion of total MTS and OUT-WATS calls.
Common Transport	Apportion among MTS, WATS and Private Line on the basis of the relative access minutes attributed to each such category for purposes of such access charge billings.
Dedicated Transport	Apportion between MTS and WATS in the same proportions as Line Termination charges apportioned to such categories.
Special Access	Apportion between WATS and Private Line in the same proportions as such access charge billings attributed to each category.
Billing and Collection	Apportion among MTS, WATS and Private Line in proportion to access charge billings attributed to each category.
Coinless Pay Phone	Assign to MTS.
Special Access Surcharge	Assign to WATS or private line on the basis of lines assessed.

III. *Expenses Not Related to Access and Income—Description of FDC Medhodologies*

Procedures in this section are to be used to distribute all interstate expenses not related to access expenses (600 series accounts) and income to the reporting categories. Expenses are directly assigned where applicable or allocated on the basis of the procedures described below. Certain accounts are allocated on the basis of "total attributable expenses." This factor represents each reporting category's percentage share of expenses derived through direct assignment and allocation procedures (except local, state and federal income taxes).

Expenses and Revenues-FDC Methods

Operating Expense Accounts	*Allocation Procedures*
602.1–602.8 Repairs of Outside Plant (OSP)	Allocate to reporting categories based on associated OSP in service (Accounts 241 through 244).
	Allocate maintenance of overseas facilities to reporting categories based on the number of associated circuits in service.
603-02 Service Order Testing	Directly assign the portion indentified in JSP data as Private Line to the Private Line reporting category. Allocate amounts identified in the JSP as Message interexchange to the MTS and WATS categories based on the distribution outside plant and interexchange central office plant in service.
603-04 Trunk Testing	Allocate circuit testing to reporting categories using an analysis of reported testing hours.
	Overseas testing allocated to reporting categories based on number of circuits in service.
	Allocate facilities testing to reporting categories based on associated interexchange (IX) OSP and COE plant in service, excluding overseas.
604 COE Repairs	Directly assign the Service Engineering portions of Account 604 to the private line reporting category.
	Directly assign #4ESS international generic program costs to MTS.
	Allocate the circuit rearrangements and change portions of Account 604-07 and Account 604-08 (less Service Engineering) to reporting categories based on number of IX circuit sections.

Operating Expense Accounts	*Allocation Procedures*
	Allocate overseas facility terminal equipment maintenance to reporting categories based on associated number of circuits.
	Allocate the remainder of Account 604 to reporting categories based on associated COE plant in service.
605 Station Equipment Maintenance	Allocate Account 605 to reporting categories based on station equipment plant in service (Accounts 231, 232 and 234).
606 Buildings and Grounds	Allocate to reporting categories based on investment in buildings.
610 Maintaining Transmission Power	Allocate to reporting categories based on COE plant (Account 221) separately for domestic and overseas.
612 Other Maintenance	Allocate to reporting categories based on combined Accounts 602 through 606 and 610.
	Allocate Accounts 621-231 (network administration staff) to reporting categories based on the combined attribution of Accounts 624-222, -622 and -722.
	Allocate the remainder (training and other staff) of Account 621-03 based on the combined attribution of Accounts 621-231, -331 and -431.
608 Depreciation	Allocate to reporting categories based on the depreciable classes of plant in service using applicable depreciation rates. (Ocean cable depreciation is allocated separately based on the ocean plant in service in each category.)
609 Extraordinary requirements	Allocate to reporting categories based on special analysis of accounting records.
613 Amortization of Intangible Property	Allocate to reporting categories based on total attributable expenses.
614 Amortization of Plant Acquisition Adjustments	Directly assign to reporting categories based on special analysis of accounting records.
621-01 General Traffic Supervision (Except Accounts 621-311 and 316.)	Allocate to reporting categories based on Account 624 less 624-22 and 624-25.
621-311/316/05 622-02/03, 624-25/629-08, 631-38 and 631-48 Business Services	Allocate to reporting categories using data from a Business Service time reporting system.

Operating Expense Accounts	*Allocation Procedures*
621-03, 624-22, 629-07 631-37/47 Network Administration	Allocate Accounts 621-431, 624-222, 624-422 and 624-622 (switching and line and number administration) to reporting categories based on toll dial switching equipment plan in service. Allocate Accounts 621-331 and 624-322 (traffic load data administration) to reporting categories based on toll dial switching and switched services IX central office equipment and OSP plant in service, excluding dedicated overseas IX central office equipment and outside plant. Allocate Accounts 624-722 (Trunk Administration) to reporting categories based on switched services IX central office equipment plant and OSP plant in service, excluding dedicated overseas IX central office equipment and outside plant. Allocate Accounts 621-231 (network administration staff) to reporting categories based on the combined attribution of Accounts 624-222, -622 and -722. Allocate the remainder (training and other staff) of Account 621-03 based on the combined attribution of Accounts 621-231, -331 and -431. Allocate the remainder (supervision, training and other) of Accounts 624-22, 629-07, 631-37 and 631-47 based on the combined attribution of Accounts 624-222, -322, -422, -622 and -722.
622-01 Service Observing	Allocate to reporting categories based on Account 624 less 624-22 and 624-25.
624 (Except Accounts 624-22 and 624-25), Operators Wages less Network Administration and Business Services	Directly assign Private Line and overseas/international expenses to Private Line and MTS. Directly assign expenses incurred at 800 Service Switchboards to WATS. Determine expenses incurred at other switchboards associated with billed messages on the basis of traffic units. Allocate expenses associated with billed messages based on the relative number of MTS and WATS messages served by such switchboards. Allocate expenses associated with nonbilled messages based on the relative number of total MTS and OUTWATS messages.
626 Rest and Lunch Rooms	Allocate to reporting categories based on Account 624 less 624-22, and 624-25. (Network Administration and Business Service portions of these accounts are treated above).

Operating Expense Accounts	*Allocation Procedures*
627 Operator's Employment and Training	Same as Account 626.
629 less -07 and -08 Co Stationery and Printing	Same as Account 626.
630 Co House Service	Same as Account 626.
631 less -37, -38, -47 and -48 Miscellaneous Co Expenses	Same as Account 626.
633 Other	Same as Account 626.
634 Joint Traffic–Debit	Same as Account 626.
635 Joint Traffic–Credit	Same as Account 626.
640 General Commercial Administration	Directly assign Service Management expense to reporting categories. Allocate remainder of Account 640 to service categories based on Account 643 for Long Lines and 645 for IXCs.
642 Advertising	Directly assign Long Distance Residence Sales, Long Distance Business Sales, Long Distance International, Long Distance Public, and Long Distance DIAL-IT to MTS. Allocate remainder based on total attributable expenses.
643 Sales	Allocate to reporting categories using the results from a sales time reporting system.
644 Connecting Company Relations	Allocate to reporting categories based on allocation of Independent Company settlements for interexchange facilities.
645 Commercial Operations	Allocate expenses to reporting categories using results from a work measurement plan and a sales time reporting system.
649 Directory	Allocate to MTS and WATS based on a count of MTS and WATS messages.
650 Other Commercial Expenses	Allocate expenses based on Account 643 for Long Lines and 645 for IXCs.
661 Executive Department	Allocate based on total attributable expenses.

Operating Expense Accounts	*Allocation Procedures*
662 Accounting Department	Allocate Revenue Accounting to reporting categories based on analysis of Revenue Accounting Offices. Allocate remainder to reporting categories based on total attributable expenses.
663 Treasury Department	Allocate to reporting categories based on plant in service.
664 Law Department	Directly assign overseas legal expenses to overseas services based on analysis of records.
	Directly assign outside legal consultant fees and associated costs based on analysis of applicability to a category.
	Allocate remainder to reporting categories based on total attributable expenses.
665 Other General Office Salaries and Expenses	Allocate Personnel, Account 665-03, to reporting categories based on Maintenance, Traffic, Commercial and Revenue Accounting salaries.
	Directly assign Service Engineering expenses (Portion of 665-09) to the private line category.
	Allocate Account 665-29, Customer Services, to categories based on reported hours.
	Allocate Account 665-149, Central Office Planning and Engineering, based on toll dial switching equipment plant in service.
	Allocate remainder based on total attributable expenses.
668-669 Insurance and Accidents and Damages	Allocate to reporting categories based on plant in service.
670 Earth Station Expenses	Allocate to reporting categories based on Account 100.5.
671 Operating Rents	Allocate circuit and miscellaneous rents to reporting categories based on interexchange OSP and Circuit equipment and toll switching equipment plant in service.
	Allocate rents paid to affiliates to Message and the Private Line reporting category based on number of circuits. Message rents are allocated to MTS and WATS based on number of minutes.
	Directly assign international satellite rents incurred for services that can only be provided on satellite facilities directly to reporting categories. Allocate remaining international satellite

Operating Expense Accounts	*Allocation Procedures*
	rents to reporting categories based on total international voice-grade circuits in use.
	Allocate domestic satellite rents to reporting categories based on domestic satellite circuits in use.
	Allocate building space rents to reporting categories based on the combined Accounts 643, 645 and Revenue Accounting portion of 662.
672 Relief and Pensions	Allocate to reporting categories based on Maintenance, Traffic, Commercial, and Revenue Accounting Salaries.
673 Telephone Franchise Requirement (dr)	Allocate based on the total investment in Account 100.1.
674 and 691 General Services and Licenses	Payment for services rendered by an affiliated company shall be assigned to expense categories in the same manner as expenses that are incurred directly by AT&T or a carrier subsidiary and shall be apportioned in the same manner as such directly incurred expenses.
675 Other Expenses	Allocate to reporting categories based on plant in service.
676 Telephone Franchise Requirements (cr)	Allocate based on the total investment in Account 100.1.
677 Expenses Charged Construction (cr)	Same as Account 675.

Income Accounts–FDC Methods Subsection

Income Accounts	*Allocation Procedures*
Gross Service Revenues (Accounts 510-516)	Directly assign to reporting categories based on accounting records.
Earth Station Revenue (Account 522)	Allocate to reporting categories based on the allocation of international satellite rent expense.
Directory Advertising and Sales	Directly assign to MTS.
Rent Revenues (Account 524)	Directly assign to reporting categories based on accounting records.
Other Operating Revenues (Account 526)	Allocate to reporting categories based on gross revenues (Accounts 510-526) less Account 526.
Uncollectibles (Account 530)	Allocate to reporting categories based on an analysis of accounting records.

Income Accounts	*Allocation Procedures*
Independent Company and Foreign Settlements	Allocate based on revenue account charged.
Miscellaneous Income Charges (Account 323)	Allocate based on plant in service (Account 100.1).
Interest on Customer Deposits	Allocate based on total investment in Account 100.1.

Taxes–FDC Methods

Type of Tax	*Allocation Procedures*
Gross Receipts Taxes	Allocate based on the allocation of reporting category revenues.
Social Security Taxes (Account 307-05)	Allocate based on the apportionment of Maintenance, Traffic, Commercial, and Revenue Accounting salaries.
Ad Valorem Taxes (Account 307-01)	Allocate based on the allocation of plant in service.
Income Adjustments for Income Tax Determination	Allocate depreciation of capitalized items, Relief and Pensions, and Social Security Taxes capitalized based on plant in service. Allocate Operating Fixed Charges based on the allocation of net investment.
State and Local Income Taxes (Account 307-02)	Allocate the actual tax incurred based on the state and local taxable income for each reporting category (net revenue less expenses, income charges, taxes excluding Federal Income Taxes, and income adjustments).
Amortization of Investment Credits	Allocate based on the allocation of plant in service.
Federal Income Tax	Allocate to reporting categories by multiplying the statutory rate times the Federal taxable income for each reporting category (net revenue less expenses, income charges other taxes, and income adjustments).

SEPATATE STATEMENT OF COMMISSIONER. MIMI WEYFORTH DAWSON

re:

American Telephone and Telegraph Co. Manual and Procedures for the Allocation of Costs
CC Docket 79–245

The "proper" allocation of the costs of AT&T's interstate services has been a regulatory issue before the Commission for more than two decades. The Commission's concern with AT&T's allocation of costs was a direct result of its decisions authorizing both private and public transmission systems in competition with AT&T's existing interstate transmission services.[1] In particular, the Commission instituted Docket 14251 in 1961 to investigate AT&T's TELPAK tariff, a bulk private line service offering substantial discounts to large users. In effect, TELPAK was AT&T's pricing response to the anticipated competition from private microwave systems authorized by the Commission in its *Above 890* decision in 1959. The TELPAK tariff underscored a potential weakness of the Commission's policy authorizing the construction of private telecommunications facilities, namely, AT&T's reaction to competitive threats to its private line market. For the first time, the Commission was confronted with assessing the lawfulness of AT&T's interstate rate *structure* rather than simply the lawfulness of AT&T's aggregate interstate revenue requirement.

The TELPAK tariff represented a new and paradoxical issue for the Commission. Prior to its nascent policy of "selective competition," the Commission's common carrier regulatory responsibility focused, in theory, on the avoidance of monopoly pricing by AT&T. Through the informal regulatory technique of "continuing surveillance," the Commission attempted to offset the profit-maximizing incentive of a monopoly firm to raise rates and restrict output. The TELPAK tariff represented just the opposite problem, namely, private line rates that may be too *low*. While users who qualified for TELPAK rates would clearly benefit from TELPAK's substantial discounts, the Commission was forced to determine whether AT&T's large private line customers were being cross-subsidized by users of switched network services or other private line users who could not qualify for TELPAK's reduced rates. Thus began the Commission's fifteen-year odyssey in search of a "costing standard" that would allow it to assess the lawfulness of AT&T's rate structure for its interstate services. The Commission's quest for such a costing standard finally ended in 1976 after merging the records of a number of related dockets and issuing a *Memorandum Opinion and Order* in Docket 18128.[2]

The decision in Docket 18128 was controversial when it was adopted and has remained so in subsequent years. In brief, the decision prescribed "fully distributed cost" (FDC) as the Commission's benchmark for lawful rates for AT&T's interstate services. In particular, Method 7, based on the principle of "historical cost causation," was prescribed as the costing method that AT&T must follow in setting rates for its interstate switched and private line services. The decision, however, only established "guidelines for a 'proper methodology,'" not a set of detailed procedures implementing the principle of historical cost causation. The decision ordered that AT&T (and Western Union) consult with the staff of the Common Carrier Bureau to revise FDC Methods 1 and 7. The current proceeding in Docket 79-245, which began in September, 1979, was initiated to develop a FDC implementation manual that would establish final rules and procedures for implementing the principles of Docket 18128.

[1] See *Above 890* decision, 27 FCC 359 (1959); *Domsat* decision, 35 FCC 2d 844 (1972); and *Specialized Common Carrier* decision, 29 FCC 2d 870 (1971).

[2] *Private Line Services (TELPAK)*, 61 FCC 2d 587 (1976).

The "Interim Cost Allocation Manual" (ICAM) adopted by the Commission in December, 1980, differed in a number of fundamental ways from the principles established in the Docket 18128 decision.[3] Nevertheless, the *Report and Order* stressed that the ICAM was only an interim methodology that the Commission would accept to satisfy an order of the U.S. Court of Appeals for the District of Columbia Circuit to adopt a cost allocation manual by December, 1980. The Commission stressed, however, that the search for a longer term cost allocation manual in Docket 79-245 would continue.

The Commission has yet to adopt a longer term or "permanent" cost allocation manual in Docket 79-245. The order just adopted by the Commission in this docket is simply another in a series of "adjustments" to the ICAM, required in the present instance by the Commission's reconsideration of the *Access Charge* decision in Docket 78-72. The Commission, however, should begin now to focus on the longer term aspects of this proceeding. In brief, the Commission should decide very soon what role FDC methodologies in general and cost allocation manuals in particular should play in the post-divestiture regulation of AT&T. While the Commission should make its decision on the appropriate longer term cost allocation manual after developing an appropriate record, I believe that the Commission should be prepared to entertain and potentially support as an appropriate option the possibility that a longer term cost allocation manual should *not* be adopted by the Commission.

The logic for not adopting a longer term cost allocation manual can be appreciated by reviewing briefly the Commission's goals in Docket 18128. In this proceeding, the Commission held that

> . . . our statutory mandate and our rules manifest our paramount responsibility to ensure carrier accountability for the rates, charges, practices and rules prescribed by the carrier.[4]
>
> Ensuring carrier accountability is one of our primary objectives and responsi-

[3] AT&T Manual and Procedures for the Allocation of Costs, 84 FCC2d 384, *recon. denied*, 86 FCC2d 667 (1981), *affirmed sub nom.* MCI Telecommunications Corp. v. FCC ("ICAM"), 675 F.2d 408 (D.C. Cir. 1982).

[4] 61 FCC 2d at 610.

> bilities. All parties appear to agree that an established carrier should be held accountable for its pricing and investment decisions.[5]
>
> . . . we find that accountability should be implemented across all services and for anticipatory (continuous surveillance) as well as retrospective purposes. Thus, accountability is the touchstone of the 'just and reasonable' provision of Section 201.[6]

Carrier accountability, therefore, was the major goal of the Docket 18128 proceeding. By prescribing a FDC methodology, the Commission hoped that AT&T's managerial discretion in the assignment of costs to its interstate services could be controlled and unlawful interservice cross-subsidization could be avoided.

While carrier accountability was the major Commission objective in Docket 18128, other objectives were also identified including

> . . . ensuring equitable and non-discriminatory treatment of all service users (generally referred to herein as 'equity'), promoting efficiency and providing a precise and clear set of market rules for planning and decision making purposes.'[7]
>
> We find our obligation to promote efficieny [sic] and innovation to encompass cost definition, minimization, and allocation. Furthermore, we recognize the interdependence of efficiency and costing. We do not limit our considerations of efficiency only to measurable transactions, but realize that the public interest may be served by recognizing factors not directly traceable to the marketplace. Thus, our concept of efficiency incorporates such considerations as equity and social welfare. It is, therefore, broader than that espoused by economists or individual carriers. Accordingly, our selection of a proper costing methodology from this standpoint will be determined by defining the term 'optimal' in a fashion quite apart from the 'relevant ratemaking factors' used by Bell.[8]
>
> A final major objective of the Commission is clarification of market rules. In general, these concern market entry and exit, proper supporting material for tariffs, rate level floors and ceilings, interservice rate relationships, and the myriad of other marketplace specifications needed by suppliers for proper decision making and planning. The Commission's prior decisions encouraging competition in certain markets were made to attract those firms which will prove over time to be viable and effective alternative sources of supply. Such firms should be able to accurately gauge the attractiveness of communications markets with full knowledge of the rules pertaining to their own and the established carriers' opportunities, responsibilities, and limitations. For example, in other proceedings, we have endeavored to provide rules regarding interconnection and service and equipment definitions. In this proceeding our attention is directed to ratemaking principles. Our findings and conclusions herein are intended to provide the rules necessary to properly relate costs and both relative rates and rate levels. They should dissuade both incipient and established suppliers from participating in a particular service area because of the presumption that 'protective umbrellas' will offset any patent inherent economic shortcomings.[9]

The goals of Docket 18128 were maintained when Docket 79-245 began. In its initial *Notice of Inquiry* in Docket 79-245, the Commission held that

---

[6] Ibid., p. 612.

[7] Ibid.

[8] Ibid, p. 615.

[9] Ibid.

> We continue to believe . . . that it is appropriate and necessary for the Commission to prescribe a set of rules and procedures to be followed in allocating costs of service in accordance with the broad principles of Docket 18128.[10]
>
> We would like the parties to comment upon the validity of the overall procedures set forth in the existing cost manuals and used by AT&T to allocate its costs. In particular, the parties might address whether the inherent complexity of AT&T's cost allocation process—when considered as a whole—makes it inconsistent with the Commission's regulatory objective of 'carrier accountability.'[11]

I believe that any further proceedings in Docket 79-245 focused on the eventual prescription of a long term or permanent cost allocation manual should begin by re-examining the goals that the Commission has established for this proceeding. The goal of "carrier accountability" may have been an important goal of regulatory policy in 1976 when competitive entry was restricted to the interstate private line market and MTS/WATS was a de facto monopoly service. The Commission's experience with the TELPAK tariff certainly appears sufficient to warrant concern that AT&T's pricing of interstate private line services may burden the MTS/WATS ratepayer and frustrate the market entry of competing carriers. But much has changed since 1976. The interstate MTS/WATS market has been opened to competitive entry; additional facilities-based carriers and resellers have entered the private line and switched services market; satellite capacity has grown substantially; private networks and bypass technologies have proliferated; a new mechanism for recovering the interstate costs of local exchange plant will be implemented next year; and the divestiture of the Bell operating companies from AT&T in 1984 will radically alter the structure of the Bell System and its incentives. Given such changes in technology, regulatory policy, and industry structure since 1976, it is not obvious to me that carrier accountability implemented by cost manual regulation should remain the focal point of the Commission's regulatory policy towards AT&T.[12]

In theory, cost-of-service or cost manual regulation is a regulatory tool designed to detect and prevent unlawful cross-subsidy among the tariffed services of a regulated firm offering both *monopoly* and "competitive" services. As I have already suggested, it is increasingly difficult to characterize the interstate MTS/WATS market as an

---

[10] *Manual and Procedures for the Allocation of Costs*, 73 FCC 2d at 631 (1979).

[11] Ibid., pp. 633-634.

[12] Carrier accountability may remain an important goal of regulatory policy at the state level where local telephone companies remain de jure monopolies and competition with the local exchange carrier is not highly developed.

AT&T "monopoly market" that should remain fully subject to all forms of classic public utility regulation.[13] Any aspect of the regulation of AT&T should, in my opinion, closely track both the actual state of market development and its likely path of evolution. From this perspective, the goal of carrier accountability achieved through cost manual regulation of AT&T seems somewhat out of focus as the target of regulatory policy for the 1980s. The emergence of actual and potential competition seems, in my view, much more likely to compel carrier accountability by AT&T than FDC pricing rules or cost manual regulation.

If cost manual regulation of AT&T were essentially "costless" to both ratepayers and AT&T shareholders, then such regulation may not be objectionable if significant public interest benefits can also be identified. If the trend toward growing competition in the interstate transmission market continues and if equal access becomes available to all intercity carriers in the next several years, the public interest benefits of cost manual regulation, a surrogate for competition, seem increasingly doubtful. Even worse, FDC pricing rules impose costs on both carriers and customers in addition to the direct costs of regulatory compliance. For example, a FDC methodology that allocates "shared costs," i.e., common and joint costs taken together, on the basis of relative use may lead to equal prices for all subperiods despite peak loads that should be reflected in time-of-day rates.[14] To offset this result, regulators may be forced to extend their regulatory reach and prescribe on an ad hoc basis the actual rate structure for a given service.[15]

Many additional criticisms of FDC as the basis for public utility ratemaking have been explored in regulatory proceedings over the years.[16] There is little need, therefore, to review these criticisms at any length here. Suffice it to say that FDC pricing distorts the allocation of resources and thwarts the realization of economic efficiency by ignoring marginal cost; may produce "umbrella pricing" that protects inefficient competitors; and prevents the rapid adjustment of prices to changing demand and costs. Moreover, the concept of interservice cross-subsidy as defined in terms of FDC is controversial, i.e., equal rates of return on the allocated costs of each service may bear little relationship to rigorous notions of "subsidy-free" prices.[17] Furthermore, it is no longer self-evident that regulatory policy centered on the elmination of *all* interservice cross-subsidy is necessarily in the best interests of consumers in all circumstances. Even "Ramsey optimal" pricing, i.e., public utility pricing that maximizes a static measure of consumer welfare subject to a revenue requirements constraint,[18] may itself involve interservice cross-subsidy.[19] Thus, regulators attempting to eliminate all interservice cross-subsidy may wind up actually reducing aggregate ratepayer welfare.[20] It is also possible that FDC pricing, absent strategic behavior by the regulated entity, may create an incentive for a partially regulated firm to set prices in its unregulated markets or markets with low allowed rates of return that exceed the prices that would prevail in the absence of regulation.[21]

---

[13] AT&T clearly retains a substantial share of the current interstate MTS/WATS market. Nevertheless, if competition continues to develop, such dominance need not mandate ongoing public utility-type regulation of AT&T any more than IBM's dominance in the computer mainframe industry warrants rate base regulation. For further discussion of this point and an analysis of the appropriate regulation of AT&T following divestiture, see Michael L. Katz and Robert D. Willig, "Deregulation of Long Distance Telephone Services: A Public Interest Assessment," *Discussion Papers in Economics* No. 7, Woodrow Wilson School of Public and International Affairs, Princeton University, 1983. The removal of regulatory entry barriers and the actual entry of fringe competitors in the interstate MTS/WATS market have enhanced the "contestability" of this market and diluted to some extent AT&T's market power in this market, despite only a modest reduction in AT&T's market share. For a recent discussion of the relationship between market share and market power, see Landes & Posner, "*Market Power in Antitrust Cases*," 94 *Harv. L. Rev.* 937–96 (1981).

[14] See Gerald R. Faulhaber, "Peak-Load Pricing and Regulatory Accountability" in *Problems in Public Utility Economics and Regulation*, 133–42 (M. Crew, ed., 1979).

[15] The Commission did precisely this in ordering a time-of-day rate structure for WATS. See *AT&T Wide Area Telecommunications Service (WATS)*, 86 FCC 2d 820 (1981).

---

[16] A summary of some of the major problems is provided by Braeutigam, *An Analysis of Fully Distributed Cost Pricing in Regulated Industries*, 11 *Bell J. of Econ.* 182–96 (1980).

[17] Most rigorous concepts of interservice cross-subsidy have been framed as problems in game theory and the recent theory of sustainability. For an introduction to this approach to cross-subsidy analysis, see *W. Sharkey, The Theory of Natural Monopoly* 102–09 (1982). *See also W. Baumol, J. Panzar & R. Willig, Contestable Markets and The Theory of Industry Structure* (1982); Faulhaber & Levinson, *Subsidy Free Prices and Anonymous Equity*, 71 *American Econ. Rev.* 1083–91 (1981).

[18] The elements of Ramsey pricing are summarized by Brock, *Pricing, Predation, and Entry Barriers in Regulated Industries*, in *Breaking Up Bell: Essays in Industrial Organization and Regulation*, (D Evans, ed., 1983).

[19] *See* Baumol, Fisher, & ten Raa, *The Price-Iso Return Locus and Rational Rate Regulation*, 10 *Bell J. of Econ.* 648–58 (1979).

[20] Much of the formal analysis of the limitations of FDC is couched in terms of static economic analysis and may set an unrealistic standard for criticism of real-world applications of FDC methodologies. Even Ramsey-optimal pricing, a common benchmark for analyzing the infirmities of FDC pricing, is itself usually cast in a static theoretical framework. The essential point of these static economic analyses of FDC pricing rules is that such rules *may* imply substantial reductions in economic efficiency and ratepayer welfare and that regulators should be especially mindful of the social costs that ratemaking based on FDC may imply. Implicit in such criticisms is the view that regulators should consider less costly, alternative mechanisms for pursuing their public interest objectives.

[21] Sweeney, *Welfare Implications of Fully Distributed Cost Pricing Applied to Partially Regulated Firms*, 13 *Bell J. of Econ.* 525–33 (1982).

I am not optimistic that further proceedings in Docket 79–245 will produce conceptual breakthroughs that will neutralize the perverse incentives and economic inefficiencies inherent in FDC pricing. Moreover, attempts to develop cost-based tests for predatory behavior for unregulated firms and markets have proven to be controversial both in theory and application.[22] Consequently, I propose that further proceedings in this docket, if any, should focus not on the goal of carrier accountability via FDC rules but on the delineation of "market rules," a subsidiary goal of Docket 18128.

A reorientation of the Commission's regulatory objectives away from carrier accountability via cost manual regulation of AT&T and toward a market rules approach is fully consistent with the Commission's pro-competitive policies.[23] A market rules approach is also fully supportive of the Commission's concerns that AT&T may have dominant firm incentives to delay the evolution and development of a competitive market in long distance telecommunications.[24] In brief, if competition in the interstate transmission market continues to develop, then a market rules approach could be substituted for cost manual regulation of AT&T's interstate services. Until the Commission is confident that competition in the interstate market for long distance telecommunications is developed sufficient-

---

[22] At a conceptual level, the definition of predatory pricing for just a single-output firm has resulted in an extensive debate among economists. See, for example, the debate between Areeda and Turner, who articulated a cost-based test for predatory pricing in 1975, and Scherer. (Areeda & Turner, *Predatory Pricing and Related Practices under Section 2 of the Sherman Act*, 88 *Harv. L. Rev.* 697–33 (1975) and the comment by F.M. Scherer and reply by Areeda & Turner, 89 *Harv. L. Rev.* 869–903 (1976).) Cost-based tests for multioutput firms would be more complex conceptually and more difficult to apply empirically.

[23] The market rules approach to the transitional regulation of AT&T is briefly discussed by Duvall, *The Conceptual Framework of Common Carrier Policymaking at the Federal Communications Commission in Recent Years: An Economist's Perspective*, in *University of Missouri Extension Publications, Proceedings of the 1981 Rate Symposium on Problems of Regulated Industries* 351–74 (1981). A more complete exposition is provided by Preece & Morris, *A Roadmap For Deregulating AT&T*, a paper presented at the Eleventh Annual Telecommunications Policy Research Conference, Annapolis, Maryland, April 26, 1983.

[24] Models of dominant firm conduct relevant to the telecommunications industry have been developed by Gerald W. Brock and William A. Brock. See *G. Brock, The Telecommunications Industry: The Dynamics of Market Structure* (1981); *W. Brock, Pricing Predation, and Entry Barriers in Regulated Industries.* These models analyze the incentives for a regulated dominant firm to invest in "barrier-to-entry" capital, i.e., investment in such activities as protracted regulatory proceedings that impose substantial sunk costs on potential competitors so that market structure can be influenced to the advantage of the incumbent regulated firm. These dynamic models stress the policy significance of barrier-to-entry capital rather than interservice cross subsidization as potential threats to the emergence of competitive telecommunications markets. Indeed, under certain assumptions, it can be argued that interservice cross-subsidization is generally not a highly-attractive predatory strategy for a rate base regulated firm. On this controversial point, see Brock, "Pricing, Predation, and Entry Barriers in Regulated Industries," pp. 205–213.

ly to warrant complete deregulation of AT&T, market rules would *directly* constrain certain aspects of AT&T's dominant firm behavior that may, intentionally or not, threaten the development of competition.[25] For example, AT&T could continue to file tariffs for services that the Commission has determined that AT&T still retains substantial market power.[26] However, *all* tariffs would allow unlimited resale and sharing. Cost-support data as presently prescribed by Section 61.38 of the Commission's Rules could be waived, and no FDC methodology for justifying tariffs would be required. Price discrimination based on the *identity* of the user could be prohibited.[27] Thus, all tariff distinctions designed to segment users by service classification would be unlawful. Time constraints on the offering and terminating of tariffed services could be imposed to prevent AT&T from generating price uncertainty ("price randomization") that may increase the risk of entry by resellers and other potential competitors.[28] In brief, the prescription of easily monitored and enforced market rules would *directly* constrain AT&T's pricing conduct that may deter entry by competitors or otherwise retard the rapid development of competition.

A major infirmity of cost manual regulation is clearly illustrated in the instant ICAM order. Abrupt variations in the allocation of costs to the Private Line, MTS, and WATS reporting categories may result in substantial rate increases or decreases for AT&T's interstate services, although the underlying *economic* costs of either switched or private line services may have changed only slightly. For example, changes in the ICAM resulting from the Commission's *Access Charge Reconsideration* Order, such as the inclusion of only open-end WATS minutes for apportioning interstate non-traffic sensitive local exchange investments between MTS and WATS and the allocation of surcharges on private lines, will have an impact, possibly substantial, on the "allocated costs" of AT&T's interstate services. Such arbitrary change in the allocation of costs may result in new switched and private line rates that may exacerbate the economic dislocations for some user groups. Moreover, such arbitrary reallocations of AT&T's interstate costs may have unintended effects on the emergence of intercity transmission competition. For example, to the extent that many non-dominant carriers rely on resold WATS to complete their nationwide switched services, abrupt changes in the allocation of costs to WATS may have unintended effects on non-dominant carriers that may thwart the rapid development of competition in the intercity transmission market. Similarly, carriers providing WATS-equivalent services may be suddenly disadvantaged as a result of a change in the apportionment of costs, even though the underlying economic costs may not justify the new rates based on the reallocated embedded costs. These, among other adjustments to the ICAM resulting from the *Access Charge Reconsideration* Order, may result in "rate churning" if AT&T is still required to target the earnings of each service category to the authorized interstate rate of return. To relax, however, the ICAM's service-specific rate-of-return constraint to avoid sudden rate dislocations undercuts the very rationale for cost manual regulation, i.e., carrier accountability for the investment and expenses allocated to each service category and avoidance of interservice cross-subsidy as defined in terms of the ICAM.

---

[25] FDC pricing rules are, in effect, *indirect* methods for regulating the prices of the regulated firm, i.e., extensive cost support materials must be organized and presented to the regulatory agency to "justify" the tariffed rates.

[26] The Commission may determine at some point that AT&T lacks market power in certain of its interstate transmission services. The Commission could then detariff such services and treat them as if they were provided by a non-dominant carrier.

[27] Price discrimination based only on the volume of usage would not be prohibited, however. If subject to resale (which constrains the amount of price discrimination to the costs of performing arbitrage), such volume-based pricing may have beneficial effects for ratepayers in the aggregate. An overview of the theory of volume-sensitive pricing is provided by *L. Philips, The Economics of Price Discrimination* 166–75 (1983).

[28] This problem is briefly discussed in Duvall, "The Conceptual Framework of Common Carrier Policymaking . . .," p. 373. A formal model of entry-deterring price randomization is proposed by Brock, "Pricing, Predation, and Entry Barriers in Regulated Industries," pp. 220–226. *See also*, Baumol, *Quasi Permanence of Price Reduction: A Policy for Presentation of Predatory Pricing*, 89 *Yale L.J.* 1–26 (1979).

This current dilemma of cost manual regulation of AT&T need not require the Commission to invest heavily in improved techniques of cost manual regulation. Indeed, I believe there will be little return on the investment. In all probability, the time has passed for such a protracted regulatory investigation. A market rules approach is an appealing alternative. I hope the Commission will explore the possibility of eliminating cost manual regulation of AT&T either in a later phase of Docket 79–245 or as a part of the forthcoming *Notice of Inquiry* concerning the post-divestiture regulation of AT&T.

I-S-P-83–002

MEMORANDUM OPINION AND ORDER

(Adopted: June 2, 1983; Released June 13, 1983)

BY THE COMMISSION: COMMISSIONER FOGARTY NOT PARTICIPATING

1. On January 24, 1983, the Communications Satellite Corporation (Comsat) submitted for our consideration the above-captioned consolidated capitalization plan (Capitalization Plan) to finance the activities of the parent company[1] and its subsidiaries[2] from 1983 to

---

[1] The term "parent company" refers to the Communications Satellite Corporation. The activities of the parent company include, but are not limited to, those undertaken by its World Systems Division in furtherance of the purposes and objectives of the Communications Satellite Act of 1962, as amended, 47 U.S.C. 701 *et seq.* (1962) and the International Maritime Satellite Telecommunications Act, 47 U.S.C. 751 *et seq.* (1979); research and development performed by or conducted under contract for Comsat Laboratories pursuant to Section 305(b)(1) of the Satellite Act, 47 U.S.C. 735(b)(1); and those general and administrative activities engaged in at Comsat's corporate headquarters in furtherance of statutory mandates. As the above activities are subject to our regulatory jurisdiction, we shall refer to them as "regulated". The parent company also engages in activities not subject to our regulatory oversight. We shall refer to such activities as "nonjurisdictional".

[2] COMSAT General Corporation (COMSAT General), Comsat General Integrated Systems, Inc. (CGIS), Comsat Technology Products, Inc., Comsat General Telesystems, Inc. (TSI), Amplica, Inc., Environmental Research & Technology, Inc. (ERT), Satellite Television Corporation (STC), and Comsat General Business Communications, Inc. (BCI). BCI is the vehicle through which COMSAT General participates as a one-third partner in Satellite Business Systems (SBS). STC is the subsidiary through which Comsat is engaged in the development of a direct broadcast satellite (DBS) service. Comsat's organizational chart is included here as Appendix I.

1985. Comsat seeks authority to implement its Plan pursuant to Section 201(c)(8) of the Satellite Act.[3] Public notice of this request was given on February 2, 1983. Report No. I-2035. No comments opposing it have been filed.

Background

2. *The Capitalization Plan Concept*. Comsat indicates that heretofore its requests to engage in financing activities under Section 201(c)(8) have been submitted and treated on an application-by-applications basis. Comsat now asserts that a capitalization plan subject to our approval under Section 201(c)(8) represents a more appropriate vehicle for the conduct of its financial operations. Comsat argues that while the *ad hoc* approach to the treatment of its Section 201(c)(8) requests to issue capital stock and to obtain external financing generally has been satisfactory in the past, such an approach will become increasingly burdensome for both Comsat and the Commission in the future. Recently, Comsat has begun to expand rapidly its activities in competitive markets. Comsat asserts that although it continues to build its existing satellite communications business through INTELSAT and INMARSAT and to sustain its commitment to these traditional rate-base-regulated international businesses, the Corporation's market strategy for the 1980's involves the application of its "expertise in satellite technology to develop selected new [satellite-based] services and enlarge the proportion of non-regulated activities in its overall business mix."[4]

3. Comsat indicates that, as it has expanded and diversified its business activities, its requirements for external financing have increased. Concomitantly, in order to take advantage of optimal market conditions and to obtain debt or equity at the lowest possible cost, Comsat has found it necessary to enter capital markets on relatively short notice. In Comsat's view, the individual requests for Section 201(c)(8) authority it would be required to submit during the 1983–85 period in the absence of a more comprehensive approach would likely exceed in number and frequency all those filed to date. Further, Comsat states that "consistent with the realities of today's financial markets, it can be expected that these applications will contemplate a number of creative financing options which will be effective only if accomplished within a limited 'window of opportunity'."[5]

---

[3] Under Section 201(c)(8), the Commission shall "authorize [Comsat] to issue any shares of capital stock, . . . or to borrow any moneys, or to assume any obligation in respect of the securities of any other person, upon finding that such issuance, borrowing, or assumption is compatible with the public interest, convenience, and necessity and is necessary or appropriate for or consistent with carrying out the purposes and objectives of this Act by the Corporation." 47 U.S.C. 721(c)(8).

[4] Comsat 1982 Annual Report to Shareholders, p. 7.

[5] Capitalization Plan, p. 3.

4. These new circumstances form the basis of Comsat's concern with the *ad hoc* approach to Section 201(c)(8) matters. Comsat considers *ad hoc* determinations to have two major drawbacks. First, Comsat argues that the amount of time generally required for Commission action on individual Section 201(c)(8) requests may not always permit Comsat to acquire capital in a cost-effective manner. Consequently, to the extent that Comsat is unable to minimize its cost of acquiring capital, the ratepayer is burdened with the additional costs incurred. Second, to the extent that the *ad hoc* approach does not enable the Commission to consider the overall framework in which Comsat is conducting its financial operations, it frustrates the Congressional intent of Section 201(c)(8).[6]

5. Moreover, Comsat believes that there are public interest benefits to be derived from the Capitalization Plan concept. First, Comsat maintains that the Capitalization Plan provides the Commission with detailed information about Comsat's prospective activities in time to properly dispatch its statutory responsibilities. Second, the Plan provides the broad overview of Comsat's jurisdictional and nonjurisdictional activities and their impact on the ratepayer which generally is unobtainable under current practice of *ad hoc* review. Finally, Comsat submits that its Capitalization Plan will enable it to respond rapidly to fluctuations in capital markets, thereby providing it with sufficient flexibility to meet its consolidated financing needs on a cost-effective basis. For these reasons, Comsat considers its multi-year, comprehensive capitalization plan a viable concept worthy of Commission approval under Section 201(c)(8).

6. *Summary of the Plan*. As explained above, Comsat's Capitalization Plan encompasses the regulated INTELSAT/INMARSAT-related activities undertaken by the parent company's World Systems Division, the non-jurisdictional components of the World Systems Division and the non-jurisdictional activities of Comsat's various subsidiaries.[7] Projections of revenues, expenses, assets and

---

[6] In support of this contention Comsat cites the Senate Report's section-by-section analysis of H.R. 11040, the bill ultimately enacted as the Satellite Act:

> [Section 201(c)(8] is considered important in carrying out the stated policy and purposes of the act of insuring that the benefits of this new technology are reflected in both the quality of communication services to be rendered by the corporation and the charges for such services. It is imperative that the corporation's capital structure be carefully regulated and controlled to avoid excessive capitalization or disproportionate amounts of equity or debt capital which could have adverse effects upon the corporation's revenue requirements and the changes for its services, and impair its ability to provide efficient and adequate service. S. Rep. No. 1584, 87th Cong., 2d Sess. 19 (1962).

[7] Comsat indicates that for the purposes of the Plan, other satellite systems operated by Comsat corporate elements and subject to Commission oversight (*e.g.*, services via the MARISAT and COMSTAR systems) are designated as "non-jurisdictional," as is Comsat's investment in the SBS partnership. Plan, Attachment 2, p. 1.

liabilities, sources and uses of funds and cumulative financing requirements are based upon the following assumptions: (a) that the projections set forth for STC reflect the two-satellite, Eastern Time Zone DBS system authorized by the Commission; (b) that Comsat's ownership interest in INTELSAT will decline from 24.1% in 1981 to 21.4% in 1985[8]; (c) that projections of the amount of additional debt financing needed do not include "non-recourse" financing by non-consolidated corporate affiliates, such as SBS; (d) that such projections do, however, include debt placed by the parent company and financing by consolidated corporate subsidiaries, such as STC; and (e) that Comsat's aggregated debt to total capital ratio will not exceed 35%.

7. Comsat has submitted three sets of actual and projected financial data for the years 1981 to 1985. One set, comprised of seven charts, was submitted on January 24, 1983 as Attachment 2 of the Capitalization Plan.[9] At the request of the Common Carrier Bureau's staff, Comsat submitted additional financial information on March 16, 1983.[10] After further discussions with the staff, Comsat submitted revisions of the March 16th materials on May 2, 1983. These revised materials consist of two sets of charts dated April 27, 1983. The first set, which includes six charts containing actual and projected financial information[11] and a chart depicting Comsat's current organizational structure, has been placed in the public file. The second set, consisting of seven charts,[12] represents a recasting of the March 16th materials for which confidential treatment was granted. Consequently, protection from general disclosure was also

---

[8] Comsat anticipates greater usage of the system by others during the 1983–1985 time frame.

[9] These include a Balance Sheet-Consolidated; Assets & Liabilities-World Systems Division; Sources & Uses of Funds-Consolidated; Capital Requirements-Consolidated; Capital Spending-World Systems Division; Key Statistics-Consolidated.

[10] Part of this data was accorded protection for public disclosure as "commercial or financial information obtained from a person and privileged or confidential" under §§0.457(d) and 0.459 of the Commission's Rules, 47 C.F.R. §§0.457(d), 0.459, and exemption 4 of the Freedom of Information Act, 5 U.S.C. §552(b)(4) (1976 & Supp. V 1980). Letter from Gary M. Epstein, Chief, Common Carrier Bureau, to William H. Berman, Senior Vice President and General Counsel, Communications Satellite Corporation; April 11, 1983.

[11] These include an Income Statement, World Systems Division; Assets & Liabilities, World Systems Division; Sources & Uses of Funds, World Systems Division; Inter-company Transactions; Inter-company Transactions-1981; Estimated Non-jurisdictional Components of World Systems Division.

[12] These include an Income Statement-Consolidated; Income Statement-Non-World Systems Division; Detailed Balance Sheet-Consolidated; Assets & Liabilities-Non-World Systems Division; Sources & Uses of Funds-Consolidated; Sources & Uses of Funds-Non-World Systems Division; Key Statistics-Consolidated.

extended to these materials, and the superseded March 16th charts were returned to Comsat.[13]

8. In these submissions, Comsat indicates actual 1982 capital expenditures of $136 million for its jurisdictional activities, and $89 million for non-jurisdictional ones. Comsat projects major capital investments in the regulated segment of the business of $179 million in 1983, $126 million in 1984 and $115 million in 1985. In addition, Comsat projects capital investments in non-jurisdictional businesses and activities, including progress payments on the purchases of satellites for STC and the construction of STC's Nevada operating center, of $178 million in 1983, $136 million in 1984 and $118 million in 1985. Taking the difference between these capital expenditures, the actual 1982 jurisdictional and non-jurisdictional cash flows[14] and the projected cash flows for regulated and non-jurisdictional activities, Comsat derives the following cumulative financing requirement (in $millions):

1982	*1983*	*1984*	*1985*	*Total*[15]
$151	$116	$111	$46	$424

9. Comsat indicates that while the substantial capital spending requirements in 1982–83 result in a sizable need for external financing during this period, this trend will reverse itself in 1984 and 1985; that is, regulated cash flows will exceed regulated capital spending during the period. Therefore Comsat will have additional stockholder profits derived from its jurisdictional operations which can be utilized to support its non-jurisdictional businesses and endeavors. Nevertheless, Comsat asserts that while approximately $75 million has been raised from its sale of one million shares of Comsat Common Stock in December of 1982,[16] an additional $125 million in new equity must be raised in the 1983–85 time period.

10. Comsat is confident that the company is sufficiently sound to engage in this and other undertakings described below without adversely affecting the ratepayer. This confidence is based in large measure on Comsat's projections of its total "capital capacity" and its "unused debt capacity." Comsat defines "capital capacity" as "the sum of the amount of debt that could be supported at each year-end,

---

[13] Letter from Gary M. Epstein, Chief, Common Carrier Bureau, to William H. Berman, Senior Vice President and General Counsel, Communications Satellite Corporation; May 13, 1983.

[14] Comsat defines "cash flow" as net income, depreciation, deferred items and amortization. Capitalization Plan, Attachment 2, p. 5.

[15] All figures in this paragraph have been derived from Attachment 2, Chart 4 of the Capitalization Plan and Public Chart 3, dated April 27, 1983.

[16] Section 201(c)(8) authorization to conduct this stock offering was granted in a letter, dated November 19, 1982, from Gary M. Epstein, Chief, Common Carrier Bureau, to William H. Berman, Senior Vice President, Communications Satellite Corporation.

assuming a maximum debt to total capital ratio of 35% . . . and the assumed stock proceeds in 1983–85."[17] Taking these variables into consideration, together with projected increases in revenues, cash flow and net income, Comsat estimates that its capital capacity will rise from $364 million in 1982 to $377 million in 1983, $588 million in 1984 and $607 million in 1985. To derive its "unused debt capacity"—which it defines as "the amounts [it] could borrow in addition to the present equity and debt in place (including treasury stock) while remaining within a 35% debt to total capital ratio"[18] — Comsat subtracts its projected cumulative year-end financing requirements from its capital capacity. Thus:

Unused Debt Capacity ($millions)

1982	*1983*	*1984*	*1985*
$213	$110	$210	$183

Comsat argues that this unused debt capacity protects its regulated businesses (and therefore the ratepayer) against a wide range of contingencies, adverse market conditions and the like. Further, Comsat argues that this "cushion" of protection could be further inflated through the issuance and sale of additional Comsat Common Stock.[19]

11. *Comsat's Proposed Guidelines and Procedures*. Comsat suggests that certain procedures be established to ensure that we will receive on a periodic basis sufficient information to enable us to determine that its individual financial transactions fall within the framework of the Plan. These procedures concern the updating of the Plan, periodic reporting and compliance with suggested financial guidelines.

---

[17] Capitalization Plan, p. 6.

[18] *Id.*

[19] On April 18, 1983, Comsat was authorized to issue a maximum of 350,000 shares of Common Stock, without par value, pursuant to the exercise of options under its 1982 Employee Stock Option Plan. FCC File No. I-S-P-83–003; Letter from Gary M. Epstein, Chief, Common Carrier Bureau, to William H. Berman, Senior Vice President and General Counsel, Communications Satellite Corporation; April 18, 1983. On May 12, 1983, this authorization was modified to increase the number of exercisable stock option shares to 700,000, pursuant to our grant of authority under Section 201(c)(8) for Comsat to issue a sufficient number of additional shares of no-par-value Common Stock to effectuate a 2-for-1 split of each issued share. FCC File No. I-S-P-83–004; Letter from Gary M. Epstein, Chief, Common Carrier Bureau, to William H. Berman, Senior Vice President and General Counsel, Communications Satellite Corporation; May 12, 1983. On May 20, 1983, Comsat's shareholders approved the stock-split and amended Comsat's Articles of Incorporation to increase from 25 million to 40 million the number of shares of Common Stock authorized for issue. As a result of these actions, the Corporation now has 18,000,028 shares of Common Stock issued and outstanding, 2,000,000 shares which it holds in its treasury and 19,999,972 shares authorized but unissued.

A. *Annual Update of the Plan.* Comsat offers to submit on an annual basis actual financial information for the planning year just completed, projections for one additional planning year, and, if appropriate, adjustments to previously submitted projections. In terms of the Plan currently before us, Comsat would submit at the end of its annual budget cycle (early 1984), actual financial data for calendar year 1983, any adjustments to its current 1984–85 projections and new projections for 1986.

B. *Periodic Reporting.* Comsat will also submit periodic updates of actual financial transactions made during the planning period. These updates will consist of information presently submitted in Comsat's monthly FCC Forms 901 and quarterly Forms 10-Q filed with the Securities and Exchange Commission.

C. *Financial Guidelines.* While emphasizing its need to retain flexibility in terms of its ability to sell stock, raise debt, initiate new programs or delete existing programs, Comsat nonetheless accepts that these activities must be conducted within the parameters of its Capitalization Plan, should we choose to approve it. Consequently, Comsat has proposed guidelines by which its activities should be appraised. First, Comsat would seek external financing through 1985 in an amount not to exceed $440 million. Second, although it does not expect its debt to total capital ratio during the 1983–85 period to exceed that of 25.9% for 1983,[20] Comsat believes that, given everchanging market conditions, we should establish a maximum guideline of 35% debt to total capital. Comsat indicates that its investment bankers consider this to be a prudent ratio for the consolidated corporation.[21] Third, Comsat suggest that its maximum interest coverage under the Plan be set at 3.0.[22] This guideline would be applied prospectively, in the context of potential debt placements. Comsat believes that the use of a 3.0 ratio for the consolidated corporation is sound and conservative. Finally, Comsat has offered to provide notice of its plans to implement specific financing actions, the nature of these actions, the amount, and the principal terms thereof. In addition, Comsat will demonstrate that such activities are in compliance with the Plan and the guidelines as approved by the Commission.[23]

12. Although Comsat projects cumulative external financing needs of $424 million, the Corporation requests authority to raise up to $440 million from external sources during the 1983–85 period.[24]

---

[20] Capitalization Plan, Attachment 2, Chart 7.

[21] Capitalization Plan, p. 10.

[22] *Id.* Comsat defines "interest coverage" as the ratio of pre-tax income to total investment requirements.

[23] Comsat also acknowledges that if it seeks to engage in any activities not contemplated in the Capitalization Plan or which may result in its exceeding any of the aforementioned guidelines, it must seek Commission review of the situation prior to undertaking such actions. Capitalization Plan, pp. 9–11.

Comsat seeks to utilize the additional $16 million as a contingency reserve to provide for what it characterizes as minor changes in capital requirements.[25] In support of this request, Comsat argues that since its proposed "contingency reserve" represents only a 4% increase over its projected financing needs, utilization of these additional funds would not significantly reduce the "cushion" of protection for its jurisdictional businesses described above.

13. Comsat believes that the data, and projections and descriptive information contained in its Plan are sufficiently comprehensive and accurate to enable us to make a finding that there will be no adverse impact on the ratepayer or on operations from the non-jurisdictional activities proposed for the 1983–85 period. Therefore, in Comsat's view, approval of the Plan will serve the public interest.

DISCUSSION

14. There are two issues raised by Comsat's proposal to finance its operations pursuant to its Capitalization Plan. The first is whether, in a general sense, the capitalization plan approach constitutes an acceptable alternative to our practice of *ad hoc* review under Section 201(c)(8). If we resolve this issue in the affirmative, we must determine whether to authorize the Capitalization Plan which Comsat has submitted.

15. In the *Comsat Study*,[26] we undertook a comprehensive examination of Comsat and its operations at the direction of Congress. One of our major tentative conclusions in the *Comsat Study* was that the public interest would be served by allowing Comsat to participate in non-INTELSAT/INMARSAT activities so long as such participation is not inconsistent with its statutory responsibilities. We affirmed this view in our decision in the *Comsat Structure* rulemaking,[27] a proceeding that we had initiated in order to provide for public comment on the proposals set forth in the *Comsat Study* for changes in Comsat's corporate structure and operations.[28]

16. One of the issues raised in the rulemaking proceeding was whether we should require Comsat to file a comprehensive capitalization plan for its existing and planned non-INTELSAT/INMARSAT activities. Upon review of the comments addressing this issue, we declined in our subsequent *Structure Order* to make such a requirement mandatory because we found that prior approval

---

[24] The total of $440 million includes $100 million in short-term debt previously authorized by the Commission, COMSAT, 88 FCC 2d 931 (1982); Comsat, 91 FCC 2d 859 (1982), and the $75 million realized from Comsat's December 1982 sale of treasury stock (n. 16 and accompanying text, *supra*).

[25] Capitalization Plan, p. 7.

[26] Communications Satellite Corporation, 77 FCC 2d 564 (1980) (Comsat Study).

[27] Communications Satellite Corporation, 90 FCC 2d 1159 (1982) (Structure Order).

[28] Communications Satellite Corporation, 81 FCC 2d 287 (1980) (Structure Rulemaking).

of such a plan was not the only way to meet our statutory responsibilities. We indicated that we could fulfill our responsibilities through *ad hoc* oversight of Comsat's individual investment decisions; that is, through review of Comsat's Title II and Title III applications and Section 201(c)(8) requests for authority to engage in financing activities. We emphasized, however, that Comsat was free to file a comprehensive capitalization plan if it so desired.[29]

17. The capitalization plan approach is not precluded as a matter of law under Section 201(c)(8). Nothing in that provision or in the Satellite Act as a whole and its legislative history mandate our practice of *ad hoc* review.[30]

18. The capitalization plan approach is also sound as a matter of policy. On the basis of Comsat's showing in the Plan before us, we are convinced that neither Comsat nor the public benefits from the delays inherent in the application-by-application approach to financing the activities of Comsat and its corporate affiliates. The capitalization plan approach better utilizes the agency's resources. Furthermore, it provides the Commission with a broad overview of Comsat's regulated and non-jurisdictional activities and is therefore useful for analytical purposes. Moreover, the capitalization plan approach to financing corporate operations is consistent with the manner in which businesses are run today. It is also consistent with our actions with respect to AT&T's capitalization plans, although the two situations are not completely analogous. *AT&T Co.*, 90 FCC 2d 404 (1982); *AT&T Co.*, 91 FCC 2d 578 (1982). Thus, we accept the comprehensive capitalization plan concept as a viable mechanism by which to fulfill our statutory oversight responsibilities under the 1962 Satellite Act.

19. Having approved the capitalization plan concept, we now turn to the issue of whether we should authorize the Plan as presented. Comsat submitted the Plan on January 24, 1983. The Plan was placed on public notice on February 2, 1983; no opposing comments were filed. Since that date, the staff of the Common Carrier Bureau has suggested that Comsat file additional information and revise the format of its financial projections. Comsat has

---

[29] 90 FCC 2d at 1197.

[30] To the extent that review of Comsat's financing activities under the capitalization plan approach would obviate the need to review Comsat's individual Section 201(c)(8) applications on an *ad hoc* basis, we find the capitalization plan approach consistent with those provisions of the Communications Act of 1934 related to the manner in which we may conduct our affairs. Section 4(i) of the Communications Act provides that "the Commission may perform any and all acts, make such rules and regulations, and issue such orders, not inconsistent with this Act, as may be necessary in the execution of its functions." 47 U.S.C. 154(i) (1976). Section 4(j) provides, *inter alia*, that "the Commission may conduct its proceedings in such manner as will best conduce to the proper dispatch of business and to the ends of justice." *Id.* at 154(j).

responded with the materials requested. In addition, Comsat has proposed guidelines for the implementation of its Plan, as well as reporting procedures designed to enable us to monitor its compliance with the Plan. Moreover, Comsat has acknowledged that should it propose to take a specific financing action that exceeds one or more of its suggested guidelines, the Corporation would be obliged to seek Commission review of the situation prior to initiating the action in question.

20. Having assessed the record developed in connection with Comsat's Capitalization Plan proposal, we conclude that Comsat's Plan is consistent with prior Commission determinations and the purposes and objectives of Section 201(c)(8). In particular, we find that Comsat's debt to total capital guideline of 35% is within the 45% level of debt we imputed to Comsat's capital structure in the 1975 *Comsat Rate Case*.[31] Second, on the basis of Comsat's projections of its capital and unused debt capacities during the 1983–85 period, we find that Comsat should be authorized to acquire external financing to meet its projected cumulated capital needs of $424 million through 1985. Third, we conclude that Comsat's request to acquire an additional $16 million to be used as a "contingency reserve" is not unreasonable.

21. The Commission is aware that as Comsat enters new competitive ventures, an element of risk is introduced into its business planning that did not exist when Comsat's main activity was the offering of monopoly, rate-base regulated services. Much of the Commission's effort in evaluating the Capitalization Plan was devoted to determining that Comsat's regulated responsibilities not be adversely impacted by its financing of unregulated ventures.[32] For this reason, the staff has requested and received from Comsat, during this period of review, financial data on both Comsat's jurisdictional and non-jurisdictional activities. Our review of this data permits us to authorize the Capitalization Plan under Section 201(c)(8), with the conditions outlined below. By this authorization, we are satisfying our statutory responsibilities under this provision with respect to all actions contemplated in the Plan. We believe that the continued oversight provided for by the Plan, coupled with these conditions, should enable us to protect the ratepayer should Com-

---

[31] We are not here altering our prior decisions in the Comsat Rate Case regarding the Corporation's capital structure and rate of return. Communications Satellite Corporation, 56 FCC 2d 1101, 1157–1160 (1975); Communications Satellite Corporation, 68 FCC 2d 941, 950–51 (1978). Rather, we are accepting Comsat's recommendation of 35% debt to total capitalization for the purpose of determining whether a specific financial transaction falls with the Plan.

[32] Furthermore, we are concerned that the ratepayer not assume as a "risk premium" any additional risk which Comsat must assume in capital markets to finance its competitive ventures. We shall address this concern in an appropriate proceeding.

sat's performance deviate significantly from the projections set forth in its Plan.

22. Therefore, we accept Comsat's Capitalization Plan subject to the following conditions: (1) that Comsat's cumulative external financing for the years 1982 to 1985 shall not exceed $440 million; (2) that Comsat shall acquire external financing on an annual basis consistent with its projected annual financing needs; (3) that Comsat's consolidated debt to total capital ratio during the period shall not exceed 35%; (4) that Comsat's interest coverage capacity during the period shall not fall below 3.0; and (5) that, on a yearly basis, Comsat shall submit actual financing data on the planning year just completed, projections for one additional planning year, and, if appropriate, revised projections for the two interim planning years.[33] We emphasize here that our acceptance of the Capitalization Plan does not prejudge any accounting issues outstanding in the *Comsat Structure* proceeding or alter the limitations placed on Comsat and its subsidiaries in *In re Application of Satellite Television Corporation*, 91 FCC 2d 953 (1982). We also accept Comsat's proposed reporting requirements. Therefore, Comsat shall submit FCC Form 901 on a monthly basis, and Form 10-Q on the same quarterly basis as it currently submits this information to the SEC. In addition, however, we shall also require Comsat to inform us immediately if at any time over the planning period it determines that any actual financial data which it has generated deviates from its submitted projections by more than 10%,[34] or if any contemplated financing activity may result in Comsat's deviating from the guidelines and projections outlined in its Plan.[35] Any such deviation would require separate Section 201(c)(8) approval. Finally, Comsat shall provide us with 10 calendar days' prior notice of all specific financing actions it plans to undertake in the implementation of its Plan.

Conclusion

23. Comsat's Capitalization Plan provides us a comprehensive overview of the operations of the parent company and its subsidaries. Our acceptance of it is for the initial three year period. Comsat must request Commission approval to obtain additional financing for

---

[33] This information shall be submitted in the precise format of the materials dated April 27, 1983 which Comsat filed with this Commission on May 2, 1983.

[34] For example, we expect Comsat to inform us promptly if its internally-generated data suggests that its capital spending for regulated activities in 1984 is likely to be $140 million, rather than $126 million as indicated in Attachment II, Chart 4 of the Capitalization Plan.

[35] For example, Comsat must inform us if its projected needs for external financing would be altered as a consequence of its use of internally-generated funds to support the SBS venture, or other "non-recourse" financing as described in paragraph 6, above.

subsequent planning years. In passing on such requests, the Commission undoubtedly will be influenced by its experience under this Plan as Comsat implements it over the initial period. Subject to the conditions we have set forth, the Plan should enable us to better monitor Comsat's financing activities and the effects of these activities upon the rates of its regulated services, in furtherance of the public interest. However, we emphasize that our acceptance of the 1983–85 Capitalization Plan in no way prejudges or prejudices our statutory right to conduct a rate or rate of return hearing at any time during the planning period if we deem it necessary or desirable.

Ordering Clauses

24. In view of the foregoing, IT IS ORDERED, that, pursuant to Sections 4(i) and 4(j) of the Communications Satellite Act of 1934, as amended, 47 USC 154(i) and 154(j) (1976), and Section 201(c)(8) of the Communications Satellite Act of 1962, 47 USC 721(c)(8) (1976), the Communications Satellite Corporation IS AUTHORIZED to implement its Capitalization Plan, presented on a consolidated basis, for the years 1983 through 1985.

25. IT IS FURTHER ORDERED, that the Communications Satellite Corporation, in the implementation of its Capitalization Plan, shall report to the Commission and adhere to the directives and conditions as set forth herein.

26. IT IS FURTHER ORDERED, that all proceeds derived from Comsat's December 1982 treasury stock sale and currently held in escrow by Comsat pursuant to prior Commission orders may be utilized in the implementation of its Capitalization Plan.

Complaint, Formal
Obscene, Profane, Indecent Language

Application for review of denial of complaint against Rahall B/cing of Indiana, Inc. (WFBQ-FM) denied. Commission found no error in Bureau's actions.
–Decency In B/cing, Inc.

FCC 83-260

BEFORE THE

FEDERAL COMMUNICATIONS COMMISSION

WASHINGTON, D.C. 20554

In the Matter of

Application for Review filed by Decency in Broadcasting, Inc., of a denial of its complaint against Rahall Broadcasting of Indiana, Inc., licensee of Station WFBQ(FM) Indianapolis, Indiana.[1]

MEMORANDUM OPINION AND ORDER

(Adopted: May 26, 1983; Released: June 3, 1983)

BY THE COMMISSION: COMMISSIONER FOGARTY NOT PARTICIPATING; COMMISSIONER SHARP ABSENT.

1. The Commission has before it an Application for Review, filed December 27, 1982, by Decency in Broadcasting, Inc., seeking review of a letter dated November 23, 1982, by the Chief of the then Broadcast Bureau (now Mass Media Bureau), under delegated authority, determining that no action was warranted on the matters raised in a complaint filed by Decency in Broadcasting, Inc. on August 2, 1982. In its complaint, Decency in Broadcasting, Inc., alleged that certain obscene, indecent and profane material had been broadcast over Station WFBQ(FM).

2. In its letter dated November 23, 1982, the Bureau explained that Section 326 of the Communications Act of 1934, as amended provides:

> Nothing in this chapter shall be understood or construed to give the Commission the power of censorship over the radio communications or signals transmitted by any radio station, and no regulation or condition shall be promulgated or fixed by

---

[1] Decency in Broadcasting, Inc. captioned its complaint and Application for Review against Gulf Broadcasting, Inc. Rahall, the licensee, is the wholly owned subsidiary of Gulf Broadcasting Company which in turn is a wholly owned subsidiary of Gulf United Corporation.

> the Commission which shall interfere with the right of free speech by means of radio communications.

The letter further explained why the information provided by Decency in Broadcasting, Inc., failed to meet the judicial standards of obscenity and indecency, prohibited by 18 U.S.C. § 1464, as specified in *Miller v. California*, 413 U.S. 15 (1973), and *Federal Communications Commission v. Pacifica Foundation*, 438 U.S. 726 (1978). The Bureau further explained that the *Pacifica* decision, *supra.*, affords the Commission no general prerogative to intervene in any case where words similar or identical to those in *Pacifica* are broadcast. See also *WGBH Education Foundation*, 69 FCC 2d 1250, 1254, 43 RR 2d 1436, 1441 (1978). The staff also concluded that the language complained of was not profane within the meaning of that word as described in court opinions and, based upon current case law, it was unlikely that any sanction imposed by the Commission for the broadcast of profane language in this situation would be judicially upheld.

3. We have reviewed the Bureau's actions and find no error. Accordingly, pursuant to Section 1.115(g) of the Commission's Rules, the Application for Review filed by Decency in Broadcasting, Inc., IS DENIED.

FEDERAL COMMUNICATIONS COMMISSION
WILLIAM J. TRICARICO, *Secretary*

Application, Acceptance of

Application for review denied. Since the applicant's proposed service area receives signals from three full-service stations and located less than 55 miles from 142nd largest television market, applicant's status as an existing licensee of a full-service UHF television station does not warrant a waiver of the Commission's freeze on the acceptance of new television translator applications and the application is therefore dismissed.

–Family Television, Inc.

FCC 83-363

BEFORE THE

FEDERAL COMMUNICATIONS COMMISSION

WASHINGTON, D.C. 20554

In Re Application of
FAMILY TELEVISION CORPORATION, INC.
For Construction Permit for a New UHF Television Translator Station at Fort Myers, Florida

MEMORANDUM OPINION AND ORDER

(Adopted: July 28, 1983 Released: August 4, 1983)

BY THE COMMISSION:

1. The Commission has before it for consideration a petition filed by the applicant, Family Television Corporation, Inc. (Family) for review of the Mass Media Bureau's return of the above-captioned application on July 30, 1982. The application was returned because it was filed after the imposition of the Commission's freeze on the acceptance of new translator and low power television applications and it failed to meet any of the exemptions to that freeze in effect at the time it was filed.

2. By way of background, on April 9, 1981, with insufficient staff and computer capability to handle the approximately 5,000 translator and low power television applications already on file, the Commission stopped accepting new applications. However, exceptions were made for: existing translators operating on Channel 70 through 83 seeking to change frequency to a lower channel; existing translators seeking to change channels to eliminate interference to full service stations; or new proposals to serve areas currently receiving fewer than two full-service stations. *Order Imposing Freeze*, 46 Fed. Reg. 26062, published May 11, 1981, 49 RR 2d 433. In effect, the Commission stopped accepting additional applications, except in

areas where the need for service outweighed the administrative burdens. In its *Report and Order* in BC Docket No. 78–253, 49 Fed. Reg. 21468, published May 18, 1982, 51 RR 2d 477, establishing a low power television service, the Commission did not lift the freeze, but did eliminate the freeze exemption for proposals to serve areas receiving fewer than two full-service stations. Instead, applications were grouped into categories by market size. Those applicants proposing to locate their transmitting antennas more than 55 miles from the coordinates of any of the top 212 television markets are placed in Tier I, *i.e.*, the most rural markets, and are now freeze exempt. Applicants other than those in Tier I are grouped in Tiers II and III by market size. Under the tiered system, processing of the first tier must be completed before processing of the second tier begins, and so on. In the interim, the freeze will be lifted only for the limited purpose of receiving competing applications to the applications published on cut-off lists. Only after the backlog of pending applications and freeze-exempt applications has been eliminated, in three phases, will the Commission lift the freeze on the filing of applications. The Commission believed that its adoption of such a processing hierarchy would facilitate the expeditious authorization of service in unserved or lesser-served rural areas, which was one of the Commission's principal goals in the establishment of a low power television service.

3. In its application for review, Family acknowledges that its proposed antenna will be located less than 55 miles from Fort Myers and Naples, Florida, which are each listed as the 142nd largest television market.[1] It is also noted that Fort Myers, Family's proposed community of license, already receives the signals of three full-service television stations. Therefore, Family concedes that its application could not be acceptable for immediate filing, since it is a Tier II application, absent a grant of its requested waiver of the Commission's freeze policy.

4. In support of its waiver request, Family notes that its application does not seek local origination authority; but, instead, proposes to retransmit the signal of a UHF full-service facility already licensed to Family, Station WFTS, Tampa, Florida. Family then makes an unsupported claim that it would be unjust not to accept an application for a translator filed by a full-service television station. Family's other arguments are of a similar general nature. Family also contends that the acceptance of its application will further the development of the UHF television service by enhancing the competitive comparability of Family's UHF facilities with existing VHF television stations. It is next asserted that Family's

---

[1] Data complied from "Television Channel Utilization," mimeo number 3331, dated April 16, 1982, as republished in Public Notice, FCC 82–297, released June 23, 1982, as corrected by Public Notice, mimeo number 5324, released July 23, 1982.

provision of a source of independent programming to Fort Myers will serve the public interest. Finally, Family notes that its proposed translator facility will create no interference with any other television facility nor preclude other applicants from applying for other low power facilities in Fort Myers.

5. In our low power *Report and Order*, at footnote 19, we noted that we would dismiss any requests for waiver of our freeze "that do not raise a novel or compelling public interest ground for waiver in a particular unique situation." Here, Family has failed to provide any such justification for a grant of its waiver request. In view of the three existing full-service television stations currently providing service, the Fort Myers area cannot be characterized as underserved. Moreover, Family has not alleged, nor can we perceive, and public interest benefit to be derived from treating applications for translators filed by existing licensees different than those filed by any other applicants in the implementation of the Commission's freeze policy. In view of the increasing vitality of the UHF service generally, as noted in our low power *Report and Order*, we are not persuaded that Family's status as an existing UHF licensee constitutes a ground for which a waiver can be granted. We anticipate that the other alleged benefits that Family alludes to, in the event its application were granted, would be substantially the same as those that could be provided by other would-be Tier II and Tier III applicants also affected by our freeze.

6. Our tiered processing system is not designed to foreclose applications for Tier II and III areas, but to facilitate the expeditious authorization of local outlets to the nation's most rural and underserved areas first and, then, less rural areas in later stages. The reason for imposing our April 1981 freeze on the acceptance of low power applications was to establish an orderly and effective procedure for the processing of the unanticipated large volume of applications. Since that time, we estimate that an additional 7,000 applications have been filed under our existing freeze exemptions. In view of the steady influx of Tier I low power applications and the commensurate burdens imposed on our staff, we believe it is in the public interest to continue to maintain a freeze on the acceptance of low power applications. Therefore, we believe that Family has failed to justify a waiver of the Commission's freeze on the filing of translator and low power television applications. Accordingly, we find that the Bureau's dismissal of the Family application was proper and we hereby affirm that action.

7. Accordingly, IT IS ORDERED That the request for waiver of the Commission's freeze on the acceptance of translator and low power applications filed by Family Television Corporation, Inc. IS DENIED.

8. IT IS FURTHER ORDERED That its application for review of

the Mass Media Bureau's action returning its application IS DENIED.

9. IT IS FURTHER ORDERED That the Mass Media Bureau send a copy of this Memorandum Opinion and Order by Certified Mail- Return Receipt Requested to the applicant named herein.

In re Application of GSM MEDIA CORPORATION Ontario, Ohio For Construction Permit	BC Docket No. 81–606 File No. BP-20,202

Appearances

Richard Hildreth, Vincent J. Curtis, Jr., and *Dan J. Alpert*, on behalf of GSM Media Corporation; *Lauren A. Colby*, on behalf of Greater Mansfield Broadcasting Company; and *Charles E. Dziedzic, Brian P. Kilbane*, and *Lawrence Bernstein*, on behalf of the Chief, Mass Media Bureau, Federal Communications Commission.

DECISION

(Adopted: August 30, 1983; Released: September 6, 1983.)

BOARD MEMBER JACOBS FOR THE REVIEW BOARD:

1. Review Board involvement in this proceeding began with Memorandum Opinion and Order, 53 RR 2d 1207, released April 22, 1983,[1] in which we ordered GSM Media Corporation (GSM) and Greater Mansfield Broadcasting Company (GMBC) to take joint field engineering measurements to locate certain pertinent AM signal contours. GSM is an applicant for authority to construct a new AM

---

[1] *Recon. dismissed*, FCC 83R-34, released May 5, 1983.

station at Ontario, Ohio, and GMBC is the licensee of Stations WCLW and WCLW-FM, Mansfield, Ohio, and a petitioner to deny GSM's application.

2. GMBC has steadfastly maintained since March 1977, when it filed its petition to deny, that GSM's proposed 0.5 mV/m contour would overlap with the 0.025 mV/m contour of AM Station WPGW, Portland, Indiana, in violation of Section 73.37(a) of the Commission's Rules, 47 CFR 73.37(a), and GSM's application was originally designated for hearing on that issue, among others, by Memorandum Opinion and Order, Mimeo No. 003113, 46 Fed. Reg. 45188, published September 10, 1981. Prior to commencement of that hearing, Administrative Law Judge James F. Tierney (ALJ) issued a Summary Decision (S.D.) granting GSM's application upon a finding that the pleadings before him left no genuine issue of material fact for determination at hearing. FCC 82D-78, released December 15, 1982. We ordered joint field measurements to be taken because GMBC's exceptions to the S.D. and the reply briefs of GSM and the Mass Media Bureau made it abundantly clear that valid engineering measurements were critical to a reasoned analysis and decision in this case, and almost all of the measurements already in the record were disputed either as unusually distorted by seasonality or as invalid because of improper locations or techniques. 53 RR 2d at 1209.

3. The joint measurements were taken on May 31, June 1, and June 2, 1983, and, according to GMBC's Report, filed July 6, 1983, at 2, "There were no disagreements and the measurement data is undisputed." We also have before us comments and reply comments by GSM, GMBC, and the Bureau related to these measurements; GMBC's original exceptions and the reply briefs of GSM and the Bureau; and a petition to enlarge issues filed by GMBC on July 7, 1983, and responsive pleadings. The Board has reviewed the S.D. in light of these documents, the oral argument held March 25, 1983, and our examination of the record. We adopt the findings of fact in the S.D., except as modified herein, but reverse the ALJ's ultimate conclusion and hold that summary decision on the contour overlap issue should be granted in GMBC's favor and that the public interest, convenience and necessity therefore requires that GSM's application be denied.

4. GMBC's original exceptions focused solely on the overlap issue. GMBC contended that summary decision was inappropriate because there were sharp differences in the relevant engineering data and the expert affidavits interpreting that data, which could not be resolved without an evidentiary hearing. In response, GSM and the Bureau essentially argued that no engineering "facts" were in dispute, only the proper analysis of those facts, and that disagreements among experts do not necessarily require elaboration at hearing where, as here, experts have already had an opportunity

to express their opinions (with supporting documentation) in writing and there is no candor issue requiring demeanor findings. Moreover, according to GSM and the Bureau, the Commission approved a data averaging methodology in *United Broadcasting Co., Inc.*, 1 FCC 2d 555, 559, 5 RR 2d 684, 689 (1965), as a means of analyzing conflicting data without the need for a hearing, and the ALJ used data averaging in this proceeding to conclude that there was no prohibited contour overlap. While GMBC agreed in principal with the concept of averaging, it maintained that the alleged averaging of valid data with invalid data in the instant case was unscientific, contrary to the Commission's rules, and should not be permitted. According to GMBC, if only valid data (its own) were averaged, that data would show a prohibited contour overlap. In their July 1983 joint measurement submissions, GSM and the Bureau continue to urge use of data averaging—averaging the 1983 data with the previous data—but GMBC opposes such averaging, still taking issue with the validity of certain previous data and now additionally arguing that averaging even valid data taken under different testing circumstances and along different testing radials is not appropriate.

5. The essential question before us is what weight should be given to the eight years of engineering data and analyses in this record and whether either the data or the analyses leave any "genuine issue of material fact" that must be resolved in the crucible of an evidentiary hearing. Section 1.251(a)(1) of the Rules, 47 CFR 1.251(a)(1). The data may be summarized, as follow:

Distance Chart

Measurement Date/Source	*Distance to Contours*		*Total Distance*
	0.025 mV/m	*0.5mV/m*	
A. December 1975/GSM	109.0	10.2 *	119.2 miles
B. July 1978/GSM	106.0	10.2	116.2
C. January 1977/GMBC	122.0	10.2 *	132.2
D. July 1978/GMBC	117.5	10.2	127.7
E. July 1978/GMBC	115.3	10.2	125.5
F. May-June 1983/GMBC**	123.0/124.49***	7.8	130.8/132.29
May-June 1983/GSM**	122.0	6.9	128.9

---

* Contour measured by GSM in 1975 and by GMBC in 1982

** GMBC and GSM provided different analyses of identical May-June 1983 data.

*** GMBC provided alternative analyses in its July 6 and 21, 1983 pleadings.

The parties agree that the total distance between Station WPGW's transmitter site and GSM's proposed site is 128.2 miles. Thus, if the "Total Distance" of the 0.025 mV/m and 0.5 mV/m contours exceeds that figure, the contours will overlap. It is clear from the above chart that, without data averaging, the data on lines C and F indicate contour overlap, while the data on lines A, B, D, and E do not.

6. For data averaging purposes, various combinations of data have been used (or considered) by the parties in this proceeding. These combinations may also be summarized, as follows:

Distance Data Combination	*Averaging Chart Source*	*Total Distance (Averaged)*
*(1) D, E **	*GSM Motion for Summary Decision; adopted in S.D.*	*126.2 miles*
(2) C, D, E	*GMBC Exceptions*	*128.46*
(3) A, C, E	*GSM Reply to Exceptions*	*125.3*
or A, C, D, E	*GSM Reply to Exceptions*	*125.9*
*(4) F ***	*GMBC July 1983 Reply*	*130.8/132.29*
(5) A, C, E, F	*GSM July 1983 Comments*	*126.175*
or A, C, D, E, F	*GSM July 1983 Comments*	*126.26*
(6) C, E, F	*Combination (5) without A*	*128.86*
or C, D, E, F	*Combination (5) without A*	*128.3*

* *Letters correspond to lines in Distance Chart, supra.*
** In its july 21, 1983 Reply, GMBC argues that the F data represent an average in themselves.

This chart indicates that, if data averaging is used, data combinations (2), (4), and (6) show contour overlap, while combinations (1), (3), and (5) do not. In their July 1983 pleadings, GSM endorses combination (5), GMBC urges combination (4), and the Bureau favors "averaging all available measurement data" (Bur. July 21, 1983 Comments, at 2) and "continues to believe that no overlap occurs," (*id.*), but does not specifically proffer a total distance figure.[2] [3]

7. When it ordered the May-June 1983 joint field measurements to be taken, the Board did not decide whether the measurements should augment or supplant the existing engineering evidence. Order, FCC 83R-34, released May 5, 1983, para. 2. We were hoping that the joint engineering effort would alleviate some of the methodology disputes with which the previous data were rife and would, at the same time, corroborate some of the existing data. We were not disappointed. We again acknowledge, with approbation, that these joint measurements, unlike the "concurrent" measurements of July 1978, were carried out in a most professional way, without petty disagreements and disputes. See paragraph 3, *supra*. However, as line F of the Distance Chart, *supra*, attests, even when there are no disputes about the raw data, experts may well differ in analyzing that data. Nevertheless, all parties—GSM, GMBC, and the Bureau—concede that no matter whose analytical expertise is used, the May-June 1983 data show prohibited contour overlap of any-

---

[2] None of the data combinations includes line B, because GMBC vehemently opposes its use and GSM stated in its July 6, 1983 Comments (at 4) that it "would not oppose" disregarding that data. If it were used, it would yield a figure less than the 126.26 miles average of combination (5).

[3] It should be noted that, with the exception of combination (1), these averages are essentially simple arithmetic averages. The Board's reading of *United Broadcasting Co., supra*, suggests that plotting all field intensity data on a single graph and drawing composite contours is analytically preferable, if not mandatory, and GSM and GMBC acknowledged that method's superiority at oral argument. Tr. 80, 101. However, GSM believes that the difference between the two methods in this case is "very minimal" (Tr. 101) and has not objected to use of the simple arithmetic method adopting it itself in combinations (3) and (5). In future cases we expect all parties to heed *United's* guidelines strictly in order to ensure the most accurate averaging results.

where from 0.7 miles (GSM) to 4.09 miles (GMBC). See Distance Chart, *supra*, at line F (*e.g.*, 128.9 miles minus 128.2 = 0.7 miles of overlap).[4]

8. It would be simple enough to curtail the data analysis at this point, toss out all of the 1975–1978 engineering measurements as flawed, and reach a decision based on the 1983 data alone. After all, the latest data is relatively clearcut, the methodology is undisputed, and the information may be said to accurately reflect technical conditions at the present time—when a grant or denial of operating authority is imminent, not five or eight years ago. And such a curtailment would probably be legally permissible under the circumstances of this case. However, we are abundantly aware that conflicting engineering data is not novel at this agency, and that *United Broadcasting Co.*, *supra*, provides a powerful analytical tool for reconciling some of these conflicts without resort to either evidentiary hearing or the ax. Indeed, the prime justification for *United's* data averaging methodology is to minimize the impact of analytical "bias or error". 1 FCC 2d at 558, 5 RR 2d at 689. However, the data disparities evident in the Distance Chart, *supra*, and other evidence to be discussed *infra*, beg the question voiced by GMBC at oral argument (Tr. 97): "How much bias [or error] can you tolerate [when data averaging] before you throw the data out?" Thus, while we feel obliged by *United* to at least consider the results of data averaging in the instant case, we do not accept the Bureau's interpretation of *United* (see paragraph 6, *supra*) that "all" data may properly be averaged, regardless of its demonstrated defects. Rather, the use of data averaging must be tempered by the command in Section 73.153 of the Rules, 47 CFR 73.153, that field strength measurements will only take precedence over theoretical engineering values if such measurements are "properly taken and presented". In other words, there *are* limits to the data short-comings that may be overlooked in the *United* data averaging process.

9. With this caveat in mind, we turn to GMBC's repeated and

---

[4] We pass over GSM's quasi-exception (July 6, 1983 Comments at note 1) concerning the propriety of our ordering these measurements and reopening the record to receive the data and related pleadings. We took this step under our plenary authority to ensure that a full record on a critical issue was secured prior to final decision, Section 0.365(a) of the Rules, 47 CFR 0.365(a), and our action was not unprecedented. *See Service Electric Cable TV, Inc.*, 37 FCC 2d 119, 25 RR 2d 135 (Rev. Bd.), *aff'd*, 37 FCC 2d 583, 25 RR 2d 595 (1972); *cf. Brown Broadcasting Co., Inc.*, 12 FCC 2d 189, 12 RR 2d 826 (1968) (Commission orders submission of supplemental information so that determination of whether a substantial question of fact exists may be based on a complete showing). *Bunker Ramo Corp.*, 31 FCC 2d 449, 22 RR 2d 843 (Rev. Bd. 1971), where the Board declined to direct a hearing examiner to take certain evidence as an impermissible incursion on his preroga- tives to control the course of a hearing, is readily distinguishable because here the presiding officer had already terminated his role in this proceeding and we were merely requiring supplemental evidence, under unusual circumstances, to aid reasoned appellate review.

shrill attacks on the validity and credibility of GSM's December 1975 field measurements (line A of the Distance Chart, *supra*). These measurements were taken by Gunther Meisse (president and 80% shareholder of GSM) and Harry James Hire (president and shareholder of Johnny Appleseed Broadcasting Company, which owns the remaining 20% of GSM's stock) and were filed as part of GSM's instant application. On October 19, 1981, GMBC took the depositions of Messrs. Meisse and Hire, which disclosed, *inter alia*, that: Meisse is not an electrical engineer, has never taken an electronics course, has read some electronics books but "not . . . extensively," and is not an electronics expert (M. Dep. 5); the December 1975 measurements were Meisse's and Hire's first such endeavor (M. Dep.6; H. Dep. 25); Hire has an electrical engineering degree, but Hire and Meisse took the measurements under the directions of a different engineer, Mr. Serge Bergen, who was not present but gave "some written instructions. However, most of it was handled by phone" (H. Dep. 19; M.Dep. 6); and both Hire and Meisse had only a vague recollection of the instructions they received and had not retained their notes (H. Dep. 26, 47; M. Dep. 9, 18). In its exceptions, GMBC uses these findings to challenge the testing credentials of Meisse and Hire and the reliability of their measurement data. It also uses other deposition statements to cast doubt on the propriety of their measurement techniques and equipment, especially during their July 1978 field measurements. Finally, GMBC notes that the December 1975 (and July 1978) GSM measurements "differ radically" from the "norm" of all of the other measurement data in this proceeding. GMBC Exceptions, at 11.

10. GMBC addressed similar concerns to the ALJ in the context of a motion to enlarge issues, which was denied by Memorandum Opinion and Order, FCC 82M-0133, released January 18, 1982. The ALJ gave short shrift to GMBC's technical arguments as "of little consequence" and fraught with speculation and surmise, and held that the Commission's rules do not specify the qualifications of measurement takers and that Meisse and Hire "can hardly be faulted" for imperfect memories concerning measurements that were taken six years before their depositions. *Id.*, para. 3. Our view is somewhat different. Although the Commission's rules do not specify the qualifications of measurement takers, we believe that especially where, as here, precise engineering measurements lie at the heart of a licensing decision, the Commission has a right to expect (and a duty to demand) that those measurements will not be taken by rank amateurs. This proceeding was clearly not the proper setting for the kind of unsupervised, novice efforts that GSM sponsored in December 1975. And while the data disparities noted by GMBC (see Distance Chart, *supra*) are only circumstantial evidence of substantial measurement errors, we conclude that these marked disparities, which have not been adequately explained, and the below-par testing

credentials of Meisse and Hire place GSM's December 1975 field measurements beyond the protection of *United's* "error" averaging umbrella and require that measurement data to be excluded from evidentiary consideration here. In reaching this conclusion, we do not address GMBC's contention that the December 1975 measurements were fraudulent. It is sufficient for us to decide that enough doubt has been cast on the accuracy of the data to warrant its exclusion from data averaging under *United*. See paragraph 8, *supra*.[5]

11. Turning again to the Averaging Chart, *supra*, we see that if GSM's December 1975 measurements (line A) are discarded, we are left with data combination 6 as the only sets of measurement data which fully comport with *United*. Those data averages show a prohibited contour overlap of either 0.1 or 0.66 miles, depending on which of GSM's data combinations is used. Thus, *United's* data averaging methodology confirms the unanimous conclusion of the May-June 1983 measurements—that GSM's proposed station would create prohibited contour overlap with Station WPGW. See paragraph 7, *supra*. Anticipating in its July 6, 1983 Comments, at 6, that the Board might reach this conclusion, GSM baldly requests that "the *de minimis* nature of any overlap . . . be considered [and] that the Board find such overlap to be insignificant and waive the appropriate rules." While the Board recognizes that the prohibited contour overlap in this case is slight, the Commission rule at issue—Section 73.37(a), 47 CFR 73.37(a)—is a go-no go rule. *See Assignment Standards -AM and FM*, 45 FCC 1515, 2 RR 2d 1658 (1964). As such, it has been rarely waived by the Commission—after extensive showings of "unique and compelling circumstances," *B & K Broadcasting Co.*, 2 FCC 2d 21, 6 RR 2d 687 (1965)—and waiver has been consistently denied, absent "extraordinary circumstances," *Valley Radio Corp.*, 52 RR 2d 1641, 1642 (1983). Because GSM has failed to provide any justification whatsoever for such extraordinary action (other than to call the prohibited overlap *de minimis*), its waiver request must, perforce, be refused. *Cf. WAIT Radio* v. *FCC*, 418 F.2d 1153 (D.C. Cir. 1969).

12. At this juncture, GSM might wish to disown its view (see paragraph 4, *supra*) that summary decision on the present record is appropriate and that further proceedings are unnecessary. However, GSM is correct that the mere existence of conflicting expert opinions does not mandate a hearing, unless there are disputed genuine issues of material fact. *See Tele-Media Corporation* v. *FCC*, 697 F.2d 402, 409 (D.C. Cir. 1983); *Chuck Stone* v. *FCC*, 466 F.2d 316, 323 (D.C. Cir. 1972). The preceding analysis demonstrates that no such issues exist.

---

[5] For similar reasons, the Board would also exclude GSM's July 1978 measurements (line B of Distance Chart, *supra*), but for the fact that GSM has already voluntarily abandoned them. See note 2, *supra*.

It is in the nature of field intensity measurements that no two sets of measurements will be identical. *See United Broadcasting Co., Inc., supra*. Where, as here, joint field measurements are taken with similar interpretative results and these results are confirmed by *United's* data averaging technique (excluding highly suspect data), no further exploration of minor differing viewpoints is called for. The controversy over GSM's December 1975 field measurements does not require a different result. Those measurements have been excluded largely because of deposition testimony by GSM's own principals. The deposition sessions were exhaustive and GSM counsel was present and had the opportunity to clarify or amplify Meisse's and Hire's testimony through "cross-examination" but saw no need (one unrelated question asked at Hire's deposition, H. Dep. 61; no questions asked at Meisse's deposition, M. Dep. 78). Having previously relied on the passage of time as an excuse for "imperfect memories," *see* FCC 82M-0133, *supra*, it is difficult to comprehend how GSM might now maintain (which it does *not*) that a hearing two years later than the depositions would further elucidate matters or lead to a different result. Hence, we conclude that summary decision is appropriate on the record as it presently exists, *cf. Tele-Media Corporation* v. *FCC, supra*, at 409, and that it must be granted in GMBC's favor on the contour overlap issue. This disposition, in turn, mandates the denial of GSM's application.

13. One final matter. On July 7, 1983, GMBC filed a petition to enlarge issues in which it alleges that, based on GMBC's May-June 1983 test site measurements, GSM's 5 mV/m proposed contour does not encompass all of the residential areas of Ontario, Ohio, in violation of Section 73.24(j) of the Rules, 47 CFR 73.24(j). GSM opposes the issue, arguing that the area and population excluded are *de minimis* (no more than 0.24 square miles out of 9.59 and no more than 19 persons out of a total population of 4,123), the area is essentially rural in nature, an adequate signal will nevertheless be provided throughout the community, and that, therefore, a finding of substantial compliance with Section 73.24(j), or waiver of the rule, is warranted. The Bureau states that a proposal falling short of absolute compliance with Section 73.24(j) may be granted without a waiver of the rules, where "substantial compliance" with the 5 mV/m coverage requirement is shown, citing *H-B-K Enterprises*, 15 FCC 2d 683, 685–686 (Rev. Bd. 1968).[6] We conclude that GSM's showing meets the substantial compliance test of *H-B-K*, and GMBC's petition will therefore be denied.

14. ACCORDINGLY, IT IS ORDERED, That the petition to enlarge issues filed by Greater Mansfield Broadcasting Company on July 7, 1983 IS DENIED; that the petition for leave to submit

---

[6] Disputes under Section 73.24(j) thus differ significantly from those under Section 73.37(a). See paragraph 11, *supra*.

responsive affidavit filed by Greater Mansfield Broadcasting Company on August 3, 1983, IS GRANTED; and that page 2 of a letter from Greater Mansfield Broadcasting Company to Review Board staff, dated August 18, 1983, IS STRICKEN.

15. IT IS FURTHER ORDERED, That the application of GSM Media Corporation (File No. BP-20,202) for authority to construct a new AM station at Ontario, Ohio, IS DENIED.

SUMMARY DECISION OF ADMINISTRATIVE LAW JUDGE JAMES F. TIERNEY

(Issued: December 8, 1982; Released: December 15, 1982)

Preliminary Statement

1. On September 14, 1982, GSM Media Corporation (GSM) filed a Motion for Summary Decision. GSM filed, September 20, 1982, an Addendum forwarding an affidavit of its President. Greater Mansfield Broadcasting Company (Greater Mansfield), petitioner to deny, filed an Opposition on October 28, 1982. The Chief, Broadcast Bureau (Bureau) filed "Comments" in support on October 29, 1982. The Bureau filed, November 1, 1982, a Supplement concerning a supporting affidavit. Greater Mansfield filed a Motion for Leave to File Reply on November 8, 1982. GSM opposed that Motion on November 10, 1982, and Greater Mansfield filed its Reply on the same date. The Bureau filed, November 18, 1982, an Opposition to Motion for Leave to File Reply.

2. In the Designation Order, *Memorandum Opinion and Order*, 46 Fed. Reg. 45188, published September 10, 1981, the following issues were specified:

> 1. To determine whether the proposed operation would cause contour overlap with station WPGW, Portland, Indiana, in violation of Section 73.37(a) of the Commission's Rules.
>
> 2. To determine whether the proposed antenna system can be adjusted and maintained within the proposed limits of radiation.
>
> 3. To determine, in light of the evidence adduced pursuant to the foregoing issues, whether grant of the application would serve the public interest, convenience, and necessity.

Findings of Fact

3. GSM urges that the issues specified in this proceeding are solely of a technical nature seeking to determine in the first instance whether there would be overlap of the 0.025 mV/m contour of station WPGW, Portland, Indiana, and the proposed 0.5 mV/m contour of GSM and secondly, whether the antenna system proposed is capable of adjustment and maintenance during operations. As purely technical issues, states GSM, the questions presented are ideally suited for action by summary decision. Here the technical facts have been established and what remains is the technical analysis of those facts and the legal conclusions to be drawn therefrom. GSM sets forth in an affidavit of Harold L. Kassens, GSM's consulting engineer, an analysis of the data available which, in its view, clearly warrants findings on both technical issues in the favor of GSM and a grant of its application.

Issue 1

A. *WPGW's 0.025 mV/m Contour*

4. Continuing its argument, GSM states, "At this time, there are four separate sets of measurements which seek to establish where the .025 mV/m contour of station WPGW, Portland, Indiana lies.[1] The first of these measurements were conducted by GSM and were filed with its original application in 1975. These showed the contour falling at 108 miles.

5. "The second set of measurements were conducted on December 31, 1976 and January 1, 1977 by [a Mr. Ball] one of the engineer's for Greater Mansfield Broadcasting Company, the licensee of stations WCLW and WCLW-FM, Mansfield, Ohio, and filed as part of a Petition to Deny the GSM Media application. That set of measurements showed a considerable difference between GSM Media's measurements and extended the WPGW contour beyond the proposed GSM Media site.

6. "The third and fourth sets of measurements resulted from a letter sent to GSM Media and WCLW in January, 1978 by the Chief, Broadcast Bureau requesting the parties to take joint measurements. Because of considerable antagonism that had developed, the parties could not agree on 'joint' measurements but did conduct what has been labeled as 'concurrent' measurements on July 18–20, 1978. These measurements, together with separate analysis were submitted by WCLW's consulting engineer, Harold Munn, and GSM Media's then consultant, Serge Bergen. Bergen's analysis of his own (GSM Media's) set of measurements finds the WPGW contour at 106 miles. (Kassens affidavit at p. 4). Munn submitted an analysis of both

---

[1] It has been calculated that a distance of 128.2 miles separates WPGW and GSM's proposed site. (Kassens affidavit at p. 10.)

GSM Media's measurements and his own (WCLW's) measurements. Munn found that the GSM Media measurements should be analyzed to show a distance of 117.5 miles for the WPGW contour.[2] Surprisingly, Munn's analysis of *his own* measurements shows the WPGW .025 mV/m contour at 115.3 miles or 1.7 miles *less* than his analysis of GSM Media's measurements. (Kassens affidavit at pp. 4–5)."

7. Further, GSM urges that it is well recognized that when field measurements are submitted to the Commission they are to take precedent over predicted calculations. The major caveat is that the field measurements are valid. Under the situation at hand, as explained by Mr. Kassens, both the original measurements by GSM and Mr. Ball's December 31, 1976, and January 1, 1977, measurements failed to indicate that concurrent readings of the directional antenna of WPGW were made. (Kassens affidavit at p. 7.) Also, the Ball measurements were totally out of sync with the other three sets of measurements—including WCLW's "concurrent" measurements. Since all four sets of measurements show an inverse distance field at one mile of 195 mV/m (the proof of performance value for WPGW)[3] and all four were made to a distance of approximately 117.5 miles, the Ball results appear to reflect that some major deviation from the norm was involved. Thus, it is submitted that the only two sets of measurements that remain to be "analyzed" are the "concurrent" July 1978 measurements.

8. As reflected above, and as set forth in Mr. Kassens' affidavit, he has "averaged" the "concurrent" measurements, using both the GSM and WCLW measurement data, and analyzed the WPGW contour to fall at 116 miles. (Kassens affidavit at p. 8.) This "average" would be above *Munn's own analysis of his own (WCLW's) set of measurement of 115.3 miles.*[4] [5]

B. *The GSM 0.5 mV/m Contour*

9. With its application, GSM submitted the results of a field test survey of GSM's proposed 0.5 mV/m contour from its proposed site. Utilizing this data[6], Mr. Kassens has analyzed the data and

---

[2] Munn and WCLW's counsel both have argued that the GSM measurements were not validly conducted and should be rejected.

[3] Previously, Munn has complained that his measurements were distorted because of the WPGW operation.

[4] Thus, if one were to accept WCLW's earlier argument that the GSM "concurrent" measurements were also to be rejected as invalid and were left with only WCLW's own measurements, the WPGW contour would fall at the 115.3 mile point, some 0.7 miles less than the average.

[5] Mr. Kassens also deals with and explains away the "stub" measurements conducted by Ball *after* the "concurrent" measurements were made (Kassens affidavit at pp. 8–9). These *additional* measurements, in addition to being contrary to the technical standards were also contrary to the Commission's January 1978 letter seeking to terminate the pleading war involved.

[6] WCLW has on three previous occasions attempted to discredit this data and on

concluded that the proposed 0.5 mV/m contour of GSM will fall at a distance of 10.2 miles. (Kassens affidavit at p. 10.)

C. *Separation between Contours*

10. Recognizing that the calculated distance between the WPGW site and the GSM proposed site is 128.2 miles (Kassens affidavit at p. 10), GSM continues its argument that if we took the analyzed distance of the GSM 0.5 mV/m contour at 10.2 miles and the WPGW 0.025 mV/m contour at an "averaged" distance of 116 miles, it is evident that *a two mile* separation occurs. Even omitting averaging and accepting *only* WCLW's *own* "concurrent" measurements and Munn's *own* analyses, the contour would fall at 115.3 miles or 2.7 miles separation.[7] Therefore, GSM states, whichever is accepted GSM or WCLW alone or both averaged, even using WCLW's own analysis, an adequate separation exists and the first issue must be found in favor of the applicant.

Issue Two

A. *Stability*

11. The affidavit of Mr. Kassens provides a complete answer to the questions facing the Chief, Broadcast Bureau at the time of designation. Not only does Mr. Kassens' statement confirm that the array would be stable but also GSM has agreed to take certain steps to ensure that proper variations will be maintained.[8]

B. *Suitability*

12. In their various pleadings, WCLW has previously raised questions concerning the suitability of the proposed site and the effect thereof on the directional operation. Again, Mr. Kassens' affidavit (pp. 17–21) demonstrates the problems alleged by WCLW can be readily overcome—should they actually arise—by usual procedures normally followed in like situations. In short, there is nothing that WCLW has raised that has not been routinely handled by many Commission licensees in the past.[9]

---

each occasion its contention has been rejected. See *Memorandum Opinion and Order, supra*, at para. 5. *Memorandum Opinion and Order*, FCC 82M-0133, released January 18, 1982; *Order*, FCC 82M-2400, released August 5, 1982.

[7] If one took *only* the GSM measurements and *only* accepted Munn's analysis, the separation would be 0.5 miles.

[8] See also affidavit of Gunther S. Meisse, GSM's President, confirming that the statements made by Mr. Kassens relating to the proposed array and site would be complied with. (Also, Kassens affidavit at pp. 16–17.)

[9] Meisse's affidavit confirms the willingness of GSM to take the steps necessary to meet problems should they arise.

C. *Proposal will Comply with Commission Requirements*

13. It is evident from Mr. Kassens' discussion that the averaging proposal can be adjusted and maintained.

14. GSM concludes that, the technical issues specified having been shown to require action favorable to GSM, summary decision should be granted allowing the application of GSM to be granted.

15. Greater Mansfield's opposition suggests that the GSM motion does not resolve the many conflicts of fact which remain. Stating that there is a clear conflict of engineering opinion of whether there would be prohibited overlap, Greater Mansfield urges that this conflict can only be resolved by a full evidentiary hearing. Further, Greater Mansfield contends that GSM's motion is predicated on a basic misunderstanding, and that its engineer denies that Greater Mansfield's measurements show that the location of the WPGW "nuisance contour" is closer to WPGW than would be shown by the GSM measurements. Also that GSM has failed to utilize valid measurement data, which must be taken into account. Among other reasons, Greater Mansfield states that where many "crucial" facts are in sharp dispute, summary decision would be wholly inappropriate.

16. In its "Comments," the Bureau notes that GSM maintains that only two sets of measurements are valid, and that GSM's engineering analysis of an "average" of those two sets establishes that there would be no contour overlap between the GSM 0.5 mV/m contour and the WPGW 0.025 mV/m contour; that analysis of either one of the two sets, without averaging, shows that there will be an adequate separation of contours. Supporting GSM's motion, the Bureau says that its engineering staff conducted an analysis "of all sets of field measurements." That the Commission requires that an engineering analysis "use an average effective conductivity determined from all available data. . . ." citing *United Broadcasting Company, Inc.*, 1 FCC 2d 555, 559 (1965), which the Bureau says it has done. Based on that analysis, the Bureau concludes with GSM that there would be no prohibited contour overlap between WPGW and GSM's proposed contour. That being so, the Bureau continues, there being no genuine issue of material fact, the overlap issue should be resolved in GSM's favor. Also, the Bureau urges that the issue concerning the maintenance of GSM's proposed antenna system should likewise be resolved in GSM's favor, in that GSM has established that its antenna system can be adjusted and maintained within the proposed limits of variation. The Bureau's position is enhanced by an appropriate verified affidavit of its engineer.

17. Respecting Greater Mansfield's uncommon Motion for Leave to File Reply, premised on its notion of a further "kick at the can," in the main, because of the Bureau's "supporting comments," suffice to say, that the "can" has been more than liberally kicked, almost to

the point of annihilation, if one but recalls the several grants of time extensions to the parties here, not to mention Greater Mansfield's granted extension of October 15, 1982, beyond its earlier profession of needing not more than "a flat period of 30 days" granted by *Order*, FCC 82M-2941, released September 23, 1982. But beyond this observation, GSM's opposition of November 10, 1982, states the proposition well—that the Bureau's analysis is not "new evidence" but simply an analysis of factual data before this agency—hence, GSM's argument[10] is persuasive and is adopted. Thus, Greater Mansfield's Motion for Leave must be AND IS HEREBY DENIED; accordingly, its proffered Reply filed November 10, 1982, IS REJECTED, as unauthorized.

Conclusion

18. Greater Mansfield would have it that, and otherwise correctly so, "Summary Decision should be granted only where the truth is clear, where the basic facts are undisputed, and the parties are not in disagreement regarding material factual inferences that may be properly drawn from such facts." *Big Country Radio, Inc.*, 32 RR 1119 (Rev. Bd. 1975). Its position, however, after review of all available factual submissions, is fatally flawed. This, not "because the Broadcast Bureau recommends such action" (as Greater Mansfield would have it); rather, it is the clear persuasiveness of the Bureau's analysis comprehending "[a]ll of the FIM [field intensity measurements] taken both by GSM and GMBC [Greater Mansfield]" and its consequent conclusion that "GSM's proposed 0.5 mV/m and WPGW's 0.025 mV/m criteria do not overlap." GSM's position is equally convincing. Though it very well may be that there are conflicting *views* or *opinions*, *vis a vis* the respective adversary engineers, this does not amount to nor equate with the sole and compelling rational inference from the facts presented that a genuine issue of material fact remains to be determined. Not only are the analyses of the factual data in dispute made by the Bureau convincing, they are soundly supported in apposite precedent, *infra*. Thus, taking into account the various provisions permissive of Summary Decision in Rule 1.251, as well as abiding precedent—*United Broadcasting Company, Inc.*, *supra*, and rendering the close scrutiny of Movants' papers with a full consideration of Greater Mansfield's prayer concerning the need for cross-examination, it is concluded that no genuine issue of material fact remains for determination at hearing respecting the given issues at bar.

---

[10] GSM Media also alludes to the notion that what Greater Mansfield has been pursuing throughout this proceeding by its pleading tactics "is seeking for straws to keep its battle against new competition alive." That question, even were it true, need not be reached.

That being so, GSM Media Corporation's Motion for Summary Decision may be AND IS HEREBY GRANTED[11]; thus the outstanding issues in this proceeding ARE RESOLVED favorably to GSM Media Corporation.

Accordingly, the application of GSM Media Corporation for the captioned facilities at Ontario, Ohio, may be AND IS HEREBY GRANTED, with the following *caveat* (as stated in the Designation Order, *Memorandum Opinion and Order, supra*):

> An antenna monitor of sufficient accuracy and repeatability, and having a minimum resolution of 0.1 degree phase deviation and 0.1 percent sample current deviation, shall be installed and continuously available to indicate the relative phase and magnitude of the sample currents of each element in the array, to insure maintenance of the radiated fields within the authorized values of radiation.
>
> Upon receipt of operating specifications and before issuance of a license, permittee shall submit the results of observations made daily of the base currents and their ratios, relative phases, sample currents and their ratios, and sample current ratio deviations for each element of the array, along with the final amplifier plate voltage and current, the common point current, and field strengths of each monitoring point for both nondirectional and directional operations for a period of at least 30 days, to demonstrate that the array will be maintained within the specified tolerances.
>
> If the Commission ultimately adopts a rule prohibiting commonly owned AM and FM stations in the same market, permittee will divest itself of its AM station or sever its relationship with WVNO(FM), Mansfield, Ohio, in accordance with the requirements established in such rulemaking proceeding.

Nothing further remaining, this proceeding IS TERMINATED. IT IS SO ORDERED.

FEDERAL COMMUNICATIONS COMMISSION
JAMES F. TIERNEY, *Administrative Law Judge*

---

[11] Under Rule 1.257, this, as a Summary Decision, is to be accorded similar appellate disposition as with an Initial Decision under Rule 1.276. Thus, in the event exceptions are not filed within 30 days after the release of this Summary Decision and the Commission does not review the case on its own motion, this Summary Decision shall become effective 50 days after its public release.

In the Matter of the Applications of GTE SATELLITE CORPORATION For authority pursuant to Section 214 of the Communications Act of 1934, to lease and operate transponder capacity from Telesat Canada for the provision of communication common carrier services within the contiguous United States,	File No. W-P-C-4355
and	
GTE SATELLITE CORPORATION For authority to construct and operate a $^{14}/_{12}$ GHz transmit/receive Telemetry, Tracking and Command (TT&C) earth station at Terre Haute, Indiana.	File No. 000179-DSE-P/L-83

MEMORANDUM OPINION, ORDER AND AUTHORIZATION

(Adopted June 2, 1983 Released June 23, 1983)

BY THE COMMISSION: COMMISSIONER FOGARTY NOT PARTICIPATING; COMMISSIONER DAWSON ISSUING A SEPARATE STATEMENT; COMMISSIONER RIVERA CONCURRING AND ISSUING A STATEMENT.

1. The Commission has before it a petition for reconsideration of *GTE Satellite Corporation*, 90 FCC 2d 1009 (1982) (hereinafter referred to as *Order*) and a related application of GTE Satellite Corporation (GSAT) for authority to construct and operate a $^{14}/_{12}$ GHz transmit/receive TT&C earth station. The petition was filed

pursuant to Section 1.106 of the Commission's rules (47 C.F.R. § 1.106) by United States Satellite Broadcasting Company, Inc. (USSB). Comments generally supporting USSB's petition were filed by Satellite Business Systems (SBS) and Satellite Television Corporation (STC). GSAT and United Satellite Television (USTV)[1] oppose the petition and also have filed motions to strike the comments of SBS and STC. We also have received a Petition to Accept Late Filed Pleading and Comments of SPACE, the Society for Private and Commercial Earth Stations, generally supporting the grant of GSAT's application and denial of reconsideration.[2] USSB also has filed a petition to deny GSAT's TT&C application, to which GSAT and USTV have responded.[3]

Background

2. On February 17, 1982, the Commission received an application from GSAT requesting authority to lease 10 transponders on Telesat Canada's ANIK-C satellite to provide communication common carrier services. Public notice of this application was made on March 3, 1982. No comments were received. On June 18, 1982, the Commission received a letter from USTV explaining its proposed use of the GSAT facilities and requesting expeditious action on the GSAT application.[4] On August 5, 1982, the Commission granted the GSAT application.

---

[1] United Satellite Communications, Inc. is the new corporate name of United Satellite Television. However, for the purpose of consistency we will continue to refer to the entity as USTV.

[2] Additional pleadings were filed in this matter after GSAT informed the Commission of a change in circumstance. See paragraphs 26–29, *infra*. In total, more than 30 pleadings have been filed in this proceeding, of varying procedural regularity. We have considered (but not separately stated) the arguments of all the parties because doing so has not delayed this proceeding, has permitted all interested parties an opportunity to comment, and has provided a fuller record upon which to base our decision. *See* Associated Press, 72 FCC 2d 760, 762–63 (1979); Columbia Broadcasting Systems, Inc., 46 FCC 2d 903, 905–06 (1974).

We reject USSB's petition for oral argument, filed May 27, 1983, in which it requests the Commission to hold oral argument on the question of whether non-licensees (such as USTV) should be subject to certain obligations imposed on broadcasters. In addressing a similar issue previously, we declined to impose these obligations at this time, but stated we may need to apply regulatory constraints on common carrier DBS licensees or their programmer customers "if circumstances arise to suggest they are needed." Direct Broadcast Satellites, 90 FCC 2d 676, 711 (1982). If USSB believes circumstances exist warranting imposition of constraints, they should be raised in a petition for rulemaking instead of an individual proceeding.

[3] Although worded differently, the arguments made by USSB in this petition essentially parallel those raised in its petition for reconsideration and challenge the merits of the underlying proposal of GSAT and USTV. While we have not separately stated all those arguments we have examined and considered them and the responses thereto in our decision.

[4] This information was in a letter to the Chief, Common Carrier Bureau.

3. In the *Order*, we gave GSAT authority to acquire and operate satellite transponder capacity under a lease arrangement with Telesat Canada. GSAT's customer, USTV, was to use GSAT's services to provide video programming to small receiving antennas in the 11.7–12.2 GHz fixed satellite band. According to USTV, its customers would include small cable television systems, hotels, motels, hospitals, low power television stations, STV and MDS stations and multiple and single unit dwellings. Authority was granted until December 31, 1984, by which time GSAT must transfer its services to a United States satellite, presumably GSAT's GSTAR satellite.[5]

4. In the *Order*, we pointed out that USTV's proposal to provide video programming to single unit dwellings raised a question as to the consistency of GSAT's application with the order adopting interim rules for Direct Broadcast Satellite (DBS) service[6] and with the United States' proposal to the World Administrative Radio Conference (WARC) to allocate separate frequency bands to the fixed satellite and the broadcast satellite services.[7] Having raised the issues, we concluded, at footnote 5, that our position at WARC and the order adopting interim rules for DBS were primarily premised on two concerns: (1) "the belief that high quality [DBS] services would require satellites operating at significantly higher powers than existing and proposed fixed satellite systems," and (2) that "the potential interleaving of such satellites of disparate power sharing the same frequency bands would have a detrimental impact on the Commission's ability to make necessary changes in the spacing of evolving communications satellite systems." We pointed out that the WARC did recognize continued sharing by adopting Radio Regulation 836 which provides that the band set aside for fixed satellite services (11.7–12.1 GHz) could be used for broadcasting satellite services but only at restricted power and without causing greater interference or requiring more protection from interference than the coordinated fixed-satellite service frequency assignments. Therefore, because the GSAT application proposed to provide USTV with relatively low power service (and would otherwise be subject to technical constraints on fixed satellites), we concluded that there was not inherent inconsistency between grant of the application and the Final Acts of the WARC or with our interim DBS rules.

5. Because USSB raises the issue of procedures relating to the Commission's authorization of DBS services, we will summarize briefly the DBS service and Commission procedures for processing DBS applications.

6. DBS service is an experimental technology which utilizes

---

[5] GTE Satellite Corp., 84 FCC 2d 562 (1981).

[6] Report and Order in Docket No. 80–603, 90 FCC 2d 676 (1982).

[7] Report and Order in Docket No. 20271, 70 FCC 2d 1193 (1978).

high-powered satellites and small parabolic receiving antennas for the distribution and reception of video programming. Though frequencies have been allocated for DBS service by the 1979 WARC, final frequency and orbital allotments and other technical parameters for the United States' broadcasting satellite band will not be made until the Western Hemisphere Regional Administrative Radio Conference (RARC) to be held later this month.

7. In 1980, the Commission began a process to establish regulatory policies for DBS to ensure that it serves the public interest.[8] On June 1, 1981, the Commission issued a *Notice of Proposed Policy Statement and Rulemaking* (*Notice*) to consider proposed policies and rules to govern the authorization of DBS service prior to RARC - 83.[9] At the same time, the Commission accepted STC's application for filing and established a 45-day cutoff period for the submission of other applications to be considered with STC's application. The cutoff date ultimately established for competing DBS applications was July 16, 1981.

8. On October 28, 1981, the Commission released a Public Notice (FCC 81–507), 45 Fed. Reg. at 32497, accepting for filing the applications of USSB, Focus Broadcast Satellite Company, and six others. In a *Report and Order* issued in the DBS docket,[10] the Commission concluded that interim DBS authorizations, on an experimental basis, would serve the public interest, subject to the policies and rules set forth in the *Report and Order*. In response to a petition from STC, the Commission released a *Memorandum Opinion and Order*,[11] on November 3, 1981, finding that a number of interim DBS applications were incomplete and unacceptable for filing. This decision was affirmed in a subsequent *Memorandum Opinion and Order*.[12]

9. On November 4, 1982, the Commission granted the applications of USSB, among others, and dismissed the application of Focus Broadcast Satellite Company. The Commission also determined that

[8] Notice of Inquiry in Gen. Docket No. 80–603 FCC 80–565, released October 29, 1980 (45 Fed. Reg. 72719 (November 3, 1980)). On December 17, 1980, the Commission received an application from STC requesting authority to begin construction of satellites for a satellite-to-home video broadcasting system. The Commission placed STC's application in the docket file and invited public comment on the application.

[9] 86 FCC 2d 719 (1981). In this Notice, the Commission proposed that downlink operations for DBS systems be authorized in the 12.2–12.7 GHz band, and that the 17.3–17.8 GHz band be used for DBS uplinks.

[10] 90 FCC 2d 676 (1982).

[11] 88 FCC 2d 100.

[12] 89 FCC 2d 177 (1982). An appeal of this decision was dismissed. National Christian Network, Inc. v. FCC, No. 82–1345 (D.C. Cir., appeal filed March 31, 1982); Motion for Voluntary Dismissal filed November 18, 1982; dismissed by the court November 22, 1982.

use of domestic fixed satellites would be considered in the context of modifications to the domestic satellite authorizations.

Petition for Reconsideration

10. In its petition, USSB asks the Commission to rescind the GSAT grant, or in the alternative, condition the grant by prohibiting GSAT from offering television service intended for individual reception by the general public.[13] USSB argues: (1) that the grant to GSAT was made without benefit of public comment from interested parties because the public notice failed to describe adequately the nature of the proposed service;[14] (2) that the "GSAT/USTV proposal is an errant DBS application" which must be treated pursuant to the procedures and policies established in General Docket No. 80–603; and (3) that GSAT has not satisfied the requirements of Section 214 of the Communications Act, 47 U.S.C. § 214, in that it has not demonstrated the adequacy of its proposed DBS service, and (4) that the Commission did not find that grant of the application would serve the public convenience and necessity because it did not know the true use for which the facilities would be employed.

11. USSB explains it has standing because as an applicant for interim authority to provide DBS services, its interests will be adversely affected if GSAT's grant is not rescinded. It claims that by filing an acceptable DBS application by July 16, 1981 it became entitled, together with others, to have its application receive consideration prior to applications which were not submitted in substantially complete form until after July 16, 1981.

12. According to USSB, the fact that the public was not given notice that USTV planned to provide DBS service is fatal to the GSAT grant because the public was denied an opportunity to be heard. "It is well settled," USSB states, "that 'the Commission may not, however, inadvertently, give public notice of a cut-off date which does not fairly advise prospective applicants of what is being cut-off by the notice . . .' *Ridge Radio Corporation* v. *FCC*, 292 F.2d 770, 773 (D.C. Cir. 1961)." USSB contends that this principle clearly applies to petitions opposing the grant of an application. It states that GSAT and USTV acted in concert to withhold from the public and the Commission the fact that USTV would provide direct broadcast, not fixed satellite service.

13. USSB contends further that because GSAT is proposing to offer a vehicle for the provision of DBS service, GSAT's application must be considered and processed according to the policies and

---

[13] SBS and STC argue that direct-to-home service is not appropriate in the fixed satellite service.

[14] Although STC agrees with USSB, SBS does not believe that the adequacy of the notice and comment procedures are at issue here.

procedures which the Commission has adopted in Docket 80-603 to govern interim DBS applications.[15] It maintains that equity and fair play require that the Commission not give GSAT's application, filed February 17, 1982, equal priority with the applicants who filed acceptable applications on or before the cut-off date of July 16, 1981.

14. In addition, USSB suggests that the failure to apply the DBS procedures to the GSAT/USTV proposal raises serious questions about the validity of the processing scheme which the Commission has applied to first and second round DBS applicants, and is inconsistent with the position it has espoused before the U.S. Court of Appeals in *National Christian Network, Inc.* v. *FCC, supra* note 12.[16]

15. USSB argues that the DBS proceeding encompasses proposals to use the 11.7–12.2 GHz band. This is evidenced, USSB claims, by the application of Western Union and Focus Broadcast Satellite Company in which Focus proposed to provide DBS programming service in the 12.1–12.2 GHz band via Western Union's Advanced Westar satellite. USSB notes that the Commission, in its *Report and Order* (*supra*, note 6), authorizing experimental DBS services, found the Western Union/Focus proposal appropriate for consideration in that proceeding. The Commission stated that proposals to operate DBS systems outside the 12.2–12.7 GHz band raised significant legal, policy, and technical issues. Similarly, USSB contends, common carriers offering DBS service and these carriers' customers are equally subject to DBS policies and procedures.

16. Substantively, USSB argues that grant of the GSAT/USTV proposal has significant policy implications which need to be addressed in a notice and comment rulemaking proceeding. According to USSB, customers who invest in the receive equipment recommended by GSAT/USTV for use with their system will receive a poor quality television picture and will not be able to receive other DBS signals with their antennas oriented to receive the USTV signal. USSB suggests that USTV will not be able to move to the GSTAR satellite system. Even if USTV can use GSTAR, USSB claims that customers will need antennas with improved discrimination to receive the same quality signal due to the proximity of other satellites operating in the fixed satellite band. USSB argues, therefore, that the GSAT/USTV proposal is directly relevant to the

---

[15] USSB uses the definition of "broadcast satellite service" developed by the International Telecommunications Union (ITU) for support of its position. ITU defines the broadcast satellite service as a "radiocommunication service in which signals transmitted or retransmitted by space stations are intended for direct reception by the general public." ITU, Radio Regulations (Geneva 1982), Art. 1, § 3.18. USSB claims that several of USTV's channels will be advertiser supported.

[16] USSB claims that the Commission's position is that for public interest reasons, the cut-off rules will not be waived to permit late-filed applications to be considered with first round applicants, nor will such applications be accepted *nunc pro tunc*.

overall issue of DBS technical standards, which is under consideration in the DBS proceeding. Thus, it claims, the carrier's facilities are not adequate to provide the service proposed and the public's interest is not well served.

GSAT's Opposition

17. In its opposition, GSAT challenges USSB's position that the Commission failed to give adequate notice of GSAT's application. GSAT states that public notice of applications need only be sufficient to "give interested parties a thirty-day opportunity to learn of an application or substantial amendment. . . ."[17] The notice, GSAT declares, was not to be a total education in and of itself, but only a pointer to the existence of an application.

18. Furthermore, GSAT denied that its application is a DBS filing. According to GSAT, its acquisition of transponders on Telesat Canada's Anik-C satellite, as a common carrier, is for the purpose of distributing the programming services of its customer "point to multipoint." Moreover, it states that when the initial application was filed, the feasibility of direct-to-home transmission was unknown, so it believed it prudent to obtain authority to provide a variety of different services.

19. While GSAT recognizes similarities between fixed satellite service and DBS services, it denies that the similar characteristics transform GSAT's application into a DBS proposal. GSAT points out that it requested authority to use a different set of frequencies than is allocated for DBS and that in accepting the Commission's grant it also accepted power limitations not placed upon DBS services.

20. GSAT also argues that as a common carrier its duty is "to carry for all people indifferently," and to allow its customers to use its facilities to "transmit intelligence of their own design and choosing."[18] Thus, to restrict delivery of USTV's television services, based on whether or not their terminations were single unit dwellings, GSAT maintains, would be in derogation of its duty as a common carrier, and inconsistent with the carrier's statutory responsibility to provide service upon reasonable demand. In GSAT's view, there is nothing unreasonable about USTV's demand to transmit television programming to all fixed points within GSAT's authorized service area where USTV elects to install receiving earth stations.

21. Finally, GSAT finds unpersuasive, and irrelevant, USSB's warning that the public interest will be disserved by GSAT's service. GSAT states that it has explained why and how interference at small

---

[17] Amendments of Parts 1 and 21, Docket No. 19905, 60 FCC 2d 549, 551 (1976).

[18] GSAT cites National Association of Regulatory Utility Commissioners v. FCC, 413, 525 F.2d 630, 641, n. 58 (1976).

antennas can be minimized if the Commission reduces orbital spacing from 3 degrees to 2 degrees.[19] Moreover, GSAT finds "ludicrous" USSB's supposition that USTV would accept the commercial risks of inability to transfer from temporary use of the ANIK system to permanent use of the GSTAR system. GSAT maintains that the decision whether the price and quality of USTV's service is acceptable is best made by consumers, not by potential competitors or the Commission.

USTV's Opposition

22. In its opposition, USTV asserts that USSB's petition is without merit and must be denied. In addressing USSB's allegation that the public did not receive adequate public notice of GSAT's proposal, USTV points out that the notice provided all of the information required by Section 214 of the Act and Section 63.01 of the Commission's rules. USTV further notes that the Commission's common carrier facilities authorization process does not normally concern itself with the end uses of transmissions delivered over those facilities and there was no obligation for GSAT to divulge the business plans of its customer in its application.

23. Similarly, USTV rejects USSB's contention that GSAT's application is a "DBS application" and the *Order* is a "DBS authorization." USTV reasons that its proposed service using existing fixed satellites to distribute video programming on fixed 11.7–12.2 band satellite frequencies with restricted power, cannot be considered a DBS service. By its very terms, USTV states, DBS entails new DBS satellites in the 12.2–12.7 GHz band with far higher power.

24. In support of this position, USTV cites 47 C.F.R. § 100.1 which specifies that DBS service "shall operate in the frequency band 12.2–12.7 GHz." Moreover, USTV asserts that both the interim DBS *Notice, supra* note 9, and the subsequent DBS *Report and Order, supra* note 6, make clear that the new interim processing procedures relate to proposals for construction of new DBS satellites capable of transmissions at high power in the 12.2–12.7 GHz band. In any event, it states, service to individual residences will constitute only a part of its service.

25. USTV finds erroneous and irrelevant USSB's contentions that USTV's switch to GSTAR will require modification of the reception equipment that will disrupt service and will be costly to customers, and that implementation of 2 degree spacing of orbital satellites will impair the quality of USTV's service. USTV insists that the receive-only antennas that it would employ are designed for

---

[19] GSAT cites its comments filed March 8, 1982 in Satellite Space Utilization Docket No. 80–741; its petition for reconsideration of Memorandum Opinion and Order, FCC No. 82–233, released May 20, 1982; and its application filed July 12, 1982, File No. 2084-DSS-LA-82.

reception of GSTAR satellite transmissions, and that these antennas also are fully capable of receiving ANIK - C transmissions.

GSAT's January 12 Letter

26. After the pleading cycle had ended regarding the reconsideration petition, GSAT submitted a letter announcing two new developments: (1) that USTV would only need 4 or 5 transponders for its initial service instead of the 10 originally requested and (2) that GSAT was considering requesting modification of its GSTAR satellite construction authorizations to increase the maximum power level on certain transponders on the satellites.[20]

27. The GSAT letter was placed on public notice so that interested parties could respond. Comments were received from various entities including the parties who had participated previously in the reconsideration proceeding.[21] While several issues were similar to those raised previously, the primary issue in these comments is whether USTV's decision to reduce the number of ANIK-C transponders to be leased has any impact on GSAT's authorization.

28. SBS initially claimed that it has available for lease 5 transponders with EIRP levels of 46 dBW which it maintains are adequate signal levels for the service proposed by USTV. Therefore, SBS argues, GSAT should not now be permitted to lease any capacity from Telesat Canada since GSAT's application no longer falls within the intent of the 1972 intergovernmental agreement between the United States and Canada.[22]

29. In response, USTV asserts that contrary to SBS' statements, SBS only made firm commitments to provide 4 transponders, with a fifth becoming available if another customer did not exercise an option. It further contends that even if it had 5 transponders available, SBS could not provide the requisite 47 dBW power level that USTV's business plans require.

Discussion

30. Our *Order* granted GSAT authority pursuant to Section 214 of the Act to acquire by lease ten transponders on Telesat Canada's Anik-C satellite. These channels were to be offered to GSAT's customer, USTV, pursuant to tariff. We noted that Section 214 requires that we find a proposed acquisition or operation of new lines

---

[20] GSAT later decided not to pursue the modification request. GSAT letter dated January 31, 1983.

[21] General Instrument Corporation, the National Black Media Coalition (NBMC), the National Citizens Committee for Broadcasting/Telecommunications Research and Action Center (NCCB) and Prudential Insurance Company of America, filed their inital comments in response to the public notice.

[22] For support, SBS cites RCA American Communications, Inc., 50 FCC 2d 406, 413 (1974).

will serve the public convenience and necessity before granting Section 214 authority. We further noted that such authority ordinarily will be granted for private line services, unless there is some basis to believe a grant is likely to produce results that conflict with the goals of the Communications Act. Because none of the arguments presented by the parties demonstrates that results inimical to the public interest will result from the authorization, or otherwise demonstrate the authorization was erroneous, the petitions for reconsideration and the relief requested in the supporting comments and comments filed in response to the January 14, 1983 public notice, will be denied. The petition to deny the application to construct and operate an uplink earth station also will be denied. The Section 214 authorization will be modified, however, to reflect the reduction in need from 10 transponders to 5.

Nature of Service

31. None of the parties challenge the contention of the applicant that the distribution of program material to small cable television systems, hotels, motels, hospitals, low power TV stations, STV and MDS stations is properly within the scope of the fixed satellite service. *See* 47 C.F.R. § 2.1. Such services are also consistent with GSAT's current domestic satellite authorizations.[23] To this extent, then, our *Order* can not be at issue. It is only USTV's provision of service to individual residences that raises issues which the parties believe warrant reconsideration. These issues are (1) proper notice was not made to the public that DBS service was proposed (2) as a DBS application, the proposal is subject to the procedures outlined in General Docket No. 80-603; and (3) the public interest will not be served because the technical quality of the received signal will not be acceptable to the public.

32. As we explained at note 5 of the *Order*, the GSAT proposal is not inconsistent with our activities in General Docket 80-603. The proposal is not Direct Broadcast Satellite Service for purposes of the Commission's rules, is proper in the fixed satellite service bands, and should not have been processed pursuant to the Direct Broadcast Satellite procedures.

33. Section 100.1(b) of the rules, 47 C.F.R. § 100.1(b), specifically states that the Rules in Part 100—Direct Broadcast Satellite Service—were designed to make available the frequency band 12.2–12.7 GHz for direct broadcast satellite service. The service is characterized by (1) high power geostationary satellites, (2) operations in the 12.2–12.7 GHz band, and (3) direct reception of signals by

---

[23] *See* GTE Satellite Corporation, 43 FCC 2d 1141 (1973), 57 FCC 2d 147 (1975), and 84 FCC 2d 562 (1981); 47 C.F.R. § 63.07. It should also be noted that DBS facilities may also be used to serve viewers at such locations in addition to direct reception at individual residences.

the general public using small, inexpensive earth terminals as an initial satellite design objective.[24] While several of these characteristics may be general in the abstract, the difference between DBS and the GSAT proposal are clear: (1) both the Anik-C and the GSAT satellites are designed to operate with approximately $^1/_{10}$th the power of the proposed DBS satellites; (2) the Anik-C (and later, GSTAR) satellite will operate in the 11.7–12.2 GHz band; and (3) the antennas used by USTV will be approximately twice the size of those used in DBS (4–6 ft. v. 2.5 ft.). The GSTAR satellites will operate with 2° spacing, while DBS satellites are proposed to be operated with 8°-10° or larger spacing.[25]

34. The three factors pointed to by USSB as evidencing that GSAT will be providing DBS service—television service by satellite, direct to the home, by means of 1.2–2.5 meter antennas—are present today in various fixed services. For example, television service has always been considered an appropriate domestic fixed satellite offering.[26] Nor is service by definition precluded to homes.[27] And USTV represents that the location of all homes receiving its service will be known, which distinguishes it from broadcast services where specific points of reception are not known.[28] Even if USTV's service to homes could be considered a broadcast service, it still would not be prohibited. Our present table of allocations allows broadcasting and fixed satellite services in the 11.7–12.2 GHz band. See Section 2.106 Table of Frequency Allocations, 47 C.F.R. § 2.106; *First Report and Order* in General Docket No. 80–739, adopted June 1, 1983. Finally, services (although not video) are now being routinely supplied by domestic fixed satellites to antennas even smaller than 1.2 meters.[29]

---

[24] Report and Order in General Docket No. 80–603, 90 FCC 2d 676, 677 n. 1; 723 (1982).

[25] *See* Report and Order in Gen. Docket No. 80–398, FCC 83–102, (released March 21, 1983), at para. 48.

[26] *See, e.g.*, Domestic Communications Satellite Facilities, 22 FCC 2d 86, 88 (1970), where we found that domestic satellites "appear to offer unique promise as an economical means of providing service from one transmission point to many reception points, e.g., for the relay of radio and television programs for entertainment, educational and instructional purposes, and for reaching remote, relatively inaccessible areas."

[27] The definition of "fixed-satellite service" parallels that of the terrestrial "fixed-service" in Section 2.1 of our rules, 47 C.F.R. § 2.1. Service to individual residences is not precluded in the Multipoint Distribution Service, a terrestrial common carrier fixed-service. *See e.g.*, Section 21.903 of our rules, 47 C.F.R. § 21.903; Notice of Inquiry, Proposed Rulemaking and Order in General Docket No. 80–112, FCC 80–136 released May 2, 1980 at paragraph 12; Multipoint Distribution Service, 45 FCC 2d 616, 617 (1974).

[28] USTV Responses to STC at para. 12.

[29] While we have established antenna size criteria for *prima facie* findings of consistency with reasonable orbital spacings, we have not precluded the use of any antenna solely on the basis of its size. *See* American Broadcasting Companies, 62 FCC 2d 901 (1977). Antennas as small as 0.6 and 1.2 meters in diameter are

Thus, we cannot accept USSB's characterization that the GSAT/USTV services are DBS and must be processed within the procedural rules adopted in General Docket No. 80-603.

35. Our DBS processing experience to date also demonstrates that USTV's use of GSAT's facilities to distribute video programming to homes does not subject USTV to the processing procedures of Part 100 of our rules. Our treatment of the application of Focus Broadcast Satellite Company, contrary to USSB's contentions, supports this interpretation. Focus applied, *inter alia,* to use a fixed satellite operating in the 11.7-12.2 GHz band (Western Union's Advanced Westar) for "DBS". We found that Focus did not propose to become a licensee of a facility, but only expressed an intention to use the facilities of broadcast and fixed satellite licensees. Accordingly, we found a DBS application by Focus was unnecessary. We stated that Western Union's companion application to modify the authorized fixed satellite Advanced Westar to provide service to Focus in the 11.7-12.2 GHz band would not be considered as part of a DBS proceeding, but rather would be considered as a modification of Western Union's fixed satellite authorization. *See Memorandum Opinion and Order*, FCC 82-498, released December 3, 1982 at paragraphs 120 and 122. Thus, while the General Docket No. 80-603 proceedings did allow for consideration of the extent to which domestic fixed satellites are available and could be used to provide additional program services, use of domestic fixed satellites for DBS-like services must also be consistent with our domsat technical standards and policies.[30] Clearly, the proceedings in General Docket No. 80-603 were not intended to review our regulation of the nature of services that could be provided over domestic fixed satellites in the 11.7-12.2 GHz bands.

36. In summary, GSAT's proposal differs substantially from those addressed in the DBS proceeding in terms of satellite power, receiving antenna size, satellite spacing and, most important, operational bands. USSB's arguments that the GSAT/USTV proposal is an out of band DBS proposal subject to the procedures established in Part 100 must be rejected. Nor have opponents of the proposal demonstrated that the public interest requires restricting uses of fixed satellites to protect prospective General Docket 80-603 DBS entities from competition. The programming operations of USTV do not need to be licensed pursuant to either our domestic

---

now being used by Equatorial Communications and Muzak, respectively, to distribute data and audio programming throughout the country.

[30] One of the serious concerns presented by the Focus/Western Union application to use Advanced WESTAR was the effect of the high power density television carrier on satellite spacing. *See* Petition to Deny by Satellite Business Systems. However, that proposal has since been withdrawn. Moreover, we have addressed the technical basis for these concerns, as well as the procedural aspects of our regulation of domestic satellites, in another proceeding. *See* Report and Order in Docket No. CC 81-704, FCC 83-184, adopted April 27, 1983.

fixed satellite policies or the DBS procedures established in the proceedings in General Docket No. 80-603.[31] No application would be necessary by USTV because USTV is not proposing to build a satellite.

Public Notice

37. As a program distribution service in the fixed satellite service, the notice given of the GSAT Section 214 application was adequate.[32] We indicated the number of channels to be leased, the area within which service is to be provided, and the satellite on which the channels were to be leased.[33] This is sufficient notice in the case of applications to acquire transponders.[34]

---

[31] The argument that the GSAT/USTV proposal is actually a DBS service was also raised by NBMC and NCCB in response to GSAT's January 12 letter. *See* note 21, *supra*. NBMC's main concern is that operators in the fixed satellite band do not have to adhere to the Commission's equal employment opportunity (EEO) rules, whereas DBS operators will. NCCB recommends that the actual operation of the DBS portion of the service be governed by the interim DBS rules and that both GSAT and USTV be bound by the permanent rules adopted after the 1983 RARC. We must reject these arguments also. We have determined that neither GSAT nor USTV is subject to the DBS processing procedures. Since USTV is not licensed as a broadcaster either in the DBS service or otherwise, and is not required to be licensed, it cannot be made subject to our EEO requirements. More importantly, even if some aspects of GSAT's proposed common carrier operation are similar to certain of the DBS proposals, GSAT's operation would be consistent with the interim regulatory policies we have adopted for DBS. Thus, for example, the EEO rules adopted for DBS are applicable only to DBS licensees operating as broadcasters and do not apply to common carrier DBS licensees or their programmer customers. *See* 90 FCC 2d 676, 715; 47 C.F.R. § 100.51(a). Hence, neither GSAT nor USTV would be subject to these EEO requirements in any event. If satellite licensees themselves offer predominently broadcast services, *see* 90 FCC 2d at 709, we would expect them to be subject to the same Title III and related requirements specified for similarly situated DBS licensees.

[32] If it were not for the fact that transponders were being acquired for use in non-U.S. satellites, GSAT would not have had to file a Section 214 application. *See* 47 C.F.R. § 63.07(e) and Competitive Common Carrier Rulemaking, 85 FCC 2d 1 (1981); Orbit Deployment Plan, 84 FCC 2d 584, 612–13 (1981).

[33] The parties cite several cases that they claim support their position on the public notice issue. For example, Ridge Radio Corp. v. FCC, *supra*, para. 12; Central Mobile Radio Phone Service, 65 FCC 2d 648 (1977); Domestic Public Land Mobile Radio Service, 60 FCC 2d 549 (1976); and Carter Mountain Transmission Corp., 32 FCC 459 (1962). These cases, however, are inapposite since they are concerned with the statutory notice requirements for radio licenses under Title III of the Act. Here, GSAT did not propose to be a licensee of the ANIK satellite.

[34] The notice issued March 3, 1982 (Report No. D-108) provided:

> W-P-C-4355 GTE Satellite Corp. (GSAT) FORMAL (Section 63.01) Applicant requests authority to acquire by lease and operate a satellite transponder capacity of 54 Mb/s on each of 10 unprotected preemptible transponders on ANIK-C satellite of Telesat Canada (Telesat) which is to be launched in late 1982 and become operational in mid-January 1983. Telesat will submit appropriate request to the Canadian Dept. of Communications for authority to enter into the lease agreement with GSAT. Canadian satellite capacity is requested because of the unavailability of U.S. domestic satellite capacity. The use of the facility will

38. However, as pointed out by petitioners, GSAT's failure to volunteer more specific information at the outset has caused much confusion about its plans. Various reasons are offered by GSAT for initially describing the proposed service as perhaps including "television, voice, data and facsimile." These include GSAT's desire not to disclose prematurely USTV's marketing plans, and the fact that additional information about a customer's precise use of common carrier facilities generally is not disclosed in a facilities application. We expect such disclosure from applicants in cases such as this where the details of the service might have an effect on regulatory classification. Although greater detail about the precise plans later were disclosed to the Commission, initial disclosure would have removed any argument that the public was not properly apprised of the application.

39. In any event, details of the GSAT/USTV proposal were provided to the Commission and placed in the public file. On our own motion, we fully discussed the relationship of the application with our General Docket No. 80–603 and found that grant of GSAT's application was consistent with our DBS policies. Specifically, we noted our policies to keep the fixed and broadcast satellite bands separate were motivated by concerns of disparate power of the two types of satellites and the resultant effect on satellite spacing. We observed (at note 5) that GSAT would utilize a lower power satellite, that we have proposed to reduce spacing at $^{12}/_{14}$ GHz, and that GSAT would not be provided special protection against interference by virtue of the authorization.

40. Finally, notwithstanding our consideration of the DBS aspects of the USTV/GSAT proposal in the *Order*, we have adopted a liberal pleading schedule on reconsideration so that all arguments are fully aired. There were over thirty pleadings submitted on reconsideration, and a variety of appendices attached thereto, which illuminated the issues raised and discussed all aspects of the proceeding in fine detail. Thus, USSB could and all other interested parties, have been fully heard.

Quality of Service

41. We see no merit in petitioner's claim that the public would be ill served by the quality of the program service offered over domestic fixed satellites. USTV has not claimed to offer the same quality of service that would be supplied by satellitees with the technical parameters being developed for planning the DBS service

---

be to provide communications services into areas not now directly served by GSAT. Communications to be provided may include television, voice, data and facsimile. The subject transponder capacity is to provide interim facilities necessary to meet customer demand prior to the launch and operation of GSAT's own GSTAR satellite system in 1984.

at 12.2–12.7 GHz at the 1983 RARC. Thus, we see no need to hold USTV to those technical standards.[35] USTV has provided extensive technical analyses of the expected technical quality of its transmissions, and petitioners have not demonstrated any significant technical flaws with USTV's documentation of expected service quality. The only dispute between petitioner and USTV is over the technical standards against which to evaluate this performance. However, USSB and STC cannot impose their technical standards on USTV's service. The USTV ANIK/GSTAR service and USSB/STC DBS service are simply designed to different technical standards. As a practical matter, USTV will meet its objectives and USSB and STC will meet theirs.[36] We have consistently encouraged providers of domestic satellite services to experiment and to tailor the nature and quality of their offerings to customer demands. This is what the parties will be doing, and the consumer will make the ultimate decision of the acceptability of the USTV service. Our primary concern here is to insure that such operations do not lead to increased orbital spacings being required between domestic satellites operating in the 11.7–12.2 GHz band.

42. We therefore see no need at this time to force the USTV service into the DBS mold. GSAT and USTV emphasize that a good portion of their services will be directed to the types of program distribution services traditionally provided over the fixed satellite service facilities. These aspects of the GSAT/USTV undertaking clearly comport with our domestic satellite policies which govern the use of the 11.7–12.2 GHz band. And we find no legitimate public interest reason to prevent the offering of service direct-to-homes. While the band suffers from certain comparative disadvantages with the 12.2–12.7 GHz band, the disadvantages are not so great as to make the USTV/GSAT proposal illusory. To the extent that some aspects of the proposal might appear to take on the characteristics

---

[35] DBS planning in preparations for the 1983 RARC is proceeding on the basis of satellites designed from the outset to serve individual homes directly with a high quality signal. Domestic fixed satellites were not originally constructed to provide such service. It was the power difference, resulting from the original design intentions for FSS and DSB, that would lead to inefficient orbit use if both services shared the same band. This fact supported our separate allocation proposals to the 1979 WARC. However, technological advances which allow domestic fixed satellites to deliver television programs to homes, albeit at lower quality and/or with less reliability than true DBS systems, should not be excluded simply because of their lower quality. In these circumstances, we are reluctant to substitute our judgment for that of marketplace forces to determine price, range of service and quality of service that consumers will expect.

[36] This is sufficient to satisfy any concerns we may have established in Associated Press, *supra* note 2. Moreover, we have conditioned our Section 214 grant of GSAT to insure that USTV's service to small antennas does not prejudice our decision in Docket CC 81–704 to narrow spacing between satellites in the $^{12}/_{14}$ GHz bands to 2 °. GSAT represents that USTV's service is compatible with 2 ° spacing.

similar to what others, such as USSB or STC are doing with satellites that are clearly DBS in the 12.2–12.7 GHz band, we are providing flexibility in the course of the implementation of the 1979 WARC by incorporating Footnote 836 in the national table of allocations. Thus, we find that our action approving the GSAT application was fully consistent with all of these policies and proceedings.

Use of Canadian Satellites

43. In our *Order*, we concluded that GSAT's proposal fell within the intent of the 1972 Intergovernmental Agreement between the United States and Canada because an insufficient number of suitable transponders appeared to be available to satisfy USTV's requirements. Since that time, USTV has reduced its requirements to 5 transponders covering the eastern portion of the United States. SBS and other parties at one time claimed that USTV's interim requirements could be satisfied, prior to the availability of the GSTAR satellites, by United States domestic satellites facilities, i.e. the SBS system. Recently, however, SBS informed the Commission[37] that because of its agreement with another entity, it could no longer offer five transponders on one satellite to GSAT. Since SBS is the only U.S. Ku-band satellite carrier currently operating, SBS' statement appears to have removed the number of leased transponders as an issue. We will, however, limit GSAT's Section 214 authorization to the 5 transponders needed to serve its only identified customer for this service.

44. In view of the foregoing, it is hereby certified that the public interest, convenience and necessity will be served by authorizing GSAT to lease capacity on the ANIK-C satellite and constructing and operating the proposed TT&C earth station.

45. IT IS HEREBY ORDERED, that application File No. 000179-DSE-P/L-83 IS GRANTED and GTE Satellite Corporation IS AUTHORIZED to construct and operate a 14/12 GHz transmit/receive Telemetry, Tracking and Command earth station described in the referenced application and associated radio station authorizations. IT IS ALSO ORDERED, that the authorization is effective upon adoption.

46. IT IS FURTHER ORDERED, that GTE Satellite Corporation's Section 214 authorization to lease 10 transponders on the Canadian satellite is reduced to 5 transponders.

47. IT IS FURTHER ORDERED, that the petition for reconsideration filed by United States Satellite Broadcasting Co., Inc. IS DENIED.

FEDERAL COMMUNICATIONS COMMISSION
WILLIAM J. TRICARICO, *Secretary*

---

[37] Letter from SBS, dated May 6, 1983.

SEPARATE STATEMENT OF COMMISSIONER MIMI WEYFORTH DAWSON

re:

PETITION FOR RECONSIDERATION OF GTE SATELLITE CORPORATION

I strongly support the Commission's action today reaffirming GSAT's authorization to lease transponders from Telsat Canada. The primary controversy in this case has centered around GSAT's customer, USCI, and that company's proposed use of these facilities to provide video programming directly to the home. Petitioners argued that the GSAT/USCI proposal was really an "errant" Direct Broadcast Satellite (DBS) service subject to the Commission's interim rules established for that service.*

In this Order, we have reaffirmed our conclusion that the GSAT/USCI proposal differs substantially from those addressed in the DBS proceeding. The Commission also concluded that USCI's satellite-to-home video service can properly be provided in the fixed satellite service. Finally, the Commission determined that the public interest would not be served by prohibiting USCI from offering such a service in potential competition with prospective DBS service providers.

Long-standing policy considerations underlie these conclusions not the least of which is that the consumer benefits when satellite facilities are utilized to the maximum extent possible. To ensure these benefits, service providers leasing satellite capacity must be free to use those facilities in innovative and productive ways. With particular respect to USCI's proposal, nothing in the Commission's rules prohibits the provision of television service to individual homes in the domestic fixed satellite service. From a public interest standpoint, USCI's proposal offers a new manner of video distribution adding variety and a corresponding boost in consumer choice.

This gain to consumers would be frustrated by prohibiting USCI's use of fixed satellites to provide home video service in potential competition with DBS. Since the inception of domestic satellite service, this Commission's policies have been directed towards maximizing entry and maintaining a flexible regulatory approach for the very purpose of promoting competitive and innovative service offerings.** Limiting the use of fixed satellites would needlessly thwart this goal with no corresponding benefits to the public.

It is interesting to note in this regard that USCI's early entry into the satellite-to-home video market has prompted other companies to do the same. In an effort to gain an early foothold in the market,

* *See*, Direct Broadcast Satellite Services, 90 FCC 2d 676 (1982).

** Domestic Communications Satellite Facilities, 22 FCC 2d 86 (1970), 35 FCC 2d 844 (1972), *recon. in part*, 38 FCC 2d 665 (1972), (Domsat I, II and III).

Comsat has announced that its subsidiary, Satellite Television Corporation (STC), will begin offering low-powered satellite-to-home service next year rather than waiting for its own DBS satellite. Another company, Inter-American Satellite Television, has also announced similar plans. It is clear from these proposed service offerings that the race to provide home entertainment services via satellite has begun. Additional entrants would not be surprising. At the same time, technological advances in order to provide quality service can be expected.

Not only will the public benefit from this flurry of competitive activity in this market but the public will also decide which of these service providers will survive—those utilizing existing lower powered satellites or those utilizing high powered DBS satellites. Which transmission medium is best suited to providing the quality of service necessary to maintain a customer base is a question which need not be resolved by this Commission. Rather, given the competitiveness of the marketplace, consumer preference, not artificial regulatory restraint, must be the means by which any particular service offering prevails.

CONCURRING STATEMENT
OF
COMMISSIONER HENRY M. RIVERA

RE: Application of GTE Satellite Corporation to Lease and Operate Transponder Capacity from Telesat Canada

When this matter appeared on our agenda, I voiced my concern that favorable action on GTE's application might adversely affect the United States' ability to obtain necessary spectrum and orbital slots at the 1983 Regional Administrative Radio Conference. A substantial body of informed opinion responded that the decision to allow home video service in the 11.7–12.2 GHz (FSS) spectrum band would not prejudice our position at this conference. I felt I had little choice but to defer to the experts. However, my concern was not entirely assuaged and, accordingly, I concur.

I would also like to point out that the Order's hypertechnical holding that this service is not DBS "for purposes of the Commission's rules" does not obscure the inescapable fact that USTV's direct-to-home satellite television service and the direct-to-home service that will later be offered in the 12.2–12.7 GHz (BSS) band are functionally equivalent.[1] Therefore, substantive regulations applicable to home video service in the BSS must—and will—apply when that service is provided in the FSS.[2] That approach may be of limited consequence during the "experimental" phase of this new service, but its impact will likely be far more distinct when the Commission adopts final regulations governing direct-to-home satellite television service.

---

[1] That view is widely shared by the public. *See, e.g.*, "Lowering Skies for the Satellite Business," *Fortune Magazine*, p. 148 (Dec. 13, 1982); "Firm to Start Satellite TV Service by Fall," *Washington Post*, p. C11 (Feb. 3, 1983).

Finally, I would have preferred a slightly more explicit discussion in this Order of the policy judgments involved here. During the pendency of the proceeding to establish interim regulatory policies for DBS, direct-to-home satellite service was not considered to be commercially viable below 12.2–12.7 GHz for largely technical reasons. As a result, the Commission did not squarely address whether such service was permissible elsewhere in the spectrum and, if so, under what conditions.[3]

Apparently, technology has since advanced, and entrepreneurs now believe that direct-to-home satellite television service is commercially viable below 12.2 GHz. That being the case, and given that non-technical substantive regulations applicable to such activity in the BSS will be applied, there is no compelling reason to forestall the introduction of this service to the public.[4]

---

[2] *See* Memorandum Opinion, Order and Authorization at note 31. While the GSAT/USTV proposal is consistent with regulatory classification guidelines announced in the DBS Report and Order, I am not unsympathetic to the regulatory concerns raised by USSB in its petition for oral argument as to common carrier DBS licensees and their programmer customers; however, I agree that those issues are better suited to rulemaking than adjudication.

[3] In considering whether to accept the two-party DBS proposal filed by Advanced Westar and Focus, we did express "reservations about the use of the 11.7–12.2 GHz band for DBS" because of the proposal's apparent inconsistency with the United States' position at WARC-79. *See* Memorandum Opinion and Order, FCC 82-498, released December 3, 1982. Because the Focus application was dismissed and Western Union ultimately withdrew its application to modify Advanced Westar's authorization, this is the Commission's first opportunity to pass upon an application proposing use of 11.7–12.2 GHz for direct-to-home satellite television service.

[4] Mixed spectrum use can present spectrum planning and management problems; nevertheless, I am persuaded that it is desirable, for now, to continue a flexible approach to the kinds of services that can be transmitted over domestic satellites.

Common Carrier, Lease Channel Service
Instructional Television Fixed Service (ITFS)
Multipoint Distribution Service (MDS)
Rules, Amendment of

Rule changes reallocate eight channels from the Instructional Television Fixed Service (ITFS) to the Multipoint Distribution Service (MDS) to permit the operation of multichannel MDS systems. Existing ITFS licensees, permittees and applicants are "grandfathered". ITFS licensees may lease excess channel capacity on facilities for other communication services.

I. *Introduction and Summary*

1. On May 2, 1980 the Commission released a *Notice of Inquiry and Proposed Rulemaking and Order* in General Docket 80–112, 45 Fed. Reg. 29,323 (1980) (hereinafter *Notice*), in which it proposed to reallocate the 2500–2690 MHz band to provide additional channels for the Multipoint Distribution Service (MDS) and the Private Operational Fixed Microwave Service (OFS) and to reduce the number of channels available for the Instructional Television Fixed Service (ITFS). The *Notice* referred to these services as "area wide microwave distribution services" (AMDS) and inquired into their future prospects and anticipated growth.

2. Approximately 200 entities submitted comments and reply comments in response to the *Notice*. On February 10, 1982 Microband Corporation of America (Microband) submitted a 3 volume proposal to create what it termed a "wireless cable system" using frequencies in the 2500–2690 MHz band. Proposal of Microband Corporation of America, General Dockets 80–112 and 80–113 (February 10, 1982) (hereinafter Microband Proposal). Microband simultaneously submitted a "Motion for Acceptance of Additional Comments" requesting that its proposal be accepted as additional comments in this proceeding and in the companion proceeding in General Docket 80–113.[1] On April 20, 1982 the Chief of the Common Carrier Bureau, acting pursuant to delegated authority, issued an order accepting the Microband Proposal as additional comments in these dockets and inviting interested parties to submit reply comments. *Order Accepting Additional Comments*, 47 Fed. Reg. 18,932 (1982). Approximately 190 reply comments were received in response to the Microband proposal.[2]

3. On August 2, 1982 Contemporary Communications Corporation (CCC) submitted a set of applications in which it requested

---

[1] *Notice of Inquiry and Proposed Rulemaking* in Gen. Docket No. 80–113, FCC 80–137, 45 Fed. Reg. 29,350 (April, 1980). In that proceeding the Commission proposed to revise certain technical rules applicable to the Multipoint Distribution Service, operating in the 2150–2162 MHz band, and inquired into the feasibility of applying the proposed rules to 2500–2690 MHz band.

[2] A list of all those submitting comments in this proceeding is contained in Appendix A. This list includes all comments both formal and informal. Comments that were not filed in a timely manner are hereby accepted as informal comments. Some entities submitted more than one set of comments and hence are listed more than once.

developmental authority to construct what it termed Multi-Channel Systems (MCS) in New York, Philadelphia, Chicago, St. Louis and Los Angeles. The CCC applications are similar in some respect to the Microband proposal and to the experimental authorization we granted to Channel View in Salt Lake City (see note 24, *infra*). They are different in that Microband filed additional comments in response to the *Notice* while Channel View requested authority to construct experimental facilities in Salt Lake City. CCC specifically requested authority to conduct market trials in five cities. It made two basic claims in support of its MCS proposal. First, it claimed that the Commission would receive valuable information concerning certain technical aspects of multichannel operation such as adjacent channel operation and propagation characteristics at ITFS frequencies. Second, CCC claimed the proposed five market developmental operation would provide the industry and the Commission with needed information concerning what CCC referred to as the "intermixture of programming and pricing" for multichannel systems. While we agree that such additional information might be useful, we do not believe that it would be in the public interest to delay introduction of multichannel service while CCC conducts its developmental program. For this reason, we are denying CCC's developmental applications.

4. Our review of the extensive record in this proceeding and our experience with these and other services leads us to the conclusion that the public interest would best be served by a limited reallocation of spectrum from the ITFS to the MDS. There are a substantial number of unused ITFS channels in many areas of the country (several states have no ITFS licensees), and it appears that, while some growth in the ITFS service will occur, this growth is unlikely to exhaust the supply of channels. The market studies presented in this proceeding appear to demonstrate a substantial demand for multichannel MDS. Creating a multichannel MDS service offers a number of public interest benefits including expanding consumer choice, creating lower cost equipment, and providing competition to other services (such as cable television) which should lead both services to construct more quickly and provide better service at lower cost. Accordingly, we herein reallocate the E and F groups to MDS. This will nominally permit us to authorize two systems in each area. Each system would have four channels, which appears to be a sufficient number to satisfy the perceived customer demand. Importantly, four channel systems are consistent with the existing channel plans for this band, and preserving the existing group design should minimize disruption to ITFS operations in the band. Our choice of the E and F groups is prompted by our desire to minimize disruption to the ITFS and other services (such as the potential use of the band by satellite systems). To further minimize disruption to existing ITFS operations, we are "grandfathering" ITFS permittees, licensees and

applicants in the E and F groups. A potential MDS entrant will have to demonstrate to the Commission prior to commencing operation that grandfathered ITFS entities will not suffer harmful interference as a result of the operation of the MDS station. We are by a further notice in this docket proposing to select licensees by lottery. We also are permitting ITFS licensees to lease excess capacity on their existing systems. We believe these actions will result in a more intensive use of the spectrum and represent an appropriate balance of the conflicting public policy interests presented.

II. *Background*

A. *MDS*

5. The origin of this service may be traced to July 31, 1970, when the Commission removed the 3.5 MHz bandwidth limitation that had been imposed on stations using the 2150–2160 MHz band. *Amendment of Part 21.703(g)*, 47 FCC 2d 957 (1970). This action precipitated a number of applications that proposed to use this spectrum for the common carrier distribution of television programming from a central location to numerous points selected by the common carriers' subscribers. At that time, this spectrum was administered as a part of the Point-to-Point Microwave Radio Service. The Commission subsequently concluded the point-to-point rules were not appropriate for administering what had become a point-to-multipoint service and hence proposed to establish a new common carrier service to be known as the Multipoint Distribution Service. *Multipoint Distribution Service*, 34 FCC 2d 719 (1972). In January of 1974 the Commission adopted rules to govern the service. *Multipoint Distribution Service*, 45 FCC 2d 616 (1974), *recon. denied*, 57 FCC 2d 301 (1975). These rules provide for two 6 MHz channels in 50 of the largest metropolitan areas. The channels are designated channel 1 (2150–2156 MHz) and channel 2 (2156–2162 MHz). In all other areas of the country, where the 2160–2162 MHz band is used for rural telephone service, the second channel bandwidth is limited to 4 MHz (2156–2160 MHz) and is designated channel 2A. This channel cannot be used to transmit a standard television signal, which requires 6 MHz of spectrum.

6. The majority of the transmission time now leased by MDS common carrier licensees is used by their customers to transmit premium television[3] to hotels, motels, apartment complexes and single family residences.

B. *The 2500–2690 MHz Band*

7. This band is divided into thirty-one 6 MHz channels and

---

[3] The term premium television refers to television entertainment programming for which the viewer pays a fee and that is not supported by advertising revenues.

thirty-two 125 KHz response channels. Twenty-eight of the 6 MHz channels and the same number of response channels are allocated to the ITFS. 47 C.F.R. §§ 74.902, 74.939. The remaining three 6 MHz channels and three response channels are allocated to the OFS. 47 C.F.R. § 94.65(f). The remaining 125 KHz response channel is not assigned to either service.

C. *ITFS*

8. The ITFS was created by a Report and Order in Docket No. 14744 adopted by the Commission in 1963. *Educational Television*, 39 FCC 846 (1963), *recons. denied*, 39 FCC 873 (1964) (hereinafter ETV). By this action the Commission allowed the newly created ITFS to use the 2500–2690 band on a shared basis with the existing OFS stations with the proviso that no new OFS stations be authorized in the band for 3 years except for modifications or expansions of existing stations, or for the use of the band by OFS eligible entities for television transmission in accord with ITFS technical standards. Prior to this action the band had been allocated to the Fixed Service for shared use by Operational Fixed Stations and International Control Stations. In taking this action, the Commission stated its intention to observe the amount of use of these channels by educators and "[to] determine what course of action should be taken to encourage the fullest development of the 2500–2690 Mc/s band . . ." at the end of the three year period. *Id.* at 851.

9. The Commission stated in 1963 that the purpose of the service was to transmit:

> instructional material to selected receiving locations in accredited public and private schools, colleges and universities for the formal education of students. Systems which have been licensed for this purpose may also be used for other incidental purposes among which are the transmission of cultural material and entertainment to these same receiving locations; the transmission of special training material to selected receiving locations outside the school system such as hospitals, nursing homes, training centers, clinics, rehabilitation centers, commercial and industrial establishments etc.; the transmission of special material to professional groups or individuals to inform them of new developments and techniques in their fields and instruct them in their use; and to perform other related services directly concerned with formal or informal instruction and training. When not being used for such purposes, the facilities licensed under these rules may be used for handling administrative traffic of the licensee such as the transmission of reports and assignments, conferences with personnel, etc. Individual stations or complete systems will not be licensed solely for handling administrative traffic.

ETV, 39 FCC at 853. The Commission further stated that this service could also be used for the relay of such material. *Id.* These service limitations are contained in Section 74.931 of the rules, 47 C.F.R. § 74.931. Elsewhere in this Order, we are amending Section 74.931 to allow ITFS licensees to lease any excess capacity available on their channels (paragraphs 110–127, *infra*). In addition, we are today opening another proceeding in which we propose, *inter alia*, to broaden permissible uses of the ITFS channels.

10. The Commission limited the eligibility to hold an ITFS license to accredited institutions providing a program of formal education and to those eligible to hold a non-commercial educational TV license. *ETV*, 39 FCC at 853–854. The eligibility standards for the ITFS are contained in Section 74.932 of the rules, 47 C.F.R. § 74.932.

11. The Commission did not consider the use of this band again until 1971 when it adopted the Second Report and Order in Docket No. 14744. *Instructional Television*, 30 FCC 2d 197 (1971) (hereinafter *ITV*). In that proceeding the Commission made the present exclusive allocation of 28 channels to the ITFS.

D. *OFS*

12. As noted above, prior to 1963 the 2500–2690 MHz band was allocated to what was then known as the Fixed Service. When the Commission established the ITFS it allowed the newly created service to use this band and limited the Fixed Service use of the band for three years to expansion or modification of existing stations, or the establishment of new television transmission stations. The traditional Fixed Service use of this band was not for television transmission but rather was for more traditional private microwave communications uses such as multichannel voice and data circuits. The Commission recognized that there were certain traditional OFS users such as municipalities that might have television transmission needs and, although it declined to allow such entities to apply as ITFS applicants, it did invite them to apply for facilities under the rules governing the public safety radio services. *ETV*, 39 FCC at 854. When the Second Report and Order was adopted in Docket No. 14744 the Commission determined that the video transmission needs of municipalities and other entities eligible for Fixed Service licenses could be met by a 3 channel allocation. It based this conclusion on the fact that only 16 stations had been licensed to such entities. *ETV*, 39 FCC at 200. The Commission further suballocated these channels to the Public Safety Service on a primary basis and to all other fixed service eligibles on a secondary basis.[4] This preference was deleted in 1975 when the Commission created what is now known as the Private Operational Fixed Microwave Service. *Private Operational Fixed Microwave Service*, 52 FCC 2d 894, 900 (1975). That action made the three channels available to all eligible entities on an equal basis.

---

[4] When the Commission allowed the newly created ITFS to use the 2500–2690 MHz band, the move was resisted by the traditional users of this band on the basis that what was being created was a "quasi-broadcast" service and that other portions of the spectrum were more suitable for the new service. It was further argued that the decision could result in the permanent exclusion of operational fixed users from the band. ETV, *supra*, at 874.

13. In 1973 the Commission authorized Columbia Pictures to use what was then known as Business Radio Service spectrum for the distribution of "feature motion picture films" and associated promotional material to "guests" in "hotels". *Columbia Pictures Industries, Inc.*, 39 FCC 2d 411, 413 (1973). In making this grant, the Commission questioned whether this was an appropriate use of the Business Radio Service spectrum and as a result specifically conditioned the grant on the result of the inquiry and rulemaking proceeding in General Docket 19671[5] that was initiated simultaneously with the grant. *Id.* at 412, n.1.

14. In 1981 the Commission issued the First Report and Order in Docket No. 19671. *Use of Private Microwave Frequencies*, 86 FCC 2d 299 (1981), *stay denied sub nom. Operational Fixed Microwave Services*, 87 FCC 2d 768 (1981). After considering the comments submitted in response to its inquiry, the Commission concluded "that it is in the public interest to allow the use of the OFS frequencies for distribution purposes and, more generally, to restrict as little as possible alternative uses of the spectrum." *Id.* at 306. In allowing this use of the OFS spectrum, the Commission noted that it was only "authorizing a licensee to distribute products and services in which the licensee has an ownership or other interest to the licensee's own customers or subscribers." *Id.* at 309. The Commission also specifically declined to authorize a licensee of "point-to-multipoint" microwave facilities in the OFS to transmit any video programming directly to apartment houses, MATV systems or private homes pending resolution of the question of whether the similarity of such services to services such as subscription television requires that they be similarly regulated. *Id.* at 311.

15. In the *Notice* the Commission concluded that if it were to authorize the use of the OFS to distribute entertainment programming to subscribers there would be an increase in demand for the OFS channels in the 2500–2690 MHz band. *Notice, supra* at para 37. Since the adoption of the First Report and Order in Docket 19671, we have received more than 1,400 applications from 60 different entities seeking to provide video entertainment services on the 3 OFS channels. In a separate action, we are today excluding the distribution of video entertainment material on OFS frequencies lower than 21.2 GHz for two years.[6] 47 C.F.R. §§ 94.9(a)(1), 94.9(b)(2)(iii).

16. Because we have decided not to allow the distribution of video entertainment material on the OFS channels in the 2500–2690 MHz band at this time, we have concluded that there is no reason to provide additional spectrum for that service in this band. Thus, we will not consider OFS further in this order.

---

[5] *Transmitting Program Material to Hotels*, 39 FCC 2d 527 (1973).

[6] *Memorandum Opinion and Order.*, Docket No. 19671, FCC 83-245, released June 23, 1983.

III. *Discussion*

A. *Spectrum Utilization*

17. The Commission based its proposals to reallocate the 2500–2690 MHz band on three tentative conclusions. First, it concluded that the demand for MDS service exceeded the supply. This conclusion was based primarily on the observation that there were a large number of situations in which more than one party had filed for the same channel and that many applicants were proposing to "short space" stations. *Notice*, at paras. 19–23. Second, it was concluded that the 2500–2690 MHz band was under-utilized. *Id.* at para. 28. Finally, it was concluded that if the existing restrictions on the use of the OFS channels were removed there would be increased demand for these channels. *Id.* at para. 57. The Commission recognized a need to develop a better record concerning the facts on which these tentative conclusions were based. For this reason a series of questions was included in the *Notice* to elicit the kind of information needed to make a reasoned decision on the issues before the Commission. *Id.* at para. 52 and Appendix C.

1. *ITFS Spectrum Use*

18. Very few of the comments filed in this proceeding contained quantative information concerning the use of the ITFS spectrum. Most of the comments filed by the ITFS community expressed the view that the spectrum should not be reallocated and supported this proposition with public policy arguments rather than spectrum utilization data. The policy arguments raised in these comments are discussed below. *See* paras. 52–64 *infra*.

19. The most extensive analysis of current ITFS spectrum use was submitted by the Center for Excellence (Centex) of Williamsburg, Virginia.[7] The Centex data showed that as of August 1980 there were 82 operating ITFS stations using 492 channels. The 82 systems were spread over 27 states. California had 15 operating systems and New York had 11 operating systems. Of the 27 states that had operating systems 13 had only one system operating. The Centex analysis also contained data on ITFS channel use in the top 50 markets as defined by the 1979 Arbitron population book. These data showed that in only one market, Los Angeles, were all the ITFS channels being used. In fact, the data showed that the Los Angeles market had 40 channels in use with applications pending for 8 more channels. The data also showed heavy use in several other markets.

---

[7] The Center for Excellence, Inc. (Centex) "is a non-profit Virginia Corporation engaged in educational, medical and social services delivery, research and research development." Comments of Center for Excellence, Inc. General Docket No. 80–112, at 1 (September 26, 1980). In 1976 Centex began a study program that included a "a biennial study of the use of ITFS across the Nation". This study was updated in 1980. *Id.* Attachment C, 7–8. This data was referred to by several commenters from the ITFS community and many included portions of it with their comments.

New York, Chicago, San Francisco, Boston, Cleveland, Dallas, Ft. Worth, San Diego, and Milwaukee all had 10 or more channels in use. On the other hand Pittsburgh, St. Louis, Seattle, Baltimore, Hartford, and many other large cities had no current channel use. The total number of channels being used in the top 50 Arbitron markets was 319. Of these, 232 were operating in the 9 cities listed above as having more than 10 channels operating. Comments of Center for Excellence, Inc., General Docket 80-112, Attachment C, (September 26, 1980) (hereinafter Centex comments).

20. Microband included as part of its proposal an "ITFS Spectrum Utilization Study." In making this study, Microband claimed that it had been unable to find a "single authoritative source or data base identifying the location and ownership of all ITFS channel licenses." Microband Proposal, *supra*, Appendix H, 1. Microband produced its analysis on the basis of data from: "(a) the FCC non-Government Frequency List, (b) TV Fact Book, (c) Compucon and (d) copies of licenses obtained through Downtown Copy Center." *Id.*[8,9]

21. The Microband survey was different from the Centex survey in several respects. The Centex survey was a compilation of existing and proposed licensees by channel group on a city-by-city and a state-by-state basis. The Microband survey listed on a city-by-city basis for each channel whether there was an existing licensee either within 25 or 50 miles of the coordinates of the channel 1 MDS station.[10] This methodology could have resulted in Microband showing a channel in use where Centex showed it vacant or vice-versa. It is more likely, however, that Microband would show a channel as being occupied

---

[8] The Downtown Copy Center is a private organization that contracts with the Commission to reproduce our public records and sell the reproductions to the public.

[9] The 50 cities that Microband submitted data for were not the same cities that were the subject of the Centex survey. Centex surveyed the 50 Arbitron markets, whereas Microband surveyed the 50 cities listed in Section 21.901 of the Rules, 47 C.F.R. § 21.901. The two surveys contain 40 common cities. The cities in the Microband survey that were not in the Centex survey were Akron, Anaheim, Gary, Rochester, San Antonio, San Bernadino, San Jose, Syracuse and Toledo. Ft. Worth was considered separately from Dallas in the Microband Survey. The two were consolidated in the Centex Survey. The Cities in the Centex survey that were not surveyed by Microband were Nashville, Charlotte, Greenville, Grand Rapids, Orlando/Daytona Beach, Charleston, Raleigh, Harrisburg, Salt Lake, and Wilkes Barre.

[10] Microband conducted its surveys at 25 and 50 miles because it is generally assumed that if cochannel MDS stations are located more than 50 miles apart, there is unlikely to be harmful cochannel interference. It is also assumed that if cochannel stations are closer than 25 miles that harmful interference will occur. When the separation is between 25 and 50 miles, a detailed interference study must be done to assess the possibility that harmful cochannel interference will occur. Thus, if there are cochannel stations within 25 miles of a proposed transmitter location, the channel is deemed to be in use and not available. If there is no cochannel station within 50 of the proposed transmitter location, the channel is likely to be available.

that Centex showed to be vacant because the Microband data was based on a 50 mile spacing and was on a channel by channel basis as opposed to the channel group basis used by Centex. Thus, the Microband data represents a finer grain analysis of channel use than the Centex study. On the basis of its study, Microband concluded that within 25 miles of the location of the MDS channel 1 station 75% of the ITFS channels are not licensed. It also showed that in 38 of the 50 markets surveyed less than half the channels were licensed.

22. The Commission staff conducted its own spectrum utilization studies based on all stations licensed as of November 1, 1982.[11] The staff study showed that there were 124 licensed ITFS operators using 808 channels. These operators were distributed over 29 states and the District of Columbia. More than half of the licensed channels were located within 25 miles of a major metropolitan area. There were 21 states with no ITFS licensees, 9 states with 1 licensee and 5 states with 2 licensees. On the other hand, California had 22 licensees using 167 channels, New York had 13 licensees using 76 channels, Florida had 12 licensees using 22 channels and Pennsylvania had 8 licensees using 53 channels.

23. The Commission staff also did a computer analysis of the ITFS channel use in the same markets Microband used in its study. The staff analysis was only done for 25 miles. That is, the analysis only considered those ITFS stations located within 25 miles of the MDS station coordinates. The results of the staff analysis were not identical to the results submitted by Microband; however, they were similar. The staff analysis showed more ITFS stations than the Microband study because the staff study was done later and hence included more recently licensed ITFS stations. It should also be noted that the staff analysis also included stations for which construction permits had been granted but which had not yet been licensed. Neither study included pending applications.

24. In its comments on the Microband proposal, the Corporation for Public Broadcasting (CPB) pointed out that the issue of adjacent channel operation must be considered before any conclusions can be drawn concerning spectrum use or availability. The 2500–2690 MHz spectrum is divided in 7 groups of four 6 MHz channels and 1 group of three 6 MHz channels. The channels within each group are not adjacent; they are alternated with those of another group to provide a 6 MHz guard band between the channels within each group. Traditionally ITFS licensees have been granted up to 4 channels in a single group. The operation on these channels is protected from

---

[11] This survey was done using the Commission's ITFS station card file that is readily available to the public. This file includes all licensed ITFS stations and all stations for which a construction permit has been issued. It is possible that some of the stations included are no longer operating and it is also possible that some stations had not been indexed; however, we believe that it represents a generally accurate picture of ITFS channel use. This study has been made a part of the record in this proceeding.

adjacent channel interference where feasible by not licensing the guard band channel in the same area. This means that if the A group channels (A1, A2, A3, A4) were licensed in a given area, the B group channels that serve as the guard band channels for the A group channels (B1, B2, B3, B4) would not be licensed in the same area. For these reasons, CPB suggests that in analyzing channel use the adjacent channels should also be considered occupied.[12] CPB redid the analysis submitted by Microband on the basis that if a cochannel were licensed within 50 miles of a given set of coordinates or an adjacent channel were licensed within 25 miles of the same coordinates, the channel was in use in that area. CPB also included all channels applied for as well as those licensed in its analysis. The CPB analysis indicates much greater channel use in the 50 metropolitan areas than either the Microband survey or the Commission staff analysis. The CPB analysis does, however, indicate that in 24 of the 50 cities surveyed there are 8 or more adjacent channels available. Further Comments of the Corporation for Public Broadcasting, Engineering Statement, 8, 9 and Figure 11 (July 2, 1982).

25. Although the studies submitted and the study made by the Commission's staff did not produce identical results, the results are similar enough to allow certain conclusions to be drawn. First, in several large metropolitan areas the ITFS channels are heavily licensed. On the other hand, there are several large metropolitan areas in which there are no licensed ITFS stations. Finally, there is little ITFS spectrum in use outside the large metropolitan areas. We believe these conclusions tend to confirm the tentative findings made in the *Notice* that while the ITFS channels are heavily licensed in some metropolitan areas, they are not heavily licensed in other metropolitan areas. Further, neither CPB nor any other commenter offered any evidence that the ITFS channels are heavily licensed outside the major metropolitan areas.

2. *MDS Spectrum Use*

26. As of December 22, 1982 there were 234 licensed MDS channel 1 stations. These licensees were distributed over 50 states, the District of Columbia, Puerto Rico and the Virgin Islands. Construction permits had been granted for an additional 114 stations. There were 194 pending channel 1 applications. Of these, 172 were mutually exclusive with at least 1 other application. There were 5 licensed channel 2 stations. Construction permits had been granted for 3 additional stations. There were 143 pending applications for channel 2 licenses in 42 cities. All of these applications were mutually exclusive with at least 1 other application. There were 3 licensed channel 2A stations. Construction permits had been granted

---

[12] We do not agree that use of one channel group necessarily precludes use of the interleaved channel group. See paras. 65–78, *infra*.

for 16 additional channel 2A stations. In addition, there were 9 pending channel 2A applications for 4 cities. Of these applications, 8 were mutually exclusive with at least one other application.

27. The Commission does not keep records of whether licensed MDS stations are actually operating. Since MDS is a common carrier service, whether a station is on the air at a given time is not determined by the licensee but rather by whether a customer has purchased time from the licensee. At least one private concern, Paul Kagan Associates, Inc., collects such data. According to its latest report, as of August 3, 1982, there were 82 MDS stations operating and an additional 120 stations licensed that had not yet obtained a customer. "Statistical Progress of MDS", *The MDS Data Book*, 64 (October 1982).

28. MDS channel 1 licenses have been granted in 49 of the 50 markets listed in Section 21.901(c) of the Rules, 47 C.F.R. § 21.901(c). A construction permit has been granted for the remaining city. Of the 49 stations licensed, 43 have customers. Outside of these markets there were, as of the date of the Kagan survey, 152 stations licensed. Of these 39 had customers. On the basis of these facts, it can be concluded that the MDS channel 1 is heavily used in the larger metropolitan areas but less used outside these areas.

29. All the channel 2 applications that are not mutually exclusive have been granted. As of December 12, 1982 five stations had been licensed and construction permits had been granted for three additional cities. Only one of these channels has a customer. As was pointed out in the *Notice*, there are certain technical problems that limit the simultaneous use of channel 1 and channel 2 in the same area. The nature of the downconversion equipment used in MDS is such that if different operators are using channel 1 and channel 2, the channel 1 subscribers will be able to receive the channel 2 programming and the channel 2 subscribers will be able to receive the channel 1 programming. Scrambling of both signals would negate this problem, but it is expensive to add scrambling to existing MDS systems. This means that if we were to authorize a channel 2 station in an area that already has a channel 1 station delivering unscrambled programming and the channel 2 station offered scrambled service, the customers of the channel 2 operator could receive both the scrambled channel 2 programming and the unscrambled channel 1 programming. There is a channel 1 station authorized in every locale that has a channel 2 available. Furthermore, because channel 1 and channel 2 have no guard band between them, it is possible that noncolocated channel 1 and channel 2 transmitters could cause unacceptable adjacent channel interference.

30. These factors have contributed to the light use of MDS channel 2. In one city, Phoenix, Arizona, these problems have been overcome. There, Microband is the licensee of channel 1 and

Contemporary Communications Corporation is the licensee of channel 2. American Cable Television is the subscriber of both Microband and Contemporary and programs both channels and has a common set of customers receiving two-channel service.

3. *Projected ITFS Growth*

31. One of the most controversial issues raised in this proceeding concerns the projected ITFS growth. In the *Notice*, the Commission concluded that there are reasons to expect some growth in the demand for ITFS channels, but not such a significant amount that most vacant channels could be expected to be filled. Several commenters from the ITFS community took issue with these conclusions. The comments submitted by the University of Maryland were typical. It claimed that the Commission's conclusion was a "vast under estimation of future ITFS demand." Comments of the University of Maryland, General Docket 80–112, at 3, (September 26, 1980). Those commenting on this issue gave several reasons why they believed the future demand for ITFS channels was much greater than the Commission envisioned.

32. The most commonly made argument concerned availability of funding. Many commenters pointed out that ITFS growth took place without any federal fundiong until the Public Telecommunications Financing Act of 1978, 92 STAT. 2405 (1978) (47 U.S.C. §§ 390–399), authorized. The National Telecommunications and Information Administration (NTIA) to make funds available for ITFS facilities. The NTIA has informed us that in 1979 $1,130,000 was made available for 4 ITFS systems. In 1980 $211,937 was made available for 3 systems; in 1981 $815,260 was made available for 4 systems and in 1982 $570,485 was made available for 4 systems. Thus, NTIA records show that since ITFS has become eligible to receive such funds 15 ITFS systems have received a total of $2,727,682.[13]

33. Other commenters have stressed that the increased use of ITFS to deliver graduate level engineering, scientific and business training directly into the work places of those needing such training will result in accelerated demand for ITFS channels. Typical of the systems referred to are those operated by Stanford University and the Illinois Institute of Technology. Stanford operates a 4 channel ITFS system known as the Stanford Instructional Television Network that is used to transmit graduate level engineering courses and continuing education courses to approximately 20 high technology companies located in California's "Silicon Valley". In its comments, Stanford indicated that it will likely need more channels in the future to satisfy the increased demand for this type of educational

---

[13] This information was furnished by the Policy Branch of the Office of Policy Coordination and Management of the National Telecommunications and Information Agency.

service. Comments of the Leland Stanford Junior University, General Docket 80–112, Attachment B (September 26, 1980).

34. The Illinois Institute of Technology (IIT) operates a 4 channel ITFS system known as Interactive Instructional Television (IIT/V) that is used to provide graduate level engineering education to over "1200 professional engineers, scientists, and managers annually in the greater Chicago area." Comments of the Illinois Institute of Technology relative to Microband Proposal, Docket 80–112 and 80–113, at 2 (July 2, 1982). In its comments, IIT presented data that indicated the level of enrollment in its program has risen constantly from approximately 100 students per semester in 1976 to approximately 550 students per semester in 1980. (Comments of Illinois Institute of Technology, Docket 80–112, at 8 (September 26, 1980).

35. In some states graduate level and other post secondary instructional television is handled on a state-wide basis by a single entity. For example in Indiana, the Indiana General Assembly established the Indiana Higher Education Telecommunications System (IHETS) to provide for the development of telecommunications systems to meet the needs of public and private post secondary institutions in Indiana. IHETS operates 23 ITFS stations in sixteen Indiana cities using 28 ITFS channels.[14] IHETS intends to add three additional channels to this system in the near future. In the longer term, IHETS sees the need for 19 more channels in Indiana. These stations are used to distribute medical, engineering, and other forms of post secondary education throughout the state of Indiana. Comments in Opposition to Microband Proposal, General Dockets 80–112 and 80–113, James R. Potter, Indiana Higher Education Telecommunications System (July 8, 1982). The IHETS plan is typical of State wide plans to use the ITFS channels. Other states have similar systems either operating or planned.

36. Less comment was received on the future growth in the use of the ITFS channels by elementary schools, junior high schools, and high schools. Dr. Gerald A. Rosander, County Superintendent of Schools, Department of Education, San Diego County, submitted extensive comments showing that virtually all the ITFS channels are used in San Diego. Much of this use is for primary, junior high, and high school education. Comments were received from most of the school districts in San Diego County articulating the value of ITFS delivered programming at these educational levels. Comments expressing the same view were also submitted by several teachers from San Diego County Schools. Thus, while very little comment was

---

[14] It is useful to note that IHETS provides these 28 channels of service using only 12 different ITFS channels. Furthermore, it does not use more than 4 channels in any city. It uses 4 channels in one city, 3 channels in another city, 2 channels in six cities, and 1 channel in nine cities. Of the 12 channels used, channel A1, B1, and D1 are used 4 times, channels A2 and G2 are used 3 times, channels C1, D2, and E1 are used twice and channels B2, E2, F1 and F2 are used once.

received on the projected growth in the use of ITFS for the delivery of educational programming at this level it is possible that if other school systems followed the lead of San Diego County there would be increased demand for ITFS channels by such secondary school systems.

37. Some comments suggested, on the other hand, that the future growth of ITFS may be limited at this time by what was referred to in the comments submitted by the National Education Association and others as "the proposition 13 mentality". Comments of the National Education Association, Docket 80–113, Appendix A, at 2 (September 30, 1980). These commenters note that when the amount of money available for public schools is being reduced by taxpayers, expenses for educational technologies such as ITFS are usually among the first to be reduced or eliminated. NEA also pointed out that there is a general reluctance on the part of educators to use new technologies. It stated that "many teachers and administrators tend to view educational innovations as fads that will pass if they are ignored." *Id.*

38. Another commenter, the United States Catholic Conference (USCC), indicated that when the Catholic Church institutes its nationwide satellite network, to be known as the Catholic Telecommunication Network of America, local dioceses will use ITFS facilities to connect the satellite earth stations with the end user of the communication service. It is estimated that at least 700 and perhaps as many as 1,050 ITFS channels may be required to fill this need. Comments of Department of Communications, United States Catholic Conference, General Dockets 80–112 and 80–113, 3 (July 2, 1982). The services to be offered on these channels are described as:

> (a) Church-related communications capabilities and (b) community-related uses of the system. Among the Church-related communication capabilities are:
>
> 1. National and regional teleconferencing for Church organizations.
>
> 2. Data and facsimile transmission of the Church's national news service to the 150 newspapers of the American Catholic press.
>
> 3. In-service training for specialized Catholic social service organizations, for example, schools, hospitals, Catholic charities, etc.
>
> 4. Electronic message and related internal digitalized communications.
>
> The community-related uses include:
>
> 1. Educational programming services to local cable systems.
>
> 2. Specialized community-related digital services. (For example, CAT scanner interconnections to regional centralized computer facilities. . . .)
>
> 3. Regional teleconferencing for civic organizations.
>
> 4. Inter-connection for national, non-profit, educational/cultural/inter-religious organizations (via cost-sharing arrangements).

Id. at 4. The growth projected by the USSC is difficult to categorize. Data subsequently submitted by the Catholic Television Network[15] show that 11 Catholic Dioceses are now operating systems that use 108 channels. These 11 systems reach 28% of the U.S. population. Another 7 Dioceses are building systems that will use 84 channels and serve 9% of the U.S. population. Thus, the 18 Diocesan systems either in existence or under construction use 192 channels to serve 37% of the U.S. population. Contrasted with these data are the data concerning the 60 Diocesan systems to be constructed in 2 to 5 years for CTN. These 60 systems will require 720 channels to reach 30% of the U.S. population. On the basis of these figures, it can be concluded that much of the growth projected by USCC will occur in areas where ITFS channels have traditionally been most underutilized.

39. In addition, it is not clear what is encompassed by each of the uses listed. It appears that some of what is to be transmitted is not "instructional and cultural material . . . for the primary purpose of providing a formal education and development to students enrolled in accredited public and private schools, colleges and universities" as required by Section 74.931(a) of the Rules, 47 C.F.R. § 74.931(a). Furthermore, much of the demand projected by CTN will not occur for many years, and when it does occur it will be concentrated in those areas where ITFS channels have been underutilized. Thus, it appears that even if all the channel requirements projected by CTN do materialize it is most likely that sufficient channels will be available to meet the projected demand regardless of the reallocation authorized by this order.

40. Finally, the Association of Hospital Television Networks (AHTN), a national non-profit consortium whose 32 members operate or are planning to operate systems to provide instructional programming for health professions, indicated that although not all these systems use ITFS frequencies to distribute their programming, it is expected that some the systems not yet constructed will use ITFS channels if they are available. Comments of the Association of Hospital Networks, General Dockets 80–112 and 80–113, (July 2, 1982).

41. The growth of ITFS channel use during the pendency of this proceeding has been robust. As noted above, just after this proceeding was started Centex reviewed ITFS channel use and determined that there were 82 ITFS systems using 492 channels. Our own analysis conducted approximately two years later showed that there

---

[15] On February 7, 1983, the Catholic Television Network (CTN) submitted a document titled "Information Indicating Current and Projected ITFS Utilization by Catholic Dioceses" and simultaneously requested pursuant to Section 1.41 of the Rules, 47 C.F.R. § 1.41, that the information be made part of the record in this proceeding and in the proceeding in General Docket 80–113. The information submitted by CTN on February 7, 1983 is hereby accepted in this proceeding and in General Docket 80–113. This action is taken pursuant to Section 1.415(d) of the Rules, 47 C.F.R. § 1.415(d).

were 124 ITFS systems using 808 channels. Thus the number of ITFS operators has grown by approximately 50% and the number of licensed channels has grown by over 60%. In addition, as of October 1982, we had 183 applications pending for new construction permits.[16] As discussed below, many in the MDS community have expressed the view that this growth was triggered by our instituting this proceeding. This may or may not be accurate. In any event, if an applicant is eligible and otherwise qualified and intends to use the spectrum for the purposes stated in our Rules, we have no basis to question its motivation for deciding to proceed at any particular time.

42. On the basis of the above, the following conclusions can be made. It is likely there will be an increase in demand for ITFS channels for use by institutions of higher education for the delivery of graduate level training to the workplaces of engineers, scientists, and other professionals. There is less evidence that there will be substantial growth of ITFS use by elementary, junior high, and high school systems. There is also some evidence that there will be growth in the delivery of health services information, but such growth is not likely to be substantial. It also is likely that growth projected by CTN that is appropriate for ITFS will occur in areas where ITFS utilization already is low. Finally, in a companion *Notice* adopted today, we are proposing to relieve ITFS licensees of a number of regulatory burdens thereby encouraging the fuller use of the ITFS channels.

4. *Projected MDS Growth*

43. It is very difficult to make predictions about the future growth of MDS. In the *Notice*, the Commission observed that in the 50 major markets and in many of the secondary markets further acceptance of MDS applications is precluded by the cutoff rules. *Notice, supra* at para. 19. As noted above, there are mutually exclusive channel 1 applications pending in 84 cities and mutually exclusive channel 2 applications pending in 42 cities. Thus there are no MDS channels available for growth in any major metropolitan, and many non-metropolitan, areas of the country. Furthermore, unless the mutually exclusive applicants reach an agreement among themselves, a comparative hearing is required to resolve each mutually exclusive situation.

44. The principal factor that most of the MDS entities commenting in this proceeding cited as limiting the growth of MDS is the lack of a multichannel capability. Virtually every member of the MDS community that filed comments in this proceeding expressed the

---

[16] Above 120 of the applications were filed by the Public Broadcasting Service (PBS) and its member stations to provide what PBS terms a National Narrowcast Service. Whether PBS is eligible to be an ITFS licensee is presently under review.

view that if MDS is to survive as an industry, multichannel operation is an absolute necessity. These views were summarized in the comments submitted by the Ad Hoc Committee for Wireless Cable which argued "the expansion of existing MDS service to a multichannel, over-the-air delivery in competition with cable and other forms of distribution is essential to the continued viability of the MDS industry and of its existing carriers and operators." Comments of the Ad Hoc Committee for Wireless Cable, General Dockets 80–112 and 80–113, at 3 (July 2, 1982). This claim is especially noteworthy because the Committee is made up of "representatives from substantially all the Carriers and Operators in the MDS Industry." *Id.* at 2.[17] In addition, Microband and others have submitted data in this proceeding to support the proposition that there is a large unmet demand for multiple channels of premium television that is unlikely to be met by cable television or any other available technologies. (*See* paras. 57–64, *infra*). Microband also submitted studies which it claims establish that the per channel cost for a 5 channel system will be 60% less than for a single channel system because of common equipment and operations. It argues that consumer appeal increases substantially when the number of channels increases but the cost is not substantially higher. Microband Proposal at 57–72.

45. There are two reasons why there is only one multichannel MDS system in operation today. The first reason is, of course, that there are not enough channels available to allow multichannel operation. As noted above, there are only two MDS channels capable of transmitting a standard television signal available in the top 50 markets. Outside of these markets there is only one such channel available. Furthermore, in most of the top 50 markets, a comparative hearing may be required before the second channel is licensed. Even when it is licensed there will be very limited opportunity for even two-channel MDS operation. In general, this appears feasible only if the same operator becomes the customer of both licensees as has occured in Phoenix (paragraph 30, *infra*).

46. The other reason is that Section 21.901(d) of our Rules, 47 C.F.R. § 21.901(d), precludes a licensee from obtaining a second channel in the same metropolitan area until it has operated the first channel for at least one year and can show that there is a public demand for additional service that is not likely to be met by a competing carrier. In the *Notice*, the Commission proposed to repeal this rule and it will be discussed below. The rule is pertinent here because it has been shown to be an impediment to MDS growth.

---

[17] The Committee is made of both licensed MDS carriers and the MDS operators who are the customers of the licensees. The carriers represent more than 80% of the existing or potential MDS licensees in the top 50 markets and the operators provide programming for 70% of all active MDS channels. Ad Hoc Committee Comments, *supra*, 2 and 1.

Except for this rule, existing channel 1 licensees would be better able to work out arrangements with the channel 2 applicants that would facilitate 2-channel operation. Or the same entity could have applied for both channels and offered 2-channel service to one customer or offered one channel service to two customers.

47. On the other hand, as was observed in the *Notice* and by most of the ITFS commenters in this proceeding, the fact that there are a large number of applications for authority to construct MDS stations does not necessarily mean there is an unmet demand for MDS service. In fact many have claimed that the MDS applications on file are merely a reflection of a "land rush mentality" rather than real demand. Typical of these comments was the view that:

> demand for MDS channels, manifested through applications filed with the Commission and the demand for MDS service, are two entirely different things. Many MDS applicants, like land speculators, are applying for spectrum with no certain knowledge of what they would do with an MDS channel and, in many cases, with no immediate plans for using any MDS channel which may be granted to them.

Comments of the Association for Higher Education of North Texas, et al., General Dockets 80–112 and 80–113, at 14 (July 2, 1982).

48. Many members of the ITFS community submitting comments regarding MDS channel use and projected growth did so on the basis of information supplied by Centex. For this reason, we believe it is appropriate to comment on the Centex MDS analysis. Centex submitted an analysis of the growth of MDS from 1972 thru 1980 that Centex claims "points to fundamental errors in the FCC analysis of MDS channel needs." Centex Comments, *supra*, Attachment C, 12. Centex claims that during this period a total of 1,771 MDS applications of various types were filed. Centex also states that "there are, in fact 21 different types of applications listed by the FCC, of which *only 8 deal directly with construction permits and licenses*, while 13 deal with modifications or additions. The FCC dockets fail to make this important point clear." *Id.* The Centex data shows that of 1,771 applications filed 1,137 were for construction permits and 102 were for station licenses. Because of this Centex exclaims "the number of applications for licenses for new stations is, however, only 102 or *5.8% of all applications*!" *Id.* at 13 (emphasis in original). The Centex data also shows that of a total of 239 channel 2 applications, only 2 were for licenses. On the basis of this data Centex makes the following assertion:

> Since serious operators—both profit and non-profit entities—usually aggressively pursue their applications for construction permits and assiduously pursue station construction authorizations, one could rightly ask, why has this not occurred in the case of MDS? Is it because applications are being made on the basis of Oklahoma-type land-grabs with the hope that valuable "mineral" or "farm lands" may be acquired? Regardless of the basis for the current status of MDS channel applications, the fact that only 1 of every 14, or 7%, of all MDS channel

> applications has developed into an FCC-licensed operation is indicative of the real status of MDS.

Id. at 14.

49. We recognize and appreciate that Centex is the most reliable private source of ITFS facility data; however, we believe that these comments suggest a misunderstanding of the MDS industry and Commission processing procedures on Centex's part. When an entity desires to construct a MDS facility it submits a construction permit application to the Commission. If the application is *not mutually exclusive with another construction permit application* and is complete in all respects and if the Commission finds that the applicant is legally, technically and otherwise qualified, the Commission will grant the requested construction permit. After the permittee constructs the station it will then apply for a station license. As is clear from the statistics quoted by Centex, there are many more construction permit applications than there are channels available and thus most of the construction permit applications received are mutually exclusive with at least one other application. None of these mutually exclusive applications can be granted until either a comparative hearing is held or the mutually exclusive applicants reach a satisfactory settlement agreement. This situation accounts in part for the slow growth in the number of MDS stations.[18]

50. It also may be that there is some truth in these assertions. It does appear that in many areas the development of MDS has been slow (*see* para. 28, *supra*). The data submitted by MDS interests suggest that the marginal cost of providing additional channels is sufficiently low that additional penetration could be anticipated were multichannel operations authorized (*see* para. 44, *supra*).

51. On the basis of the information presented, we conclude that there will be little growth in the use of MDS channels as long as there are only two channels available and each licensee is only allowed to use one channel per metropolitan area (*see* para. 44, *supra*). The market for single channel MDS in many areas is limited (*see* para. 28, *supra*). We further conclude that if more channels were made available and if the restrictions on multiple channel operation

---

[18] The Centex comments also included a table that represented a statistical comparison of MDS, OFS, and ITFS. In this table, Centex claimed that 98 MDS stations served a total of 133 receive sites with an average 1.4 receiving sites per installation. *Id.* at 19. It is not clear where Centex obtained these figures, but it is clear that they represent a gross misstatement of MDS channel use. According to the figures compiled by Paul Kagan Associates, Inc. as of June 30, 1980 the MDS industry was providing *premium television* service to 352,000 individual locations. MDS Data Book, *supra*, at 12. It may be that what Centex did in its analysis was confuse the number of entities purchasing time from MDS stations with the number of locations receiving service via MDS. In the usual MDS situation there is a single MDS licensee with a single subscriber who provides service to a large number of customers.

are removed there could be a rapid acceleration in the growth of MDS.

B. *Public Policy Considerations*

52. Several ITFS commenters in this proceeding claimed that even if the ITFS channels are not now fully utilized, as a matter of public policy, the Commission should continue to keep all 28 channels reserved for ITFS. For example, the American Library Association asserted that "as a matter of public policy the Commission should retain this spectrum for noncommercial educational use. As the guardian of the airwaves for the public, the Commission has a special responsibility—in our judgment—to set aside a portion of the spectrum for the benefit of the public, just as is done in the case of land development in Alaska and the Far West." Comments of the American Library Association, General Docket 80–112, at 3 (September 5, 1980). The National Association of Educational Broadcasters stated that:

> The growth of instructional telecommunications systems depends on the concept of reservation. Educational and public telecommunication interests should not be forced into the "marketplace" with commercial and private microwave system operators. The ITFS band is the last "free" resource available to the country for educational purposes. The Commission maintains the noncommercial reservation of the lower 4 MHz of the FM radio band and of unused assignments in the TV Table of Allocations, despite the pressures from would-be commercial broadcasters to invade this reserved territory. Maintenance of the reserved nature of the 2500–2690 MHz band is also warranted by the same policy considerations.

Comments of the National Association of Educational Broadcasters, General Docket 80–112, 6 (September 26, 1980).

53. We recognize that there are sound public policy reasons for creating spectrum reserves. In the order granting the exclusive use of the 28 channels to the ITFS, the Commission concluded that "[b]y providing the exclusivity desired by the educators, planning of the system as well as usage should be simplified since they will not need to consider the questions of new non-ITFS systems." *ITV*, *supra*, at 200. In the same order, the Commission recognized that it should wait longer to review the use of spectrum allocated for educational use "because it was aware of the problems encountered by educational interests in preparing funding and implementing the new tool as well as developing the operational expertise . . . ." *Id.* at 199. We continue to believe that the concept of a spectrum reservation for educational and other public service entities is valid. We also continue to recognize, as many of the ITFS commenters in this proceeding have again emphasized, that the nature of educational institutions is such that it will generally take them much longer

than it would take a commercial entity to begin using a new technology such as ITFS.[19] It has been pointed out in this proceeding that educators are slow to accept new technologies and that many of the funding sources for education are even slower to make funds available for innovative endeavors such as ITFS. We also note in this regard that in its comments, Microband stated that "[w]hile it might be argued that school systems, which must pay for land, buildings, supplies, electricity and other facilities, should otherwise compete in the free market for these channels, we do not subscribe to such an approach. Instead, we would urge the retention of a number of channels for exclusive ITFS use." Comments of Microband Corporation of America, General Docket 80–112, at 27 (October 9, 1980). We agree. Thus, we continue to believe it is in the public interest to have a spectrum reserve for the ITFS.

54. Deciding that it is the public interest to have a spectrum reserve does not mean, however, that a 28 channel nationwide reserve is in the public interest. In this proceeding, we have tried to determine whether the channels that have been available for the ITFS since 1963 are now being used or will be used in the future. As summarized above, the evidence indicates that in some of the largest metropolitan areas most of the ITFS channels have been licensed. In other metropolitan areas, there has been limited or no use of the channels. In many states, there are no channels in use, and in most of the other states, there is little use outside of the metropolitan area. Although it is difficult to make accurate projections concerning the future use of these channels, the evidence available indicates that there will be some growth, but not enough to fully utilize all the channels on a nationwide basis.

55. Having found that there are ITFS channels that are not now being used and are unlikely to be used in the near future, we are faced with the question of whether it would be in the public interest to reallocate some of them for use by MDS as proposed in the *Notice*. MDS is now used primarily for the distribution of premium television to hotels, motels, apartments and single family residences. In its proposal, Microband submitted extensive evidence that there is a large unmet demand for multichannel premium television and that "cable (television) is not capable of meeting the existing demand . . . now or any time in the forseeable future." Microband Proposal, *supra*, at 55. Microband further argues that making more channels available for MDS would act as a competitive spur to the cable television industry and that "[s]ince there are no alternative distribution systems authorized to provide multichannel broadband service, cable has been able to behave as a monopoly industry,

---

[19] It could be argued that ITFS can no longer be considered a new technology since it has been available for almost 20 years. However, it is only recently that many of the school systems and universities have become aware of its potential.

building at a schedule suited to its own pace, with little incentive to upgrade antiquated systems." *Id.* at 12 (footnotes omitted). Microband concludes that an expanded MDS would "provide a competitive spur to cable, thereby moderating its monopoly characteristics and speeding its growth." *Id.* at 25.

56. On the other hand, most of the ITFS commenters expressed the view that expanding the MDS was unnecessary in view of the number of alternative methods of delivering entertainment programming to the public. The Public Broadcasting Services (PBS) comments were typical. PBS asserted that:

> Microband's argument that multichannel MDS systems should be used to increase competition for cable television does not justify a departure from the nation's long established and sound policy of assuring adequate telecommunications resources for educational purposes, especially when that competition is provided by numerous other technologies. Nor are multichannel MDS systems required to fill in service gaps where cable television is not available. With the explosion of STV, and DBS and low power television on the short-term horizon, there will be more than sufficient alternative services available to the public in both urban and rural areas. Low power television and DBS, in particular, have been highly touted as solutions to the problem of underserved rural areas.

Comments of the Public Broadcasting Service, General Dockets 80–112 and 80–113 (June 2, 1982).

57. These comments do not demonstrate that there is no substantial public demand for additional premium entertainment programming. Rather, they address the matter of how the demand should be met. As to the timing of the introduction of other new services, we note that there is no multichannel alternative to cable available now. STV is a one channel service. A high power Direct Broadcast Satellite service, transmitting entertainment programming directly to individual homes on a widespread basis, is several years away.[30] Low power television as a means for delivering subscription television is basically a low power version of STV. In any case, multichannel MDS will expand consumer options, and expanding consumer options is a legitimate public interest justification for reallocating spectrum. If those who claim there is no market for multichannel MDS are correct then whatever spectrum is allocated for multichannel MDS will go unused and can be reallocated back to the ITFS or to some other appropriate use.

---

[30] A number of entities (*e.g.* United Satellite Communications, Inc.) have announced plans to attempt to use low power fixed satellites to deliver video entertainment programming to individual homes, in addition to traditional fixed satellite reception points (cable television systems, MDS systems, hotels, etc.). The fixed satellite service is at a comparative technical disadvantage vis-a-vis the direct broadcast satellite service because, among other things, the lower power transmitters require larger receive antennas and the satellites are spaced more closely together which increases the possibility of interference. In any event such systems are nascent in design and may be subject to further regulatory considerations.

58. If, on the other hand, a market does develop for multichannel MDS there would be benefits to the public at large and there could be large benefits to the users of the ITFS channels as well. For example, in both this proceeding and in the companion proceeding in Docket 80–113, we have been informed by ITFS licensees that there has been no reduction in the cost of the equipment they are being offered by manufacturers. This is in direct contrast to the MDS industry where the cost of the downconversion equipment has decreased from over one thousand dollars to less than one hundred dollars. We believe that if there is widespread use of multichannel MDS there could be similar reductions in the cost of ITFS equipment. These savings would result from economies of scale in the manufacture of reception equipment. This could result in dramatic decreases in the cost of constructing ITFS systems thereby making them affordable to many who cannot now afford to build these systems.[21] Lower cost ITFS reception equipment could also make it possible for existing ITFS systems to expand the market for their programming. It could become economically and technically feasible to deliver instructional programming directly to private homes.

59. Microband further claims that authorizing multichannel MDS would be in the public interest because it would "promote economic activity in a high technology field which is important to the nation's future." *Id.*, at 73. Microband estimates that the authorization of the multichannel MDS could provide 20,000 new jobs. *Id.* Bogner Broadcast Equipment claims that the authorization of multichannel MDS would cause equipment manufacturers such as itself "to develop new, improved and competitively priced multichannel reception equipment." Bogner further claims that "the stimulus will have a ripple effect throughout the industry benefitting manufacturers, marketers, retailers, MDS licensees, MDS programmers, and most of all the consumer." Comments on Proposal, Bogner Broadcast Equipment Corporation, General Dockets 80–112 and 80–113, at 2 (June 2, 1982). Other equipment manufacturers have expressed similar views. Conifer Corporation asserts that authorization of multichannel MDS "will create new business opportunities and will benefit the economy." Comments on Proposal, Conifer Corporation, General Dockets 80–112 and 80–113, at 2 (June 2, 1982). Lance Industries states that authorizing multichannel MDS "will cause a re-vitalization of a significant segment of the American-based electronics manufacturing industry" and thereby "create jobs and benefit society as a whole." Comments in Support of Rulemaking Proposal, Lance Industries, General Dockets 80–112 and 80–113, at 2 (May 28, 1982).

60. Another public interest argument made by some commenters

---

[21] This does not argue against reallocation of a portion of the band to MDS because the premise of the reallocation is based on commercial operation.

is that authorizing multichannel MDS will make multiple premium television channels available to rural areas that may never be served by conventional cable television. One citizen from West Virginia made the following observation:

> Any survey of rural America will demonstrate that the presently allocated instructional television fixed channels are not being used or are used only in a minimal fashion in rural areas. The likelihood that a multi-channel MDS service would impinge on the availability of such channels for instructional purposes is most remote at best.
>
> I really believe that it is about time that your agency give as much consideration to expanding various electronic services to rural America as you give to increasing the plethora of electronic services that are available in the larger markets.

Informal comment of S. Craig Curtis, General Dockets 80–112 and 80–113 (May 8, 1982). An MDS operator from New Hampshire surveyed potential multichannel MDS customers and submitted the following summary of the responses received:

> Most of these residents cited a recent article that appeared in the newspapers concerning a small town that was considering Cable Television, wherein one of the politicians stated that "Only 50% of the residents in the State of New Hampshire will ever have Cable Television Service." Their general reaction to this article is that when an electronic type of service is available to provide them with this service, which will not cost the taxpayers any additional money and will actually employ more people in the State, why should they be deprived of this service simply because they choose to build their home and raise their family in a suburban type of atmosphere? Others expressed views that they realized that it was more costly for their water, sewage system and fire insurance rates where their homes have been erected, but their reaction was, "Isn't this what the United States is all about—Freedom of choice?" And they felt as long as they were willing to pay the cost for their freedom, the FCC should provide them the same equal opportunity that is provided to those who have elected to live in a large city, provided the cost is paid for by themselves, and not the State or Government.

Comments of Dynamic Sound, General Dockets 80–112 and 80–113, at 3 (June 1, 1982).

61. Two major public interest arguments favoring the authorization of multichannel MDS are efficiency and flexibility. It is clear that substantial demand exists for multichannel premium television service. In uncabled areas (some of which may never be cabled), multichannel MDS is a means for satisfying consumer demand for additional premium television service. In areas that are or are about to be cabled, competition from multichannel MDS may spur cable systems to build promised systems faster, improve existing systems, and keep prices low. The efficient production of goods and services and the efficient use of spectrum are promoted when competition among providers is present.

62. Multichannel MDS is also a particularly flexible service. While current indications are that its primary use would be for premium video, many other uses are possible (*e.g.*, high speed data

transmission or transmission of educational programming). The common carrier nature of MDS means that the type of service provided can change on public demand. Thus, frequencies authorized for multichannel MDS use are likely to be employed in their highest valued use.

63. In addition to these two advantages, it is also possible that multichannel MDS would stimulate equipment innovations that would lower the cost of ITFS equipment. This could make ITFS service more widely available.

64. The major argument raised in opposition to the reallocation, other than the spectrum reservation argument discussed above, is that multichannel MDS is not needed because there are other technologies available to meet whatever demand exists. After carefully considering all these arguments, we have concluded that reallocating some ITFS channels to MDS will serve the public interest. We believe the benefits noted above are sufficiently likely to permit MDS entrepreneurs an opportunity to expand consumer choice by offering a multichannel MDS service. Should these benefits not materialize, a further reallocation may be undertaken. We do not believe our reallocation plan, discussed below, compromises the legitimate needs of the ITFS community for channels of communication.

C. *Reallocation Plans*

65. Before reviewing the reallocation plans considered, we believe it is useful to review the existing allocation scheme used for the 2500–2690 MHz band. The band is divided into thirty-one 6 MHz channels and the same number of 125 KHz response channels.[22] (The final 125 KHz of the band is not allocated for these services.) The thirty-one 6 MHz channels are contained in the portion of the band from 2500 MHz to 2686 MHz and the thirty-one 125 KHz response channels are contained in the band from 2686 MHz to 2689.8750 MHz. The thirty-one 6 MHz channels are further divided into 7 groups of 4 channels each and a single group of 3 channels. The 4 channel groups are designated channel groups A through G and are assigned to the ITFS. The 3 channel group is designated the H group and is assigned to the OFS. Within each group there is a 6 MHz gap between each of the channels. That is, channels within each group are not adjacent; they are alternated with those of another group to provide a 6 MHz guard band between the channel within each group. The chart below illustrates the allocation plan.

---

[22] The response channels are used by some existing ITFS channels to allow students in the remote class rooms to speak with the instructor at the studio. Other systems use telephone lines for this purpose and their response channels are unused.

* Response channels

66. ITFS licensees are limited to no more than 4 channels in a single area, all of which must come from the same group. 47 C.F.R. § 74.902(c). If an applicant is not ready to use all four channels when it first applies, it may request the remaining channels be reserved for it for future use. *Id.* In those situations in which there are two ITFS licensees in the same area, the channel groups are assigned in so far as is possible so that there is no adjacent channel operation. For example, if there were an A group licensee in a given area, we would try to avoid granting a B group license in the area. It should also be pointed out in this regard that our rules provide for reusing channels in the same area if doing so would not cause harmful interference. 47 C.F.R. § 74.902(d).

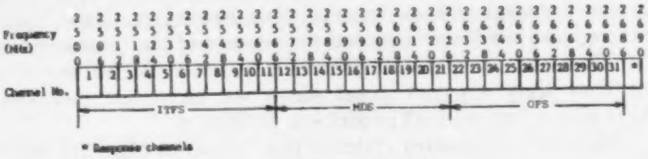
67. The principal reason for adopting the present scheme was that it allowed the use of simple and inexpensive reception equipment. *Instruction Television Fixed Service*, 2 RR2d 1615 (1964). The equipment used to receive an ITFS signal consists of an antenna, a downconverter and a conventional television receiver. The downconverter simultaneously converts the incoming signals from the four ITFS channels (if four channels are being transmitted) to four VHF television channels. The VHF channels used are usually either 7, 9, 11 and 13, or 8, 10, 12 and 13(+).[23] Which set to use is determined by which VHF channels are used in the area. This eliminates the possibility of the VHF stations interfering with the downconverted ITFS channel. It also allows the local television channels to be distributed on the same cable as the downconverted ITFS channels. *Id.* at 1617.

68. In the *Notice*, we proposed a plan whereby the 31 channels in the 2500–2690 MHz band would be reallocated for shared use by the ITFS, the MDS and the OFS. Under this plan there was to be a primary allocation of 11 channels to the ITFS, 10 channels to the OFS, and 10 channels to the MDS. We also proposed that if the primary allocation of a service was fully used in one area any unused channels in the other two allocations could be used to satisfy the excess demand in the fully used service. The proposed plan did away with the channel groups described above and replaced them with

---

[23] The designation 13+ refers to the use of the spectrum immediately above channel 13. This is made possible by adjusting certain circuits within the television receiver. Further Comments of the Corporation for Public Broadcasting, General Dockets 80–112 and 80–113, Engineering Statement, at 6 (July 2, 1982).

contiguous allocations. The chart below illustrates the proposed allocation plan.



69. This plan received virtually no support from the commenters in this proceeding. It was criticized as being technically not feasible and unduly disruptive of the existing ITFS allocation scheme.

70. The claims that is was technically not feasible were all based on the belief that adjacent channel operation cannot readily be achieved. Several reasons were given to support the claim. First, some claimed that adjacent channel operation would preclude the use of the block downconversion equipment now used by virtually all ITFS systems. One of the major advantages of the block downconversion technique is that it "avoids interference created from 'direct pickup' of a VHF television station by the television receiver, or by a 'MATV' system used to distribute converted ITFS signals to school classrooms." Further Comments of the Corporation for Public Broadcasting, General Dockets 80–112 and 80–113, Engineering Statement, at 5 (July 2, 1982). If adjacent channel operation were required, the local VHF television signal would be picked up by the television receiver being used to display the ITFS signal and cause a degraded picture. CPB outlined a downconversion scheme that would mitigate this problem but that would also produce another problem, interference with the reception of the local VHF signals carried on the same distribution system. *Id.* at 6. The equipment required to implement the downconversion scheme was much more complicated and expensive than existing ITFS downconversion equipment.

71. CPB also mentioned two other problems that could occur with adjacent channel operation: unavoidable unauthorized reception of the adjacent channel programming and downconverter overloading. *Id.* at 2. The unauthorized reception referred to by CPB would occur when different licensees were using interleaved channel groups. For example if one ITFS licensee were using the A group and another ITFS licensee were using the B group in the same area, the block downconversion equipment used at the receiving sites of both licensees would be capable of receiving programming from both licensees. The other problem raised by CPB, downconverter overloading, could result if 8 strong signals were received at a single location from two nearby ITFS stations. CPB claims that the presence of eight signals in the downconverter would produce intermodulation interference to both systems.

72. Notwithstanding the theoretical merits of CPB's criticisms, we note that there are many large metropolitan areas where interleaved channel groups are being used. For example, the A and B groups are licensed in Los Angeles, San Francisco, New York and Milwaukee, and we have received no reports of the problems raised by CPB. This is not to say that problems do not exist, but we can only assume that they are not great since we have not received any reports of this arrangement producing problems.

73. Another commenter claimed that adjacent channel operation would eliminate the ability of ITFS operators to use the same transmitter for both the aural and the visual channels as is done now and force them to the expense of using a separate transmitter for each channel. It was claimed the present "mode of operation simplifies the transmitter and makes it less expensive but also complicates the suppression of energy outside the particular channel transmitted." Comments of National Instructional Telecommunications Council, Inc. and Catholic Television Network, General Docket 80–112, Attachment H, Engineering Statement by Jules Cohen & Associates, at 2 (July 26, 1980). According to Mr. Cohen single transmitter operation would produce so much interference that adjacent channel operation would be impossible. Finally, Dr. William Kincheloe, Jr., Adjunct Professor of Electrical Engineering at Stanford University concludes, "that such a major change in policy for frequency allocations as that proposed by the adjacent channel assignment in Docket 80–113 should be done with great care if a situation is not to develop where many instances of degraded service would be experienced to the embarassment of the FCC." Comments of the Leland Stanford Junior University, Attachment A at 6 (September 26, 1980).

74. These and other commenters are only claiming that the adjacent channel operation that was implicit in our proposal is not technically feasible *using existing ITFS equipment*. None has claimed that such operation is not technically feasible using state-of-the-art engineering practices. In fact, the Corporation for Public Broadcasting made the following claim in its first set of comments:

> With present state-of-the-art engineering practices, it is no longer necessary to restrict distribution systems to alternate channels. Primarily by careful control and maintenance of signal strength ratios, systems can be constructed to successfully utilize adjacent channels, as in the now common cable television distribution systems where all 12 VHF channels are filled.

Comments of the Corporation for Public Broadcasting, General Docket 80–112, Appendix 1, at 57, n.1 (September 26, 1980).

75. In its proposal Microband expressed some doubt about adjacent channel operation using *existing* MDS equipment. It stated:

> We rejected a scheme which would make use of a block of contiguous channels all operating on the same polarization. The major difficulty associated with this plan is not knowing what the adjacent channel interference performance of such a

> system would be. *Existing equipment* type accepted for MDS and ITFS operation would not be capable of operating without significant adjacent channel interference because the vestigial sideband attenuation required by paragraph 73.687 of these Rules does not provide for sufficient isolation between adjacent channels. Thus, without additional isolation provided by orthogonal polarization operation and/or a significant increase in the vestigial sideband filtering, interference-free adjacent channel operations will not be possible.

Microband Proposal, *supra* at 33 n. 37 (emphasis added). Contrasted with Microband's view was that of Richard Vega who claimed that "the transmission of copolarized adjacent channels can easily be accomplished by relatively *simple and inexpensive modifications* to existing type accepted MDS transmitters." Comments of Richard L. Vega. General Dockets 80–112 and 80–113, at 5 (July 2, 1982) (emphasis added). Mr. Vega further claims that the multichannel experiment being conducted in Salt Lake City supports this claim. *Id.*[24] In its comments, Contemporary Communications Corporation (CCC), while agreeing with Microband's claim that the existing MDS and ITFS transmitters will not allow adjacent channel operation, contends that "state-of-the-art transmitters are readily available today whose technical specifications will permit adjacent channel operation using the same polarization without causing interference." Additional Comments of Contemporary Communications Corporation, General Dockets 80–112 and 80–113, at 19 (July 2, 1982). CCC also suggests that modifications of some sections of the rules would make adjacent channel operation easier. *Id.*

76. Many ITFS operators have claimed that even if adjacent channel operation were technically feasible the costs of the necessary equipment changes would be prohibitive. For example, the University of Southern California stated "the suggested channel reallocation would entail significant additional costs which educational institutions in their present financial circumstances, can ill afford." USC further argued that "[a]ny new allocation schemes that would increase the technical complexity of existing ITFS equipment would undermine the very basis upon which the low cost educational

---

[24] On December 3, 1981, the Commission granted Channel View, Inc. an experimental station license to test the technical feasibility of transmitting eight adjacent channels from a single site. The station is designated KM2XBN. File No. 866-ED-PL-81. The early results submitted by Channel View indicated some difficulty in reducing the spurious emissions from the transmitter more than 60 dB below the peak visual transmitter output; however, subsequent design adjustments in the transmission equipment have solved this problem and the tests have demonstrated that operating an 8 channel system using adjacent channels appears to be technically feasible. Channel View subsequently sought permission to conduct a "market experiment" using these frequencies. File no. 8938-ED-MR-82. In particular, Channel View requested authorization to program its multichannel system with premium programming and to provide service to the public for profit. The original experimental authorization prohibited Channel View from offering multichannel service to the public for profit. In view of our action reallocating spectrum, a market experiment would serve no useful purpose and that portion of Channel View's application therefore is denied.

use of ITFS was originally promoted." Comments of the University of Southern California Instructional Television Network, General Docket 80–112, at 3 (September 29, 1980).

77. Many of the existing ITFS licensees claimed that the proposed plan would result in substantial reductions in the service they are now providing. For example the California Public Broadcasting Commission (CPBC) claimed that if the plan in the *Notice* were adopted "there would be a net loss of two-thirds of the channels now operating or imminent in Los Angeles, San Francisco and San Diego," and "that California's principal cities will face massive reductions in their present ITFS service . . . ." Comments of the California Public Broadcasting Commission, General Docket 80–112, at 7 (September 26, 1980). We are aware that these California cities represent areas of unusually heavy ITFS channel use, and that there is some validity to the concerns that our initial proposal could cause dislocations or additional expense.

78. On the basis of these considerations, we have reached the following conclusions regarding the reallocation plan in the *Notice*. Adjacent channel operation is technically feasible but it can only be implemented using transmission and reception equipment that is different from existing ITFS equipment. We believe implementation of the allocation plan in the *Notice* would be expensive and would put an undue financial burden on existing ITFS licensees.[25] Furthermore, the plan would be disruptive of many existing and planned ITFS systems. For these reasons and since we have concluded there are less disruptive methods to make spectrum available for MDS use, we have concluded that adoption of the allocation plan in the *Notice* would not be in the public interest.

79. The *Notice* also discussed other allocation plans. One was that each service be allocated specific channels within the band. We rejected that plan for two reasons. First, it required us to make predictions concerning the future needs of the services, a prediction we felt unable to make at the time. Second, we felt that such a plan would not be flexible enough to deal with regional variations in the number of channels required for the services. For these reasons, we proposed the primary allocation plan that allowed sharing of unused channels by the other two services. As articulated above, the voluminous record in this proceeding has enabled us to develop a better sense of the future growth of these services. It also has demonstrated that our concerns about regional variations were

---

[25] It is difficult to make precise estimates of the costs that would be incurred in converting existing ITFS systems to adjacent channels systems. It is likely that in most situations the existing transmitters would need to be replaced at a cost in excess of $100,000 per transmitter. It is also possible that existing downconverters would need to be replaced or modified. The total cost involved would be a function of the number of receiver sites and the cost per site could be several hundred dollars.

valid. There are wide regional variations in the use of both MDS and ITFS.

80. We also considered the alternative of unlimited sharing of the band by all three services. We rejected this plan because we believed it would be difficult to administer, especially if different technical rules were applied for each of the services sharing the band. After reviewing the record in this proceeding, we have also concluded as set out above, that such a plan would be contrary to the public interest in that it would not insure that some spectrum would continue to be reserved for potential ITFS applicants.

81. On the basis of these conclusions, we have reviewed the reallocation options available and have concluded that a plan that considers regional variations in spectrum use while at the same time reserving some channels for potential ITFS applicants would best serve the public interest. Several of those commenting in this proceeding also expressed the view that an allocation plan that reflected regional differences in spectrum use also made more sense than a uniform nationwide plan. *See* Comments of Oklahoma State Regents For Higher Education, General Docket 80–112 (June 16, 1980); Comments of C. Peter Magrath, President, University of Minnesota, General Docket 80–112, 3 (September 29, 1980); Comments of the State University of New York, General Docket 80–112, 4, (September 24, 1980).

82. We have considered various methods to take into account the regional variations in the demand for ITFS stations and multichannel MDS. One method suggested by President Magrath of the University of Minnesota was to hold local or regional public hearings to determine, *inter alia*, "the views of the community effected concerning the merits of the existing and proposed services." Comment of the University of Minnesota, General Docket 80–113 at 3 (September 5, 1980). Such public hearings could also be used to get accurate detailed information on the projected demand for ITFS channels and the demand for multichannel MDS for each area. We believe that holding such hearings would be a lengthy and expensive process, requiring a substantial amount of travel and administrative support. We do not believe that such a procedure is feasible and even if it were we do not believe that results obtained would be so substantially better than those obtained by other methods as to justify the expense and delay involved.

83. We have also considered reallocating channels to provide multichannel MDS only in those areas where there has been little or no use of the existing ITFS channels. Proceeding in this manner has two distinct disadvantages. First, it could involve the Commission in a protracted process to determine the boundaries of such areas. The only realistic way this could be done would be to wait until a multichannel application was received and then determine the ITFS channel use within a specified distance of the proposed MDS station.

Only after conducting such an analysis could we accurately determine ITFS channel use in the proposed MDS service area. Of course, we could require MDS applicants to include this analysis as a part of their applications. This would likely cause many existing and potential ITFS licensees to challenge the accuracy of the MDS applicant's analysis thereby involving the Commission staff in a series of contested proceedings. This would clearly delay the introduction of multichannel service in many areas.

84. The other difficulty with such a plan is that there would be little possibility of multichannel MDS in those metropolitan areas where the ITFS channels are extensively used. Thus, even where existing ITFS licensees were willing, or even desired, to transfer their license to an MDS operator, MDS operations would not be permissible.

85. The plan we have settled upon takes into consideration regional variations in ITFS channel use, "grandfathers" all existing ITFS licensees, permittees, and applicants and reallocates a specific set of channels for MDS use on a strict noninterference basis. The plan works as follows:

a. The E and F groups are reallocated for multichannel MDS use on a nationwide basis.

b. A multichannel MDS permittee will not be authorized to begin construction until it submits a statement from all existing cochannel and adjacent channel ITFS users with transmitters located within 50 miles of the new MDS station that the operation of the multichannel MDS station will not interfere with the ITFS operation or that the ITFS operator would accept any interference that did occur. This means that the MDS permittee is authorized to negotiate with existing cochannel and adjacent channel users of the ITFS channels to attempt to reach an accommodation whereby the needs of each can be satisfied. In those cases where there are no ITFS operators within 50 miles of the proposed MDS transmitter location that are using the authorized channels or any adjacent channels, the MDS permittee must so state.[26]

c. All ITFS licensees and permittees of, and applicants for, the channels as of the adoption date of this order will be grandfathered with rights of renewal. That is, all ITFS licensees of E or F group channels will be allowed to renew their licenses. Furthermore, all permittees of and applicants for either E or F group channels that ultimately obtain a license will be allowed to renew such licenses. No assignments, other than *pro forma* assignments of ITFS E or F group licenses, applications, or construction permits will be authorized.

---

[26] We expect existing and potential ITFS operators to cooperate with MDS permittees in determining whether the operation of the MDS facilities will interfere with the ITFS operators. If the MDS permittee is not able, after making reasonable efforts, to obtain the desired statement from the ITFS operator it may submit evidence to the Commission on the issue of whether harmful interference will occur. The MDS permittee must also detail the efforts it made to obtain the desired statement and must serve a copy of all evidence submitted to the Commission to all affected ITFS operators. We expect such submissions to represent extraordinary cases.

d. No new ITFS applications for the E or the F group channels filed after adoption of this order will be accepted.

86. The elements of this plan have several advantages that other plans lack. Reallocating a specific set of channels on a nationwide basis means that in those areas where the reallocated channels are not being used, channels will be immediately available for multichannel MDS. It also creates at least the possibility that multichannel MDS will be available even in those areas where the reallocated channels are being used by ITFS service providers. It does this by granting conditioned construction permits for multichannel MDS in such areas and allowing the holders of these construction permits to negotiate with the existing cochannel and adjacent channel users to attempt to reach an accommodation whereby the requirements of both can be met.

87. We expect that such negotiations would consider, *inter alia*, the relocation of the existing ITFS users to other available ITFS channels, the use of frequency reuse techniques such as cross-polarization, site shielding and frequency offsets, and even the possibility of satisfying some of the communication requirements of the existing ITFS users in other areas of the spectrum. In this regard, we note that some members of the MDS community have argued that ITFS channel use is inefficient in the large metropolitan areas. For example, in its proposal, Microband claimed that many of the licensed ITFS channels were being used for point-to-point communication rather than for omnidirectional communication and concluded that, "[t]he significance of these point-to-point uses is that when intermixed with an intended omnidirectional use, they lead to a significant waste of spectrum." Microband Proposal, *supra*, Appendix H, at 6. In his first set of comments, Richard L. Vega, concluded that, "[i]n many cases, the ITFS authorized channel is for point-to-point microwave service thereby creating a wasteland of co-channel and adjacent channels over a relatively large geographical area due to the potential for harmful interference." Comments of Richard L. Vega, General Docket 80–112, at 2 (September 30, 1980). In many cases, the use of ITFS channels for point-to-point communications is complementary to point-to-multipoint or omnidirectional use in the same area. The point-to-point use of the ITFS channels is usually for studio to transmitter links (STLs). For example, under the proper set of circumstances, it could be possible to use one group of a pair of interleaved channel groups in an omnidirectional configuration and to use the other group as an STL in the same area. Furthermore, the use of an ITFS channel group for point-to-point communications allows the ITFS operator to use simpler and less expensive equipment than would be required by conventional point-to-point service. Finally, of course, such use is specifically provided for in Section 74.931(d) of the Rules, 47 C.F.R. § 74.931(d). We do believe, however, that it may be possible to accommodate such users in other portions

of the spectrum. In regard to these negotiations, we would expect the multichannel MDS permittee to give reasonable compensation for any dislocations caused by the operation of its facilities.

88. Another advantage to reallocating a specific set of channels and requiring an agreement prior to construction of the multichannel facilities is that it is easy to administer. This is in a sense a double advantage. It makes it easier for applicants to file acceptable applications and it makes it easier for the staff to review the applications. Under this plan, an applicant is not required to conduct an interference analysis until after he has received an authorization. Thus, all applicants are expected to comply with all pertinent Sections of Part 21 including those we are adopting today except that they are not required to show non-interference with existing and proposed cochannel and adjacent channel ITFS users of the reallocated channels until after a construction permit has been granted. This procedure will save unsuccessful applicants the time and expense required to prepare such analysis and it will save the staff the time required to review each analysis submitted. Furthermore, we expect that the analyses that are submitted by permittees will be of a much higher quality than those submitted by applicants. Another administrative advantage is that under all of the other plans considered it may have been necessary to freeze the acceptance of all further ITFS applications for some period time. This plan does not require such a procedure because it does not change the application process for the twenty channels still allocated for ITFS use.

89. A final advantage to a uniform nationwide allocation for multichannel MDS is that it avoids, to the greatest extent possible, disrupting the authorized satellite use of the 2500–2690 MHz band. The use of the band by the broadcast satellite service is limited domestically "to domestic and regional systems for community reception of educational television programming and public service information." 47 C.F.R. § 2.106, n. NG 101. The bands 2500–2535 MHz (space to earth) and 2655–2690 MHz (earth to space) are also shared with the fixed satellite service for common carrier use in Alaska and certain areas in the Western Pacific and in the contiguous United States, Alaska and the Mid and Western Pacific areas for education use. 47 C.F.R. § 2.106, n. NG 102.

90. Several of those filing comments in this proceeding suggested that if we were to reallocate spectrum from the ITFS use to the MDS use we would reduce the possibility of any satellite service sharing the band.

91. The shared use of the band by terrestrial and satellite services poses two distinct problems. First, the broadcast satellite transmissions can interfere with the reception of terrestrial signals. In general, this would be a problem for any terrestrial service, but it could be more of a problem for MDS than for ITFS users because of

the receiving antennas used. ITFS receiver sites generally are equipped with higher gain and hence more directional antennas than MDS receiver sites. The latter in many cases use low gain less directional antennas that are much more likely to pick up interfering signals from satellites than are the higher gain ITFS antennas. The Corporation for Public Broadcasting submitted an extensive analysis of the impact of sharing this band between terrestrial and satellite users that indicated that terrestrial ITFS users could coexist with satellite users. CPB was unwilling to extend this analysis to include MDS because of the antenna differences. Comments of the Corporation for Public Broadcasting, *supra.*, at 31, 32.

92. Terrestrial transmissions in the shared band can interfere with the reception of the satellite signal by nearby earth stations. Here also CPB claimed that the sharing of the band between ITFS and the satellite service was possible but it was again unwilling to extend its analysis to the MDS sharing. CPB claimed that the studies that it presented for ITFS sharing were not valid for MDS because MDS uses omnidirectional antennas and higher power whereas many ITFS stations use directional antennas and lower power transmitters. *Id.* The argument is that terrestrial transmitters of whatever kind create "holes" where no frequency sharing satellite receive stations can be located and that MDS transmitting stations create larger "holes" than ITFS. We agree. However, others have argued that the creation of such holes should not be used as a justification for precluding terrestrial operation in the same band. The Public Service Satellite Consortium (PSSC) commented as follows:

> PSSC respectfully urges that limiting the development of 2.5 GHz terrestrial distribution, by claiming that it limits potential satellite distribution in the same band, is not sufficiently strong justification for such action. To limit the developmental potential which 2.5 GHz terrestrial distribution service has, by claiming that such terrestrial distribution causes interference "holes" in potential satellite coverage in this same band, has few merits when the potentials are viewed together. It is true that "holes" would be made in satellite coverage in the presence of local ITFS (or other uses of the 2500 to 2690 MHz band), and that satellite earth stations in this band would require careful placement or other precautions to avoid being interfered with. But to limit development of terrestrial networks, which have at least an order of magnitude of more program capacity and flexibility, would be unwise. The total variety of potential programs which could be distributed via satellite on these frequencies is relatively small. In contrast, the variety of programming which could be aired terrestrially within the same band, is about five to six programs for each location where terrestrial transmitters can be coordinated. This would represent thousands of program possibilities which could be tailored to local or regional needs.
>
> Another consideration which should be recognized as a factor in this argument relates to the demographic distribution of potential "holes" in satellite coverage. If an assumption is made that a local entity wants to receive a satellite-distributed public service or instructional program, and can point its antenna to one of five or six satellites to receive it, it could do it. But if the program content did not match its needs for programming, either generally or at that particular time, it would probably choose from alternative sources. This is where the demographic distribution enters in.

> The more densely a city or region is populated, the more likely it will be that diverse programs are available to the public, and therefore less likely that a small selection of nationally distributed material will be useful. Where the satellite-distributed material will be most useful is in the more rural areas of the country where alternatives are not as plentiful.
>
> Carrying the argument further, rural areas are not as likely to have as great economic justification for installing ITFS transmitters as the more populated regions would have. In rural areas, low-cost satellite receivers installed to serve small towns, and having local signal distribution via low-power VHF or UHF transmitters, would seem to fit the need best. Terrestrial distribution at 2.5 GHz band frequencies would not be justifiable for individual users who would have to invest in additional receiving equipment to get the programs. Simplistically then, there would be no interference "holes" in satellite beam coverage, where such coverage is most appropriate-in areas where terrestrial distribution at these frequencies is less appropriate and economical.

Comments of the Public Service Satellite Consortium, General Docket 80–113, at 8–10 (Sept. 2, 1980) incorporated by reference in Comments of the Public Service Satellite Consortium, General Docket 80–112, at 4 (September 2, 1980). Perhaps more important in this regard is the fact that we are not aware of any existing plans to construct a public service satellite using this band. Many of those that used the ATS-6 satellite that operated in this band are now leasing transponders from existing satellite communications providers that operate in a different band.

93. The National Aeronautics and Space Administration (NASA) has indicated that it is exploring the use of this band to provide what it terms "feeder links" to provide communications between a "satellite and fixed earth stations, to facilitate interconnection of a mobile satellite service with the terrestrial telephone network". Further Comments of the National Aeronautics and Space Administration, General Dockets 80–112 and 80–113, at 2, 3 (July 2, 1982). NASA is proposing to use the 806–890 MHz band to communicate between a mobile user and a satellite and to use the feeder link to communicate from the satellite back to the feeder link earth station. This would allow for the extension of mobile telephone service to users beyond the range of planned terrestrial networks. NASA has proposed to use the 2500–2535 MHz for the space to earth segment and the 2655–2690 MHz band for the earth to space segment of the feeder links. NASA's proposal is not an allowed use under the existing table allocation and thus would require a separate rulemaking proceeding before it could be implemented.[27] In light of its plan, NASA suggests that any additional use of the 2500–2690 MHz by terrestrial users would make sharing of the band by satellite users more difficult.

94. Reallocating specific groups of ITFS channels for MDS would mitigate the problems pointed out by CPB and NASA and would move in the direction suggested by PSSC. Allocating a specific set of

---

[27] On November 29, 1982 NASA filed a Petition for Rulemaking in which it formally proposed, *inter alia*, that this band be made available for this purpose.

channels for MDS use would mean that any future public service satellite use of this band could be structured to avoid sharing the MDS frequencies. Thus, the analysis presented by CPB would be valid in most of the band. Further, the use of the frequencies NASA proposed for its feeder links could also be avoided. Of course, proceeding in this manner will increase the use of the channels that remain available to ITFS but if the CPB analysis is correct, and ITFS use of these is much less inimical to sharing of the band than is MDS use, sharing can still be accommodated.

95. Grandfathering all existing licensees and permittees of and applicants for the reallocated channels accounts for regional variations in ITFS channel use without extensive Commission involvement or analysis. It does not require any existing ITFS licensees, permittees or applicants to alter planned or present use of their authorizations. Where the channels are not being used multichannel MDS applicants have immediate access to the channels,[28] and where the channels are licensed or applied for MDS operations cannot commence without negotiations with affected ITFS entities.

96. The final element of the plan we are adopting—not accepting any ITFS applications for the reallocated spectrum after adoption of this order—is necessary in order to keep the reallocated channels available for multichannel MDS and to avoid having mutually exclusive, fundamentally different applicants for the same channel. In most cases, the would-be ITFS applicants will be able to be accomodated in the 20 channels that will continue to be available for ITFS.

97. On the basis of this analysis, we have concluded this plan strikes a reasonable balance between the need to continue to make spectrum available for traditional ITFS users and, at the same time, makes spectrum available for multichannel MDS. It does so by minimizing the disruption to the plans of existing ITFS licensees, permittees, or applicants. It is easy to administer and provides at least the possibility of multichannel MDS on a nationwide basis. It

---

[28] It could be argued that if the reallocated channels were the only channels not used in a particular area, and if an applicant were just about to file for these channels, such an applicant would be left with nowhere to apply. We believe that such occurrences will be rare and when they do occur it may be possible to reuse some of the 20 channels that will continue to be available for ITFS use to satisfy the needs of the would-be applicant. Furthermore, in regard to frequency reuse, we have recently been furnished data that indicate there is extensive frequency reuse in several of the large metropolitan areas where ITFS use is heavy. For example, in New York 19 of the 27 authorized channels are reused at least once; in Los Angeles 24 of the 28 authorized channels are reused at least once; in San Francisco 10 of the 26 authorized channels are reused at least once; and in Boston 14 of the 26 authorized channels are reused at least once. "Letter from Victor E. Ferrall, Jr." General Docket Nos. 80–112 and 80–113, attachment titled "ITFS Channel Utilization in the Top 25 Markets," (May 4, 1983). The letter and the data attached thereto are hereby accepted as informal comments in this proceeding.

also preserves, to the greatest extent possible, the future satellite use of this band.

98. We now address the question of how many channels to reallocate for multichannel MDS. This question really involves three separate questions. First, how many channels constitute a viable multichannel MDS system? Second, how many multichannel systems should be provided for in each market? Third, how many channels should be kept in reserve for ITFS use?

99. The existing MDS rules do not allow MDS licensees to operate even a two channel system. Specifically Section 21.901(d), 47 C.F.R. § 21.901(d), precludes an existing licensee from applying for at least one year and even then it must show that there is a public demand for additional service that is unlikely to be satisfied by a competing carrier. The new rules proposed in the *Notice* did not contain this restriction. However, the proposed repeal of the section was not discussed in the *Notice* and we did not receive much comment on it in the first set of comments filed in this proceeding. Virtually all the MDS entities that filed reply comments in response to the Microband Proposal strongly supported the concept of multichannel MDS. Microband itself also noted that the existing restrictions "for all practical purpose, limit carriers to a single channel in any one market," because "it is virtually impossible for MDS carriers to prove a negative—that no other carrier is likely to provide service." Microband Proposal, *supra* at 38, and 39. n. 48. In its filing, Contemporary Communications Corporation (CCC) argued strongly for multiple channel MDS. CCC claimed that:

> For both technical and economic reasons, the public would be better served by a single entity operating multiple channels, as opposed to many operators, each limited to one channel. Studies have shown that if multiple channels are to be provided to subscribers, careful control must be exercised over the transmitting parameters of the channels. In particular, for best operation, transmitting locations should be the same. Even better operation will result if common transmitting antennas are used. To achieve satisfactory reception, relative frequencies of the several transmitters must be controlled with respect to one another, to a degree much finer than that required for a single channel. Power levels must also be related among the several transmitters, transmission lines, and transmitting antennas if interference is to be reduced. In sum, only a single operator can insure efficient operation of a multiple channel system.
>
> In addition to technical operating factors, economic factors also support common ownership of multiple channels. Common transmission line (often costing as much as $25 per foot) and common antennas, costing thousands of dollars, can be utilized for multiple channels if there is only one operator. Rent can be reduced, since only one antenna would be employed, and multiple equipment can be operated in the same room, thereby decreasing the total floor space, as compared to a multiplicity of rooms that might be required for multiple operators. Common maintenance personnel can also reduce the maintenance cost per channel. Further, the number of spare parts needed by a single operator of multiple channels is obviously less than the number required by separate operators each operating one channel. Even electricity costs will be less for multiple channel operations.

Additional Comments of CCC, *supra* at 7–8.

100. Of course, it is possible to have multichannel MDS systems where each of the channels is licensed to a different carrier. As mentioned earlier, this is the situation in Phoenix where Microband and Contemporary are the carriers and both have the same customer, American Cable Television, offering two-tier programming with the two channels. We believe that for technical reasons, this is probably the only way a two-channel operation will be achieved under the existing rules. Allocating a single channel to each licensee has done little to promote diversity of ownership, and has the significant detriments of increased system complexity, cost, and regulatory delays in providing service to the public. The increased complexity and costs result from the factors listed by CCC in its comments. In a service where the licensee is not permitted to exercise program control the benefits of diversity are less pronounced than they might be where the licensee controls the material transmitted. Although diversity may lead to competition in such things as quality of service, allocating a single channel to each carrier means that there will likely be a comparative hearing for each channel as compared to a single hearing for a multiple channel application. For these reasons, we have concluded that there is no reason to continue to limit MDS carriers to a single channel operation and that the public interest would be better served by the repeal of the single channel limitation contained in Section 21.901(d) of the rules.

101. Given that multichannel MDS operation will benefit the public interest, we must address the question of how many channels should be in each system. In its proposal Microband suggested that a five channel system was optimum. It based this conclusion on an analysis that showed that "four channels of Pay TV will satisfy 85% of consumer demand." It thus concluded a multichannel system should consist of "four video channels plus a data channel." Microband Proposal, *supra*, at 48. Another commenter, Tekkom, suggested that 10 channels per system would be in the public interest. Comments of Tekkom, Inc., General Dockets 80–112 and 80–113, 11 (June 28, 1982). CBS, on the other hand, argued that the demand in each market should determine the number of channels in multichannel systems. CBS Comments on the Microband Proposal for Multichannel MDS Service, General Dockets 80–112 and 80–113, at 10 (July 1, 1982). We agree with CBS's claim that there may be regional variations in the number of channels that would be optimum in a multichannel system. On the other hand, we recognize that we are making this reallocation from a band that is divided into four channel groups and that four channel systems would, therefore, be less disruptive of the existing scheme. Also the Microband analysis suggested that 4 channels would satisfy nearly all the consumer demand for premium channels. Furthermore, the fact that

MDS is a common carrier service means that market forces will still play a part in determining how users acquire the channels and offer services to the public. Depending on the particular market conditions, a licensee may find it desirable, in a system of carrier initiated tariffs, to offer channels in a variety of different ways. *See e.g.*, *Metrock Corporation*, 73 FCC 2d 802 (1979). This variety would reflect the particular needs and desire of users in different areas. Not only may the terms of the offering of channels vary, but also the uses to which they are put may vary. For example, although it appears the channels will at least initially be used for the distribution of premium television programming, our rules permit "any kind of communications service consistent with the Commission's Rules . . ..." 47 C.F.R. § 21.903. For these reasons, we have concluded that authorizing 4 channel MDS systems serves the public interest.

102. We also recognize that it is possible that the same entity could lease all of the capacity of each common carrier, thereby, precluding others from becoming MDS programmers. Since the public only deals with the customers of the common carrier — and not the common carrier itself — the public could be forced to deal with a single multichannel MDS provider. We have considered requiring multichannel MDS licensees to so tariff their service that such an eventuality could not occur. We have decided not to adopt such a requirement for several reasons. First, we believe that the fact that an entity desiring to lease all available MDS channels will be required to deal with two common carriers somewhat reduces the possibility this will occur. Furthermore, since we are also by this order allowing ITFS licensees to lease excess capacity in their facilities, it is possible that an entity that wishes to provide premium television service to the public could do so using such excess capacity. It is also possible that in many areas, the public will be offered a choice between multichannel MDS and cable. Finally, we believe that restricting MDS tariffs would prevent market forces from determining the optimum mix of channels. Adopting such a requirement would create an artificial upper limit on the maximum number of channels a single entity could program.

103. Finally, we must address the related questions of how many channels to reallocate for MDS and how many channels to hold in reserve for future growth in ITFS. What we must do here is balance the need to make a reasonable number of multichannel MDS systems available with the need to ensure that an adequate number of channels are available for future ITFS growth.

104. In its proposal, Microband suggested that we reallocate three full ITFS groups or twelve channels for MDS use. Microband Proposal, *supra*, at 33. Microband claims to have based this suggestion on its analysis of the potential number of customers for multichannel MDS service in the top 50 markets. Microband did not submit any analysis to support its suggestion. It did present data on

the number of potential multichannel MDS customers in the top 50 market but it did not relate this data to the number of competitive MDS systems that would be optimum or even reasonable. The data presented show that on the average, there are 1,770,800 potential multichannel MDS subscribers in the top 5 markets and 70,400 in markets 46 through 50. Microband took these figures and divided each by 18,000, the break even number of subscribers for a multichannel system, to produce what it called a coverage ratio. What this figure purports to represent is the number of systems that could reach a financial break even point if all the potential customers were to subscribe to a single service and if each of the competing services were to have an equal share of the available customers. The coverage ratio for the top 5 markets was 98.4 and the coverage ratio for markets 46–50 was 3.9. All that the Microband data really show is that there are potential customers for multichannel MDS systems. We believe that there are factors other than the number of homes not passed by cable that will determine the number of multichannel MDS systems that can profitably serve an area. These include the nature and quality of the programming available, the quality of signal that can be delivered, the availability of competitive services, the price of the service, and the discretionary income of the residents of the area. These factors may combine in one area in such a way that only one MDS system can be profitable and in another area in such a way that 3 or more systems could be profitable.

105. Consideration of all these factors does not lead to clear choice for the number of multichannel systems that should be authorized in each area. However, it does appear that in many large areas at least two systems could be viable. Moreover, authorization of more than one system should provide a number of public interest benefits. Competition between competing systems could stimulate technological innovation, could increase systems availability and could also make lower cost service available to the public. We also believe that we should continue to hold a substantial amount of spectrum in reserve for ITFS use. For these reasons, we have concluded that we should make two groups of ITFS channels available for multichannel MDS. This will allow two competitive MDS operators to offer multichannel service in those areas and will keep 20 channels in reserve for existing and future ITFS use.[29]

106. Another issue to be resolved is what channels to reallocate. In its proposal, Microband suggested that the E, F and G groups be reallocated for MDS use. It based this recommendation on its conclusion that these were the bands least used by ITFS licensees. We do not agree. Our records show that the distribution of ITFS

---

[29] Each applicant will only be allowed to file a single multi-channel application in each service area.

licenses among groups is as follows: A group-225, B group-93, C group-128, D group-82, E group-112, F group-91, and G group-113. Thus, it would appear that except for the A-B group, use of the interleaved ITFS frequency groups is about the same. It should also be noted that the A, C and E groups are significantly more used than the groups with which they are interleaved. This is to be expected because the use of channels in one pair of an interleaved group tends to preclude use of the other group in the same area. Because the interleaved ITFS group use does not vary significantly by group except for the A-B group, we must look to other criteria to select the group to assign to MDS.

107. The most important factor in selecting the groups to be reallocated is minimum interference to the remaining ITFS licensees. This means that we should reallocate an interleaved pair of groups. Proceeding in this manner will result in only two ITFS channels being adjacent to MDS channels. Choosing non-interleaved groups could result in there being as many as 9 ITFS channels adjacent to MDS channels. We also believe that we should avoid reallocating either the group of channels that share the band (2500–2535 MHz and 2665–2690 MHz) that NASA is proposing to use for its feeder link operation so as not to jeopardize consideration of that proposal. This eliminates the A-B pair and G group. This reduces the choice to either the C-D pair or the E-F pair. We also believe that it would be useful to leave the widest possible contiguous band available for ITFS because this would result in the largest possible contiguous bandwidth being left available for shared use by ITFS and Public Service satellite use. This means that if there is a public service satellite use of this band, it would be shared with only ITFS over the largest possible contiguous band. For these reasons, we have concluded that the best pair of channels to reallocate for MDS are the E and F groups.

108. Finally, we must address the question of how to divide the eight channels in the E and F groups between the two MDS operators licensed. We could follow the ITFS assignment method discussed above and assign the 4 channel E group to one licensee and the 4 channel F group to the other licensee. Proceeding in this manner has the advantage of allowing the use of simpler transmitters and downconversion equipment, but it has the disadvantage that widespread adjacent channel interference could occur if the transmitters of the two operators were not colocated. We could also authorize each operator to use 4 adjacent channels; that is assign channels E1, F1, E2, F2 to one operator and channels E3, F3, E4, F4 to the other operator. Thus, there would only be one pair of adjacent channel F2 and E3. Of course with either method, channel E1 will be adjacent to ITFS channel D4 and channel F4 will be adjacent to ITFS channel G1, both of which may be in use in the area where the MDS channels are being authorized. Thus, by licensing adjacent channels

to the same operator, we would be leaving the possibility of adjacent channel interference with existing ITFS stations unchanged and would be eliminating most of the non-colocated adjacent operation from the reallocated spectrum. This could require that the multichannel operators use more complicated transmission and reception equipment.

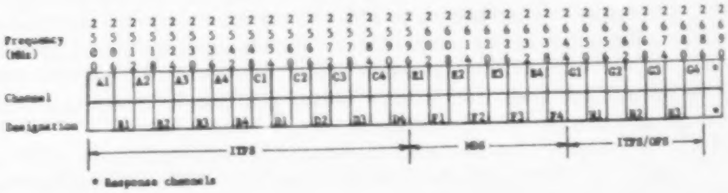
109. We did not address this issue extensively in the companion *Notice*, and, although we did not receive much comment on it in response to the companion *Notice*, some of those commenting on the Microband proposal did address the issue. One commenter, the Microwave Communications Association (MCA), noted that because we did not specifically propose rules for multichannel operation, we would be required to do so in the future. MCA further expressed the view that "this is fortuitous, because it will permit the Commission to consider multichannel systems' operating experience. Actual operating experience is clearly preferable to a lengthy technical rulemaking based only upon theoretical calculations." Comments of MCA, *supra*, at 9. There is some validity to MCA's claim; however, we cannot reallocate spectrum without specifying what channels are available for each applicant.[30] For this reason, we have concluded that the best course to follow is to have each applicant apply for a four channel MDS authorization using the interleaved channel plan now used by ITFS licensees. We also will require each applicant to include, as part of its application, an analysis of the potential for adjacent channel interference with a non-colocated licensee operating on the interleaved channel group. If the two successful applicants determine either before or after initiation of service that there would be less adjacent channel interference by operating on adjacent channels, we will allow such operation. We believe that the two licensees in each area will be in a better position to make the final determination as to which channelization scheme is best.

110. To summarize we conclude that it is in the public interest to reallocate 8 of the channels now allocated for ITFS for use by the MDS nationally. Existing ITFS licensees (as well as existing permittees and applicants that eventually become licensees) of the reallocated channels would be grandfathered in perpetuity. Further, we have concluded that reallocating the E and F groups for MDS use would be least disruptive of the existing and potential uses of the 2500–2690 MHz band. We will accept applications for multichannel MDS in all areas of the country regardless of whether the reallocated channels have been previously applied for by an ITFS applicant. In those situations where there is an existing ITFS licensee, permittee, or applicant we shall issue multichannel MDS construction permits

---

[30] We will apply existing technical rules to multichannel MDS. We expect to adopt new technical rules for MDS prior to or shortly after the authorization of the first multichannel MDS station. (*See* Note 1, *supra*).

conditioned on the permittee obtaining, prior to commencing construction, a statement from each adjacent channel and cochannel ITFS licensee, permittee, or applicant whose transmitter is located within 50 miles of the proposed MDS transmitter site, that the operation of the MDS facility will not cause harmful interference to the ITFS operation or if it does the ITFS operator will accept the interference. We expect that the MDS permittees and the ITFS users of the reallocated channels will negotiate in good faith to mutually accommodate each others' communications requirements. We believe that this process will be beneficial to all concerned. The MDS permittees will be able to offer a potentially profitable new communications service to the public. Existing ITFS users of the reallocated spectrum may end up with better and more efficient communication facilities at no expense, will most likely benefit from technical expertise of the commercial users of the band and will likely benefit from the decreased costs of equipment that will result from the partial commercial exploitation of the band. Finally, the public will benefit from the more efficient use of a valuable national resource, the electromagnetic spectrum. We recognize that there may be some large cities in which no reallocation will occur despite the steps we take today. It is likely in those areas in which this plan does not make multichannel MDS available there will be alternative means available by which the public will be able to obtain multichannel MDS including leasing the excess capacity of existing ITFS channels. The following chart illustrates the channel plan we are adopting.



Frequency (MHz)
2500 2506 2512 2518 2524 2530 2536 2542 2548 2554 2560 2566 2572 2578 2584 2590 2596 2602 2608 2614 2620 2626 2632 2638 2644 2650 2656 2662 2668 2674 2680 2686 2690

D. *Time Sharing and Leasing*

111. In the *Notice*, we invited comments on the "technical and practical feasibility" of permitting ITFS stations to share unused transmission time with MDS users. We stated that because most educational use occurs during daytime hours while entertainment television occurs in the evening, sharing appeared to be practical. Three forms of sharing were discussed: separate station facilities sharing the same frequency, jointly licensed facilities, and lease of unused transmission time by ITFS licensees. We also asked whether sharing ought to be mandated. *Notice, supra*, at para. 51.

112. Several ITFS entities accepted our invitation and submitted comments on time sharing of the ITFS channels. Most of the

comments received were not favorable. For example, the Joint Council on Educational Telecommunications commented that colleges, universities and hospitals use their channels in evening hours and on weekends, and that entertainment programming often is transmitted on a 24-hour basis. Comment of the Joint Council on Educational Telecommunications, General Docket 80–112, at 5–6 (September 29, 1980). The National Education Association (NEA) reiterated the concerns of JCET and added that sharing is not feasible for other reasons. For example, it stated that ITFS systems are configured to reach designated educational sites while MDS systems that are used to transmit pay television are configured to reach the greatest population possible. Comments of the National Education Association, General Docket 80–112, at 6–7 (September 25, 1980).

113. Several others raised another reason why time-sharing is not feasible. In its comments, the Archdiocese of Los Angeles made the following observations:

> "Education has for its object the formation of character". Under the second and third Commission sharing schemes, ITFS licensees would lose control over the content of certain transmissions from their facilities. Much of the programming being broadcast today via MDS is considered by many people to be objectionable—even, at times, pornographic. Proposals for construction of new ITFS facilities, and continued funding of present stations, will likely meet strong opposition from university regents, local boards of education, private institutions and concerned parent-teacher groups if they are placed in the position of having to purvey material which they consider disconsonant with their responsibilities as educators. Thus, these sharing schemes could discourage further ITFS growth—and perhaps result in a reduction of the present number of stations.
>
> Indeed, the Los Angeles Archdiocese is totally opposed to imposition of either of the latter sharing schemes. The Archdiocese would be forced into a difficult moral decision if it faced the prospect of its facilities being used for the transmission of programming which it considered offensive to Catholic values. If the Archdiocese lacked the ability to discriminate as to users of its facilities, it might well have to decide to give up its station altogether so as to avoid becoming party to transmissions contrary to the mission of the Church.

Comment of the Archdioceses of Los Angeles, General Docket 80–112, at 14–15 (September 26, 1980) (footnote omitted) (quoting Herbert Spencer, *Social Statistics*, pt. 1 ch. 2(1851)).

114. We agree with the majority of commenters who oppose any requirement that ITFS licensees share or lease their excess channel capacity. Contrary to the belief of those commenters, however, we believe that it is in the public interest to *permit* ITFS licensees to lease their excess channel capacity. The decision to lease excess capacity thus remains entirely up to the individual ITFS licensee. As a result of the current decrease in federal funding for ITFS, we believe it is appropriate to modify our rules to permit ITFS operators

to generate revenues by using their excess capacity for a variety of non-ITFS purposes.[31] As the excess capacity of ITFS operators is put to use serving the public, greater use of the available spectrum should result.[32]

115. We think that the changes that we are making today are appropriate for two basic reasons. First, the cost of constructing and operating an ITFS system represents a significant burden to licensees. In addition, the cost of education is increasing daily. ITFS provides a low-cost alternative to specialized instruction, adult education and other instructional modes. However, new revenue sources are necessary in order to give ITFS every chance to grow and succeed. Second, increased interest has been generated in the ITFS band including demand for broader use of the spectrum.

116. Thus, substantial benefits to the public may be derived from allowing ITFS licensees to use excess channel capacity, either by directly utilizing it themselves or through leasing it to others. The income derived from such service could enable stations to be on the air for a greater portion of the day and to increase programming availability. In addition, new revenues might prove sufficient to bring currently vacant channels on the air.

117. Increased revenue would widen ITFS' base of support and contribute to the service's ability to withstand a diminution in any one source of funding without being forced to significantly reduce its overall service to the community. If federal government funding declines, the success of licensees in recouping at least part of the loss may be crucial to ITFS growth and development. The option licensees have to lease excess ITFS channel capacity is consistent with several recent actions taken by the Commission. The Commission amended Part 74 of its rules to permit the shared use of broadcast auxiliary facilities with other broadcast and non-broadcast entities.[33] It also recently has authorized non-broadcast uses of non-main channel operations, such as teletext and FM subcarriers.[34] We are adopting policies in this proceeding for leased uses of ITFS excess channel capacity that are consistent with the decisions in the Part 74, teletext and FM subcarrier rule proceedings.

118. Therefore, we are amending Part 74 to permit use of

---

[31] The Public Broadcasting Amendments Act of 1981 (Public Law (97–35) Section f(a)).

[32] The Commission today is also adopting a *Notice of Proposed Rule Making* that would further assist ITFS licensees in their operations. *See* Amendment of Part 74 of the Commission's Rules and Regulations in regard to the Instructional Television Fixed Service, FCC 83–244, (adopted) May 26, 1983.

[33] 48 Fed. Reg. 17081 (April 21, 1983).

[34] *See* Amendment of Parts 2, 73 and 76 of the Commission's Rules to Authorize the Transmission of Teletext by TV Stations, *Report and Order* in BC Docket No. 81–741, adopted March 24, 1983; and Amendments of Parts 2 and 73 of the Commission's Rules Concerning the Use of Subsidiary Communications Authorizations, *Report and Order* in BC Docket No. 82–536, adopted April 7, 1983.

facilities by ITFS licensees for non-ITFS purposes. This authorization includes use of the ITFS station's main broadcast channel and the use of non-main channel excess capacity including subcarriers and the vertical blanking interval (VBI). Furthermore, licensees are permitted to make this excess capacity available to others, if they so choose, on a profit-making basis. We will not, at this time, adopt specific time limitations on non-ITFS use of licensee excess channel capacity. By declining to specify any such limitations, we hope to maximize the spectrum efficiencies that shared use will provide. This will also afford ITFS licensees flexibility in offering their excess capacity to other entities. However, we do expect ITFS licensees to utilize each of their ITFS main channels substantially for legitimate ITFS use. Since we cannot anticipate in advance how much time is required for each licensee to address its ITFS needs, we do not wish to force ITFS channels to remain idle when other legitimate demands for the channels exist. Such an outcome is precisely the situation that we are attempting to avoid by allowing shared use of the channels. This policy is consistent with action taken by the Commission in amendment of Part 74, Subpart F of the Commission's Rules to permit shared use of broadcast auxiliary facilities with other broadcast and non-broadcast entities, 48 Fed. Reg. 17081 (published April 21, 1983). As in the proceedings discussed above, if ITFS licensees do make excess capacity available, the question arises as to whether the licensee is engaging in common carrier activity. After briefly explaining the legal requirements under which we must decide the common carriage issue, we shall apply those requirements to the two types of excess capacity at issue, in turn, below.

119. In *National Association of Regulatory Utility Commissioners v. FCC*, 525 F.2d 630 (D.C. Cir), *cert. denied* 425 U.S. 992 (1976) (*NARUC I*), the court specifically stated that a carrier will not be a common carrier where its practice is to make individualized decisions, in particular cases, whether and on what terms to deal. 525 F.2d at 641. The court continued, moreover, that the distinction between common and private carriers was not based on the services offered or the clientele served, but rather on "the manner and terms by which they approach and deal with their customers." Id. at 642. The court then stated that in determining whether a particular carrier should be accorded common carrier status, a finding must be made as to whether any legal compulsion to serve indifferently exists, or whether there are reasons implicit in the nature of the operation to expect an indifferent holding out.

120. With respect to leasing of the main ITFS channel, we see no reason to require ITFS licensees who engage in such leasing to be common carriers. One purpose of this proceeding is to make unused channels in the 2500–2690 MHz band available for use on a common carrier basis. We are reallocating channels from ITFS to MDS to

serve this purpose, and we believe experience with the reallocation is necessary before we take an additional step and find the need for common carrier channels is so great that all excess capacity should be offered on that basis. Moreover, the requirements of Title II may well discourage or inhibit ITFS licensees from making spare capacity available, if they could only do so as common carriers. For these reasons, we will not require that spare capacity on the main channel be leased on a common carrier basis.

121. With respect to the second test for classifying common carriers, whether there are reasons implicit in the nature of the operation to expect an indifferent holding out, we believe that main channel leasing should not, at least initially, be considered a common carrier activity. Our reasoning closely parallels the decision recently adopted in BC Docket No. 81–794, in which we stated that the selling of excess capacity on television broadcast auxiliary stations would not be treated as common carriage. *Shared Use of Broadcast Auxiliary Facilities*, 48 Fed. Reg. 17081 (April 21, 1983). We believe ITFS will not engage in a generalized holding out of their excess capacity, but instead will carefully select lessees for long-term contracts. The comments demonstrate that licensed facilities do not readily lend themselves to widespread MDS use. They have been tailored to the particular requirements of the licensee, and, if they do lend themselves to use by another, careful coordination will be necessary. The licensee also must consider its own growth requirements, and likely will limit the availability of the excess capacity so it will be able to use the facilities for its own primary purpose when the need arises. Individual contractual arrangements would better serve this purpose than would a general offer to deal with the public indiscriminately. This individualized selection of clients due to the need to protect the licensee's own use of the facilities was one factor, thought by the court in *NARUC I* to be inconsistent with common carrier status. 525 F.2d at 642. We find nothing inherent in the potential leasing activities of ITFS licensees that would lead them to make indifferent offerings of excess capacity on the main channel. Accordingly, we do not believe that ITFS licensees will act as common carriers.[35]

122. We recognize that permitting ITFS licensees to lease their main channels for other than traditional ITFS purposes may effectively result in a diminution of the channels reserved for traditional purposes, but we believe this risk is acceptable. First, only excess capacity may be leased. We presume the channels were obtained, and are primarily utilized for, satisfying a legitimate ITFS

---

[35] If our initial analysis is incorrect, and ITFS licensees do in fact begin offering main channel excess capacity on an indifferent basis, it would be incumbent on the Commission to determine the extent to which traditional Title II regulation should be applied. *See NARUC I at 644; Shared Use of Auxiliary Broadcast Facilities at para. 26.*

requirement. Because these requirements appear to be increasing in a number of areas, we presume the traditional uses will continue. Second, the pleadings indicate, if anything, a reluctance on the part of licensees to engage in any form of sharing. Finally, any wholesale abandonment of the primary purpose of the facility could jeopardize the entity's license.

123. Just as we find ITFS main channel sharing analogous to our recent Broadcast Auxiliary proceeding, 48 Fed. Reg. 17081 (April 21, 1983), we believe that the regulatory status of subcarrier and VBI leasing can be resolved in essentially the same manner as in the recently adopted FM-SCA and Teletext decisions.

124. Depending on the nature of the information disseminated via an ITFS station's subcarriers or VBI, the regulatory status accorded the service may vary. As noted in the FM-SCA *Report and Order*, the provision of "broadcast-related services on subchannels is well established and does not raise any new issues of appropriate regulation". Thus, so long as the services provided over the station's subcarriers or VBI are broadcast related, no extraordinary regulatory treatment will attach to the profit-making activity.

125. However, other subchannel or VBI uses may be similar to services being provided by licensees in the private radio or common carrier services. To the extent that services offered via ITFS facilities are private radio or common carrier services, these ITFS-delivered services will be treated in the same manner, and with all the same benefits, obligations and responsibilities as the providers of similar services. Thus, with regard to non-broadcast related uses of the ITFS station's subcarriers and VBI, it will be necessary to determine whether the service offered constitutes private or common carriage under *NARUC* I and applicable statutes.

126. With one exception, the determination as to whether a particular non-broadcast service offered on an ITFS subchannel or VBI is private or common carriage will be made in accordance with the guidance given in *NARUC I*, as discussed above. Essentially, if the ITFS operator indiscriminately offers the station's subcarriers and VBI to other users, the operator will be regarded as a common carrier and will be treated accordingly. If, on the other hand, the licensee does not engage in an indiscriminate holding out, common carrier obligations will not attach and private carriage rules will apply. The one exception to utilizing the *NARUC I* test involves land mobile services.

127. With regard to land mobile services, the Communications Amendments Act of 1982, Section 120, establishes a demarcation between private and common carrier land mobile services, and indicates that the test contained in the new Section 331(c) of the Communications Act is intended to supersede the *NARUC I* standard. Public Law No. 97–259, 96 Stat. 1087. We believe that the test in the new legislation would apply to some of the communications

services that could be offered on ITFS subchannels or the VBI. The Act defines a "Mobile Service" as . . . a radio communication service carried on between mobile stations or receivers and land stations, ..., and includes both one-way and two-way radio communication services." Public Law 97-259 at Section 120(b)(2), 96 Stat 1097, 47 U.S.C. 153(n). It is clear that potential ITFS subchannel and VBI services such as paging would therefore be governed by the new legislation, and such services will be judged by the test in the new Section 331(c). The new statutory test is based on the manner in which a multiple licensed or shared private land station is interconnected with a telephone exchange or interexchange service or facility.[36] *See also* H.R. Rep. No. 765, 97th Congress, 2nd Session, pp. 52–56 (1082).[37] The statute also makes it clear that if it is a private system, it is exempt from state and local regulation. 47 U.S.C. 331(c)(3).

128. Once an ITFS licensee has determined whether the proposed service is private or common carriage, either under the *NARUC I* standard or, for land mobile services, Section 331(c) of the Act, the licensee, in order to provide a common carrier service, must seek the appropriate authorization from the FCC.[38] The ITFS licensee will be in the same position, entitled to the same privileges and subject to the same obligations and regulations as a traditional offerer of common carrier services.[39]

129. ITFS licensees seeking to provide private carrier service on

---

[36] New Section 331(c)(1) of the Act provides, in pertinent part, that "private land mobile service shall include service provided by specialized mobile radio, multiple licensed radio dispatch systems, and all other radio dispatch systems, regardless of whether such service is provided indiscriminately to eligible users on a commercial basis, except that a land station licensed in such service to multiple licensees or otherwise shared by authorized users (other than a nonprofit, cooperative station) shall not be interconnected with a telephone exchange or interexchange service or facility for any purpose, except to the extent that (A) each user obtains such interconnection directly from a duly authorized carrier; or (B) licensees jointly obtain such interconnection directly from a duly-authorized carrier."

[37] The Commission's interpretation of the test in the new legislation will be fully explored in our reconsideration of the *Second Report and Order*, Docket No. 20846, 89 F.C.C. 2d 741 (April 8, 1982), and our treatment of land mobile services herein is expressly subject to the outcome of that proceeding.

[38] These authorization and filing requirements are illustrated in greater detail in the FM-SCA *Report and Order* at paragraphs 25–27.

[39] In all cases, involving either private or common carrier services, the applicant will not be seeking approval for the technical facilities of the ITFS station. The Commission regards ITFS subcarrier and VBI use as a secondary privilege that runs with the primary ITFS station license. That right is conferred on the primary station licensee only. In this regard, it should be noted that an ITFS licensee that elects to use a subchannel for private or common carriage remains an ITFS licensee for all other purposes. Only the use of the subchannel for non-broadcast related purposes would be regulated in accordance with private radio or common carrier regulation.

an ITFS subchannel or VBI must notify the Licensing Division of the Private Radio Bureau at Gettysburg, Pennsylvania, 17325, by letter, prior to initiating service. In the letter, they must certify that their facilities will be used in this regard only for permissible purposes. *See* 47 C.F.R. Parts 90 and 94. When providing land mobile service, they must also certify that service will be offered only to users eligible under Part 90 of the Commission's Rules, and that any interconnection of the station with a telephone exchange or interexchange service or facility will be obtained in accordance with new Section 331 of the Communications Act, *supra*. Such notifications will not give rise to a comment period, and no separate authorization will be issued by the Commission. As in the case of common carrier services, the ITFS operator offering a private service will be in the same position, entitled to the same privileges and subject to the same obligations and regulations as a traditional offerer of such services.

E. *Selection Procedures*

130. Several of the commenters in this proceeding expressed the view that if the Commission decided to reallocate spectrum to the MDS, it should simultaneously act to ensure that the application processing procedure will not unduly delay the offering of multichannel MDS service to the public. The Ad Hoc Committee for Wireless Cable outlined the perceived problem as follows:

> Our primary concern in this regard is that the Commission might adopt a procedure involving comparative hearings for all of the allocated frequencies. It is inevitable that this will lead to interminable delays in conflict with the public interest. Recent Commission experience has established that a certain "gold-rush" mentality has accompanied reallocation of frequencies. The reallocation of frequencies to the Low Power Television Service spawned thousands of applicants and swamped the processing mechanism. Even the recently allocated spectrum for the Digital Electronic Message and Cellar Radio Service have been sought by more applicants than can be licensed.
>
> Moreover, many of the applications would probably not meet minimum qualifications necessary to operate a multi-channel MDS system. The development, construction, operation and maintenance of multi-channel MDS systems will require substantial and sophisticated experience in construction and operation of microwave facilities. The time and effort needed to evaluate the qualifications of potential applicants and then compare these applicants would delay the introduction of the service indefinitely, thereby eliminating the prompt introduction of new and innovative programming and the competition such an introduction would bring. Moreover, it would place substantial burdens on Commission resources and personnel.

Ad Hoc Committee Comments, *supra* at 5–6 (footnotes omitted). The National Association of MDS Service Companies (NAMSCO), the trade organization for users of licensed MDS facilities, expressed the view that "without a concurrently established procedure for processing new MDS applications, the benefits of the long awaited action in this proceeding will be rendered academic." Comments of the

National Association of MDS Service Companies, General Dockets 80-112 and 80-113, at 5 (July 2, 1982).

131. In its proposal Microband suggested that these problems could be avoided if the Commission were to "[expand] the capacity of existing MDS channel 1 and channel 2 in the top 50 markets by separate allocation." Microband Proposal, *supra*, at 87. In particular, what Microband proposed was that we reallocate three ITFS channel groups to the MDS and that we allow only existing MDS channel 1 licensees, permittees and applicants to apply for one of the reallocated groups for 1 year after the date of the order. A second reallocated channel group would be similarly reserved for channel 2 applicants, permittees and licensees. The third group would be available to any applicant that met the requirements of Section 21.900 of the Rules, 47 C.F.R. § 21.900. *Id.* Appendix F at 3. Thus, what Microband proposed is that two channel groups be made available for existing MDS licensees, permittees, and applicants and that another channel group be made available for all other applicants.

132. In support of its plan, Microband claimed "that the Commission has routinely established separate frequency allocations where the need for the new service was immediate." Comments of Microband Corporation of America, General Dockets 80-112 and 80-113, at 9 (July 2, 1982) (hereinafter cited as 2nd Microband Comments). In Cellular Communications Systems, the most recent Commission decision cited by Microband to support this proposition, we did state that "the Commission in the past has routinely established separate *wireline and non-wireline* frequency allocations" *Cellular Communications Systems, 86 FCC 2d 469, 492 (1981), on recon.*, 89 FCC 2d 58 (1982) (emphasis added) (hereinafter *Cellular Order* and *Cellular Order on Reconsideration*). In the Cellular Order, we reviewed the line of cases now relied upon by Microband and concluded that there is:

> [a] firm legal foundation for establishing a separate *wireline* allocation in a situation where, . . . (1) there is an immediate need for service to the public, (2) this need can be addressed quickly by a *wireline company's* expertise, (3) the separate allocation licensing scheme is a reasonable means of avoiding long delays in the availability of *any* cellular service attributable to comparative hearings, and (4) we have taken reasonable steps to guard against anticompetitive practices.

Cellular Order, *supra*, at 493 (emphasis added). Before applying these tests to the present situation, we first note that, in the past, we have only authorized separate allocations for wireline carriers in various mobile communications services. Wireline carriers and non-wireline carriers were two distinct classes of applicants for the services. There are not two distinct classes of MDS carriers. For this reason, we believe that Microband's reliance on our policy of making separate frequency allocations for wireline and non-wireline carriers providers of the same service to support its plan is misplaced.

133. Disregarding this fundamental distinction, we nevertheless apply the tests articulated in the *Cellular Order* to the Microband plan. First, is there an immediate need for service to the public? Microband and other MDS licensees and their customers have argued that there is an unmet public demand for a multichannel premium television service that multichannel MDS will satisfy. We do not believe that this demand is analogous to the verified congestion that existed on two-way mobile systems prompting our separate allocation decision for the Cellular Service. *Id.* at 489. Rather, we believe what really is at issue here is the timing of multichannel MDS entry into the pay television market relative to the growth curve of cable television and other competitive services. As Microband itself noted, "the primary market for multiple channel MDS will shrink at a rate of ten to fifteen percent per year of delay due to increased cable penetration alone." Second Microband Comments, *supra*, at 12. What Microband is telling us is that while there is now a need for multichannel MDS, the need may decrease with the passage of time. Thus, we believe it is reasonable to conclude that there is a demand for the delivery of multichannel premium programming that multichannel MDS would be well-suited to provide; however, the need for the service does not justify the separate allocation suggested.

134. Next, do existing licensees and permittees possess some special technical expertise in operating multichannel MDS systems? It is not clear that operating a single channel system gives a licensee multichannel expertise. Even assuming that Microband and other single channel licensees have some technical expertise in operating multiple channel systems as a result of their experience with single channel systems, we do not see how those entities that have only filed applications can be said to have any expertise at all. It could be argued that the only entities with any real experience in operating multiple channel video systems are cable television operators. Thus, we conclude that the Microband separate allocation proposal would not bring a significant special technical expertise to the multichannel MDS service. In reaching this conclusion, we are comparing the technical expertise of those that the Microband plan would favor with the expertise that wireline carriers had in cellular and related technology. The applicants that the Microband proposal would favor do not have equivalent expertise in multichannel MDS.

135. Third, would the separate allocation be a reasonable means to avoid long delays in making multichannel MDS available and, fourth, would it adequately guard against anti-competitive practices? We are considering these two criteria together because we believe that one of the fundamental elements of reasonableness is competitive effect. The Microband separate allocation scheme reasonably could be expected to result in the early availability of multichannel MDS service. The Microwave Communications Association, an

industry trade organization of MDS carriers, MDS users, equipment manufacturers and others, analyzed the results of the Microband plan as follows:

> Microband owns 26 Channel 1 MDS stations outright and partially owns an additional 9 Channel 1 MDS stations in which it has management responsibilities, or a total of 35 MDS stations - 70% of the top 50 markets. Further, Microband is a Channel 2 applicant in an additional 13 markets. Thus Microband potentially could have multiple channel ownership interests in 48 out of the top 50 markets. Even more significantly, since most of the Channel 2 markets are mutually exclusive with more than one applicant (there are only three Channel 2 licensees), Microband (or a Microband related company) would be the *sole* multichannel licensee in 64% of the top 50 markets until the mutually exclusive Channel 2 markets . . . were resolved.

Comments of the Microwave Communications Association, General Dockets 80–113, at 10 (July 2, 1982).

136. American Home Theatre, the MDS customer in Salt Lake City termed the Microband scheme "flagrantly anti-competitive" and concluded that what Microband was seeking was "a substantial 'leg-up' on the provision of multichannel MDS service while new entrants to the market place would still be tied up in litigation in comparative hearings before the Commission." Comments of American Home Theatre, Inc. With Respect to Proposal of Microband Corporation of America, General Docket 80–112 and 80–113, at 7 (June 2, 1982). On the other hand, Microband claims that if its plan were to be adopted, it would own only twenty-two percent of the 150 multichannel licenses and that this would result in a decrease in its percentage of ownership. Second Microband Comments, *supra*, at 8–9. Of course, because we are only authorizing two multichannel operations, rather than the three Microband proposed, Microband would have 33% of the licenses. We believe the quoted Microwave Communications Association analysis presents a more realistic view of the ownership statistics that would result if the Microband proposal were adopted. We have concluded that the adoption of the Microband separate allocation proposal would unnecessarily and unreasonably concentrate control of multiple channel MDS systems in a few entities including Microband, and that it would also give such entities a substantial head start in the provision of multichannel MDS service in most markets. Moreover, we believe that other means are available to make multichannel MDS available expeditiously, and we therefore conclude that the advantages of the Microband proposal are outweighed by its detriments.[40]

137. Having reached this conclusion, we must now decide whether to adopt any special procedure for dealing with the expected

---

[40] We recognize that our decision to authorize multichannel MDS could impact upon other services. However, there is no evidence in the record before us that would support protecting existing entities from competition and we expect the public overall to benefit from these authorizations.

large number of applications for the newly allocated channels. If we do nothing, the comparative hearing procedures of Part 21 of our rules will apply. As discussed above, many of those filing comments in this proceeding expressed the view that proceeding in this manner would embroil the applicants in lengthy comparative hearing procedures and thereby unnecessarily delay availability of the service to the public. Before discussing other procedures that could circumvent the problems caused by the comparative procedures, we feel that it is useful to consider Microband's view of the existing Part 21 procedures. In its proposal, Microband stated:

> This MX situation has been with the industry almost since its inception. Unlike some other segments of the communications industry, however, a solution to this problem has been found: merger of competing applications. In nine years, only four MX situations have actually been decided by resorting to comparative hearings. Microband believes that the joint venture solution, which has worked well to date, will continue to solve the MX problem with a minimum of expense to the applicants and to the Commission.

Microband proposal, *supra*, Appendix A, at 1, n. 1. Thus, Microband seems to contend that we should adopt a new procedure to avoid the problems of our comparative hearing procedures, and in the same proposal, tells us that our comparative procedures have worked rather well. This position is not necessarily inconsistent. The comparative hearing procedure can work well where there are only two or three entities applying for the same frequency. If there are 5, 10, or more mutually exclusive applicants for the same frequency, the comparative procedures work less well. In the first place, it is much less likely that 10 mutually exclusive applicants will reach an agreement to form a joint venture than if there are only two or three mutually exclusive applicants. Furthermore, in those situations in which it is necessary to hold a hearing among a large number of mutually exclusive applicants, it is likely that several of the applicants will be equally well qualified and thereby force us to make a choice on the basis of very minor differences in the applicants. For these reasons, we conclude that the comparative hearing procedure may not be the best method to resolve mutually exclusive multichannel MDS applications.

138. Some of those that predicted we would receive a large number of mutually exclusive applications if we authorized multichannel MDS suggested that we use a lottery procedure to grant multichannel MDS authorizations. For example, Contemporary Communications Corporation suggested that, "In the current procompetitive deregulatory environment, we believe the only fair method of selecting licensees is by lottery among applicants meeting threshold qualifications determined by the Commission." Additional Comments of CCC, *supra*, at 10.

139. Section 309(i) of the Communications Act authorizes us to grant licenses or permits "through the use of a system of random

READEX FICHE best copy available

selection". 47 U.S.C. § 309(i)(l). On March 31, 1983, we adopted the *Second Report and Order* in General Docket 81-768 in which we provided specific rules to implement a lottery scheme. In adopting the Order, we noted that Congress intended that we use a lottery where it would best serve the public interest and that we should consider the following factors in determining whether a lottery would be in the public interest: whether there are a large number of available licenses; whether there are a large number of mutually exclusive applications for each license, whether there is a significant backlog of applications, whether the lottery would significantly speed up the process of getting the service to the public; and whether diversity of information sources would be enhanced. Using these factors, we initially determined that 5 services are amenable to the use of random selection techniques. The services were low power television, private land mobile radio, private operational fixed microwave, aviation and marine services, and domestic public land mobile.

140. The new legislation also directs us to use notice and comment rulemaking procedures each time we intend to use a lottery in a specific service. 47 U.S.C. § 309(i)(4)(A). Many of the commenters in this proceeding predicted that we would receive a large number of applications if we made spectrum available for multichannel MDS. We agree that this is a likely result. We are therefore proposing to use a lottery to select all MDS permittees, both multichannel and single channel, in a separate Further Notice of Proposed Rulemaking in this Docket.

141. In regard to using random selection procedures for MDS, we note that we had previously proposed several alternative methods for selecting from among mutually exclusive MDS applicants.[41] One of the methods proposed was a lottery. The other two methods proposed were an auction and a paper hearing. The *Lottery Notice* was primarily concerned with the question of our legal authority to employ alternatives to comparative hearings to resolve mutually exclusive situations. Since the new legislation specifically authorizes us to use a random selection procedure and provides Congressional guidance on when the expedited procedure should be used, there is no reason to consider further the selection procedure proposals contained in the *Lottery Notice*.

142. The only other issue raised in that proceeding concerned trafficking rules. In the *Lottery Notice*, we suggested that, if we were to adopt a lottery procedure, it would also be appropriate to eliminate or modify the existing anti-trafficking rules now applica-

---

[41] In the Matter of Amendment of Part 21 of the Commission's Rules to Permit the Use of Alternative procedures in Choosing Applicants for Radio Authorizations in the Multipoint Distribution Service, *Notice of Inquiry and Proposed Rulemaking*, CC Docket No. 80-116, 45 Fed. Reg. 29,335 (May 2, 1980) (hereinafter *Lottery Notice*).

ble to MDS. *Lottery Notice, supra*, para. 74 and Appendix A. In Appendix A, we pointed out that the anti-trafficking provisions contained in Sections 21.27 and 21.39 of the Rules, 47 C.F.R. §§ 21.27, 21.39, are mandated by Section 310 of the Communications Act, 47 U.S.C. § 310. We further noted that Section 21.40 of the Rules, 47 C.F.R. § 21.40, was not required by the Act. This section gives us discretion to inquire whether a facility that has been operated less than 2 years by the proposed assignor or transferor had been acquired for the purpose of profitable sale rather than public service.

143. We recently considered the question of the continued usefulness of the anti-trafficking rules and policies with reference to broadcast licensees. *In the Matter of Amendment of Section 73.3597 of the Commission's Rules (Applications for Voluntary Assignments or Transfers of Control), Report and Order*, BC Docket No. 81-887, FCC 82-519, (released December 2, 1982) (hereinafter *Trafficking Order*). There we eliminated what was known as the "three year rule." That rule, which was similar to Section 21.40, required that we designate for hearing all applications for transfer or assignment of broadcast station licenses that had not been held for three years. *Id.* at para. 1. After reviewing the reasons for the rule and its effect during its 20 years of existence, we concluded that it was:

> appropriate to eliminate our . . . 'trafficking policy' and to limit Commission action in this area to enforcing the requirements of Sections 301 and 304 of the Communications Act. Such Commission inquiry will be restricted to whether any party has engaged in activity indicating action contrary to the statutory prohibition on license sales, such as attempting to profit on the transfer of a bare license. The Commission will continue to exercise its statutory authority under the Communications Act to determine that each transfer it approves is in the public interest.

Id; at para. 29. We also concluded that because Sections 301 and 304 state that radio station licenses do not convey a property interest, "profiting on the transfer of a construction permit is contrary to the letter and spirit [of these sections]." *Id.* at para. 32. Finally, we concluded that we should treat licensees that had obtained their license in a comparative hearing differently than other licensees. In particular, we held that a one year holding period after starting operation should be imposed on permits obtained through comparative hearings. *Id.* at para. 35.

144. Because the Part 21 common carrier trafficking rules stem from the broadcast policy, we have concluded there is no reason to continue to apply these rules to common carriers where we are no longer applying them to broadcast licensees. Therefore, for reasons analogous to those relied upon in the Trafficking Order, we have

decided to eliminate those portions of Section 21.40 that limit the free transferability of Part 21 licenses.[43] We shall retain those portions of Section 21.40 that limit the transferability of construction permits and we shall add new language to Section 21.40 to limit the transferability of station licenses that were obtained through comparative hearings. This action is independent of whether we ultimately decide to use a lottery for multichannel MDS. The new Section 21.40 is included in Appendix B.

145. Finally, we recognize that, although it is our belief that elimination of the trafficking rules will in general result in the more efficient use of the spectrum in that the ultimate licensee will be the entity that values it most highly, it is possible that situations could occur in which the licensee's best interest would be in not using the spectrum. For example, it is possible that a cable television company that had been awarded a cable franchise for a particular area but had not yet constructed its system would find it in its best interest to purchase the multichannel MDS license and not use the station, thereby preventing the establishment of MDS service in the area. This would preserve the largest possible customer base for the cable company. Because this is common carrier service, the licensee is required to render service on a reasonable basis in accordance with the obligations imposed by Title II of the Act. For this reason, we believe we have adequate regulatory tools to deal with this problem should it occur.

146. We have now resolved the only unresolved issue raised in the *Lottery Notice*. We are, therefore, terminating that proceeding. Comments relating to the use of a lottery in multichannel MDS should be filed in Docket 80-112.

F. *Application Procedures*

147. One of our primary concerns in making this reallocation is to ensure that no existing ITFS operation experiences unacceptable degradation in service as a result of the operation of a multichannel MDS station. For this reason, we are adding a new subsection to the rules requiring that multichannel MDS permittees demonstrate that they will not cause any harmful interference to any ITFS receiver site located within 50 miles of the proposed MDS transmitter location. 47 C.F.R. 21.902(d).

148. We have tried to anticipate other eventualities that could unduly delay the introduction of multichannel service to the public. One such eventuality, commonly referred to as "grid-lock", could be caused by the combination of a large number of applications and the operation of Section 21.31(c) of the rules, 47 C.F.R. § 21.31(c). Grid-

---

[43] Section 22.40 of the Rules is equivalent to Section 21.40. In common carrier Docket 80-57, we are considering the revision and updating of Part 22. We will consider equivalent changes to Section 22.40 in that proceeding.

lock refers to the situation in which applications proposing to serve widely separated geographical areas are mutually exclusive. For example, if two metropolitan areas, A and B, were separated by 75 miles and several applications were filed for each area, it is unlikely that any of the applications proposing to serve area A would be mutually exclusive with those proposing to serve area B. If, however, even one application was filed that proposed to serve the area located midway between area A and area B, it is likely that it would be mutually exclusive with all the applications proposing to serve area A *and* all the applicaitons proposing to serve B. This means that all of the applications proposing to serve area A would be in a sense mutually exclusive with those proposing to serve area B. If another area C were located 75 miles from either A or B, a similar set of circumstances could result in all the applications filed for area C being mutually exclusive with those filed for both area A and area B and the connecting areas. It is not difficult to envision a set of circumstances in which an application that proposed to serve a location in Maine would be mutually exclusive with an application proposing to serve a location in Florida.

149. We have considered several methods to avoid this result. One of these was to enforce rigorously Section 21.902(a) of the rules, 47 C.F.R. § 21.902(a), that requires all applicants to make "exceptional efforts" to avoid blocking cochannel use in nearby cities. We do not believe that this rule alone is enough to avoid the problem. For this reason, we have decided to limit the applications that will be considered to be mutually exclusive for purposes of inclusion in either a comparative hearing or a lottery—if we should decide to use such a selection procedure in this service—to those applicants that propose to locate their transmitters within a given Standard Metropolitan Statistical Area (SMSA) or within 15 miles of the boundary of the SMSA (if the transmitter is not located in another SMSA) or that propose to serve the SMSA. In those situations where the SMSA to be served is a part of a Standard Consolidated Statistical Area (SCSA), it will be considered with all other applications proposing to serve the SCSA.[43] We are requiring applicants proposing to serve any portion of an SMSA to specify what SMSA it intends to serve. In those situations where SMSAs that are not part of SCSAs are either adjacent or so close that a single transmitter could produce a signal strong enough to cause harmful interference in both SMSAs, we require that each applicant not only specify which SMSA it intends to serve but also to detail what steps it will take to prevent blocking cochannel use in the adjacent SMSA. Issues of mutual exclusivity for applications not proposing to serve SMSAs

---

[43] We intend to use the list of SMSAs and SCSAs to be published by the Office on Management and Budget on June 30, 1983 as our source for SMSA definitions in this service.

will be resolved using only existing Part 21 Rules. However, we do require all such applicants to specify the name of the primary service area. Each applicant will only be allowed to file a single application for each service area.

150. We believe that by using techniques such as crosspolarization and frequency offsets that it will be possible to avoid cochannel interference in most situations. We stress again that we expect applicants to address this problem in their applications. *Those applications that do not contain an analysis of how the applicant intends to avoid cochannel interference in adjacent areas will not be considered acceptable for filing.*

151. We expect existing ITFS licensees to cooperate with would be MDS applicants to make channels available. We believe that cooperation between MDS providers and ITFS licensees could result in benefits to each. The ITFS licensees could benefit from the technical expertise of MDS operators and the MDS operators would benefit from access to the ITFS spectrum. Most importantly, the public will benefit from more intensive use of the spectrum.

152. All MDS applications must contain a statement that the applicant will comply with the following interference protection requirements:

1) With respect to the ITFS, the MDS operator must attempt to obtain the written consent of all licensees, permittees and applicants of cochannel and adjacent channel ITFS transmitters located within 50 miles of the MDS transmitter prior to commencing MDS construction facilities.

2) With respect to cochannel and adjacent channel MDS operations, the MDS applicant must provide the level of interference protection proposed in Docket 80–113 until a resolution of that proceeding has occured.

3) To assist us in enforcing Section 21.902(a) of our Rules, that requires applicants to make "exceptional efforts" to avoid blocking cochannel use in nearby cities and adjacent channel use in the same city, the applicant must explain what efforts it has made to comply with this section.

Applicants will be granted construction permits conditioned on their submitting to the Commission, prior to commencing construction, a statement from all cochannel and adjacent channel ITFS licensees, permittees or applicants that have transmitter sites within 50 miles of the proposed MDS transmitter that the operation of the multichannel MDS facility will not cause harmful interference to their ITFS operations or if it does that the ITFS operator will accept such interference. If the applicant is not able, after making reasonable efforts, to obtain such a statement it may in the alternative submit evidence that the operation of the proposed MDS would not cause harmful interference to the existing ITFS operations.[44]

---

[44] In this regard it should be noted that lessees of the E or F group channels will not be protected from harmful interference caused by an MDS licensee operating on these channels.

153. Finally, as noted above, (*see* para. 88, *supra*) we do not believe it would be in the public interest to require the first group of applicants for the reallocated channels to submit the interference analysis required by Section 21.902(c)(1) of our Rules, 47 C.F.R. § 21.902(c)(1). For this reason, we are hereby waiving the requirement that the first group of applicants for the reallocated channels comply with Section 21.902(c)(1). If we subsequently decide to accept a second group of applications for these channels (*see* para. 154, *infra*) such applications must contain the interference analysis required by Section 21.902(c)(1).

154. Because it is possible that two new MDS construction permits will be granted simultaneously in some markets, and because it is possible that MDS or ITFS operations in markets that are in close proximity may present potential interference problems, it will be difficult for applicants to comply fully with Section 21.902(a). We will therefore allow MDS construction permit holders to apply for modifications to their facilities in order to minimize interference potential with other MDS and ITFS operations.

155. Section 21.43 our rules, 47 C.F.R. § 21.43, requires construction of an MDS facility within eight months of grant, although construction permit holders may request extensions. We believe that it is appropriate to grant extensions liberally to MDS construction permit holders in the E and F groups. The reason for this is that, particularly in major markets, many of the E and F channels will be occupied. In this case, the grant of an MDS construction permit is simply an authorization for the permittee to enter into negotiations with certain ITFS licensees. While the permittee may, subject to the interference protection requirements, commence operations on as few as one channel, the enterprise may not be viable unless a larger block is assembled. Hence, while we will look favorably on requests for time extensions of construction permits, such requests must include information on the permittee's efforts to assemble a viable block of channels and an estimate of the construction timetable.

156. In general, we will use existing Part 21 procedures to process multichannel MDS applications. However, we believe it is necessary to adopt procedures to deal with what we referred to in the *Cellular Reconsideration Order* as "one-upmanship". There we stated that:

> We want all participants to file applications which represent their best view of a service plan for the named SMSA. To do so, we do not find it necessary for participants to consult the plans of their potential competitors. Setting up a plan which would allow applicants to revise their filings after viewing the applications of others would encourage applicants to engage in "one-up-manship," which has harmful consequences. This would undermine our ability to compare proposals with some measure of confidence that the applicant had participated in its development. Plans based on another proposal would no longer represent the applicants' best idea of how to serve a given area but would, instead, represent applicants' use of the administrative process to obtain an advantage over competitors. Furthermore,

> allowing opportunity for one-up-manship would needlessly encumber an administrative process which we must streamline to its essentials if the American public is to receive cellular service without unnecessary delay.

Cellular Reconsideration Order, *supra*, at 89 (footnotes omitted). We recognize that there are significant differences between the technical planning required to operate a cellular communication system and that required to operate a multichannel MDS system. Our experience with both MDS and the more recently authorized Digital Electronic Message Service (DEMS) has taught us that some applicants merely copy applications that have previously been filed and resubmit them with the names changed. We believe that this kind of activity does smack of the "land rush" or "gold rush" mentality that concerned many of the commenters in this proceeding. Our experience with single channel MDS applications is that in many instances a local entity will perceive the need for service in its community and file the appropriate application only to have another entity file a competing application on the final day allowed by our Rules thereby delaying the introduction of service to the public. We do not believe that such activity is in the public interest. We will, therefore, initially only accept multichannel MDS applications on the 45th day after publication of this Order in the Federal Register.[45] We cited the well-established legal precedent for proceeding in this manner in the *Cellular Reconsideration Order* and noted that this procedure "treats all prospective applicants equally and fairly by giving them substantial advance notice of due dates for their applications." *Id.* at 90. After processing the first set of applications, we will determine whether to proceed to accept further applications in this manner or to allow applicants to file using the existing Part 21 cut-off procedures.

G. *Other Matters*

157. Several of the commenters in this proceeding questioned the need and wisdom of continuing to regulate MDS as a common carrier service. Michael Benages claimed that:

> The Commission's rules impose on the MDS licensee its status as a common carrier, but they do not alter the fact that in operation the licensee is functionally equivalent to [a] broadcast licensee, and most specifically, the licensee of a subscription television facility.

Comments on Proposal of Microband Corporation of America, by Michael Benages, General Dockets 80–112 and 80–113, at 7–8 (July 2, 1982). In the same vein Tekkom commented that:

> Common sense would dictate a current regulatory approach to MDS similar to that adopted for STV. STV is, as a practical matter, little different from MDS. In STV, the licensee can either operate the subscription television service or sell the

---

[45] If the 45th day after release of this Order falls on a holiday, applications should be filed on the next business day. 47 C.F.R. §§ 1.4(i), (d).

> airtime to another under terms of a contract negotiated to meet the marketplace realities. The staff's adherence to a strict interpretation of tariff rules prevents MDS from being allowed to act on a cost efficient basis and, instead, imposes a regulator's view as to what is "*possible, practical and desirable.*"

Comment of Tekkom, Inc., *supra*, at 4–5. Contrasted to these views is the view expressed by the Ad Hoc Committee for Wireless Cable.

> [T]he Commission wisely chose to establish MDS as a common carrier service. By separating the ownership of facilities from decisions over programming, the Commission permitted the risks of this new venture to be spread among different entrepreneurs with differing focuses, interests and abilities. Whereas Carriers gained expertise in system construction and operation, Operators moved into each community and provided the service which they believed was most demanded in that community. The latter invested their resources in trucks, technicians, reception equipment, programming and advertising. They were also unencumbered by the costs of regulatory compliance. This separation of investment risks has maximized the speed with which MDS has grown.
>
> The existing MDS structure has worked well and has been to the benefit of the public: It should not be changed for the sake of change . . ..

Comments of the Ad Hoc Committee, *supra* at 11–12. Because we did not propose to change the regulatory status of MDS in this proceeding, we believe it would be inappropriate for us to act on this issue in this proceeding. Those who believe that this issue should be addressed further are invited to submit a Petition for Rulemaking.

158. The National Cable Television Association (NCTA) and Warner Amex Cable Communications, Inc. (Warner Amex) filed comments concerning another issue not raised in the *Notice*. Warner Amex and NCTA point to heavier regulatory burdens faced by cable television systems as compared to those faced by other providers of video services including MDS and conclude that the Commission should act to eliminate these disparities. The NCTA position is that:

> [I]t is crucially important that the Commission recognize that the new service that Microband proposes would enjoy significant regulatory advantages over cable that would distort competition between the two services. To promote its own objectives of fostering true competition and diversity, the Commission should accompany any authorization of Microband's proposed service with a comprehensive proceeding fashioned to level the playing field on which MDS, cable and the other old and new video services will compete.

Comments of the National Cable Television Association, Inc., General Docket 80–112 and 80–113, at 12 (July 2, 1982). Warner Amex concludes that:

> Before considering Microband's proposal and the issues in the above-captioned rulemaking proceedings, the Commission must first address the issue of regulatory parity among competing technologies. To ignore this issue any longer, while at the same time creating additional economic advantages for cable's competitors (via preemption), is unfair to the cable industry, its subscribers and the public interest generally.

Comments, Warner Amex Cable Communications, Inc., General Dockets 80–112 and 80–113, at 6 (July 2, 1982). It may not be possible (assuming it were desirable) to "level the playing field" on which multichannel MDS and cable "play." There are vast technological differences between multichannel MDS and cable that strongly favor cable. Cable systems have the capability of providing more than one hundred channels of television service. The multichannel MDS systems we are authorizing today are limited to four channels. Cable systems have the capability to serve all locations within a service area. Our experience with single channel MDS is that most operators, because of various propagation factors, have difficulty serving more than 50% of the locations within their service areas. Furthermore, the service areas of MDS operators are frequently much smaller than the service areas of cable companies. As far as regulatory burdens are concerned, MDS licensees are subject to the full panoply of Title II common carrier regulation. Cable has never been subject to these obligations. For these reasons, we find little merit to arguments raised by NCTA and Warner Amex as presented. Petitioners may wish to submit a petition for rulemaking addressing these issues in a substantiated, focused manner.

159. Turner Broadcasting Systems (TBS) urged that we act on its *Petition for Rulemaking* requesting the deletion of the cable television "must-carry" rules. TBS notes that Microband in its proposal claims that multichannel MDS operators will provide the "right mix" of channels on their systems to maximize subscribers and concludes that cable television systems, especially 12 channel systems, are not free to similarly provide the "right mix" of programming to their customers because of the must-carry rules. TBS's petition is now being studied by the Commission staff. However, we do not believe it would be in the public interest to delay this proceeding pending action on the TBS petition.

160. Finally, on December 21, 1979, Microband filed a *Petition for Rulemaking*, RM-3540, in which it requested that we investigate the feasibility of exchanging the existing MDS channel 2 allocation (2156–2162 MHz) with a 6 MHz band allocated to some other service. Microband suggested that we consider common carrier frequencies in the 2110–2130 MHz and 2162–2180 MHz bands or operational fixed frequencies in the 2130–2150 MHz, 2180–2200 MHz and 1850–1990 MHz bands. Microband's reason for submitting this petition was its concern that channel 2 operation would cause unacceptable adjacent channel interference with existing channel 1 operations. As discussed above, channel 1 and channel 2 are now being operated in Phoenix, Arizona and none of the interference problems suggested by Microband have materialized. Furthermore, since we are by this order removing the restriction limiting MDS operators to single channel per service area, we believe that many channel 2 operators can enter into joint ventures with existing channel 1 operators and thereby make two channel service available. For these reasons, we have concluded that there is no need to proceed with the rulemaking

suggested by Microband and we will by this Order dismiss its petition.

IV. *Regulatory Flexibility Act*

161. The Regulatory Flexibility Act of 1980 does not apply to rules adopted after January 1, 1981 when the underlying notice of proposed rulemaking was adopted before that date. The underlying *Notice of Proposed Rulemaking* for this proceeding was adopted March 19, 1980. Accordingly, there is no need for certification under the Regulatory Flexibility Act. See 5 U.S.C. § 601.

V. *Conclusion*

162. We believe that we have in this *Report and Order* arrived at equitable treatment of all concerned parties and at the same time have adopted policies that best serve the public interest. In particular, we believe that the policies and rules set out herein recognize and provide for the unique needs of the existing and potential users of the ITFS channels and also provide would-be providers of multichannel MDS service spectrum to meet anticipated public demand. This proceeding has required that we balance difficult competing interests in reaching a decision which should result in more intensive use of the spectrum while preserving legitimate needs of existing users.

163. Accordingly, IT IS ORDERED, pursuant to Sections 4(i) and 303(r) of the Communications Act, 47 U.S.C. §§ 154(i), 303(r), that Title 47 of the Code of Federal Regulations IS AMENDED as described in Appendix B. These amendments shall become effective thirty days after publication of this Order in the Federal Register and we will accept mutichannel MDS applications *only* on the forty-fifth day after publication of this Order in the Federal Register.

164. IT IS FURTHER ORDERED that the Microband Petition for Rulemaking RM-3540 IS DISMISSED and that proceeding IS TERMINATED.

165. IT IS FURTHER ORDERED that the proceeding in Common Carrier Docket 80–116 IS TERMINATED.

166. IT IS FURTHER ORDERED, that the portion of the application of Channel View, Inc. requesting authority to conduct a market experiment, File No. 8938-ED-MR-82, IS DENIED.

167. IT IS FURTHER ORDERED that the developmental applications of Contemporary Communications Corporation to construct and operate multichannel over-the-air pay video service facilities in New York, Chicago, Los Angeles, St. Louis, and Philadelphia, File No. BPEX-820802KH, ARE DENIED.

168. IT IS FURTHER ORDERED that Form 330P IS AMENDED as set forth in Appendix C effective upon obtaining approval of the Office of Management and Budget as required by the Paperwork Reduction Act. 44 U.S.C. § 3502(4).

169. IT IS FURTHER ORDERED that applications for Channel Groups E and F filed after 12:00 PM, May 26, 1983, must be consistent with the provisions herein.

FEDERAL COMMUNICATIONS COMMISSION
WILLIAM J. TRICARICO, *Secretary*

APPENDIX B

Parts 2, 21, 74 and 94 of Chapter I of Title 47 of the Code of Federal Regulations are amended as follows:

1. In Section 2.106, for band designated in column 5 as 2535–2655 MHz, add "Multipoint distribution" to corresponding list in column 9 designated as Class of Station in existing Table of Frequency Allocation as follows:

§ 2.106 Table of Frequency Allocations.

• • • • •

Band (MHz) 5	*Class of Station* 9
2535–2655	Instructional television fixed. Operational fixed. Space. Multipoint distribution.

• • • • •

NG 47

In the band 2500–2690 MHz, channels in 2500–2686 MHz and the corresponding response frequencies 2686.0625–2689.8125 MHz may be assigned to stations in the Instructional Television Fixed Service (Part 74 of this Chapter); channels in 2596–2644 MHz and response frequencies 2686.5625–2689.6875 MHz may be assigned to Multipoint Distribution Service stations (Part 21 of this Chapter); and channels 2650–2656 MHz, 2662–2668 MHz and 2674–2680 MHz and response frequencies 2686.9375 MHz, 2687.9375 MHz and 2688.9375 MHz may be assigned to stations in the Operational Fixed Service (Part 94 of this Chapter). In Alaska, however, frequencies within the band 2655–2690 MHz are not available for assignment to terrestrial stations.

• • • • •

2. In Section 21.2, a definition for Multipoint Distribution Service response stations is added in appropriate alphabetical sequence to read as follows:

§ 21.2 Definitions.

• • • • •

Multipoint Distribution Service response station. A fixed station operated at an MDS receive location to provide communications with the associated station in the Multipoint Distribution Service.

3. Section 21.40 is amended by revising paragraph 21.40(a) and the introduction to paragraph 21.40(c) as follows:

§ 21.40 Considerations involving transfer or assignment applications.

(a) The Commission will review a proposed transaction to determine if the circumstances indicate "trafficking" in licenses or construction permits whenever applications (except those involving a *pro forma* assignment or transfer of control) for consent to assignment of a common carrier construction permit or license, or for transfer of control of a permittee or licensee, involve facilities which have been operated for less than one year by the proposed assignor or transferor. Only licenses that were obtained following a comparative hearing are subject to this section. At its discretion, the Commission may require the submission of an affirmative, factual showing (supported by affidavits of a person or persons with personal knowledge thereof) to demonstrate that the proposed assignor or transferor has not acquired an authorization or operated a station for the principal purpose of profitable sale rather than public service. This showing may include, for example, a demonstration that the proposed assignment or transfer is due to changed circumstances (described in detail) affecting the licensee or permittee subsequent to the acquisition of the permit or license, or that the proposed transfer of radio facilities is incidental to a sale of other facilities or merger of interests.

* * * * *

(c) For the purposes of this section, the one year period is calculated using the following dates (as appropriate):

* * * * *

4. Section 21.901 is amended by revising paragraphs 21.901(a), 21.901(b) and 21.901(d) as follows:

§ 21.901 Frequencies.

(a) Frequencies in the bands 2150–2162 MHz and 2596–2644 MHz are available for assignment to fixed stations in this service. Frequencies in the band 2150–2160 MHz are shared with nonbroadcast omnidirectional radio systems licensed under other parts of the Commission's Rules, and frequencies in the band 2160–2162 MHz are shared with directional radio systems authorized in other common carrier services. Frequencies in the 2596–2644 MHz band are shared with Instructional Television Fixed Service Stations licensed under Part 74 of the Commission's Rules. The response channels E1, E2, E3, E4, F1, F2, F3, and F4 listed in § 74.939(d) are also available for assignment to fixed stations in this band and are shared with Instructional Television Fixed Service stations licensed under Part 74 of the Commission's Rules.

(b) Applicants may be assigned a channel(s) according to one of the following frequency plans:

(1) At 2150–2156 MHz (designated as channel 1),

(2) At 2156–2162 MHz (designated as channel 2), or

(3) At 2156–2160 MHz (designated as channel 2A), or

(4) At 2596–2602 MHz, 2608–2614 MHz, 2620–2626 MHz and 2632–2638 MHz (designated as channels E1, E2, E3 and E4 respectively with the four channels to be designated the E-group channels) and the associated response channels E1, E2, E3 and E4 listed in § 74.939(d), or

(5) At 2602–2608 MHz, 2614–2620 MHz, 2626–2632 MHz, and 2638–2644 MHz (designated as channel F1, F2, F3 and F4 respectively with the four channels to be designated the F-group channels and the response channels F1, F2, F3, and F4 listed in § 74.939(d).

* * * * *

(d) Frequencies in the band 2596–2644 MHz and associated response channels will be assigned only in accordance with the following conditions:

(1) Prior to commencing construction of any facilities to use frequencies in this band permittees must submit to the Commission a written statement from all cochannel and adjacent channel Instructional Television Fixed Service Licensees, Permittees or Applicants with transmitters located within 50 miles of the permittee's transmitters that operation of the permittee's transmitter will not cause harmful interference to Instructional Television Fixed Service Operation or that the Instructional Television Fixed Service Licensee, Permittee, or Applicant will accept whatever interference occurs. If the permittee is unable to obtain such a statement from the ITFS Licensee, Permittee, or Applicant it may submit a Petition for Declaratory Ruling pursuant to Section 1.2 of this Chapter on the issue of whether harmful interference will occur. The Petition must be simultaneously served on the affected ITFS entity. In such cases, the Commission will determine if harmful interference will occur using accepted engineering standards. The MDS permittee must also detail what efforts it made to obtain the desired statement from the ITFS operator.

(2) The E-group channels will be assigned to a single applicant in each area and the F-group channel will be assigned to a different applicant in that area. In such areas, each applicant may submit only a single application for either the E-group channels or the F-group channels but not both. The partners, owners, trustees, beneficiaries, officers, directors or stockholders holding more than one percent of an entity's stock, or any other person or entity holding a similar cognizable interest in the applicant for, or licensee of, one group of channels in any area, shall not have a cognizable interest in the applicant for, or licensee of, either the same group, or the other group of channels in the same area.

(3) All applicants for frequencies in this band must specify the channels being applied for; however, the Commission may on its own initiative assign different channels in the band if it is determined that such action would serve the public interest.

(4) Notwithstanding the provisions of Section 21.31 of this part, applications for frequencies in this band will be accepted only on the date(s) specified by the Commission.

(5) Notwithstanding the provisions of Section 21.31(a) all applications that propose to locate transmission facilities within or within 15 miles of the border of a Standard Metropolitan Statistical Area (SMSA) will be considered together. In the case of a Standard Consolidated Statistical Area (SCSA) all applications that propose to locate facilities within or within 15 miles of the boundary of any SMSA contained in the SCSA will be considered together. In those cases in which an applicant proposes to locate its transmission facilities so that it will be located in, or within 15 miles of, more than one SMSA, the applicant must specify which SMSA it intends to be its primary service area. Each application will be entitled to comparative consideration or to be included in a lottery in only one such service area.

(6) Licensees or permittees of the frequencies in this band may petition the Commission to authorize exchange of assigned channels to allow adjacent channel operation. For example, one licensee may be assigned channels E1, F1, E2, and F2 and the other licensee could be assigned channels E3, F3, E4, and F4. Such a petition will be granted if the petitioners show that the exchange will result in better service to the public.

(7) All applications for frequencies in this band must contain a showing of how interference with the operation of adjacent channels will be avoided and what steps the applicant has taken to comply with subsection 21.902(a) of this section.

5. A new paragraph (d) is added to existing Section 21.902 as follows:

§ 21.902 Frequency interference.

* * * *

(d) All permittees of frequencies in 2596–2644 MHz band must, prior to commencing construction of any transmission facility, file with the Commission an analysis demonstrating that the facility to be constructed will not cause any harmful interference to existing cochannel or adjacent channel Instructional Television Fixed Service receiver locations within 50 miles of the transmitter, or, in the alternative, submit a statement from the ITFS licensee that the interference is acceptable.

6. A new Section 21.909 is added to read as follows:

§ 21.909 MDS response stations.

(a) An MDS response station is authorized to provide communication by voice and/or data signals with its associated MDS station. An MDS response station may be operated only by the licensee of the MDS station or its subscriber and only at a receiving location of the MDS station with which it is communicating. More than one response station may be operated at the same or different receiving locations. All MDS response stations communicating with a single MDS station shall operate within the same frequency channel. The specified frequency channel which may be used by the response station is determined by the channel assigned to the MDS station with which it communicates. The specified frequency channel may be subdivided to provide a distinct operating frequency for each of more than one response station.

(b) Authorization of an MDS response station is subject to the following terms and conditions:

(1) The response station shall not cause interference to any station operating beyond the service area of the MDS station with which it communicates.

(2) The Commission's Engineer-In-Charge of the radio district in which intended operation is located shall be notified prior to the commencement of the operation of each response station. Such notice shall include:

(i) The authorized call sign of the MDS station, the transmitter location number (assigned by the carrier in sequence of use beginning with number one) and the response station location coordinates.

(ii) The exact frequency or frequencies to be used.

(iii) Anticipated date of commencement of operation.

(3) The Engineer-In-Charge shall be notified within 10 days after termination of any operation. The notice shall contain similar information to that contained in the notice of commencement of operation.

(4) Each station shall have posted a copy of the notification provided to the Engineer-In-Charge.

(5) The antenna structure height employed at any location shall not exceed the criteria set forth in Section 17.7 of this chapter.

7. The following definitions will be added at the end of the list of definitions in Section 74.901:

§ 74.901 Definitions.

* * * * *

Main channel: The main channel is that portion of each authorized channel used for the transmission of visual and aural information as set forth in Section 73.682 of this Chapter and Section 74.938 of this Subpart.

Subsidiary channel: A subsidiary channel is any portion of an authorized channel not used for main channel transmissions.

8. Section 74.902 is amended by adding a new paragraph (c) as follows and by redesignating existing paragraphs 74.902(c) and 74.902(d) as paragraphs 74.902(d) and 74.902(e) respectively.

§ 74.902 Frequency assignments.

* * * * *

(c) Channels 2596–2602, 2602–2608, 2608–2614, 2614–2620, 2620–2626, 2626–2632, 2632–2638, and 2638–2644 MHz and the corresponding response channels listed in Section 74.939(d) are shared with the Multipoint Distribution Service. No new Instructional Television Fixed Service applications for these channels filed after May 25, 1983 will be accepted. In those areas where Multipoint Distribution Service use of these channels is allowed pursuant to § 21.902, Instructional Television Fixed Service users of these channels will continue to be afforded protection from harmful cochannel and adjacent channel interference from Multipoint Distribution Service stations.

* * * * *

9. Section 74.931 is amended by revising paragraph (e) and by adding a new paragraph (f) to read as follows:

§ 74.931 Purpose and permissible service.

* * * * *

(e) The excess capacity of each channel licensed in this service may be used for the transmission of material to be used by others in addition to material specified in (a), (b), (c) and (d) of this section. Each station licensed in this service must use a significant portion of the main channel capacity of each authorized channel for the transmission of material specified in subsections (a), (b) and (d) of this section. All of the capacity available on any subsidiary channel of any authorized channel may be used for the transmission of material to be used by others. When an ITFS licensee makes excess capacity available on a common carrier basis, it will be subject to common carrier regulation. Licensees operating as a common carrier are required to apply for the appropriate authorization and to comply with all policies and rules applicable to the service. Responsibility for making the initial determination of whether a particular activity is common carriage rests with the ITFS licensee. Initial determinations by licensees are subject to Commission examination and may be reviewed at the Commission's discretion. Leasing activity may not cause unacceptable interference to cochannel and adjacent channel operations.

(f) Material transmitted by these stations may be intended for simultaneous reception and display or may be recorded by authorized users for use at another time.

APPENDIX C

1. Form 330P, Application for Authority to Construct or Make Changes in an Instructional TV Fixed Station and For Response Station(s) and Low Power Relay Station(s) is amended by adding the following:

* * * * *

Describe briefly the primary purpose of the requested authorization.

State the anticipated percentage of time for which the channel will be used by entities other than the licensee.

List the total number of existing authorizations and state the combined percentage of time for which these channels are presently used for transmissions of material for others.

May 26, 1983

Concurring Statement of
FCC Commissioner James H. Quello

In re: Frequency Reallocation to the Multipoint Distribution Service (MDS), General Docket 80–112 & CC Docket 80–116

As you know, my consistent position on this issue has been that there is a heavy burden of proof on those who seek to take away frequencies reserved for educational purposes. I am concerned that the Commission is not adequately taking into consideration the educational community's future needs for this spectrum as this nation moves into the information age. Nevertheless, the staff and some of my colleagues do want to make additional channels available for commercial video services. Given that this is inevitable, I believe that this document represents an exceptional balancing of competing interests in a very difficult area. I believe that if reallocation must result, this document appears to be a reasonable approach which maintains priority where it belongs—with educational entities.

I have been reluctantly persuaded to concur in this document because of the following provisions and assurances:

(1) all existing ITFS applicants, permitees, and licensees have been "grandfathered";

(2) at least 20 channels are reserved exclusively for ITFS;

(3) educators will be permitted for the first time to lease excess capacity so as to provide the potential for needed additional revenues;

(4) MDS applicants will receive only a conditional construction permit and must get an agreement in writing from the existing ITFS licensee before they can begin construction on the same channel or an adjacent channel;

(5) MDS applicants must protect ITFS operators against interference.

Finally, I must note that the Commission, in making its decision, had to give some weight to the lack of existing use of the ITFS spectrum. It is a significant argument that in a substantial number of states there are no channels in use and no applications on file.

While we cannot ignore the loss of potential for ITFS service resulting from this action, I strongly hope that the educational community will recognize the significant benefits which will accrue to the ITFS service as a result of this decision. We must all now look to the future and allot the highest priority to applying the ITFS service as an innovative tool for making our nation more productive and our people better able to cope with a rapidly changing world.

CONCURRING STATEMENT OF COMMISSIONER MIMI WEYFORTH DAWSON

I concur in the "reallocation" of certain ITFS channels for multichannel MDS use, but I do so with a number of reservations. In particular, while I agree with the allocation of spectrum for multichannel use, I think the Commission could have accomplished this in a way which is both less intrusive to ITFS operators and at the same time better insures the viability of the multi-channel service which the Commission purports to create.

As to the effect on ITFS, for example, I do not understand the necessity for the creation of two four-channel MDS systems rather than one system. This Commission has often spoken of the proliferation of competition in the video marketplace. With this multitude of services, a single four-channel MDS system would face competition whether or not the Commission authorizes a second four-channel system. And obviously, the authorization of a single four-channel system would have had a substantially lesser impact on existing ITFS users, particularly if the Commission had reallocated the three under-used OFS channels for MDS use rather than dipping into the more heavily used ITFS channels. I wish these options had been seriously explored by the Commission staff.

However, having made the policy choice to "reallocate" enough spectrum for two multi-channel MDS systems, the Commission should have proceeded to make multi-channel MDS as viable as possible. But I am fearful that the Commission's decision, fashioned in the name of compromise, does not bode well for the timely creation of multi-channel MDS systems, at least in the major markets. And if it appears that the Commission has so burdened multi-channel MDS that it stands little chance of getting off the ground, then I believe that the Commission should reevaluate its allocation of ITFS spectrum to MDS.

The burdens on potential MDS operators in this oddly configured "reallocation" are numerous. For example, even the "winners" of MDS lotteries[1] win only the right to negotiate with co and adjacent channel ITFS licensees within a 50-mile radius of the MDS station.[2] In fact, MDS permittees, before they may begin construction, must submit a statement from those co and adjacent channel ITFS users to the effect that "the operation of the multichannel MDS station will not interfere with the ITFS operation or that the ITFS operator would accept any interference that did occur."[3] Obviously this gives current ITFS operators something in the nature of a veto power over MDS systems, with the only bright spot in such a procedure being that the veto must be related to "harmful interference" to existing stations.[4] Thus, at least it would appear inappropriate under the negotiation process adopted by the Commission for an ITS operator to veto MDS systems simply because the ITFS operator does not agree with the programming proposed to be presented on the MDS system or for any reason other than a reasonable belief that the MDS system will interfere with the ITFS operator's existing facilities.[5]

---

[1] The failure of the Commission to adopt lottery procedures now—which I believe the Commission could have done—also adds to the delay in providing multichannel MDS service. I can only hope that the further notice proposing lottery can be completed expeditiously so that MDS service may be provided to the public in something approaching a timely manner.

[2] Report and Order at para. 85.

In short, while I agree with the allocation of spectrum for multichannel MDS operation, I hope that the Commission has not preordained laggard construction and fitful performance by the multichannel systems; if the Commission has done so, then the disruption to existing ITFS users will have occurred for no reason.[6]

STATEMENT OF COMMISSIONER HENRY M. RIVERA CONCURRING IN PART, DISSENTING IN PART

RE: Report and Order in CC Docket Nos. 80–112 and 80–116.

This Report and Order has two principal aims: to create a new multi-channel video delivery service, and to assure adequate spectrum for future ITFS growth. With respect to these aims, the decision represents a basically fair balancing of the interests of the affected spectrum users and I concur in most of it. However, the Commission erred in failing to precisely define and limit the degree to which ITFS licensees may lease "excess" capacity and I dissent to that part of the decision. As I have previously indicated,[1] I am concerned about the potential *de facto* spectrum reallocation made possible by the Commission's failure to adopt clear guidelines governing excess capacity leasing. If *de facto* reallocation occurs, one of the aims of this Report and Order—assuring adequate spectrum for future ITFS growth—will be thwarted. In view of the apparently intense outside commercial interest in these microwave frequencies, this issue will be far more than academic, at least in the long term, as ITFS usage multiplies. While I certainly do not wish to deprive ITFS licensees of the new income-producing opportunities extended other licensees, I am concerned that the Commission's laissez faire approach here will prove detrimental to our ability to manage the spectrum in the future.

---

[3] *Id.*

[4] *Id.* Rather than this clumsy and laborious process, I would have preferred the application of the "last-in" theory familiar both to the Commission and to broadcasters. *E.g.*, Sudbrink Broadcasting of Georgia, Inc., 65 F.C.C.2d 691, 692 (1977). Under this more familiar procedure MDS systems could have been permitted to construct but would have been required to correct any harmful interference to ITFS operators.

[5] It is also important to emphasize my belief that the Commission's decision grandfathers only "existing" ITFS facilities, i.e., those which have been granted, those which are operating and those which have been applied for. To extend grandfathering to inchoate systems is to invite confusion and to delay even further the provision of multi-channel MDS service. *See* Report and Order at para. 85.

[6] I must disagree with one small aspect of the Commission's decision. Consistent with the decision in Amendment of Section 73.3597 of the Commission's Rules, ___ F.C.C.2d ___ (BC Docket 82–887, released December 2, 1982), the instant decision substitutes a "one-year" transferability rule for the "three-year" rule now in force at least for those licenses "that were obtained through comparative hearings." Report and Order at para. 144. While it seems unlikely that this rule will have much effect given the proposed application of lotteries to choose MDS permittees, I continue to believe that any such limitation on the free transferability of licenses "is wholly antithetical to the deregulatory philosophy of this Commission." Amendment of Section 73.3597 of the Commission's Rules, ___ F.C.C.2d at ___ (dissenting opinion).

I also emphatically dissent to the majority's decision to sidestep the media diversity issues inherent in the new "wireless cable service" provided by multichannel MDS. My fellow commissioners apparently believe that there is no place for such concerns in a common carrier service. I disagree. While MDS is nominally regulated as a common carrier service, the majority should have faced the fact that to the viewer, the wireless cable transmission is indistinguishable from other home video mediums, no matter what their regulatory classification.[2] To the viewer, it is all "television". Whether we care to acknowledge it or not, MDS transmissions can influence social, cultural, political and moral values to the same extent as conventional broadcast television. Given this reality, the Commission should have explicitly evaluated options to assure that the new multichannel service will optimally further the robust ideological diversity we have worked so long to achieve in broadcasting.

Common carriers, by law, may neither discriminate among those wishing to use their facilities nor exercise control over transmission content. At first blush, these limitations would appear to mitigate many of the concerns underlying structural and behavioral regulation of broadcast licensees, who do control channel access and transmission content. However, the theoretical programming diversity benefits of common carrier regulation are constrained in MDS. As an initial matter, our rules allow an MDS licensee to provide up to fifty percent of its transmission time to an "affiliated subscriber".[3] Although carriers are prohibited from influencing the content of such transmissions, the efficacy of such a prohibition upon affiliated entities is highly questionable. Where such substantial influence actually is exerted, the diversity-related virtues of common carrier regulation, as well as the classification of MDS as a common carrier, are frontally undermined.

---

[1] *See Report and Order Authorizing Shared Used of Broadcast Auxiliary Facilities with Other Broadcast and Non-Broadcast Entities*, released April 15, 1983 (Docket 81–794) (Concurring Statement of Commissioner Henry M. Rivera).

[2] In point of fact, there is little apparent practical difference between MDS home video service and broadcast subscription television. In both services, a licensee typically leases transmission facilities to program distributors or their surrogates, whose goal is to reach as many members of the public as are willing to pay for the service. Neither service can be employed without special equipment. The STV licensee, unlike the MDS licensee, is entitled to deal with the lessee/programmer of its choice and is legally responsible for transmissions over its facility. However, the soundness of the disparate regulatory classifications applied to MDS and STV is open to question, given that an MDS licensee may lease most or all of its channel capacity to a single lessee. *See generally Report and Order* paras. 101–102; *Metrock Corp.*, 73 FCC 2d 802 (1979).

The MDS licensee's apparent freedom to enter long-term contracts with a single customer as to one or more channels in a given local market also substantially curtails, if not eliminates, the diversity-related benefits common carrier regulation might otherwise be expected to provide. In such circumstances, the programmer-customer is functionally indistinguishable from a broadcast licensee. Unlike a broadcaster, however, its discretion over programming is completely unfettered. As a result, the public's exposure to the widest possible diversity of viewpoints may be diminished, despite the fact that authorization of multichannel MDS is intended to promote that goal.

In the broadcast arena, the Commission has traditionally held the view that programming diversity can most effectively be maximized by diversity of ownership and control of broadcast outlets. It has therefore placed heavy emphasis upon structural regulatory policies which, among other things, promote diversity of ownership in local markets through one-to-a-market, duopoly and media cross-ownership rules narrowing curbing local media combinations.[4] The media diversity objective underlying local ownership restrictions in the broadcast service is no less compelling in MDS, which is widely viewed as an alternative to conventional broadcasting, and whose regulatory status and configuration are murky at best. The fact that the FCC has elected to regulate MDS as a common carrier service simply does not negate the reduction in diversity of viewpoint that occurs when an entity obtains the unfettered right to program an MDS channel in a market where that entity already controls another mass communications medium or when a single entity obtains the right to program multiple MDS channels.[5] The majority has apparently blessed such anti-diversity combinations in MDS, essentially because restrictions "would prevent market forces from determining the optimum mix of channels." *See Report and Order* paras. 101–102.

---

[3] *See* 47 C.F.R. §21.903(b).

[4] Among the other structural broadcast regulatory rules and policies designed to promote programming diversity are those which proscribe regional broadcast ownership concentration, limit the total number of broadcast properties that can be commonly owned, emphasize diversification of ownership in the comparative licensing process, and mandate non-discrimination and affirmative action in broadcast employment. If the Commission had seen fit to examine more broadly the media-related implications of MDS and the policy options available to address those concerns, *see infra*, it could also have explored the extent to which the foregoing regulation should be applied to MDS.

For the reasons just outlined, the majority's failure to consider even minimal regulation in furtherance of First Amendment values was a serious mistake. The Commission could have easily provided a small measure of assurance that diversity would be furthered by formulating tariff requirements preventing MDS licensees from leasing channels to entities already owning other media interests in the same geographic market. Furthermore, the Commission could have considered tariff requirements precluding programmers from leasing more than one MDS channel per market. This would have demonstrated at least a minimal commitment to longstanding FCC policies in furtherence of diversity of voices within local markets. The Commission has previously confirmed its authority to reach the activities of a common carrier's programmer-customer through tariff provisions,[6] and it would not have been difficult to fashion such restrictions for MDS, whose service characteristics are reasonably well established.

The Commission could also have elected to fully explore what alternative or additional diversity-enhancing policies to apply to MDS in the further rulemaking notice to be issued regarding MDS lotteries. In the final analysis, this more comprehensive approach may well have been preferable. The options to be examined could have included various tariff prescriptions, including but not limited to those described above, a dual licensing scheme for MDS carriers and their programmer-customers, or reclassification of MDS as a broadcast service.[7] At the conclusion of that proceeding, if additional regulations were adopted, applicants could have been allowed to amend their applications to conform to these new rules as necessary.

---

[5] Some of my colleagues contend that the FCC has never directly regulated programmers and that, therefore, regulation of MDS programmer-customers is legally foreclosed. Their basic operating assumption is incorrect. *Cf. Columbia Broadcasting System, Inc.* v. *FCC*, 629 F. 2d 1, 26 (D.C. Cir. 1980), *aff'd*, 453 U.S. 367 (1981) (confirming FCC authority to apply Section 312(a)(7) to the major broadcast networks). However, there is a logical reason why the FCC ordinarily does not regulate programmers *per se*: its policies directly apply to the entities responsible for program selection and transmission, *i.e.* broadcast licensees. In any event, the Commission has broad discretion to regulate interstate communications by radio or wire to protect the public interest. *See, e.g.*, 47 U.S.C. §§ 152(a), 154(i), 303(g), 303(r); *United States* v. *Southwestern Cable Co.*, 392 U.S. 157 (1968). *See generally, National Broadcasting Co.* v. *United States*, 319 U.S. 190 209–21 (1943). In this instance, important policy objectives detailed previously counsel in favor of utilizing this broad discretion to impose diversity-related requirements upon MDS programmer-customers, either directly or indirectly.

[6] *See, e.g., Direct Broadcast Satellites*, 90 FCC 2d 676, 711 and n. 85 (1982). The Commission declined to impose limited broadcast-type regulation on DBS common carrier programmers because the service is novel and still in the developmental stage. *Id.* The same cannot fairly be said of MDS, which was created in 1974 and is currently provided in several markets around the nation.

My colleagues have not seen fit to follow either route, apparently out of fear that by doing so, the Commission would be expected to saddle MDS with the panoply of rules that apply to broadcast licensees. Any such fear was largely without foundation. This Commission has shown that it can be very creative in regulating the many communications services within its purview by rejecting outmoded or unnecessary rules while continuing those which further fundamental communications policy. That approach could have been followed here. Instead, the Commission essentially decided to remain blind to the actual service chracteristics of MDS and to important policy issues implicit in it. By blinking reality, the FCC has seriously undermined the credibility of its efforts to maximize diversity of ownership and expression. To this highly regrettable, if unexpressed, policy shift, I dissent.

---

[7] No doubt a variety of options exist—I am not particularly wedded to any one of the foregoing at this juncture.

Notice of Inquiry adopted re integrated digital service networks (ISDN), its evolution, current standardization efforts and possible U.S. implementations.
–Integrated Services Digital Networks
GEN. Docket No. 83–841

FCC 83–373

BEFORE THE

FEDERAL COMMUNICATIONS COMMISSION

WASHINGTON, D.C. 20554

In the Matter of INTEGRATED SERVICES DIGITAL NETWORKS (ISDN)	GEN Docket No. 83–841

NOTICE OF INQUIRY

(Adopted: August 4, 1983 Released: August 10, 1983)

BY THE COMMISSION:

I. INTRODUCTION

1. Currently, a world-wide telecommunications effort is underway to specify standards for integrated services digital networks (ISDN). An ISDN is a network which is designed and constructed to provide a wide range of telecommunication and information services and to transport electrical signals in digital, rather than analog, form. Participants in this effort include numerous countries, telecommunications entities and professional organizations. It is envisioned that an ISDN or ISDNs will evolve in each nation from its existing network(s). In the U.S., several ISDNs could emerge from existing privately-owned telecommunications networks. National ISDNs are expected to emerge and interconnect over the next two decades, as communications signals will be increasingly digital. In recognition of this trend, and also in recognition of the technological trend generally towards the use of digital technology in telecommunications, existing telecommunications providers have increasingly begun to construct and install digital components in their networks.

2. The purpose of this Notice of Inquiry (NOI) is to provide background on ISDN developments to date, and on related telecommunications policy, and to discuss various issues raised by the potential implementation of ISDNs. We shall seek comment on the

appropriate role for the FCC to play in the ongoing ISDN standards development effort.[1] In particular, we solicit comment on how the FCC should best continue to promote its pro-competitive policies as ISDN evolves. Furthermore, this NOI is intended as a clearinghouse for comments of U.S. telecommunications service providers, equipment manufacturers, users and the public.[2]

3. As noted, we are cognizant that international and domestic standardization efforts involving the U.S. government, telecommunications providers, large users, and foreign entities are presently underway.[3] We do not intend that this proceeding hinder or conflict with these ongoing efforts, rather, this NOI seeks to complement existing efforts. In addition, the NOI will serve as another vehicle to apprise the Commission and the public of concerns which U.S. service providers, equipment manufacturers, users and the public may have about implementation of ISDN networks.

4. ISDN will emerge from existing telecommunications networks and represent the next stage in the evolution of telecommunications. Initially, telephone networks were designed to transport voice signal information in analog form. As computers began to communicate with one another, computer information which was in digital form was transformed into analog form in order to be transported over existing analog networks intended for voice signals.[4] However, with

---

[1] In a recently released report, the National Telecommunications and Information Administration (NTIA) concluded that: "because of the far-reaching impact of ISDN on competition, equipment and service trade, and U.S. technological leadership, it is important that the U.S. Government provide a reasonably specific policy framework on which future U.S. efforts to develop ISDN standards could be based. Toward this end the FCC, which is presently considering a Notice of Inquiry, should initiate it without delay." NATIONAL TELECOMMUNICATIONS AND INFORMATION ADMINISTRATION, UNITED STATES DEPARTMENT OF COMMERCE, LONG RANGE GOALS IN INTERNATIONAL TELECOMMUNICATIONS AND INFORMATION, 130 (1983).

[2] The NOI raises and discusses many ISDN-related issues. To facilitate comment, a partial list of issues discussed in the NOI is presented as Attachment I.

[3] These planning efforts are widespread and dynamic. Since 1976 the International Telegraph and Telephone Consultative Committee (CCITT) has been the focal point of international ISDN planning efforts. In the United States, telecommunications companies, private sector organizations and the federal government have participated in ISDN planning activities. *See* Section II for further discussion.

[4] Because the bulk of the network consists of circuits intended for transmission of voice, the transmission of signals in digital form is not as efficient as if the network were originally designed to handle digital signals. Most circuits designed for voice use frequency division multiplex (FDM) to achieve the composite signal necessary to modulate a carrier for the purpose of transmitting multiple conversations over a single path. Circuits intended for digital use usually employ time division multiplex (TDM) which simplifies the encoding of individual bit streams onto a single composite bit stream. While data signals in digital form can be used to directly modulate a carrier via the FDM process, there are distinct advantages to be gained by using TDM. The advantages also extend to voice signals, which are first sampled, then encoded as digital signals by a process such

rapid development of digital technology in the past three decades, voice and data communications were transported over both digital and analog media. During recent years many national networks rapidly moved toward transporting voice and digital signals on digital media. This trend toward digitalization is occuring because it is believed that digital networks may reduce costs, increase service quality and provide new services to the user.

5. ISDN continues the trend towards use of digital transport facilities. An ISDN is characterized by the provision of numerous services, from low speed alarms up to high speed broad-band video services, and end-to-end digital connectivity between users for both the transport of voice signals which have been originated electrically in digital form, and the transmission of digital signals themselves. ISDN will permit users to communicate via the network(s) by interconnecting through a select group of standardized, multi-purpose user access interface arrangements. Currently, technical standards of telecommunications equipment and facilities can vary within a national network and among various nations' networks. This lack of uniformity requires equipment manufacturers to construct, and may require some users to buy, equipment tailored to meet each differing standard. ISDN efforts are aimed at changing this situation. One objective of ISDN planners is the creation of model ISDN interface characteristics after which each nation would pattern its own ISDN or ISDNs. This uniformity would permit national ISDNs to interconnect and form a worldwide system or systems,[5] and would promote ubiquity of terminal equipment used therein. Thus, users in one country could use their telephones and terminals in any country and be able to communicate with users anywhere in the world. Although this uniformity would simplify the interconnection of ISDNs with other countries systems, there is a question as to whether a single standard or set of standards for specialized systems would be appropriate for some users.

II. ISDN PLANNING EFFORTS

6. ISDN planning efforts are underway within the United States and internationally. Domestically, several voluntary standards development organizations and federal agencies have been involved in ISDN efforts. Internationally, the International Telegraph and

---

as pulse code modulation (PCM). PCM involves the conversion of an analog signal, such as voice, to a digital format. This is ordinarily accomplished by generating binary-coded pulses to represent the quantized amplitude samples of the analog signals. The process of encoding voice signals by PCM has been used for many years and where bandwidth problems are not too severe is the preferred method of transmission. Thus, many national networks have been gradually shifting to digital transmission.

[5] There appears to be a possibility that separate terrestrial and space satellite worldwide ISDNs could evolve.

Telephone Consultative Committee (CCITT) and the International Organization of Standardization (ISO) are involved in developing ISDN-related standards.[6] We shall discuss the international efforts first.

A. *International efforts*

7. CCITT provides the central forum for international planning and discussion of ISDN.[7] In 1976, the Sixth Plenary Assembly of the CCITT proposed that CCITT begin formally to study ISDN.[8] The Seventh Plenary Assembly met in 1980 and gave Study Group XVIII primary responsibility for establishing general ISDN standards and guidelines. Several other study groups have specific responsibilities. *See* Attachment II. In addition to its ISDN study groups, CCITT is generating and has generated other standards which may have some bearing upon implementation of ISDN.[9]

8. CCITT's ISDN efforts are aimed at specification of uniform ISDN Recommendations. These Recommendations are intended as an outline of an ISDN model which nations can adopt and adapt to meet their individual needs. This CCITT model is expected not only

---

[6] In addition, the Conference Europeene des Administrations des Postes et des Telecommunications (CEPT), the International Federation for Information Processing (IFIP), the European Computer Manufacturers Association (ECMA) and other agencies are also active in ISDN matters. CEPT outlined a common CEPT approach to ISDN in its Special Group ISDN (GSI) 1982 report on Integrated Services Digital Network Studies, Doc. T/CCH (82) 30, Doc. T/GSI (82) 71, Information for Industry, Stockholm, (November 1982).

[7] The CCITT is one of four permanent organs of the International Telecommunication Union (ITU). The ITU has 158 member countries of which the United States is one.

[8] CCITT's activities are structured around a four year cycle known as the "plenary cycle". CCITT establishes Study Groups to develop telecommunications disciplines or services. Study Groups convene, divide their subject into subparts and assign various groups of experts (working groups) questions to study and answer. These working groups meet, study their assigned questions and make recommendations to the Study Group. The Study Group convenes and reviews these recommendations and may adopt them. If adopted, the recommendations are then presented to the CCITT at the next Plenary Assembly. The CCITT Plenary Assembly convenes to review and approve or disapprove Study Groups' recommendations as well as plan the work to be undertaken during the next plenary cycle. Study Group recommendations which are approved by the Plenary Assembly become CCITT recommendations.

[9] For example, International Telecommunication Union, International Telegraph and Telephone Consultative Committee, Yellow Book, Volume III, Fascicle VIII.2, Data Communication Network Services and Facilities Terminal Equipment and Interfaces [hereinafter ITU Yellow Book Vol. III], Recommendation X.3 Packet assembly/disassembly (PAD) in a public network, at 10 (1980) outlines the interworking standards for start/stop mode data terminal equipment in a packet network. In addition, ITU Yellow Book Vol. III, Recommendation X. 25 Interface between data terminal equipment (DTE) and data circuit equipment (DCE) in the packet mode in public data networks, 100, Geneva 1976, (amended Geneva 1980) describes the interface standards for packet mode data terminal equipment in a packet network.

to detail the technical specifications of the ISDN network, but also to encompass all the facilities and equipment required by a user to gain access to the network.

9. In the seven years since CCITT began work on an ISDN model, much progress has been made. CCITT has developed, and continues to refine, its ISDN model. *See* Attachment III. Currently, the model has the user accessing the network through a series of defined interfaces. The user begins its call by using its telephone or terminal (denominated TE1). The call passes through two other interfaces (NT1 and NT2) before it is carried through the local loop[10] to the local exchange and onto the ISDN. In addition, CCITT has also begun to specify a system of protocols[11] for ISDN based upon the International Organization for Standardization's (ISO) open systems interconnection model (ISO/OSI). *See* Attachment IV.

10. The next CCITT Plenary Assembly will meet in November 1984. Initial recommendations which are submitted for final approval will be reviewed by the Plenary Assembly, and those that are approved will become CCITT Recommendations. It is envisioned than CCITT ISDN Recommendations will be relied upon by nations for the design and construction of their ISDN networks.

B. *Domestic efforts*

11. In the United States ISDN discussions and planning efforts are being carried on by groups in both the private and public sector. Among these groups are the United States Organization for International Telegraph and Telephone Consultative Committee (U.S. CCITT Committees, including the ISDN Joint Working Party), Federal Communications Commission, National Telecommunications and Information Administration, National Communications System, Defense Communications Agency, Electronic Industries Association, American National Standards Institute, and the Institute of Electrical and Electronics Engineers.

12. The United States Organization for International Telegraph and Telephone Consultative Committee (USCCITT) was established by the Department of State pursuant to the Federal Advisory

---

[10] A local loop is a single channel connecting the customer and the local exchange office.

[11] Protocols have been described as: "the rules by which physically separated entities interact." Green, Introduction to Network Architectures and Protocols, IEEE Transactions on Communications, Vol. COM-28, No. 4, at 413 (1980). The Commission has described protocols as: "governing the methods used for packaging the transmitted data in quanta, the rules for controlling the flow of information, and the format of headers and trailers surrounding the transmitted information and of separate control messages." Amendment of Section 67.702 of the Commission's Rules and Regulations (Second Computer Inquiry), 77 FCC 2d 384, 422 n. 37 (1980) (Final Decision), *reconsideration, aff'd sub nom.*CCIA v. FCC, 693 F 2d 198 (D.C. Cir. 1982), *cert. denied* 51 U.S.L.W. 3826 (U.S. May 16, 1983) (Nos. 82–1331 and 82–1332) [hereinafter *Computer II*].

Committee Act, Pub. L. No. 92–463, 86 Stat. 770 (1972), *as amended* Pub. L. No. 94–409 § 5[c], 90 Stat. 1247 (1976) to discuss and develop U.S. positions on matters before the CCITT. It consists of the U.S. CCITT National Committee (USNC) and four Study Groups. The USNC functions as a steering body over the four Study Groups and the ISDN Joint Working Party. Study Groups "A", "B", "C" and "D" are assigned specific topics. Study Group A is concerned with tariffs and service definitions. Study Group B examines terminal equipment and telex issues; C examines telephone matters; and D examines data networks and data communications matters.

13. In 1981, in response to the increased international ISDN activity, a domestic ISDN Joint Working Party (JWP) was established as an adjunct to the USNC. It was created to develop a domestic forum for discussion of U.S. positions on ISDN issues at CCITT, in view of the relevance of ISDN considerations to all four U.S. study groups. The JWP is chaired by a representative of the National Telecommunications and Information Administration (NTIA). The FCC, National Communications System and the Department of State, among other government agencies, participate in the JWP. In addition, many telecommunications companies and private sector organizations also participate in and make submissions to the JWP. If a contribution is approved by the JWP, it is coordinated with the appropriate Study Group and recommended for approval to the State Department as a U.S. CCITT contribution. If neither the JWP nor the appropriate Study Group approves a given contribution, the contributor may withdraw or revise its contribution or, if the contributor is recognized by the CCITT as a Recognized Private Operating Agency (RPOA) or a Scientific or Industrial Organization (SIO), it may submit its documents to CCITT Working Parties on its own motion but without the status of a United States government contribution.[12]

14. In addition to the FCC's involvement in the USNC and the Joint Working Party, the Commission established, in 1981, an intra-agency ISDN Coordinating Committee to monitor ISDN developments. During the last year and a half, observing that international ISDN planning efforts have accelerated rapidly, this Committee stepped up its own efforts to remain abreast of developments by participating more actively in international and domestic meetings.

15. In the private sector, voluntary standards-setting organizations composed of telecommunications professionals have been active. Organizations such as the Electronic Industries Association

---

[12] There are 18 U.S. companies accorded RPOA status. The American Telephone and Telegraph Company (AT&T) and various IRCs are RPOAs. IBM is recognized as a SIO. In addition to RPOAs and SIOs, CCITT Study Groups are open to International Organizations (*e.g.* ISO), Specialized Agencies (*e.g.* World meteorological Organization), and any administration of the ITU which wishes to participate.

(EIA), the American National Standards Institute (ANSI), and the Institute of Electrical and Electronics Engineers (IEEE) develop recommendations and may submit documents to the JWP and the ISO.

16. Telecommunications carriers, enhanced service providers, equipment manufacturers and user groups are also involved in the development of ISDN standards both on a national and international level. These businesses often prepare ISDN-related documents that they submit to standards setting organizations. They may also submit their contributions to the JWP for incorporation as a U.S. contribution or, if as previously stated, they are recognized RPOAs or SIOs, they may submit their contributions directly to CCITT.

C. *Status of planning efforts*

17. At least nine CCITT Study Groups are working on ISDN related matters. *See* Attachment II. These study groups prepare Draft Recommendations which are often subject to review and revision. Given the fluidity of the process and the scope of the subject, an overview of important CCITT ISDN actions will be presented.[13]

18. In 1980, the Seventh Plenary Assembly published Recommendation G.705[14] outlining conceptual principles which would guide the international development of ISDN. These principles mandate, among other things, that the ISDN will contain intelligence for the purpose of providing service features that may be contained in the customer's terminals or distributed throughout the network; that layered sets of protocols for various access arrangements to the ISDN will control the networks and may vary as a function of the services required and the status of the evolution of a nation's ISDN, and that new services should be compatible with 64 kbit/s switched digital connections.

19. Although CCITT's ISDN model will utilize a layered set of protocols, CCITT has not agreed upon a system for categorizing protocols for ISDN purposes. However, ISO's open system intercon-

---

[13] The following section will discuss various proposed amendments and revisions of CCITT Recommendations and Draft Recommendations. These amendments and revisions are mentioned for illustrative purposes only, and the discussion of these documents is not intended to indicate nor represent the position of the FCC or the U.S.

[14] International Telecommunication Union, International Telegraph and Telephone Consultative Committee, Volume III, Fascicle III.3, Digital Networks Transmission Systems and Multiplexing Equipment, Recommendation G.705, Integrated services digital network (ISDN), at 65–66 (1980). As CCITT ISDN efforts continue draft recommendations which will alter Recommendation G.705 are being developed.

nection model (ISO/OSI), discussed in para. 9, is being utilized by CCITT as a framework for designing ISDN protocols.[15] The ISO/OSI model identifies seven protocol layers. *See* Attachment IV. The implementation of each protocol layer requires the utilization of each lower layer protocol. Layer one, physical control, is the most fundamental protocol level. It provides the mechanical, electrical, functional, and procedural characteristics needed to establish, maintain and release physical connections between the network termination and the exchange. While layer one establishes physical connections with the network termination and the exchange, layer four protocols provide control signals from user terminal to user terminal across the network, and layer seven protocols permit data to be combined, converted, calculated and processed to become new data.

20. A number of significant ISDN developments have occurred in 1983. Two of the more important CCITT meetings were those of the Kyoto Meeting of Experts in February and the Geneva Meeting of Study Group XVIII in June. These meetings resulted in a detailed outline of ISDN Recommendations which was accepted in draft form. *See* Attachment V. This outline covers a broad range of ISDN characteristics, including many aspects of the network. Various sections deal with terminology, evolutionary principles, service capabilities, protocol models, numbering-addressing-routing principles, performance objectives, user-network and inter-network interfaces as well as other ISDN topics. This outline, if adopted at the November 1984 Plenary Assembly, would serve as the basis for implementing ISDNs and shape future CCITT ISDN work.

III. FCC STATUTORY OBLIGATIONS IN AN ISDN ENVIRONMENT

21. The Commission maintains jurisdiction over U.S. domestic and international common carrier facilities and service providers pursuant to Title I and Title II of the Communications Act of 1934.[16] Under Section 214 of the Communications Act of 1934 as amended, 47 U.S.C. 214 (1976), the FCC authorizes service providers to extend, acquire, and operate facilities, and evaluates Section 214 applications to insure against excessive plant additions which will unduly expand the rate base, thus causing higher revenue requirements. In the last decade, the Commission has initiated international facilities planning processes to examine U.S. carrier traffic forecasts and

---

[15] Report of the Meeting of Group of Experts on ISDN matters of Study Group XVIII, Com XVIII, No. R 15-E. [hereinafter Kyoto Meeting of Experts] Draft Recommendation I.311, p. 139 (March 1983).

[16] Title III of the Act, 47 U.S.C. 301 (1976), *et. seq.*, extends the Commission's jurisdiction to radio and satellite facilities, covering common carriers to the extent that they hold radio licenses.

facility requests prior to the Section 214 authorization process. It has done so to provide overall policy guidance on the complex issues raised by large scale facilities investments, finding this approach preferable to reliance on *ad hoc* Section 214 oversight alone. In addition, the facilities planning process gives service providers the ability to develop long-term facilities plans and removes the uncertainty inherent in *ad hoc* authorizations.

22. A further basis for institution of this inquiry is the potential that our equipment registration rules (47 C.F.R. Part 68) may require amendment to accomodate digital interconnection with the telephone network in an ISDN environment. Since 1976, when the registration program initially became effective, most terminal equipment connected with the network has been registered as conforming with technical specifications to prevent harm, or has been used with registered protective apparatus. In some cases, we have considered use of tariff alternatives to registration of equipment under our rules, *see, e.g., Third Notice of Proposed Rulemaking*, Docket No. CC 81-216, FCC 83-268, 94 FCC 2d 5 (1983). While we do not decide here whether rule or tariff procedures would be appropriate for ISDN, it is fair to inquire in this proceeding, at least initially, whether such procedures may prove necessary or useful.

23. The Commission's jurisdiction over networks and service providers will remain unchanged by the evolution of ISDN. ISDN will require additional construction of facilities and service offerings. Thus, the Commission will continue to address policy issues and authorize facilities in an ISDN environment. While we do not seek to plan ISDN facilities, we here seek to review the large policy issues raised by ISDN at an early stage in the facilities planning cycle, rather than only acting on an *ad hoc* basis.

IV. FCC TELECOMMUNICATIONS POLICIES

24. The FCC was established to foster efficient nationwide and worldwide communications, and we have promulgated policies, discussed below, to meet that goal. We are faced with the challenge of ensuring that ISDN and other subsequent technological innovations are implemented on a national level in a manner that comports with our policies.

25. In response to dramatic technological change, the Commission has, over the last fifteen years, increasingly relied on the forces of the marketplace to complement traditional common carrier regulation, and to ensure that such regulation is not inappropriately or unnecessarily extended. The Commission, therefore, has promulgated pro-competitive policies and has begun to deregulate competitive telecommunications services. In a series of decisions the FCC has

fostered competition in the provision of customer premises equipment,[17] promulgated policies fostering new common carrier entrants,[18] permitted domestic resale and shared use[19] and authorized COMSAT to provide end-to-end service.[20] Although each of these decisions relates to a different aspect of common carrier operations, a single regulatory philosophy is common to them—a desire to foster competition while reducing governmental involvement.

26. In the last three years we have taken several significant steps to deregulate service providers such as resellers of domestic "basic" service[21] and "enhanced" service providers.[22] In *Computer II* the Commission classified communications services as being either basic services or enhanced services. Basic service is a common carrier offering of transmission capacity for the transport of information. Enhanced services are defined in § 64.702(a) of our rules as:

> . . .services offered over common carrier transmission facilities used in interstate communications, which employ computer processing applications that act on format, content, code, protocol or similar aspects of the subscriber's transmitted information; provide the subscriber additional, different, or restructured information; or involve subscriber interaction with stored information.

In *Computer II*, the Commission retained Title II jurisdiction over basic services (including underlying basic services that support enhanced services), but found that enhanced services are not subject to Title II regulation. Thus, while the provision of basic services remained within Title II jurisdiction, the provision of enhanced services was deregulated.

27. Before deregulating enhanced services, the Commission considered the potential effect of such deregulation on competition and structured its decision to ensure that unregulated provision of enhanced service by common carriers would be fair. Tariff conditions were placed on all common carriers to assure that basic service providers that offered enhanced services would not gain unfair competitive advantage over enhanced service providers that did not

[22] Computer II, *supra* note 11.

own underlying transmission facilities. Common carriers which seek to offer enhanced services may do so subject to conditions which ensure that: a) costs of unregulated enhanced service offerings are not borne by ratepayers of carriers' regulated basic service; and b) a common carrier which provides enhanced services does not gain unfair advantage over an enhanced service provider that must purchase basic service from a common carrier.

28. All facilities-owning carriers must continue to offer such transmission facilities pursuant to tariff, and must take basic facilities to support their own offerings of enhanced services on the same tariffed basis as other competing enhanced service providers.[23] Thus, carriers owning underlying transmission facilities and providing enhanced services must "unbundle" their basic and enhanced service offerings. Since enhanced services are not subject to Title II regulation, carriers may not include their enhanced service offerings in their tariffs. Thus, the *Computer II* decision was designed to assure that basic services would be available to all enhanced service providers on the same tariffed basis, while establishing a dichotomy between the two types of services.

29. Under *Computer II*, American Telephone & Telegraph Company (AT&T) is subject to an additional structural requirement. Due to its market dominance, AT&T must establish a separate corporation to offer enhanced services and terminal equipment and must maintain structural separation between the separate corporation and the parent.[24]

30. The pro-competitive philosophy outlined above is also embodied in judicial and congressional actions. In the Modification of Final Judgment (hereafter *MFJ*) entered on August 24, 1982 in *U.S. v. American Telephone and Telegraph Co.*, 552 F. Supp. 131 (D.D.C. 1982), *aff'd sub nom. Maryland v. U.S.*, 103 S. Ct. 1240 (1983), AT&T was required to alter fundamentally the structure and scope of its operations. Before the *MFJ*, AT&T owned and operated the long distance telephone interexchange facilities as well as twenty-one Bell Operating Companies (BOCs) which provide local exchange service. However, under the terms of the entered *MFJ*, AT&T consented to divest the BOCs. The BOCs will be limited to provision of exchange service, exchange and information access, provision of other natural monopoly services actually regulated by tariff, and the

---

[23] Computer II Reconsideration, *supra* note 11, at 75, n. 19.

[24] And the separate corporation must take transmission facilities under tariff. Furthermore, *Computer II* policies developed prior to divestiture impose separation requirements on the Bell Operating Companies (BOCs) in their entirety. However, post divestiture, as a result of the consent decree, AT&T will divest itself of its operating companies. The Commission recently released a Notice of Proposed Rulemaking to determine whether and to what extent the structural separation conditions established in *Computer II* should be applied to BOCs after divestiture. *Bell Operating Companies*, 48 Fed. Reg. 13056 (March, 29, 1983).

provision, but not manufacture, of terminal equipment (unless these restrictions are subsequently modified by the court). The Commission is examining the divestiture under its Section 214 aegis.

31. In 1981 Congress passed the Record Carrier Competition Act of 1981 (RCCA), Pub. L. No. 97–130, 95 Stat. 1687 (to be codified in ___ U.S.C. § 222) which increased competition by eliminating the statutory bar preventing Western Union Telegraph Company from providing overseas services and by mandating full interconnection of domestic and international record carrier facilities to provide universal customer access to any carrier network. Pursuant to the terms of the RCCA, the Commission has prescribed interconnection arrangements for international and domestic record carriers which require carriers to grant all other carriers equal interconnection with their respective networks. *Interconnection Arrangements*, 89 FCC 2d 928 (1982), *see* also, *MTS and WATS Market Structure Phase III*, C.C. Docket No. 78–72, FCC 83–178, Transmittal No. 33184 (released May 31, 1983).

V. ISDN PLANNING EFFORTS AND FCC TELECOMMUNICATIONS POLICIES

32. The concept of an integrated services digital network and CCITT's ISDN planning efforts present the U.S. public and private sectors with a host of issues. In order to facilitate identification and discussion of the issues, this section will describe the international ISDN planning environment, examine the interaction between international ISDN design and U.S. ISDN(s) structure,[25] explore the effects ISDNs could have on U.S. groups and discuss what role, if any, the FCC should have in this area.

33. As outlined in Part IV, the FCC, the Courts and Congress have promulgated pro-competitive policies to guide our nation's telecommunications structure as it evolves in the new technological era. While the Commission has no intention of unnecessarily regulating the development or implementation of U.S. ISDNs, we believe it essential that we should monitor the progress of various specification efforts which are underway to ensure that our pro-competitive policies are furthered and not inadvertently frustrated. To that end, we are of the tentative view that we must monitor and participate in the international specification efforts which are now underway.

A. *The international ISDN planning environment*

34. The international scope of ISDN planning efforts will naturally reflect the telecommunications policies and market struc-

---

[25] "U.S. ISDNs" refers to ISDNS which evolve from privately owned U.S. telecommunications networks and service providers. It is not meant to suggest governmental ownership or control.

tures of each of the participant countries. These participants have quite disparate domestic market structures.

35. Most telecommunications systems are owned and operated by national governments. Usually, these telecommunications systems are owned and operated by a ministry or Department of Post, Telegraph and Telephone (PTT). Countries relying on this system believe that telecommunications services can be most efficiently provided through a centralized administration-owned network. However, there are variations in this organizational structure. Recently, the United Kingdom's administration-owned telecommunication system was restructured and augmented with another telecommunications carrier. Other countries are also reviewing their telecommunications systems. While several countries have more than one entity involved in operating telecommunications networks, only the U.S., Canada and the United Kingdom have, or are considering, competitive entities. Some countries restrict provision of customer premises equipment to the entity or entities responsible for the provision of services while others permit multiple suppliers of equipment.

36. The United States is one of the world's leading users and exporters of telecommunications and data services, and the largest producer of telecommunications equipment.[26] Our telecommunications system consists of numerous service providers, including AT&T, the Bell System, Independents, international service carriers and a vibrant customer premises equipment market. Approximately $21.1 billion worth of U.S.-produced telecommunications and computer merchandise was exported in 1982.[27] The United States has long followed a private enterprise approach to the provision of public telecommunications services, and it promotes competition among telecommunications service providers in the belief that the resultant competition will benefit users in the form of decreased costs and increased choices and technological innovation.

37. Each nation involved in the ISDN planning process can be expected to work towards shaping ISDN to reflect its telecommunications market structure and philosophy. From the point of view of countries which promote a single, universal telecommunications system, ISDN could be considered an extension of existing centralized telecommunications systems. Viewed from this perspective, it

---

[26] Grabhorn, Changes Ahead in World Telecommunications, Telephone Engineer & Management, vol. 87, no. 2, at 71 (1983).

[27] *See* U.S. Dept. of Commerce, Bureau of Industrial Economics 1982 U.S. Industrial Outlook, chs 24–26 (Jan. 1982). These exports brought a positive balance of trade of approximately $10.5 billion in 1982. The export and balance of trade figures cited above have been derived by aggregating industry statistics from the following Standard Industrial Classification (SIC) codes; SIC 3573 Electronic Computing Equipment; SIC 3661 Telephone and Telegraph Equipment; SIC 3662 Radio and Television Electronic Communications Equipment, and SIC 367 Electronic Communications Components.

appears logical for ISDN to support most, if not all, services. However, the United States' reliance on numerous telecommunications service providers that are subject to varying degrees of regulation for the provision of basic and enhanced telecommunications services, and our belief that competition among them benefits the public, requires that ISDNs operating in the United States be designed to accomodate our multiple service providers while still attempting to achieve the asserted benefits that ISDN promises.

38. This potential disparity in underlying policy necessitates that competing interests be accomodated in the CCITT's planning activities. Both the Kyoto Meeting of Experts and the Geneva Meeting of Study Group XVIII have produced documents that appear to take into account the different requirements of many countries.[28]

B. *The interaction between the CCITT's ISDN design and U.S. ISDNs*

39. To date, much of CCITT's specification efforts have been directed toward defining and outlining the ISDN and related user interfaces. The issues of how telecommunications functions will be apportioned between the ISDN and the user have begun to be addressed in international forums. However, these issues are closely related to the architecture of an ISDN, since the design of an ISDN and the services it will perform are interdependent.

40. The CCITT is seeking in its ISDN efforts to produce and adopt a set of ISDN specifications through a series of Recommendations. If the CCITT continues to pursue its present course, these Recommendations will outline performance specifications and will apportion telecommunications functions between the ISDN network and the user. For example, performance standards such as bit speed and bit error rates will have to be specified so that information can be efficiently sent from a terminal through the ISDN and to a designated terminal. In addition, CCITT's ISDN planning efforts will include the adoption of a protocol model and the apportionment of protocol handling between the network and the user. The CCITT may also recommend the degree of control the network users have to select and use network and non-network services according to a consensus on what functions the ISDN network should be allowed to perform and which are best left outside the network.

41. The recommendations CCITT formulates will directly affect U.S. ISDNs, service providers, equipment manufacturers and users.

---

[28] The Kyoto Meeting of Experts, Draft Recommendation I.120, p. 218, 219 (March 1983) explicitly recognized that: "Other arrangements corresponding to national variants may comply partly or wholly with CCITT Recommendations on ISDN." Although this particular language was omitted in Geneva, many other draft recommendations acknowledge that nations may implement various portions of national ISDNs differently.

In order to interface with the ISDNs of other nations, a nation's ISDN(s) must be compatible with them at the point of interface. ISDNs will have to be designed to transmit data through interfaces with other nations' ISDNs in formats which are compatible with, or convertible to, internationally agreed upon specifications, to permit interworking. If the technical specifications of one nation's ISDN(s) vary from those of other nations, it might require translation in order to interface with other ISDNs. Absent such translation, non-conforming ISDNs would probably be unable to interface with other ISDNs.

42. CCITT ISDN planning efforts are designed to produce a uniform set of technical specifications which extend from the network down to customer premises equipment. However, in the U.S., competitive market forces could result in some deviation from these standards. If, in the U.S., customer premises equipment were to operate at standards which were technically incompatible with or inferior to CCITT adopted standards, it could result in traffic being restrictd to domestic termination points, unless an additional layer of hardware and/or software could be added. Some CCITT schematics recognize this possibility by including a terminal adapter for this purpose. *See*, Attachment III. We invite comment on the relationship between the CCITT's ISDN planning efforts and the design of U.S. ISDNs. In addition, we solicit comment on whether this hardware and/or software is technically and economically feasible. Further, we request comment on whether specifications of this adapter, if done through voluntary standard setting activities, would as a practical matter be adhered to absent governmental involvement and/or whether Commission involvement in this area is necessary.

43. As discussed in para. 26, *Computer II* divided telecommunications services into two categories, basic and enhanced services. At the Geneva Meeting of Study Group XVIII, Draft Recommendation I.200, Temporary Doc. No. 38-E, p. 11 (June 1983) [hereinafter Draft Recommendation I.200] created two categories of services that ISDNs would perform or support: (1) bearer services; and (2) telecommunications services. Bearer services may generally be described as those services that provide the capability for information transfer between ISDN interfaces (transport services) and defined in protocol layers 1–3. *See* Attachment IV. Telecommunications services are those that provide the capability for communications between users of specific user terminals. Both types of services may be provided within or outside an ISDN. We solicit comment on whether the bearer/telecommunications services approach can readily accomodate our market structure (which is comprised of multiple service providers offering regulated and unregulated services in an unbundled manner) and telecommunications policies.

44. The most practical approach to planning an ISDN model would seem to be one that accomodates the interests of U.S.

telecommunications service providers, equipment manufacturers and users during the international planning phase.[29] In particular, it would appear important to U.S. telecommunications service providers and users that CCITT's technical ISDN standards not preclude or restrict service providers' ability to interface with the other nations' ISDNs nor adversely affect users' ability to select among numerous service providers.[30] Unless an ISDN model is designed with sufficient flexibility, both U.S. and foreign users could be precluded from, or limited in, their ability to specify the service providers and services they wished to utilize. Also, users might register concern over whether ISDN will be designed to technically and economically accomodate private leased lines. If ISDNs cannot or are not designed to meet the needs of private leased line users, the question then becomes whether a circuit and/or packet switched network could provide suitable alternatives. For instance, would the substitution of permanent virtual circuits for private lines, satisfy current private line users? Is there some reason for the U.S. to seek, as a policy objective, the continued availability of dedicated leased channels in an ISDN environment? In addition, are there any ISDN developments which the Commission should be aware of that have, or could, raise issues of U.S. national security? We request comment on these issues. In addition, we solicit comment identifying other possible areas of U.S. concern; how U.S. interests can be affected by international ISDN standards, and how our interests can best be accomodated.

C. *Impact of various types of ISDNs on U.S. service providers, equipment manufacturers and users*

45. Competition among service providers and unrestricted user access to their basic service offerings are the cornerstone of our pro-competitive policies and goals. As indicated in paragraphs 24–31 *supra*, the Commission, Congress and the Courts have established

---

[29] As discussed in para. 38, various draft recommendations appear to recognize the need to accomodate varying national implementations of ISDN.

[30] The United States, with our diversity of service providers, might not be able to conform to a technical specification that nations with a centralized telephone network could meet. For example, in the United States, the users' ability to utilize numerous service providers and the geographic span of the U.S. network often result in calls being routed over a higher number of connections than in other countries. Each connection adds to the time which it takes to complete a call. Thus, a specification, such as timing, which could be conformed to over a limited number of connections might prove impossible to conform to in our country. In addition, satellite common carriers could be precluded from relaying traffic from national satellite systems if restrictive time specifications were adopted which would have the effect of prohibiting "double hop" situations. Thus, if CCITT were to adopt a standard that might be too restrictive, and if U.S. service providers were to be bound by such a standard, they could be limited in the number of services they could provide, and users could be restricted in the routing and number of service providers they might utilize.

the framework for how these goals can be attained through initiatives such as *Computer II*, the *MFJ*, the RCCA and the *Interconnection Arrangements* decision.

46. As discussed in para. 28 *supra*, *Computer II* requires all facilities-owning carriers to continue to offer basic services under tariff. Common carriers owning underlying transmission facilities are required to offer their basic services as discrete services separate from their enhanced service offerings. Thus, under the regulatory framework of *Computer II*, users may obtain a carrier's pure transmission capability unencumbered by any enhanced services the carrier may offer. Maintenance of this transmission capability is the cornerstone of our efforts to foster the provision of numerous services on a competitive basis.

47. It is important, therefore, that ISDNs be implemented in the U.S. in a fashion which is consistent with our *Computer II* decision and other competitive policies. Pursuant to *Computer II*, basic services may be provided over ISDNs and ISDNs may also form the building blocks for provision of enhanced services.

48. *Computer II* and the *MFJ* will militate towards implementation of ISDNs in the U.S. which provide solely basic services and ISDNS which provide the user with the option of selecting its unbundled basic and enhanced service offerings. Pursuant to *Computer II*, AT&T may only provide enhanced services through a separate subsidiary. Thus, AT&T's interexchange facilities will function as an ISDN providing basic services alone, rather than supplying basic and enhanced services within its ISDN. Provisions in the *MFJ* may restrict the ability of the BOCs to support fully a non-basic ISDN. *See MFJ* Sections II.D and IV.I-J, 552 F. Supp. at 227–29. Furthermore, as noted, we are considering whether *Computer II* conditions now applicable to the BOCs should continue to be applied after divestiture. Other carriers will be able to establish ISDNs which provide both basic and enhanced service providing they comply with the service unbundling requirements outlined in *Computer II*.

49. U.S. ISDNs must evolve under a structure which accommodates our multiple vendor telecommunications market and our pro-competitive policies. Our regulatory framework is sufficiently flexible to permit existing carriers and enhanced service providers the ability to develop ISDN configurations with minimal additional capital investment and disruption of service, and would permit new telecommunications entities the option to provide a variety of services to users. In addition, users will retain their ability to select among basic service providers, determine which, if any, enhanced services they require, and decide which enhanced service providers they will use. This degree of selection will result from the users' ability to use an ISDN(s) for basic services and to supplement these basic services to meet their enhanced service needs. Users will be the

ultimate beneficiaries of an ISDN environment which accommodates the multi-vendor/multi-service environment fostered by our competitive policies.

50. As ISDNs evolve, the entire U.S. telecommunications market—service providers, equipment manufacturers and users—will be affected. We solicit comment on the potential impact of ISDN, as discussed in para. 49 *supra*, and request comment on additional ways in which ISDN could affect U.S. service providers, equipment manufacturers and users. These comments will help clarify various U.S. interests, which is essential if our interests and policies are to be effectively communicated internationally.

51. The challenge that confronts both the U.S. public and private sectors is the need to communicate our interests and policies effectively in international forums so that our needs can be accommodated during the planning phase in the design of an ISDN model. Section D will discuss what role, if any, the FCC should have in furthering our pro-competitive policies in an ISDN environment.

D. *Furthering pro-competitive policies in an ISDN environment*

52. As discussed in para. 35 *supra*, most foreign countries' telecommunications systems are government owned and they are operated by PTTs. Many of these nations do not place the same importance on competition as does the United States. Those countries may not have the same incentives to design an ISDN capable of accommodating interconnection by multiple service providers. If U.S. interests are to be taken into account in the international planning process, it would seem that the U.S. service providers, equipment manufacturers, users and the federal government would have to identify areas of concern and then make U.S. interests known.

53. This process of identification of U.S. interests and concerns on ISDN requires both public and private sector participation. As outlined in Part II, numerous groups from both sectors are actively involved in ISDN-related matters, and in particular, the Department of State's ISDN Joint Working Party provides a public forum for service providers and users to discuss their views.

54. One of the purposes of this NOI is to discuss the appropriate role of the FCC in ISDN matters. The Communications Act of 1934 charges the FCC with the responsibility for ensuring that construction of new facilities and the provision of regulated services are in the public interest. Pursuant to the Act, the Commission has adopted pro-competitive communications policies which mandate that marketplace forces be allowed to determine, to the maximum extent possible, the best methods of providing service to users. Thus, we believe that any FCC involvement in ISDN specification activities should be designed to complement existing planning efforts, with the

objective of fostering our domestic and international United States telecommunications policies, and not directed to the design considerations involved in the ISDN specification process as such. For example, it is not our intention to hinder the progress of international activities or unilaterally impose standards in lieu of CCITT's efforts. Rather, it is our tentative view that the public interest would best be served by assuring that U.S. policy is understood by all participants in the ISDN specification process, to the end that it will be accommodated in this process.

55. In order for the Commission effectively to continue to foster its pro-competitive policies, it appears necessary for us more actively to monitor and participate in international and domestic ISDN specification activities, with the focus noted above. Correspondingly, it would also be necessary for the Commission to become increasingly aware of the views of U.S. service providers, equipment manufacturers, users and the public on this matter. Therefore, we solicit comment on how the FCC can best ensure that ISDNs are structured to foster competition and serve the public interest. We request comment on how the competitive nature and structure of U.S. telecommunications can best be maintained without unnecessarily diminishing any alleged efficiencies which may be inherent in uniform ISDN specifications. In addition, we more specifically solicit comment on how the specification of ISDNs may best conform to the regulatory scheme adopted in *Computer II*. Furthermore, we request comment on how the Commission best can continue to promulgate pro-competitive policies as ISDN develops and how we can best represent divergent interests of U.S. service providers, equipment manufacturers, users and the public at international forums. We also expect that this NOI will generate comment on what short and long term ISDN goals the FCC should set for itself.

56. Accordingly, IT IS ORDERED, pursuant to Sections 4(i), 4(j), 218, 303(g) and 403 of the Communications Act of 1934, 47 U.S.C. 701 (1976) that the aforementioned inquiry IS HEREBY INSTITUTED.

57. IT IS FURTHER ORDERED that the Secretary shall cause this Notice of Inquiry to be published in the Federal Register.

58. Interested parties may file comments 45 days from date of publication of the Notice in the Federal Register. Reply comments must be filed 60 days from the date of publication of the Notice in the Federal Register.

59. IT IS FURTHER ORDERED that the Commission's staff is hereby delegated authority to expeditiously compile a full and complete record of this proceeding.

FEDERAL COMMUNICATIONS COMMISSION
WILLIAM J. TRICARICO, *Secretary*

ATTACHMENT 1

ISDN will affect U.S. service providers, equipment manufacturers, and users. This Notice of Inquiry (NOI) has examined some of the issues which ISDN will present. In order to facilitate discussion, we have compiled a partial list of the issues discussed in the NOI. We do not intend to restrict comments to these subjects, rather, we are providing this to highlight certain salient questions with the expectation that it will provide a starting point for discussion. Comments which pinpoint specific issues and contain concrete recommendations are essential to the proper functioning of the proceeding.

1. ISDN planning efforts are currently underway in a number of national and international forums. Are there definable U.S. interests which are being, or could be, adversely affected by ISDN? In addition, are there any ISDN developments which the Commission should be aware of that have, or could, raise issues of U.S. national security? Are the interests of U.S. service providers, equipment manufacturers and users being represented or underrepresented? How can the FCC best assist in U.S. efforts to formulate a coordinated ISDN policy and represent U.S. interests? Do the technical specifications raise policy issues? If so, what issues are involved?

2. U.S. telecommunications policy is designed to promote a competitive U.S. telecommunications system. As part of this policy, we have taken steps to eliminate barriers to market entry and taken other measures to foster a marketplace with numerous interconnected telecommunications service providers. How can the FCC continue to promote competition in an ISDN environment? Could ISDN specifications be inconsistent with U.S. telecommunications policies? How can we ensure ISDN will be compatible with our telecommunications policies and objectives? How can ISDNs be designed to accommodate the U.S. web of numerous service providers?

3. Do the international ISDN draft recommendations appear to be sufficiently flexible to accommodate the regulatory structure outlined in *Computer II* and the Modified Final Judgment? If not, in what areas should the FCC concentrate its efforts to assure U.S. policies are accommodated?

4. The Communications Act of 1934 created the FCC for the purpose of making available to our citizens a rapid, efficient, low cost, nationwide and worldwide communications system. What ISDN issues must be addressed in order for the Commission to carry out this obligation? Is FCC guidance necessary or desirable? What sort of guidance should we provide? What form should this take? What should the Commission's short-term and long-term ISDN objectives be, and how can they be achieved? The Commission has many administrative procedures available by which ISDN could be addressed. Should ISDN-related issues be considered in rulemaking proceedings

and/or in *ad hoc* processes such as facility authorizations and tariff filings?

5. How will ISDN affect U.S. users, service providers and equipment manufacturers? How could U.S. users, service providers and equipment manufacturers benefit from ISDN? What services and benefits are unique to ISDN? What trade-offs are involved? Could ISDN specification efforts adversely affect users' ability to select service providers and services they wish to utilize? How will the development of ISDN affect private networks? Will ISDNs be designed to technically and economically accommodate existing services, such as private lines? Would the implementation by an ISDN(s) of a substitute service for private lines, such as permanent virtual circuits, satisfy current private line users? Is there some reason for the U.S. to seek, as a policy objective, the continued availability of dedicated leased channels in an ISDN environment?

6. ISDN specification efforts are aimed towards creating a uniform set of worldwide technical standards. To what extent should U.S. ISDNs conform to those standards? Are there technical, economic, or regulatory considerations which would mandate deviation from those standards? If so, to what extent is nonconformance possible or desirable?

ATTACHMENT II

CCITT STUDY GROUP ACTIVITIES

STUDY OF THE INTEGRATED SERVICES DIGITAL NETWORK (ISDN)

Examination of the Questions drafted by Study Groups III, IV, VII, XI, XVII and XVIII reveals that each Group intends to study various aspects of the ISDN. In order to avoid overlapping and possibly conflicting results the VIIth CCITT Plenary Assembly agreed that the areas of responsibility for the study of ISDN should be assigned as follows:

1.	Services and facilities interpretation and coordination (taking into account the requirements identified by Study Groups I, II, III and VII).	XVIII
2.	General ISDN aspects and guidelines, quality of service, numbering, performance targets, maintenance principles and miscellaneous subjects not more specifically identified (taking into account the requirements of Study Groups I, II, IV, VII, XI, XVII, and CMBD).	XVIII

Note: It is considered that Items 1 and 2 above are of high priority.

3.	Digital transmission standards and performance (local and inter-exchange). The study of hypothetical reference digital paths is in the competence of the specialized Study Groups of CCITT and CCIR, the study of reliability and availability is to be coordinated by CMBD. *Note:* Also of interest to CCIR.	XV/XVIII
4.	Switching aspects and parameters (taking into account the requirements identified by Study Groups VII, XVII and XVIII). *Note:* In the case of mixed mode switches (e.g. ISDN circuit and packet) other Study Groups will also be consulted.	XI

ATTACHMENT IV

APPLICATION LAYER (layer 7)

Layer 7 is the source of data, usually consisting of services which process data (i.e. data are combined, converted, calculated and processed to create new data). Airline reservations and on-line banking are just two examples of possible user applications.

PRESENTATION LAYER (layer 6)

Layer 6 provides data formats and data information, if needed. Examples of presentation layer services are data translation, data encoding/decoding, and command translation for virtual terminals.

SESSION LAYER (layer 5)

Layer 5 establishes, maintains, and terminates logical connections for the transfer of data between processes. Examples of session layer services are: dialogue control, message unit flow control, and segmentation of message data units.

TRANSPORT LAYER (layer 4)

Layer 4 provides end-to-end control signals from user terminal to user terminal across the network (e.g. network acknowledgment or received information).

NETWORK LAYER (layer 3)

Layer 3 provides the control needed for call establishment and clearing through the switching network nodes.

DATA LINK LAYER (layer 2)

Layer 2 protocols provide reliable transmission over a single data link including frame management, link flow control, and the link initiation/release procedures.

PHYSICAL LAYER (layer 1)

Layer 1 provides the mechanical, electrical, functional, and procedural characteristics needed to establish, maintain, and release physical connections between the network termination and the exchange.

Draft Recommendation I.110

GENERAL STRUCTURE OF THE I-SERIES RECOMMENDATIONS

PART I - GENERAL

Section 1 - Frame of I-Series Recommendations; Terminology

I. 110 General Structure of the I-Series Recommendations
I. 111 Relationship with other Recommendations relevant to ISDNs
I. 112 Vocabulary (with Annex: Glossary of ISDN-terms)

Section 2 - Description of ISDNs

I. 120 Integrated Services Digital Networks (ISDNs) (present G.705)

PART II - SERVICE CAPABILITIES

I.200 The structure is for further study. The contents could cover the following items:*)
- concept of services, functional elements, etc.
- information types
- compatibility checking
- connection types (e.g. circuit and packet switched, etc.)
- user-to-user signalling
- tariff principles (refer to D-series)
- charging functions
- additional network capabilities (e.g. closed user group).
- terminal portability

I.2xx Services supported by an ISDN

PART III - OVERALL NETWORK ASPECTS AND FUNCTIONS

Section 1 - Reference models

I.310 ISDN functional architectural model
I.311 ISDN protocol reference model

---

*) - To be revised in accordance with the results of WT3 or 4

I.312 ISDN Hypothetical reference connections

Section 2 - Numbering, addressing and routing

I.320 ISDN numbering and addressing principles
I.321 ISDN routing principles
I.3xx Network connection types

COM XVIII-No. R 15-E

Section 3 - Overall performance objectives

The structure and contents are for further study. The following is given as an example:
I.330 Overall performance objectives relating to circuit switched connections
The structure is for further study. The contents could cover the following items:
- overall error performance (cf. G.821)
- overall controlled slip rate objectives (cf. G. 822)
- overall availability
- call set-up and clear-down time
- overall blocking probability etc.

I.331 Performance objectives relating to packet switched connections
The structure is for further study. The contents could cover the following items:
- overall error performance
- overall availability
- overall packet transfer delay
- overall packet loss probability etc.

Section 4 - Overall testing and maintenance principles

The structure and contents are for further study. (See also G. 704, X.150)

Section 5 - Evolution

The structure and contents are for further study.

PART IV - USER-NETWORK INTERFACES

Section 1 - ISDN user-network interfaces

1. *General*

I.410 General aspects and principles relating to Recommendations on ISDN user-network interfaces (I.XXW)
I.411 ISDN user-network interfaces - reference configurations (I.XXX)
I.412 ISDN user-network interfaces - channel structures and access capabilities (I.XXY)

Section 2. Application of I-series Recommendations to ISDN user-network interfaces

The intention of this sub-section is to identify the relevant I-Recommendations that constitute particular ISDN user-network interfaces.

I.420 Basic user-network interface
I.421 Primary rate user-network interface
I.42x C channel user-network interface

User-network interface for other channel structures (for further study).

Section 3 ISDN user-network interfaces: Layer 1 Recommendations.

The structure and contents are for further study. One example is as follows:

3. *General*

I.430 General aspects and structure of Layer 1 functions and protocols
- layer service characteristics
- modes of operation, e.g. point-to-point, point-to-multipoint
- requirements for specific user-network interfaces

3.1 *Basic user/network interface*

I.431 Basic user/network interface - Layer 1 specification
- functional characteristics
- procedural aspects
- mechanical aspects
- electrical aspects
- maintenance aspects

3.2 *Primary rate user-network interface*

I.432 Primary rate user-network interface - Layer 1 specification (see 3.1 above for aspects to be considered)

3.3 *C-channel user-network interface*

I.43x - C-channel user-network interface - Layer 1 specification (See 3.1 above for aspects to be considered)

Section 4 - ISDN user/network interfaces: Layer 2 Recommendations

4. *General*

I.440 General aspects and structure of Layer 2 functions and protocols (could include reference to a simplified subset)

4.1 *Layer 2 specification*

I.441 Specification of Layer 2 protocol (Provisionally Q.920)
- layer service characteristics
- methods of operation
- overview description of Layer 2 functions and procedures
- frame structure
- elements and description of the procedures
- procedure-oriented and state-oriented graphical presentation
- maintenance aspects
- performance characteristics

Section 5 - ISDN user/network interfaces: Layer 3 Recommendations

5. *General*

I.450 General aspects and structure of Layer 3 functions and protocols (will include reference to protocols for connections of PABX, LAN, etc. and could include reference to a simplified subset)

5.1 *Layer 3 specification*

I.451 Specification of Layer 3 protocol (provisionally Q.930)
- layer service characteristics
- definition and function of information elements
- formats and codes
- call control procedures (overlap with I. 472 needs resolution)
- procedures for additional user facilities
- maintenance aspects
- modes of operation of the procedures, e.g. point-to-point and point-to-multipoint
- performance characteristics

The structure and contents of the Recommendations concerning protocols for connection of PABX, LAN, etc. are for further study.

Section 6 - User related testing and maintenance principles

I.460 The structure is for further study. The contents could cover the following items:
- user related testing and maintenance principles
- test loops

- fault conditions and alarms
- testing procedures etc.
  (cf. G.704, X.150)

Section 7 - Support of existing interfaces

7. *General*

I.470 General (this section refers only to CCITT recommended interfaces)

7.1 *Support of X.21 and X.21bis DTEs*

I.471 Support of Recommendation X.21 and X.21bis DTEs by an ISDN *).
- hypothetical reference connections
- D-channel services
- mapping of X.21 and X.21bis interface signalling procedures to the D-channel services
- rate adaption and TA operation to effect synchronization

7.2 *Support of X.25 DTEs*

I.472 Support of Recommendation X.25 DTEs by an ISDN*
- hypothetical reference connections
- principles for DTEs accessing the B-channel (overlap with I.451 needs resolution)
- principles for DTEs accessing the D-channel (overlap with I.451 needs resolution)
- B/D-channel call handling

7.3 *Support of V-series DTEs by an ISDN*

I.473 Support of DTEs recommended in the V-series by an ISDN
- hypothetical reference connections
- principles for DTEs accessing the B-channel
- principles for DTEs accessing the D-channel
- rate adaption and TA operation to effect synchronization

PART V - INTERNETWORK INTERFACES

I.500 The structure is for further study. The contents could cover the following items:
- principles
- interworking between an ISDN, and
- other ISDNs
- analogue telephony networks
- packet switched data networks

---

*) Draft text already provided by Study Group VII.

- circuit switched data networks
- mobile systems

etc.

DECISION

(Adopted: August 24, 1983; Released: August 31, 1983.)

BOARD CHAIRMAN MARINO FOR THE REVIEW BOARD:

1. In this comparative case, after a trial type hearing, Administrative Law Judge Kuhlmann granted the application of Housatonic Broadcasting Co., Inc. for a new television broadcast station in Pittsfield, Massachusetts. Initial Decision, FCC 83D-15, released February 28, 1983. Housatonic was preferred because of the superi-

ority of its quantitative and qualitative participation of ownership in management. Exceptions have been filed by Pittsfield Community Television Association and oral argument was heard June 9, 1983. Upon review of the record and briefs, we affirm the Initial Decision, which correctly applied standard comparative principles to this case.[1]

2. *Diversification of Control*. No other media interests were attributed to either Housatonic or Pittsfield and thus the ALJ found them to be equal for diversification purposes. *I.D.*, paras. 4–21. Pittsfield now argues that it should have been given a moderate preference because of other media interests held by three of Housatonic's principals. Specifically, it states that William K. McDaniel, a 9.1% Housatonic stockholder, is a vice president and account supervisor of a New York City advertising agency, with responsibility for television advertising planning; that Gary Krakow, also a 9.1% stockholder, is the producer of "Early Today," an NBC daily television program; and that Pamela Peterson, another stockholder, owns "a fraction of one percent" of CBS, Inc.

3. We agree with the ALJ that these interests do not warrant the award of any preference to Pittsfield. With regard to Mr. McDaniel, we note that Pittsfield is relying on precedents which indicate that ownership of a local advertising agency, while not ownership of another medium of mass communications, could result in a minor diversification demerit because of the possibility of a potential conflict of interest. *Midwest Broadcasting Co.*, 70 FCC 2d 1489, 1499 (Rev. Bd. 1979); *Mid-Florida Television Corp.*, 33 FCC 2d 1, 10 (Rev. Bd. 1973). Here, however, Mr. McDaniel has no ownership interest in the agency in question, which is non-local, and there is no evidence that it places advertising on stations in the Pittsfield area or market. Moreover, Mr. McDaniel has only a comparatively small ownership share in Housatonic. For these reasons, and even accepting, *arguendo*, Pittsfield's contention that Mr. McDaniel occupies a significant managerial position at the New York advertising agency, we conclude that the underlying potential for media concentration or serious conflict, which is the rationale for recognition of this interest, is absent, and that, therefore, no preference is called for. Moreover, *Eastern Broadcasting Corp.*, 30 FCC 2d 745 (Rev. Bd. 1971), cited by Pittsfield for the first time at oral argument, is also distinguishable. There, a cross-interest issue was added based on a specific showing that the applicant owned an advertising agency which served clients in the proposed community of license and placed advertising on at least two of that community's stations.

4. As for Mr. Krakow's role as producer of a network program, we have held only that ownership of a local production company may

---

[1] A third application filed by Berkshire Television Inc., was dismissed pursuant to a settlement agreement. FCC 83R-30, released April 21, 1983.

bear upon diversification where such ownership is found to undermine the objectives of the Commission's diversification policy in a given case. *Golden State Broadcasting Corp.*, 54 RR 2d 349, 351 (Rev. Bd. 1983), *Morris, Pierce & Pierce*, 88 FCC 2d 713, 723–4 (Rev. Bd. 1981), *review denied* FCC 83-31, released January 25, 1983. Here, however, Mr. Kraskow does not own or control a production company, does not occupy a significant managerial position at NBC where he only produces a single program, and Krakow has only a minority stock ownership in Housatonic. We do not perceive any resulting impairment of the Commission's diversification policies, and Pittsfield has demonstrated none. *Id.* Finally, Ms. Peterson's ownership of less than one percent of the stock of CBS, Inc. is too minimal to have any meaningful impact on diversification of control of the mass media. *See Greater Wichita Telecasting, Inc.*, 90 FCC 2d 1046 (Rev. Bd.), *recon. denied*, 52 RR 2d 1357 (Rev. Bd. 1982). In sum, we affirm the ALJ's conclusion that neither applicant is entitled to a diversification preference.

5. *Participation of Ownership in Management*. Housatonic received 41% full-time participation credit and 18.2% part-time credit. Its full-time proposal was enhanced by local residence, broadcast experience, and female participation. By contrast, the ALJ credited Pittsfield with no full-time integration and 12.5% part-time integration. *I.D.*, paras. 22, 29. In its exceptions, Pittsfield argues that the ALJ mistakenly failed to credit its part-time proposal with enhancement for local residence, that he should have awarded only very slight credit to Housatonic for the part-time integration proposal of two of its principals because they would not be at the station on a daily basis but only on weekends, and that Housatonic is therefore only entitled to a moderate preference. Housatonic replies that it is entitled to a substantial preference.

6. We find that Housatonic is entitled to a moderate preference. Even after awarding Pittsfield the overlooked enhancement credit for the local residence of its part-time integrated principal, and agreeing that the part-time proposal of two of Housatonic's stockholders to work on the weekends is entitled to only slight credit, *see Greater Wichita Telecasting, Inc., supra*, 90 FCC 2d at 1051 and n. 6, we conclude that these part-time proposals (18.2% vs. 12.5%) are essentially offsetting and not decisionally significant. The factor of substantial importance here is that of proposed full-time participation by owners in station operations. *See Policy Statement on Comparative Broadcast Hearings*, 1 FCC 2d 393, 395 (1965). In this regard, the ALJ quite correctly held that Housatonic's 41% full-time proposal manifestly outweighed Pittsfield's 0% proposal. Despite this 41% differential, however, we will award Housatonic a moderate rather than a substantial preference in keeping with our precedent that integration proposals are not entitled to maximum credit where less than a majority of stock ownership is fully

integrated. *See Ottumwa Broadcasting Co.*, 52 RR 2d 1447 (Rev. Bd. 1982); *Communications Properties, Inc.*, 92 FCC 2d 45, 49 (Rev. Bd. 1982); and cases cited therein, *review denied*, FCC 83–320, released July 7, 1983. *Horne Industries, Inc.* FCC 83R-49, released July 13, 1983 at note 44.

7. *Other Matters.* Pittsfield argues that it should receive a preference because of its status as a non-profit community association which consists of local residents who were "organized to apply for and construct the station and represent the community." Pittsfield Br. at 13. In this regard, Pittsfield relies on the Omnibus Reconciliation Act of 1981 (Public Law 97–35), which amended Section 309 of the Communications Act to authorize the Commission to employ a lottery in initial licensing cases, and the *Notice, Random Selection/Lottery Systems*, 88 FCC 2d 476, 485 (1981), where the Commission recognized the Congressional intent to include community organizations as among the "underrepresented" groups to be given preferences. Finally, Pittsfield contends that it should have received a preference for proposed auxilliary power at its transmitter site and main studio.

8. These exception are denied. First, we cannot accept Pittsfield's position that its status as a "community organization" entitled it to a special preference. Our past cases have declined to create new comparative categories on the basis of novel arguments. *See, e.g., Joseph Bahr*, 92 FCC 2d 114, 122–3 (Rev. Bd. 1982), *affirmed as modified*, FCC 83–321, released July 8, 1983 (no credit awarded applicant claiming to have existing organization, non-profit status, and history of working for minority employment in broadcasting); and *Webster-Baker Broadcasting Co.*, 88 FCC 2d 944, 955 (Rev. Bd. 1982) (no enhancement credit awarded to applicant on the basis of principal's physical handicap). We adhere to this approach. Pittsfield has established no nexus between its organizational status and the furtherance of the Commission's objectives of diversification of control and best practicable service to the public, and for us to carve out a new comparative niche to accommodate this claim would be to engage in policy-making contrary to our limited function. *Id.* Moreover. as Pittsfield itself acknowledges, the Commission never implemented the lottery procedure it refers to. *See, Report Random Selection/Lottery Systems*, 89 FCC 2d 257 (1982). Indeed, Congress subsequently enacted a new law, which the Commission is now in the process of implementing, that does not contemplate that "community organizations" will receive preferences. *See* Public Law 97–259, enacted September 13, 1982; *see also Las Misionies De Bajar Television Co.*, 53 RR 2d 119, 122 (Rev. Bd. 1983) (lottery legislation "did not deal with or change existing comparative standards and policy.") Finally, we will deny Pittsfield's claim for an auxiliary power preference because it ignores the ALJ's finding, which it does not dispute, that its proposal was made after the pre-designation cut-

off date and therefore constitutes an impermissible comparative upgrading for which credit may not be awarded. *See Webster-Baker Broadcasting Co., supra*, 88 FCC 2d at 949.

9. *Summation*. The only preference awarded in this case is to Housatonic for its superior integration proposal. Neither applicant has received a diversification preference, Pittsfield's claim for credit for a new comparative factor has been rejected, as has its upgraded proposal for auxiliary power which, even if permitted, would only have resulted in a very slight preference and would not have been comparable to the moderate preference awarded Housatonic under the substantially more important comparative factor of integration. Housatonic is the clear comparative choice and a grant of its application will serve the public interest, convenience and necessity.

10. ACCORDINGLY, IT IS ORDERED, That the application of Housatonic Broadcasting Co., Inc. (File No. BPCT-811217KG) for a construction permit for a new commercial television broadcast station to operate on channel 51 at Pittsfield, Massachusetts IS GRANTED, and the application of Pittsfield Community Television Association (File No. BPCT 811217KF) IS DENIED.

INITIAL DECISION OF ADMINISTRATIVE LAW JUDGE EDWARD J. KUHLMANN

(Issued: February 18, 1983 Released: February 28, 1983)

1. The Chief, Broadcast Bureau designated these applications for comparative hearing on July 9, 1982, *Memorandum Opinion and Order*, 47 Fed. Reg. 32784 (July 29, 1982). The applicants are applying for a television construction permit for a new commercial facility to operate on Channel 51 at Pittsfield, Massachusetts. The following issues are considered in this decision:

> 1. To determine which of the proposals would, on a comparative basis, better serve the public interest.
>
> 2. To determine, in light of the evidence adduced pursuant to the foregoing issue, which of the applications should be granted.

2. A prehearing conference was held on September 22, 1982. A hearing session was held on December 7, 1982 where written testimony was received into evidence. There was no cross-examina-

tion and the record was closed on the day of the hearing. *Order*, FCC 82M-3912, released December 9, 1982. Proposed findings and conclusions of law were filed by the three applicants on December 30, 1982 and replies were filed on January 14, 1983.

Findings of Fact

3. *Diversification*: *Berkshire Television, Inc.* has no mass media ownership but its Secretary, Martin E. Firestone, who owns 42.5 percent of Berkshire's stock, owns 25 percent of Multi Media Communications Corporation. Berkshire Exh. 4. Multi Media owns 89 percent of JEM Communications, Inc., permittee of WSJN-TV, Channel 24, San Juan, Puerto Rico and 100 percent of Vinco Communications Corp., which holds 6 percent of the Class B, nonvoting stock in Hess Broadcasting Corporation, permittee of Channel 15, Mobile, Alabama. *Id.* Mr. Firestone is also a less than 1 percent stockholder of Springfield Television Corporation, which is the licensee of television stations in Springfield, Massachusetts and Dayton, Ohio. In addition, Springfield Television is the parent of Springfield Television of Utah, which is the licensee of KSTU, Salt Lake City, Utah.[1] *Id.* Jean Kaddy and Raymond Goudreau, Berkshire principals, currently work for Springfield Television but they intend to resign if a grant is made to Berkshire. *Id.*

4. *Pittsfield Community Television Association* did not indicate whether it has interests in mass media. PCTA Exh. 1. However, it did state that three members of the association, Maurice E. Callahan, Jr., Robert Petricca, and Steven B. Schwartz have media or media related interests. *Id.* Mr. Callahan is president of an outdoor advertising business in Pittsfield, Maurice Callahan & Sons, Inc. Mr. Petricca is a principal in a long distance resale carrier, Petricca Industries. And Mr. Schwartz owns a media production agency and audio recording studio in Pittsfield. *Id. Housatonic Broadcasting Company, Inc.* has no media interests and neither does its stockholders. Housatonic Exh. 1, at 2.

5. *Integration of Ownership into Management*: *Berkshire Television* proposes to integrate two stockholders, Jean Ellen Kaddy and Raymond Goudreau. Berkshire Exh. 1, Table 1. Ms. Kaddy, who is a Director, President and Treasurer of Berkshire and holds 42.5 percent of its shares, proposes to work full time at the station. Berkshire Exh. 1, at Table 1; Exh. 2, at 1–2. While her testimony states that she will participate in management, there is no indication how this will be carried out. *Id.* Currently, Ms. Kaddy works in Springfield, Massachusetts. (The record does not reflect where she lives.) Since 1970 she has worked as an administrative assistant at

---

[1] John A. Fergie owns as much of Multi Media and Springfield Television as Mr. Firestone. *Id.* He is the father of Jean Kaddy, who is President, Treasurer and a 42.5 percent stockholder of Berkshire Television.

WWLP in Springfield, which is licensed to Springfield Television Corporation. Berkshire Exh. 2, at 1. At WWLP she dispatches news, schedules traffic and programs, and apparently conducts public relations.[2] *Id.* Ms. Kaddy has not stated that she will move to Pittsfield.

6. Mr. Goudreau, who is a Director and 5 percent owner of Berkshire, proposes to work full time as Chief of Engineering. Berkshire Exh. 3, at 2. Mr. Goudreau also works for the stations owned by Springfield Television, where, since 1977, he has been Assistant Director of Engineering. *Id.* Before that, and since 1964, he has been a staff engineer at various stations. *Id.* The record does not reflect where Mr. Goudreau lives, nor has he indicated whether he would live in Pittsfield.

7. *Pittsfield Community Television Association*, which is a non-profit community association, proposes that three of the association's members would participate in the operation of the station. Steven B. Schwartz proposes to act as the station's full-time general manager and Edmund B. Grosso and Scott C. Taylor, Sr. would spend 20 hours per week as "Technical Advisory Managers." PCTA Exh. 2. Pittsfield Community Television Association has 18 members. PCTA Exh. 4, at Attachment A. It proposes that these members will take an interest in the station operation by giving advice, participating in program planning and other pursuits of the organization. PCTA Exh. 2, at 1. However, Messrs. Grosso and Schwartz were only made members of the association after designation and shortly before the hearing.[3]

8. The Petition for Leave to Amend filed November 26, 1982 by Pittsfield Community Television notified the Commission that one director, George Crane, had resigned on October 4, 1982 and that on that same day eleven new membership applications had been accepted.[4] Preceding the October 4, 1982 meeting Pittsfield Community Television had eight director-members, seven of whom were Board members and were listed in the application when it was filed and one, John S. Clark, who had become a director-member

---

[2] Ms. Kaddy asserts that there is merit to the fact that she has "longstanding ties to the Western Massachusetts area." The policy in comparative hearings, however, attaches credit primarily to civic participation and local residence in the principal community and secondarily to residence within the service area. While the community encompasses an area which includes at least the primary service area of the proposed station, there is no evidence that the Commission recognizes unspecified "ties" to a section of a state. The record does not reflect whether Ms. Kaddy lives within Berkshire's proposed service area.

[3] Messrs. Grosso and Schwartz were accepted as members of Pittsfield Community Television on October 4, 1982, and then 53 days later—three days before the written case was due on November 29, 1982—Pittsfield Community Television petitioned to amend to reflect their membership.

[4] The new members were John A. Barry, Jr., Isadore Goodman, Steven Schwartz, Gordon Reynolds, Robert Petricca, Edward Grosso, Jr., Maurice Callahan, Susan Francese, Beverly Mancivalano-Schwartz, Pat Donovan, and Michael Casey.

sometime after the and one, John S. Clark, who became a director-member sometime after the application was filed.[5] Affidavit of Pittsfield's President, William H. McAlister, Jr., attached to Opposition to Motion to Enlarge Issues, filed September 13, 1982 by Pittsfield Community Television Association.[6]

9. Pittsfield Community's November 26, 1982 amendment changes the control of the association only insofar as it alters the Board of Directors, because, as Pittsfield Community's bylaws state, "affairs of the Association shall be governed by a Board of Directors composed of seven persons . . .." PCTA Exh. 6, at Bylaws Article IV, Section 1. The Board of Directors "shall have the powers and duties necessary for the administration of the affairs of the association . . .." *Id.*, at Section 2.

10. Pittsfield Community Television explained "that control of the association's affairs is vested in the board of directors." Opposition to Motion to Enlarge Issues, filed September 13, 1982 by Pittsfield Community Television Association, at 3. "[T]he affairs of the association are managed by [the] seven member board of directors." *Id.*[7] The members of the Board are Robert K. George, William H. McAlister, David J. Tierney, Scott C. Taylor, Andrew Campoli, Eugene Dellea, and John S. Clark. PCTA Exh. 7.

11. Of the three persons proposed for participation for a specific time at the station, only Scott Taylor is a member of the Board of Directors. PCTA Exh. 2. Mr. Taylor proposes to spend 20 hours per week as one of two Technical Advisory Managers. *Id.* He lives in Pittsfield where he is President of Taylor'd Sound, Inc. PCTA Exh. 3, at 1; PCTA Exh. 4, at 4.

12. *Housatonic Broadcasting* proposes that stockholders Gary M. Kaye, Gary S. Krakow, Pamela W. Peterson, Jonathan M. Heller, Ronald Richman and William K. McDaniel would be integrated. Housatonic Exh. 1, at 2–3.

13. Mr. Kaye, who is President, a Director, and an 11.4 percent stockholder of Housatonic, proposes to work as the full-time General Manager and Executive Producer. Housatonic Exh. 1, at 2. Housa-

---

[5] An amendment was filed notifying the Commission about Mr. Clark's membership on February 9, 1982. The final date for submitting amendments in response to the January 7, 1982 "B" cut-off was February 10, 1982.

[6] Reference is made to the above pleading in Pittsfield's November 26, 1982 amendment adding 11 new members.

[7] Those persons who are only members of the Pittsfield Community Television Association meet annually to elect members of the Board of Directors and transact business. PCTA Exh. 6, at Article III, Section 2. However, a petition presented by 20 percent of the membership for a specific purpose requires a meeting of the membership. PCTA Exh. 6, at Article III, Section 3. Pittsfield Community Television also asserts, without reference to the bylaws, that a certificate of membership represents beneficial ownership in the Association and that it establishes "a right of participation in the program planning and other pursuits of the Association." PCTA Exh. 3, at 1 and Attachment B.

tonic Exh. 2, at 1. He would direct the overall station operation and he would be responsible for the programming content of the station. Housatonic Exh. 2, at 1–2. Since 1966 he has been employed at radio and television stations, and broadcast networks. *Id.*, at 3–4. He has worked as a news writer, announcer, reporter, editor and producer, a public affairs producer, television assignment editor for NBC News, and producer of NBC Radio News' coverage of the Republican National Convention in Detroit. *Id.* Mr. Kaye would move his full-time residence to Pittsfield if a grant is made. *Id.*, at 2.

14. Pamela W. Peterson, who is Treasurer, Director, and an 11.4 percent stockholder of Housatonic, proposes to work full time as the Chief Engineer. Housatonic Exh. 3, at 1. She would direct the day-to-day technical operation of the station and would be responsible for fiscal matters for the corporation. *Id.*, at 1,2. She is licensed as a First Class Radio Telephone Operator. *Id.*, at 2. Currently, she is manager of Long Term Planning, Technical Facilities, for the CBS Broadcast Center. *Id.*, at 4. Since 1967 she has worked at radio and television stations in technical, programming, and sales positions. *Id.*, at 3, 4, 5. She would move to Pittsfield if Housatonic's application is granted. *Id.*, at 2.

15. Jonathan M. Heller, a Director and 9.1 percent stockholder of Housatonic, proposes to work full time as Station Manager and Sales Manager. Housatonic Exh. 1, at 1, 2; Exh. 5, at 1. Mr. Heller would direct the business operations of the station. Housatonic Exh. 5, at 1. He would be responsible for the operations of the sales department, promotion, and business administration. *Id.*, at 2. All department heads other than programming and engineering would report to him. *Id.* Mr. Heller has worked in radio and television broadcasting since 1968. *Id.* He has been an announcer, traffic coordinator, and cameraman. *Id.* Mr. Heller would move to Pittsfield. *Id.*

16. Ronald Richman, who is a Director and 9.1 percent stockholder of Housatonic, proposes to work full time as Operations Director. Housatonic Exh. 1, at 2, 3. In this position, Mr. Richman would direct production of commercials and news. Housatonic Exh. 4, at 1. Mr. Richman has worked as a free-lance video technician for Broadcast News Service; he is the production supervisor for a cable television talk show; and he does free-lance production work for commercial and documentary film or video. *Id.*, at 2–3. He would move to Pittsfield. *Id.*, at 2.

17. Gary S. Krakow, who is Vice President, Director, and a 9.1 percent stockholder, proposes to work part time (20 hours per week) as News Manager of the proposed facility. Housatonic Exh. 1, at 2. Mr. Krakow would work on weekends and direct the news operations of the station. Housatonic Exh. 6, at 1–2. He works as the producer of NBC's early morning news program, Early Today. *Id.*, at 2–3. Mr.

Krakow has extensive broadcast news experience. *Id.* Mr. Krakow lives in New York City and would not move to Pittsfield. *Id.*

18. William K. McDaniel, who is Secretary, a Director and a 9.1 percent stockholder, proposes to work part time (20 hours per week), on weekends, as Promotion Manager of the proposed facility. Housatonic Exh. 1, at 3; Exh. 7, at 1. He would have full charge of the station's promotional activities. Housatonic Exh. 7, at 1. Mr. McDaniel is and has been an account supervisor for New York City advertising agencies where he has been and is responsible for media planning for national and local television advertising. *Id.* He lives in Rye, New York and would not move to Pittsfield. *Id.*

Conclusions of Law

19. *Diversification of Control of the Medium of Mass Communications*: Berkshire Television, Inc. has no mass media interests, but Martin Firestone, who is a Director, Secretary, and Berkshire's largest stockholder (42.5 percent, individually, and his wife, Elaine B. Firestone, holds an additional 10 percent), holds a 25 percent interest in Multi Media Communications Corporation. Multi Media owns 89 percent of JEM Communications, the permittee of WSJN-TV, Channel 24, San Juan, Puerto Rico, and 100 percent of Vinco Communications Corp., which holds a construction permit for Channel 15, Mobile, Alabama. Mr. Firestone also holds less than 1 percent of Springfield Television, which is the licensee of a number of television facilities. Housatonic Broadcasting and its stockholders have no cognizable mass media interests. Pittsfield Community Television Association did not state whether it holds other media interests. It did list the outdoor advertising interest of Maurice Callahan, one of its 18 association members, the long distance telephone resale business of Robert Petricca, another member, and the audio recording studio and media production agency of Steven Schwartz, also an association member.

20. Housatonic Broadcasting and Pittsfield Community Television Association are to be slightly preferred over Berkshire on the diversification criteria because of Martin Firestone's interest in the San Juan, Puerto Rico and Mobile, Alabama television facilities. Berkshire receives a very slight demerit for his interests. A slight demerit is assessed because the facilities are some distance from Pittsfield. Nevertheless, a demerit is warranted because it cannot be concluded that Mr. Firestone has no influence, or control, over the Puerto Rican facility since Berkshire has not indicated the importance of Mr. Firestone's holdings in terms of the other stockholders.

21. Pittsfield Community Television stands in the same position as Housatonic and it, too, is to be preferred over Berkshire because its Board of Directors does not have any mass media interests. The interest of Messrs. Petricca and Schwartz would not be cognizable for assigning a diversification demerit under any circumstances. *Mid-*

west Broadcasting Company, 70 F.C.C. 2d 1489, 1498–99 (Rev. Bd. 1979). However, the interest of Mr. Callahan in local outdoor advertising might be considered because of its potential for affecting the economic control of mass media if he held any control of the Pittsfield Community Television Association. But, Mr. Callahan is only one of 18 members of Pittsfield Community Television Association and he is not a member of its Board of Directors where "control of the association's affairs is vested . . . ."

22. *Full-time Participation in Station Operation by Owners*: Housatonic and Berkshire are to be preferred over Pittsfield Community Television on this criteria, and Housatonic is to be preferred over Berkshire for the following reasons: Housatonic's Gary M. Kaye, an 11.4 percent stockholder, Pamela W. Peterson, an 11.4 percent stockholder, Jonathan M. Heller, a 9.1 percent stockholder, and Ronald Richman, a 9.1 percent stockholder, propose to work full time in management positions at the station and they propose to live in Pittsfield. Each of them has experience in the television field, each holds a position of significance in the Housatonic corporation, and Ms. Peterson enhances the proposal because she is a woman. In addition, Gary Krakow, a 9.1 percent stockholder, and William K. McDaniel, also a 9.1 percent stockholder, would occupy management positions on a part-time basis and have had experience performing the jobs they would occupy. They would, however, work only on weekends and would not live in Pittsfield. Nevertheless, their participation means that 59.2 percent of the ownership of Housatonic would participate in the management of the station.

23. While Berkshire promises slightly more full-time participation by owners (47.5 percent compared to Housatonic's 41 percent), the part-time participation of two Housatonic stockholders who own 18.2 percent of its stock outweighs the slightly greater full-time proposal of Berkshire. Furthermore, Berkshire's full-time intergration proposal is vague about the responsibilities that would be handled by Jean Kaddy. Ms. Kaddy, who holds 42.5 percent of Berkshire's stock and is a coporate officer, "propose[s] integration into the management" of the station. Berkshire Exh. 2, at 1. Nowhere does Berkshire explain what it is that she would do at the station.

24. The *Policy Statement on Comparative Broadcast Hearings*, 1 F.C.C. 2d 393, 395 (1965) requires that before full credit is given for an integration proposal, an assessment must be made of the policy functions the person would undertake and the likelihood that the person would play an important role in management. For example, the Commission has stated that it would accord significant weight to certain staff positions held by owners. *Id.* And "although positions of less responsibility will be considered . . . they cannot be given the decisional significance attributed to the integration of stockholders

exercising policy functions." *Id*. Ms. Kaddy can be credited with her promise of full-time participation in management but no assessment can be made that she would undertake a policy role or that her job will be important in the management of the station. Berkshire's proposal to integrate Raymond Goudreau, who is a Director, 5 percent stockholder, and proposed full-time Chief of Engineering, does not suffer from the same infirmity.

25. Qualitatively Housatonic's full-time proposal is also superior to Berkshire's. Berkshire's Kaddy and Goudreau do not live in Pittsfield and they have not stated that they would move there. In contrast, all of Housatonic's stockholders, who propose to work full time, have indicated that they would move to Pittsfield.[8] While both Kaddy and Goudreau have broadcast experience, so do all of the stockholders proposed for integration by Housatonic.

26. Ms. Kaddy, as a 42.5 percent stockholder, receives credit as an integrated woman, but so does Housatonic's Pamela W. Peterson. Neither Ms. Kaddy nor Ms. Peterson hold control of the applicant, and their ownership positions are relatively the same, since no other stockholder in either applicant owns a greater number of shares than they do.[9] (That is the case for Berkshire unless the 42.5 percent held by Berkshire's Martin Firestone is combined with his wife's shares.) However, Ms. Peterson's role in the policy formation and management of Housatonic is clearly defined and important and, therefore, the import of her female credit can be assessed. Overall on qualitative grounds Housatonic is entitled to a moderate preference over Berkshire because its stockholders proposed for full-time integration will move to Pittsfield and because Housatonic has given a well defined and important role to a woman who owns a significant share of the applicant.

27. Pittsfield Community Television Association proposes that three members of the association would work at the station, Steven Schwartz, Edmund B. Grosso, and Scott C. Taylor. Steven Schwartz, who would work full time, and Edmund B. Grosso, who would work

---

[8] Berkshire states that "Mrs. Kaddy's long-standing ties to the Western Massachusetts area, with concomitant personal knowledge of area issues and problems, will also be valuable . . .." Berkshire Exh. 2, at 1–2. With regard to Mr. Goudreau, the testimony indicates that "his extensive ties to the Western Massachusetts area . . . indicate that he will be sensitive to the needs of the local area." Berkshire Exh. 3, at 2. The only example of sensitivity cited was the fact that Mr. Goudreau has been married for twenty-one years and has three children. *Id*. The Commission provides primary credit to residence in the community and a lesser credit to residence in the service area. *Waters Broadcasting Corporation*, 52 Radio Reg. (P&F) 2d 1063, 1065–66 (1982). But Berkshire's statements are too imprecise to credit: Berkshire does not claim that Kaddy and Goudreau live in the community of Pittsfield, or in the service area. They only refer to unspecified "ties" and an unexplained familiarity with Western Massachusetts.

[9] Cf. *Gilbert Broadcasting Corp.*, 52 Radio Reg. (P&F) 2d 429, 444 (1982) (where the Commission gave a greater preference to minority control).

part time, became members of the association on October 4, 1982. Scott C. Taylor, Sr., who would work part time, was a member of the association and its Board of Directors at the time the application was filed.

28. Whether any or all of these people should receive credit for their participation largely depends on their authority or ability to exercise control over the operation of the nonprofit Association. Pittsfield Community Television Association's seven person Board of Directors has the power and duty to administer the Association. The Board holds control and manages the Association's affairs. Members of the Association elect Board members and, in the ordinary course, have the right to vote on matters at an annual meeting. While Pittsfield Community Television Association claims in its Exhibit 3 that a member has a beneficial ownership and a right to participate, it is clear from its bylaws and earlier filings in this proceeding that the right is limited and that control of the Association's affairs on a day-to-day basis rests with the Board of Directors. The bylaws state that the Board of Directors will be made up of seven members, although until just before the hearing there were eight directors. Assuming authority rests with the Board, then any integrated Board member would receive 14.3 percent credit if there were seven members.

29. At the cut-off date Pittsfield Community Television Association's authority was distributed among the eight members of the Board of Directors. Now it proposes that one of its directors, Scott Taylor, would work part time at the station. At the cut-off date he held 12.5 percent of the Association's control. His part-time promise is insignificant when compared to Housatonic and Berkshire's applications.

30. Until October 4, 1982, Pittsfield Community Television Association had no members who were not also directors but then on that date it accepted eleven members who are not directors. It seeks integration credit for two of these new members who are not directors.

31. The other applicants oppose giving credit to these new members because they were added to the application after the "B" cut-off date—the date on which the applications could no longer be amended as a matter of right. Pittsfield Community Television's response to this argument is that it told the Commission when it filed that it might add new members and therefore it has the right to do so. Pittsfield Community Television offers no support for its assertion and there is none. Applicants cannot improve their comparative standing after the cut-off date by adding new owners who promise to integrate. See *Birmingham Family Television, Inc.*, 52 Radio Reg. (P&F) 2d 525, 526, 528 (Rev. Bd. 1982). Although Pittsfield Community Television may add new members who would manage the station, their promise is not of comparative importance

because it does not couple legal control with management since they are not directors. Adding members, therefore, does not improve Pittsfield Community Television's position.[10]

32. Pittsfield Community Television Association also seeks comparative credit for proposing auxiliary power. Housatonic points out, however, that Pittsfield's application contains no such proposal and to permit an amendment would be to allow Pittsfield to improve its application after the "B" cut-off date. In any event, the *Addendum to the Policy Statement*, 2 F.C.C. 2d 667 (1966) provides that auxiliary power is a factor only in AM and FM broadcast proceedings; therefore, no preference is warranted.

33. In sum, Housatonic is to be favored because its quantitative and qualitative integration proposal is better than Berkshire's, and superior to Pittsfield Community Television Association's. In addition, Housatonic's comparative standing on diversification is slightly better than Berkshire's. Berkshire's integration would be quantitatively better than Pittsfield Community Television Association's. Pittsfield Community Television is better on diversification than Berkshire, but this difference does not outweigh Berkshire's superior integration proposal.

ACCORDINGLY, IT IS ORDERED that the petition for leave to amend, filed November 26, 1982 by Pittsfield Community Television Association IS GRANTED and the amendment IS ACCEPTED, subject to the condition that the changes effectuated in its membership and Board of Directors will not improve its comparative position.

IT IS FURTHER ORDERED that the applications of Berkshire Television, Inc. (File No. BPCT-811026KG) and Pittsfield Community Television Association (File No. BPCT-811217KF) ARE DENIED and the application of Housatonic Broadcasting Company, Inc. (File No. BPCT-811217KG) for a construction permit for a new commercial television station to operate on Channel 51 at Pittsfield, Massachusetts IS GRANTED.[11]

FEDERAL COMMUNICATIONS COMMISSION
EDWARD J. KUHLMANN, *Administrative Law Judge*

---

[10] If the control of Pittsfield Community Television does rest with its members, then the November 26, 1982 amendment notifying the Commission of the change presents an even more serious question of whether control had transferred. See *Pacifica Foundation*, 36 F.C.C. 147, 152 (1964) (where an existing non-profit licensee was expected to, and did, apply for a transfer of control of even a noncommercial facility).

[11] In the event exceptions are not filed within 30 days after the release of this Initial Decision, and the Commission does not review the case on its own motion, this Initial Decision shall become effective 50 days after its public release pursuant to Sec. 1.276(d).

Application, Acceptance of

> Petition for review of Bureau's action returning application denied. Since the applicant's proposed service area already receives the signals from two full-service stations, the applicant's provision of a first local service does not meet the Commission's freeze exemption criteria for new proposals and the application is therefore dismissed.

BEFORE THE

FEDERAL COMMUNICATIONS COMMISSION

WASHINGTON, D.C. 20554

In re Application of

P.M. BROADCASTING COMPANY, INC.

For Construction Permit For a New Low Power Television Station in Portsmouth, New Hampshire

MEMORANDUM OPINION AND ORDER

(Adopted: July 28, 1983 Released: August 3, 1983)

BY THE COMMISSION:

1. The Commission has before it for consideration a petition filed by P.M. Broadcasting Company, Inc. (PM), for review of the Mass Media Bureau's return of the above-captioned application on August 4, 1981. The application was returned because it was filed after the imposition of the Commission's freeze on the acceptance of new low power television applications and failed to meet any of the exemptions to that freeze.

2. By way of background, on April 9, 1981, with insufficient staff and computer capability to handle the approximately 5,000 TV translator and low power television applications already on file, the Commission stopped accepting new applications. However, exceptions were made for: existing translators operating on Channels 70 through 83 seeking to change frequency to a lower channel; existing translators seeking to change channels to eliminate interference to full-service stations; or new proposals to serve areas receiving fewer than two full-service stations. *Order Imposing Freeze*, 46 Fed. Reg. 26062, published May 11, 1981, 49 RR 2d 433. In its *Report and Order* in BC Docket No. 78–253, 49 Fed. Reg. 21468, published May 18, 1982, 51 RR 2d 477, establishing a low power television service, the Commission did not lift the freeze, but did eliminate the freeze

exemption for proposals to serve areas currently receiving fewer than two full-service stations. Instead, applications were grouped into categories by market size. Those applicants proposing to locate their transmitting antennas more than 55 miles from the coordinates of any of the top 212 television markets are placed in Tier I and are now freeze exempt. Applicants other than those in Tier I are grouped in Tiers II and III by market size. Under the tiered system, processing of the first tier must be completed before processing of the second tier begins, and so on. The freeze will be lifted only for the limited purpose of receiving competing applications to the applications published on cut-off lists.

3. In its application for review, PM acknowledges that its proposed community of license, Portsmouth, New Hampshire, already receives coverage from two full-service television stations. One station is licensed to Boston, Massachusetts, and the other to Portland, Maine. In addition, PM notes that Portland, Maine, the 79th largest television market,[1] is located approximately fifty miles from Portsmouth. Nevertheless, PM contends that its application falls within one of the exceptions to the freeze order because PM's proposal would bring the first local television service to Portsmouth. According to PM's reasoning, the provision of first local service is equivalent to a proposal to cover areas that directly receive fewer than two full-service television stations.

4. We are unable to accept PM's contention that its application is freeze exempt. In adopting the freeze exemption for areas receiving fewer than two full-service television stations, we noted that the exemption encompassed two of the five service priorities listed in the *Sixth Report and Order* in Docket Nos. 8736 and 8975, 9174 and 8976, 41 FCC 148, 167 (1952):

> (1) To provide at least one TV service to all parts of the United States and
>
> (2) To provide a choice of at least two TV services to all parts of the United States

Moreover, we stated that it was "our opinion that, in the context of TV translator and low power stations, these two service priorities of the Sixth Report and Order are of paramount importance because they would facilitate service to areas most in need of it, the primary goal of our interim policy." In establishing that freeze exemption, we declined to include the other service priorities specified in the *Sixth Report and Order*, such as, the priority for the provision of at least one television station for each community. In our opinion, the inclusion of that latter service priority would have nullified the purpose of the freeze since we anticipate that, in light of the small and undefined coverage areas of low power stations, many applicants could claim that they were providing the first local service to their area of license.

---

[1] Public Notice encaptioned "Television Channel Utilization", FCC mimeo number 3331, dated April 16, 1982.

5. The reason for imposing our April, 1981 freeze on the acceptance of low power applications was to establish an orderly and effective procedure for the processing of the unanticipated large volume of applications. Since that time, we estimate that an additional 7,000 applications have been filed under our existing freeze exemptions. In view of the steady influx of Tier I low power applications and the commensurate burdens imposed on our staff, we believe it is in the public interest to continue to maintain a freeze on the acceptance of low power applications.

6. Here, we find that PM's application fails to meet any of the freeze exemptions specified in our April 1981 *Order Imposing Freeze* since the applicant proposes to serve an area that presently receives two full-service stations. Moreover, the application may not be accepted under our present Tier I freeze exemption since PM proposes to locate its station less than 55 miles from a television market. Finally, in view of the considerable number of pending applications, we believe that PM's provision of a first local service does not justify the requested waiver or a lifting of the Commission's freeze on the filing of low power television applications. We simply will not be able to establish the new low power television service in an efficient, orderly manner if waivers are readily granted. Under these circumstances, we find that the Bureau's dismissal of the P.M. Broadcasting Company, Inc. application was proper and we hereby affirm that action.

7. Accordingly, IT IS ORDERED that the request for waiver of the Commission's *Order Imposing Freeze* filed by P.M. Broadcasting Company, Inc., IS DENIED.

8. IT IS FURTHER ORDERED that its petition for review of the Mass Media Bureau's action returning its application IS DENIED.

9. IT IS FURTHER ORDERED that the Mass Media Bureau send a copy of this Memorandum Opinion and Order by Certified Mail - Return Receipt Requested to the party named herein.

FEDERAL COMMUNICATIONS COMMISSION
WILLIAM J. TRICARICO, *Secretary*

Common Carrier, Rate or Tariff Unlawful
Satellite Domestic Communications
Tariff, Suspension

On remand from the Court of Appeals for the District of Columbia Circuit, the Commission explains further its decision that RCA's tariff revisions for its Domestic Satellite Services are unjust and unreasonable under Section 201(b) of the Act.
–RCA American Communications, Inc.
CC Docket No. 80–766

FCC 83–370

BEFORE THE

FEDERAL COMMUNICATIONS COMMISSION

WASHINGTON, D.C. 20554

In the Matter of RCA AMERICAN COMMUNICATIONS, INC.	CC Docket No. 80–766
Revisions to Tariff FCC Nos. 1 and 2	Transmittal Nos. 191 and 273

MEMORANDUM OPINION AND ORDER

(Adopted August 3, 1983; Released August 5, 1983)

BY THE COMMISSION:

1. On July 21, 1982 the D.C. Circuit Court of Appeals remanded the record of the captioned proceeding to the FCC for an unambiguous statement of the rationale for our decision. *RCA American Communications, Inc.* v. *FCC*, Case Nos. 81–1558, et al. (*Judgment* entered July 21, 1982). This order is intended to provide the statement required by the Court.

2. This controversy began in April 1980 when RCA American Communications, Inc. (Americom) filed revisions to its domestic satellite service tariffs. The revisions proposed changes both in the rates and in the terms and conditions on which Americom's satellite services would be offered. They would have raised the rates for Americom's satellite service, changed the length of the service terms, eliminated less expensive grades of service, effectively prohibited customer termination of service and changed the time limits for notice of a customer's intention to renew the service. The general impact of these revisions would have been to alter substantially the conditions under which customers had committed themselves to take service from Americom. See *RCA American Communications, Inc.*, 84 FCC 2d 353, 360–62 (1980).

3. Because we were concerned that the proposed changes might not be reasonable within the meaning of Section 201(b) of the Communications Act, 47 U.S.C. 201(b), we suspended the Americom tariffs for five months pending investigation. *Id.* Although we noted that the tariff filing process presupposes that carriers be permitted to initiate tariff changes, we determined that there were a number of reasons for carefully scrutinizing the Americom proposal. These included the carrier's dominant position in the industry, the sweeping changes it proposed in virtually every significant term and condition of the service, the potential hardship to relying customers, and the possible unfairness to the customer in allowing the carrier to make changes in the middle of the term while binding the customer to all the tariff provisions until its expiration. *Id.* at 356–59. We concluded that, under these circumstances, the reasonableness test of Section 201(b) involved considerations of fairness to carrier and customer alike.

4. After investigation, we declared the proposed revisions unjust and unreasonable in violation of Section 201(b) of the Communications Act. *RCA American Communications, Inc.*, 86 FCC 2d 1197 (1981). Our decision centered in large measure on our conclusion that the reasonableness of a proposal to revise material provisions of a long-term tariff in the middle of its term "must hinge to a great extent on the carrier's explanation of the factors necessitating the desired changes at that particular time." *Id.* at 1201. We determined that "if a carrier can make a showing of substantial cause, its decision to alter tariff terms will be considered reasonable." *Id.* at 1201–02. Applying this test, which has come to be known as the "substantial cause for change" test, to the Americom proposal, we found that the carrier had not established the reasonableness of reducing the length of the service terms, eliminating part-time and one-year service and prohibiting customer termination of service. *Id.* at 1203–06.

5. Americom challenged this finding in the D.C. Circuit Court of Appeals. It argued that the substantial cause test was a separate hurdle that required it to justify changing existing tariff terms in addition to proving reasonableness under 201(b). Relying upon *American Telephone and Telegraph* v. *FCC*, 487 F. 2d 865 (2d Cir. 1973), Americom asserted that such a requirement unlawfully interfered with the carrier's right to initiate and implement new tariffs. Commission counsel, responding to Americom's arguments, explained that the test employed in the FCC's order was not a new barrier to the filing of tariff changes. Rather, the brief said, it was an FCC recognition that, under the circumstances presented in this case, reasonableness was not a function of cost alone, but also of other factors such as customer reliance upon the long term provisions of the existing tariff.

6. In its *Memorandum* accompanying the *Judgment*, the Court

agreed with the FCC that the "reasonableness" determination required under section 201(b) need not be confined to mere consideration of the carrier's costs of providing service. It said:

> reasonableness ultimately depends on the special facts of each case. . . . [w]e see no reason why the Commission, in a thoughtful and properly supported exercise of its expertise, could not decide that substantial customer reliance expenditures have been induced by a particular type of tariff, and that these should play a significant role in defining the zone of reasonableness within which the carrier is free subsequently to modify its rates and practices."

Memorandum, p. 4. Nonetheless, the Court concluded that it was not clear from our order that we had employed the "substantial cause for change" test merely as factor for defining the zone of reasonableness under 201(b). The Court found that some language in the order supported Americom's characterization of the test as an additional hurdle for the carrier to overcome. Thus, the Court remanded the record of this case to the Commission "for an unambiguous statement of its rationale for invalidating [Americom's] revised tariff." *Memorandum* p. 6.

7. In response to the Court's *Judgment*, we take this opportunity to specify that we returned Americom's tariff revisions because we found them unjust and unreasonable under 201(b) of the Communications Act. It is well established that we have broad authority to interpret the Communications Act and determine when a tariff is just and reasonable. See *Nader* v. *FCC*, 520 F. 2d 182, 192 (D.C. Cir. 1975). We used that authority in this instance by employing the substantial cause for change test as a tool for defining the appropriate zone of reasonableness applicable to the Americom tariffs. The circumstances that surrounded the Americom filing clearly indicated that customer fairness was an appropriate factor to be considered under the Section 201 reasonableness test. In particular, the peculiar characteristics of the domestic satellite industry, Americom's position in that industry and the nature of the tariffs and proposed changes before us indicated that customer equity was an important consideration in this case. Accordingly, and for the reasons specified in paragraphs 14–28 of our May 21, 1981 *Order* in this proceeding, we reaffirm our finding that Americom failed to establish the reasonableness of the tariff changes it proposed.

Lighting, Specifications

Notice of Inquiry adopted seeking information to aid the Commission in formulating regulatory policy for lighting devices using radio frequency (RF) energy. Part 18 Subparts H and E (by reference) currently applies to RF lighting devices. These rules, however, are not considered appropriate for new RF lighting devices.
–RF Lighting Devices
Gen. Docket No. 83–806

FCC 83–360

BEFORE THE

FEDERAL COMMUNICATIONS COMMISSION

WASHINGTON, D.C. 20554

In the Matter of FCC Regulations concerning RF Lighting Devices.	Gen. Docket No. 83–806

NOTICE OF INQUIRY

(Adopted: July 28, 1983 Released: August 5, 1983)

BY THE COMMISSION:

Introduction

1. This Notice of Inquiry is issued to assist the Commission in determining what, if any, minimum regulatory requirements are necessary to minimize the interference potential of radio frequency (RF) lighting devices. In this Inquiry we are seeking information concerning the emission characteristics of RF lighting devices and the degree to which these products may become sources of harmful interference to authorized radio communication services. If a significant potential for interference exists, information submitted in response to this inquiry will aid us in determining what technical standards are necessary to control emissions to a level which would minimize interference.

2. Parallel with our effort in this Inquiry, we encourage the RF lighting industry to study the need for and, if found necessary, adopt voluntary industry standards to minimize the interference potential of their RF lighting devices. The Commission considers that voluntary industry standards would be preferable to government imposed regulations, particularly in an evolving area of technology. An

additional purpose of this Inquiry is to seek information on the ability of the RF lighting industry to regulate the interference potential of their devices.

3. If government regulations are needed, information gained from this Inquiry will be useful to the Commission in developing the minimum regulations necessary for the control of harmful interference from these RF lighting devices. We plan to investigate the least burdensome technical or administrative (i.e. labelling, user information, equipment authorization, etc.) regulations which could accomplish our goal of providing for use of this new technology while adequately protecting radio communication services against undue interference. We should stress at the outset that any regulatory requirement will be viewed as a last alternative to a workable voluntary standard.

RF Lighting Devices

4. RF lighting is an energy efficient lighting system currently being developed. AC power is taken from the power line, converted to RF energy[1] and applied to a fluorescent tube to produce light. Such RF lighting is claimed to be up to 3 to 4 times more energy efficient than incandescent lighting and than conventional fluorescent lighting using electromagnetic ballasts. Although this fact has been known for some time, it is only recently that electronic or RF ballasting has become cost effective. Developments of RF lighting are moving in several directions. One development is in the direction of a self contained lamp to be screwed into the standard incandescent bulb socket. A second development is producing an electronic or solid state ballast to replace the conventional electromagnetic ballast in the standard fluorescent fixture. A third development is looking toward the distribution of RF energy over a dedicated set of wires to the individual fluorescent fixtures. In this Notice of Inquiry we will use the term "RF lighting device" to encompass all the developments enumerated above.

5. The SL-18 RF light bulb developed by North American Phillips Lighting Corporation, is typical of the first development enumerated above. This bulb contains a folded fluorescent tube and has the necessary electronic circuitry built into the glass envelope. The electronic ballast produced by International Energy Conservation System and Soli-Tronics typify the second development described above. The operation of a fluorescent tube with an electronic ballast is similar to that of a tube using a conventional electromagnetic ballast. The difference lies in the internal circuitry. In the electronic ballast the 60 Hz AC line voltage is first rectified to DC.

---

[1] Most electronic ballasts operate between 20 and 40 kHz. However, the Commission is aware of the development by Litek International Corp. of an electronic ballast for a fluorescent light bulb which operates at 13.56 MHz.

The DC voltage is applied to an inverter whose output is RF energy at a frequency above 20 kHz. The RF energy is then applied to the fluorescent tube through an RF choke[2] to strike an arc which in turn excites the fluorescent coating to emit light. The rectifier, the inverter and the RF choke are all in the same package which looks exactly like the conventional electromagnetic ballast and is installed in the same way by the electrician. In this connection, we are aware that in some commercial and industrial RF lighting systems, instead of using an individual electronic ballast in each fixture, the system uses a centrally located piece of equipment that provides the AC to DC to RF conversion with the RF energy distributed to the individual lighting fixtures over a dedicated set of wires. In other such system, only the rectifier is centrally located with the DC voltage distributed to the individual lighting fixtures, each of which contains a simplified electronic ballast.

6. The General Electric Co. has taken a different path in its development of an RF light bulb—the GE Electronic Halarc light bulb. Unlike the electronic ballasts for fluorescent tubes where RF energy is used continuously while the bulb is on, the GE bulb uses RF energy only for a few seconds in the initial start-up mechanism of the bulb. GE intends for this bulb to replace the standard household incandescent bulb. This bulb allegedly uses 1/3 the energy of an incandescent bulb and lasts 4 or more times longer. As mentioned previously, several RF fluorescent type bulbs have also been designed to fit in the same socket as a regular incandescent bulb. Compared to the incandescent bulb, these RF fluorescent bulbs are much more energy efficient (allegedly only using 1/4 the energy).

7. While these RF lighting bulbs have residential application, it is expected that the major use of RF lighting sources will initially be in the commercial and industrial area to replace the standard flourescent fixtures or incandescent lamps. Commercial and industrial purchasers of lighting devices are more apt to take all costs into account including long term energy costs. The residential consumers, on the other hand, may not be as willing to spend additional money for an expensive RF light bulb even though it may save them money over the long run.[3] However, in the future, with increasing residential consumer awareness, the rising costs of energy, and the probable narrowing of the price differential between standard and RF bulbs, the new RF lighting devices could reach a significant portion of the

---

[2] The RF choke is necessary to limit the current that flows when the arc is struck and serves the same function as the magnetic coil in the conventional electromagnetic ballast. The RF choke need not be set out as a separate component, but it is usually incorporated in the circuitry that produces the RF energy.

[3] Currently developed household RF light bulbs are expected to sell for a significantly higher price than the standard incandescent bulb. However when considering the money saved in reduced energy consumption over the life of the bulb, an individual could justify paying more for an RF light bulb.

residential market and could become a significant part of the overall lighting market.

Present Requirements

8. Currently, under the Commission's Rules, RF lighting devices meet the definition for industrial, scientific and medical (ISM) equipment regulated by Part 18.[4] Under these rules RF lighting devices fall within the category of Miscellaneous Equipment in Subpart H which includes, among other devices, apparatus in which RF energy is applied to materials to produce physical, biological or chemical effects such as ionization of gases, etc.[5]

9. Part 18 requirements, however, were never intended to apply to mass produced or consumer items. Rather, these requirements were designed to govern large industrial equipment such as industrial heaters. The current radiated emission limit for Part 18 equipment may not provide sufficient protection against interference to consumer devices. In addition, for most Part 18 equipment, there is no conducted emission limit. These liberal standards, accordingly, are inappropriate when applied to products having a widespread use in commercial and residential locations.[6]

10. In the proceeding in Docket 20718 instituted by a *Notice of Inquiry* in 1976 followed by a *Notice of Proposed Rule Making* in 1978, we had proposed to reduce the allowable radiation emissions from ISM equipment, add a new power line conducted interference limit, and simplify the equipment authorization requirements for ISM equipment.[7] In that proceeding, we noted that the rules in Part 18 pose an administrative burden on manufacturers of certain ISM equipment. One of the most burdensome is the requirement for detailed certification and re-certification every three years for medical diathermy and miscellaneous ISM equipment operating on non-assigned ISM frequencies.[8] When the Part 18 rules were

---

[4] Section 18.3 (f) defines ISM equipment as "[d]evices which use radio waves for industrial, scientific, medical or any other purposes including the transfer of energy by radio and which are neither used nor intended to be used for radio communication".

[5] Section 18.3 (d). RF lighting devices contain materials and gases which are excited to emit light by the application of an RF voltage.

[6] Products which are widely distributed in a residential and commercial environment require tighter emission limitations because of the greater chance of their operation in close proximity to or on the same electrical circuit as a radio or TV receiver.

[7] Docket 20718: In the matter of overall revision of Part 18 governing Industrial, Scientific, and Medical (ISM) equipment. *Notice of Inquiry* adopted March 9, 1976 and released March 15, 1976 (41 FR 11626). *Notice of Proposed Rule Making* adopted September 19, 1978 and released September 29, 1978 (43 FR 46326). *Second Notice of Proposed Rule Making* adopted January 1, 1979 and released January 29, 1979 (44 FR 9771).

[8] The non-assigned ISM frequencies are all frequencies other than those specifically assigned for ISM purposes as listed in Section 18.13. The assigned ISM frequencies

adopted, equipment subject to recertification was usually large and very frequently unique. Under these conditions recertification was not considered to be overly burdensome, and it insured that the equipment would continue to comply with our technical standards. However, with the introduction of mass produced and particularly residential consumer items, such as RF lighting devices, we recognize that recertification every three years poses an impractical requirement and had proposed to eliminate this requirement in the proceeding in Docket 20718.

11. In 1980, the Commission granted a waiver of the recertification requirement to the General Electric Company to allow it to produce a limited quantity (up to 10,000) of the GE Electronic Halarc light bulb.[9] Later, at the beginning of 1981, we revised this waiver to eliminate the limitation on the numbers of bulbs that could be produced under the waiver.[10] Three other manufacturers of RF lighting devices have recently filed similar requests for waiver of the re-certification requirement. These petitions for waiver are being considered in a companion *Order Granting Limited Waiver*. These petitions demonstrate the need to develope a policy concerning RF lighting devices.

Discussion

12. The interference potential of RF lighting devices is considered the central issue in this inquiry. Any future regulatory action that we take is directly dependent upon the potential that these devices have to become sources of interference to licensed communication services. Since these devices are relatively new, there is a lack of information on their interference potential. We trust that this inquiry will aid in supplying us with the needed information concerning this question. In addition to responses from the RF lighting industry, we seek comments from other parties particularly those associated with licensed radio communication services which may be affected by emissions from RF lighting devices. We are specifically looking for supporting data, e.g., mathematical analysis, emphirical results, and modelling, to substantiate any claims of interference potential or lack thereof.

13. In addition, test data would be helpful to the Commission in

are:

13.56 MHz ± 6.78 kHz
27.12 MHz ± 160. kHz
40.68 MHz ± 20. kHz
915 MHz ± 13 MHz
2450 MHz ± 50 MHz
24.125 GHz ± 125 MHz

[9] *Order Granting Limited Waiver* adopted July 17, 1980 and released July 23, 1980 (FCC 80–418, 45 FR 51649).

[10] *Order Expanding Limited Waiver* adopted January 29, 1981 and released February 4, 1981 (FCC 81–25).

corroborating any predictions concerning interference potential. In this respect, measurements were performed on several sample RF light bulbs at the Commission's Laboratory.[11] Emissions from these bulbs were found to be very broadband with measurable emission spanning the frequency range from 10 kHz up to 80 MHz. Our test data showed that the RF light bulbs were able, for the most part, to meet considerably tighter emission limits, such as those applicable to computers, than the limits now in the Part 18 rules. At the same time, we noted that these bulbs were capable of interfering with AM broadcast radio reception. We question whether technical standards designed to limit emissions from ISM equipment in general would be adequate to protect the communications services from harmful interference caused by RF light bulbs especially when considering the unique broadband nature of the emission from these bulbs.

14. In controlled laboratory tests, AM radios received objectionable interference via radiation up to a distance of several meters away from the RF light bulbs tested. In addition, emissions on the power line also resulted in interference to AM radios especially those connected to the AC power line. Tests performed in several homes verified that a potential does exist for harmful interference to AM radio reception. However, because of house wiring differences and other factors, results varied from one home to the next. The home tests are inconclusive at this point, but we are hopeful that the larger real world survey to be accomplished through the associated waivers using a substantial number of bulbs will provide us with a reasonable assessment of the actual degree of interference potential posed by RF lighting devices to AM broadcast and other services. In any case, we are particularly interested in comments regarding the interference potential presented by RF lighting devices to AM radio reception or any other radio service.

15. Further, we are interested in gathering information about the emission characteristics presented by different types of RF lighting devices. We are also interested in comments regarding appropriate technical emission standards, both radiated and conducted, which could restrict emissions from RF lighting devices to levels that would not cause harmful interference. Comments concerning an appropriate measurement procedure to determine compliance with any proposed emission standard would also be beneficial to this inquiry.

Questions

16. The following questions are representative of our concern about RF lighting products. In addition to the FCC generated questions, the list also includes questions contributed by the

---

[11] *See* the Technical Memorandum from Philip M. Inglis to the Chief, Authorization and Standards Division, dated February 25, 1983, file No. 31030/EQU/4-0.

Lighting Division of the National Electrical Manufacturers Association (NEMA).[12] Commenters are requested to identify each question being answered with the appropriate designator. We also invite comments not directed to any particular question as long as it is related to the general subject matter of this proceeding. Answers should include adequate justification and data, when appropriate.

REGULATION AND STANDARDS

Q1. What kinds of RF lighting devices and systems are on the market or are being developed with a description of each? Also, is there any information available concerning the interference potential of each such device or system.

Q2. How should RF lighting devices be regulated? Should the FCC regulate such devices as part of an official rulemaking or should the Commission give the lighting industry a chance to develop a voluntary industry standard through an organization such as NEMA?

Q3. What are the principal categories of RF lighting devices? Should each category be regulated differently? Should there be different categories by lamp type or industrial use? Or should there be different standards for differing environments, for examples, one standard for residential use, one for factory use, one for sensitive areas such as hospital intensive care units, etc.?

Q4. Should there be standards which apply to *groups* of low powered lamp systems, such as areas with many fluorescent fixtures, and other standards that are applicable to high powered systems that may have fewer lamps, such as 20 kilowatt short-arc xenon area lighting? Should some systems have standards which apply both to elements of the system and to the system as a whole?

Q5. Should there be one standard that includes both conducted and radiated interference or should there be separate standards?

Q6. Should there be specific standards for fixtures or systems intended to reduce radiated RFI? (Should lighting specifiers or consumers be given the option of selecting lighting products with "interference ratings"?)

Q7. Should manufacturers label each product, particularly consumer RF lighting devices, to provide user information to educate consumers and users about the interference potential of the device.

Q8. Should standards include operation of systems in an abnormal mode, (such as rectifying lamps, shorted or open lamp elements)?

Q9. Should RF lighting products be moved from Part 18 of FCC Rules and Regulations to Part 15? Should a totally separate, new Rule Part be established for RF lighting devices?

Q10. Should the lighting industry, through a representative committee, establish limits on RF emission? If so, which organization is best suited and able to lead the lighting industry in establishing and policing the standards that the industry imposes upon itself? If industry accepts the responsibility of policing itself, what is the best manner to enforce the standard developed to ensure the EMI product quality will be maintained.

---

[12] Our concern of the potential interference from RF lighting devices had been raised in discussions with the Lighting Division of NEMA. As a result of these discussions, NEMA contributed a list of questions for which answers are required before a sound regulatory policy can be developed for RF lighting devices.

Q 11. Would an administrative program of notification and verification by the manufacturer be acceptable to assure adequate compliance? See 47 CFR Part 2, Subpart J, for an explanation of the Commission's equipment authorization program.

Q 12. Should the standards be based upon existing international or foreign government standards? If so, which ones? Should it be a guideline for establishing the one in the United States.?

EMISSION LEVELS AND LIMITS

Q 13. What is the effect of the use of multiple RF lighting devices in one location on the interference potential?

Q 14. Should there be different limits for interference which may occur for brief periods, such as lamp starting or warm-up, than for more persistent or continuous emissions, as during lamp operation? If so, should intermittent and continuous cases include both conducted and radiated emission limits? Should a derating curve of emission intensity versus emission duration exist?

Q 15. Should bands of frequencies be alloted solely for use by RF lighting devices and systems? If so, how many and at what frequencies? Should RF lighting devices and systems be restricted to special frequencies?

Q 16. Should harmonic content of interference be specified as well as amplitude (intensity) and direction (spatial characteristics)?

Q 17. Should emission level limits, whether imposed by rulemaking or by industry standards, reflect different environments such as residential (consumer), commercial, or industrial? If so, what is the justification and rationale? If not, why not?

Q 18. How additive are the effects from multiple sources? Does industry data indicate some relationship in actual installations? Do multiple unit installations represent a significantly greater potential for interference than do individual devices?

Q 19. What emission level limits are appropriate for RF lighting devices? Discuss radiated and conducted limits and a rationale for recommended limits. Discuss an appropriate model for developing such limits.

Q 20. Should emission limits be established for a "system" consisting of a lamp, ballast, and fixture? Or should emission limits be set for lamp and ballast combinations?

Q 21. How shall lighting systems be treated that distribute RF energy to the fixtures over a set of dedicated wires instead of using individual electronic ballasts in each fixture? What limit shall be placed on the radiation of RF energy from the wiring? On the RF energy fed into the wires?

MEASUREMENTS

Q 22. What is an appropriate test methodology for determining the interference potential for each type of RF lighting device? Are both conducted and radiated measurements required? What are the conditions for each? Or, is some other test methodology more suitable?

Q 23. Should there be different test equipment for different frequency ranges? What should the measurement procedure be? Should consideration be given to polarization of the radiated interference? In what units should the measurements be recorded and reported?

Q 24. What line impedance stabilization network (LISN) should be used for conducted measurements? How should conducted measurements of RF lighting devices be taken?

Q 25. What should the setup be for radiated RF emissions? What type of antenna should be used? Should the testing be done in a special test chamber or in a working installation? What distances should be employed and should different distances be used for different frequency bands?

Q 26. Under what operating parameters should RF lighting devices be measured?

Q 27. What detector function and bandwidths should be used for measurements? Should the same detector and bandwidth be used across the entire frequency spectrum?

Q 28. Is measurement of radiated emissions in near rather than far fields an issue for these products?

Q 29. Can existing testing methods be incorporated or adopted? Which ones?

Q 30. Over what frequency range or bands are conducted and radiated emissions to be monitored?

Q 31. What test methodology is suitable for measuring compliance of distributed RF lighting systems?

SUSCEPTIBILITY AND INTERFERENCE

Q 32. What government and non-government radio communication services would be susceptible to emissions from RF lighting devices, and to what degree should protection be provided for each authorized radio service?

Q 33. What are the emission characteristics and signatures of the various RF lighting devices? How does a susceptible receiver respond to these characteristics?

Q 34. What products are likely to be interfered with by such RF lighting devices? What levels of protection will preclude harmful interference?

Q 35. What has been the industry history and experience to date on interference from traditional (non-RF) lighting devices?

Q 36. What are the ambient levels of radiation and conducted radio noise that already exist in typical residences and commercial structures? Does RF lighting significantly raise the radiated or conducted levels in actual field installations?

Q 37. What has been the industry experience with such RF lighting systems to date? What about the neighbors of such systems? Have there been instances of harmful interference from existing RF lighting installations?

TECHNOLOGY

Q 38. What does the emerging RF lighting industry predict as far as future directions of RF lighting sources? What frequencies of operation are likely to be employed?

Q 39. What emerging communications products might find these new RF lighting devices to be a potential problem?

Q 40. Do emissions from current products meet any existing RFI limits?

ECONOMICS

Q 41. What is the economic benefit to the user and the public from these new RF lighting devices and systems?

Q 42. What amount of interference suppression is cost effective for such products? Is suppression strictly a cost issue for manufacturers or are there other factors that determine the degree of emanation control?

Procedural Matters

17. Pursuant to Sections 4(i) and 302 of the Communications Act of 1934, as amended, IT IS ORDERED that this Inquiry IS HEREBY INSTITUTED.

18. In accordance with the provisions of Section 1.415 of the Commission's Rules, interested parties may file comments on or before October 31, 1983. Reply comments must be filed on or before December 16, 1983. Pursuant to the procedures set forth in Section 1.419 of the Commission's Rules, an original and five copies should be filed by formal participants with the Secretary of the Commission. Participants wishing each Commissioner to have a copy should include six additional copies. Members of the general public who wish to express their interest by participating informally may do so by submitting one copy. All comments are given the same consideration, regardless of the number of copies submitted. All comments should be clearly marked General Docket No. 83-806, and will be available for public inspection in the Public Reference Room at the Commission's headquarters. All written comments should be sent to: Secretary, Federal Communications Commission, Washington, D.C. 20554. For further information on this proceeding, contact Herman Garlan at (202) 653-8247. For general information on how to file comments, contact the FCC Consumer Assistance and Information Division at (202) 632-7000.

In the Matter of

Petitions for waiver of Section 18.142 of the FCC Rules by
- North American Philips Lighting Corp.
- International Energy Conservation Systems,
- Brigham Young University/Soli-Tronics

ORDER GRANTING LIMITED WAIVER

(Adopted: July 28, 1983 Released: August 5, 1983)

BY THE COMMISSION:

1. In the past year, the Commission received three petitions for waiver of the detailed certification and re-certification requirement of Section 18.142 for certain radio frequency (RF) lighting devices. The petitions were submitted by: North American Philips Lighting Corporation (NAPLC) on July 15, 1982, International Energy Corporation (IECS) on June 7, 1982, and Soli-Tronics in Conservation Systems (IECS) on June 7, 1982, and Soli-Tronics in cooperation with Brigham Young University on January 24, 1983. The NAPLC and IECS petitions were put on public notice on July 30, 1982 and August 5, 1982, respectively. The American Radio Relay League, Inc. (ARRL) and General Electric Company (GE) filed comments on the NAPLC and IECS petitions for waiver. Since the Soli-Tronics request is essentially identical[1] to that of IECS, it was believed that comments submitted on the IECS petition would also

---

[1] IECS requests a waiver for its "Ballastronic" electronic ballast. Soli-Tronics requests a waiver for the following models of electronic ballasts: Model Nos. 4024, 4120, 4124 and 8120.

apply to the Soli-Tronics request and that a separate public notice for Soli-Tronics was not necessary.

2. All three petitions are concerned with new RF lighting devices using electronic ballasts for fluorescent type bulbs. NAPLC requests a waiver for its SL-18 lamp which is similar in size and shape to a household incandescent bulb. The SL-18 bulb consists of both the fluorescent tube and an electronic ballast built into the glass envelope of the lamp. On the other hand, IECS and Soli-Tronics produce only electronic ballasts for installation in fluorescent fixtures. For convenience we will refer to both the SL-18 lamp and each electronic ballast made by IECS and Soli-Tronics as an RF lighting device.

3. The standard ballast used for fluorescent lights operates at 60 Hz - the standard power line frequency. However a fluorescent light bulb with an electronic ballast is stated to be 20 to 40 percent more energy efficient than the standard fluorescent fixture. In comparison to the household incandescent bulb, RF lighting devices are claimed to be even more energy efficient. NAPLC states that its bulb, which can be inserted into a standard incandescent socket, uses only one-fourth of the energy of a standard incandescent bulb. Since the NAPLC bulb can fit incandescent sockets and is approximately the size of an incandescent bulb, it will have residential as well as commercial and industrial uses. The RF lighting devices developed by IECS and Soli-Tronics were developed with the commercial/industrial market in mind, but can be expected eventually to reach the residential market.

4. According to the petitions, the RF circuitry in the electronic ballast operates continuously at a high frequency between 20 and 40 kHz.[2] The first step in the operation of the electronic ballast is to convert alternating current (AC) from the power line into direct current (DC) by using a rectifier circuit[3] The DC voltage is then applied to an inverter which converts the DC energy to RF energy at a frequency between 20 and 40 kHz. This RF energy is applied to the fluorescent tube(s) by the same basic technique as that used in conventional fluorescent fixtures. The RF energy excites the gaseous compound within the tube causing the fluorescent coating material to glow and emit light.

5. Since RF energy is applied to excite gases and materials, these new RF lighting devices are considered to be miscellaneous industri-

---

[2] Although most RF lighting sources operate between 20 and 40 kHz, the Commission is aware of an RF excited fluorescent lamp designed by the Litek Company which operates on the frequency of 13.56 MHz.

[3] The Soli-Tronics Model 4024 electronic ballast does not contain a rectifier to convert from AC to DC voltage. It is designed to be used in a DC distribution system where the AC to DC conversion is done at one point in the lighting system and DC voltage is then distributed to each electronic ballast and associated fluorescent fixture.

al, scientific and medical (ISM) equipment subject to Part 18 Subpart H of the FCC Rules.[4] By reference, miscellaneous equipment is subject to the requirements in Subpart E (medical diathermy equipment) of Part 18. Since the RF lighting devices operate on frequencies that are not assigned for ISM purposes, Section 18.142 is the particular regulation in Subpart E that applies. This regulation requires that each piece of equipment (RF lighting device in this instance) must be certificated (tested) and re-certificated at intervals of three years. It is evident that this requirement is completely unsuitable for RF lighting devices. Accordingly, the Commission is seeking alternative regulatory requirements. (See paragraphs 7–9 below).

6. Section 18.142, and Part 18 in general, were intended to apply to large, high power industrial, scientific and medical equipment produced in small quantities. This regulation was designed to ensure that such equipment continued to comply with the technical requirements. However, the detailed certification and re-certification requirement in Section 18.142 poses an extremely severe administrative problem to the marketing of a mass produced item such as an RF light bulb. Each bulb would have to be certificated and the user or purchaser would need to re-certificate each bulb every three years. Re-certification of an RF light bulb would provide hardly any additional protection against interference over that provided by a prototype certification prior to marketing.

7. In a separate proceeding, FCC Docket 20718, we proposed to extensively revise and update the rules in Part 18.[5] Among other contemplated changes, the proposal included deletion of the re-certification requirement, addition of a simplified certification procedure as a prerequisite for marketing, the imposition of more stringent radiated emission limits and the addition of a conducted emission limit. A tighter emission limit is particularly appropriate for mass produced commercial and consumer products such as RF lighting devices.[6] However, although consumer ISM equipment was discussed in Docket 20718, the Commission at that time did not have

---

[4] Miscellaneous (ISM) equipment is defined in Section 18.3(d), as equipment in which radio frequency energy is applied to materials to produce physical, biological, or chemical effects such as heating, ionization of gases,. . .which do not involve communications or the use of radio receiving equipment.

[5] Docket 20718: In the matter of overall revision of Part 18 governing Industrial, Scientific and Medical (ISM) equipment. *Notice of Inquiry* adopted March 9, 1976 and released March 15, 1976 (41 FR 11626). *Notice of Proposed Rule Making* adopted September 19, 1978 and released September 29, 1978 (43 FR 46326). *Second Notice of Proposed Rule Making* adopted January 1, 1979 and released January 29, 1979 (44 FR 9771).

[6] The current standards in Part 18 were intended to protect communication services from ISM equipment usually operated in industrial areas significant distances away from communication services.

any information on RF lighting devices. Accordingly, no specific provisions for RF lighting devices were proposed.

8. In a companion *Notice of Inquiry* we are seeking to acquire information so that we may knowledgeably proceed with minimal regulations for RF lighting devices to minimize the potential for harmful interference.[7] However, while that inquiry is pending, the Commission recognizes that technological advancements such as energy saving RF light bulbs and electronic ballasts should not be delayed access to the market as long as adequate control is maintained over the interference potential of this new technology.

9. In July of 1980, the Commission granted a limited waiver of the detailed certification and re-certification requirement in Section 18.142 to GE for 10,000 Electronic Halarc light bulbs.[8] In January of 1981, we removed the limit on the number of GE Halarc light bulbs which could be produced and marketed under the waiver.[9]

10. In an attempt to determine the interference potential of RF lighting sources, tests were performed by the Commission on the NAPLC SL-18 RF light bulb both at the FCC Laboratory and at the homes of several members of the Commission's staff.[10] Measurements taken at the laboratory indicate that emissions from this bulb are very broadband extending from 10 kHz up to approximately 80 MHz. The laboratory results show that AM Broadcast was the only broadcast service which may experience any significant interference from the SL-18 bulb. In controlled laboratory conditions, radiated interference to AM radios was noted up to distances of two meters from the bulb. With the bulb plugged into the same outlet as the radio, interference was noticed at greater distances indicating that power line conducted emissions from RF lighting sources may be of greater concern than radiated emissions.

11. Results gathered from subjective interference tests performed by using the SL-18 RF light bulbs in the homes of several Commission staff members varied significantly. Objectionable interference to AM reception in some homes was confined to situations when the AM radio was plugged into the same AC receptacle, or operating very close (within a few feet) to the bulb. However, a few individuals reported more widespread interference to AM reception in their homes. NAPLC submitted test results indicating that its

[7] *Notice of Inquiry*, In the matter of FCC Regulations concerning RF Lighting Devices, FCC General Docket No. 83–806 adopted July 28, 1983, released August 5, 1983.

[8] *Order Granting Limited Waiver* adopted July 17, 1980 and released July 23, 1980 (FCC 80–418).

[9] *Order Expanding Limited Waiver* adopted January 29, 1981 and released February 4, 1981 (FCC 81–25).

[10] The tests are described in a Memorandum from Philip M Inglis to the Chief, Authorization and Standards Division dated February 25, 1983, file No. 31010/EQU/4–0.

light bulb did not pose a significant potential for interference to AM broadcast reception.[11] In a portion of NAPLC's tests run in several actual homes, interference was noted only in cases when the bulb was extremely close (within a foot or so) to an AM radio or when plugged into the same electrical outlet as the AM radio. Other parts of the NAPLC test report show that emission levels from the SL-18 bulb are below levels emitted by conventional fluorescent fixtures. Further, NAPLC alleges that no interference complaints have been received for a similar RF bulb marketed in Europe.

12. The limited tests performed up to this point only show that in some situations interference can occur to AM broadcast reception due to emissions generated by an RF lighting device. However, the number of times such situations will occur and the severity of any resulting interference is dependent upon many factors such as location and environment of product use, proliferation of the product, emission characteristics, the prevailing conditions at the particular location of use (i.e. susceptible receivers).

13. With respect to the location and environment of use, the RF lighting devices developed by IECS and Soli-Tronics will be operated for the most part in commercial office buildings and industrial plants. Compared to consumer equipment used in residential areas, these commercial/industrial RF lighting devices will usually be further away from susceptible receivers, and therefore less likely to cause interference problems. As noted previously, the Soli-Tronics RF lighting devices can be operated in two different types of system configurations, and each configuration may present a different interference potential. In one configuration, standard AC voltage is distributed to each lighting fixture which contains an electronic ballast which generates RF energy and applies this energy to the fluorescent tube. In the other configuration one main rectifiers is used for the entire system. The DC voltage is distributed to each lighting fixture which contains a simplified electronic ballast—an electronic ballast without the individual rectifier. It is claimed that the single large rectifier is more efficient than the multiplicity of small rectifiers, thus further improving the energy efficiency of the system. Each configuration could result in different levels of RF energy on the distributed wiring directly affecting the interference potential of the system.[12]

14. On the other hand, due to its capability of replacing a regular incandescent bulb, the NAPLC RF lighting device will eventually have application in residential as well as commercial/industrial environments. Because of the greater possibility of close proximity

---

[11] Test report regarding the SL-18 Lamp filed by NAPLC on April 8, 1983.

[12] The Commission is aware of another RF lighting system which is composed of one main unit that performs all the voltage conversions (AC to DC to RF) and then distributes the RF voltage to all the fluorescent fixtures in the system.

operation to AM radios, residential operation of the light bulb may lead to more interference complaints. However, since the NAPLC bulb is more expensive than the standard household incandescent bulb, NAPLC contends that, at least initially, most of these bulbs will be used in commercial and industrial locations.

15. With regard to emission characteristics, the NAPLC, IECS, and Soli-Tronics RF lighting devices all operate on the same basic principle and so are expected to have similar emission characteristics. It is important to note that the emissions characteristics from these devices is broadband and as a result has a different interfering affect than most other ISM equipment, which exhibit narrowband emissions. Accordingly, the existing emission limitations in Part 18 are not directly applicable to RF lighting devices and can not be relied upon by manufacturers as a valid guideline to design to hold emissions from their products to tolerable levels. Our evaluation of the NAPLC bulb appears to substantiate this contention. The lab results show that the NAPLC RF lighting source did meet currently established standards for other equipment such as personal computers, etc.; however, significant interference was still caused to AM radio reception in the same household.

16. In view of the large number of variables affecting the interference potential of RF lighting devices, a determination of the actual interference potential presented by these products is most practical through experience gained in actual use. However, the commenters, both ARRL and GE, are concerned about widespread interference problems which may develop and urge the Commission not to grant a waiver for these new RF lighting devices until an adequate showing is made concerning their interference potential. The limited testing performed in several homes with the NAPLC RF lighting source does not provide the Commission with a large enough statistical base to draw accurate conclusions about the interference potential. Based on our experience with the limited waiver granted to GE, we believe that a real world interference survey based on the use of 10,000 RF lighting devices from each petitioner manufacturing electronic ballasts and 100,000 RF light bulbs by NAPLC would provide a valid assessment of interference potential for each type of RF lighting device.[13] [14] At the same time, by limiting the prolifera-

---

[13] Footnote 5, supra. GE actually made improvements to reduce the interference potential of its bulb with the aid of the actual market survey conducted with a limited number of bulbs. See the reports submitted by GE as a requirement under its waiver. These reports are available for inspection in the RF Devices Branch file No. 4–3–7.

[14] The selection of the number of units to be initially authorized is based on several factors. The first is the need to have a sufficiently large test sample to adequately determine the interference potential of RF lighting sources in a variety of locations and environments. The second is our concern to limit widespread interference. Considering these two factors and our concern not to hamper a manufacturers marketing plan, we have selected 10,000 units for electronic

tion of these new RF lighting sources, we maintain an adequate control over interference potential, thereby reducing the concern expressed by the commenters. Moreover, by granting the waiver, and relieving the petitioners of burdensome administrative requirements, we permit this energy saving technology to develop and be introduced into the marketplace without delay.

17. We are also imposing the radiated and conducted limits in for computing devices Subpart J of Part 15 of the Rules on RF lighting sources marketed under the terms of this waiver. While we recognize that these limits may not be completely satisfactory, as stated in paragraph 15 above, we believe some minimal technical limits are necessary to place a cap on the interference potential of these devices. RF lighting devices intended for use in industry and commercial environments will be subject to the technical limits for a Class A computing device. RF lighting marketed for use in residential areas will have to meet the limits for a Class B computing device. It may be possible that the subject RF lighting devices will have to add additional EMI suppression in order to comply with these limits. We believe that this is not an unreasonable burden for manufacturers of these bulbs. Alternatively, however, the manufacturer must satisfy the Commission that its bulb or ballast is not a major interference source.

18. Accordingly, we are limiting this waiver of the equipment authorization requirements in Section 18.142 for a total number of 10,000 (100,000 for NAPLC) RF lighting devices for each petitioner to be used in field testing and market evaluation. Each petitioner is required to submit periodic reports concerning all interference problems resulting from operation by its RF lighting device. The results of the experience derived from actual use of these RF lighting sources will also be useful to the Commission by providing real world data to supplement information generated through the associated *Notice of Inquiry*. In addition, the Chief Scientist is delegated authority to waive the requirements of Section 18.142 for other manufacturers of RF lighting devices subject to the same conditions herein. Further, the Chief Scientist is delegated authority to increase the number of RF lighting devices covered by this waiver if significant interference problems do not result.

19. The Commission hereby grants a limited waiver to NAPLC, IECS and Soli-Tronics subject to the conditions below:

(a) This waiver authorizes the manufacture and marketing of 10,000 electronic ballasts each by International Energy Conservation Systems and Brigham Young University/Soli-Tronics and 100,000 RF lighting bulbs (SL-18) by North American Philips Lighting Corp. to be used in field testing and evaluations.

---

ballasts and 100,000 units of the SL-18 bulb. The larger number for the NAPLC is based on the detailed test program plan submitted by the firm as a supplemental information to their petition

READEX FICHE best copy available

(b) A report of measurements of both the conducted and radiated emissions from the RF lighting device along with ten samples of the lighting device shall be submitted to the FCC Laboratory for examination.

(c) Grantee shall make a study of the cumulative effect of a large number of devices installed in one plant and all connected to a single wiring system on the amount of radio frequency interference created and how this correlates with the radio frequency interference caused by a single device. A report of this study shall be submitted within six months.

(d) Reports of all radio frequency interference (RFI) experiences resulting from the operation of RF lighting devices under this waiver shall be submitted to the Commission at intervals of three months.

(e) The RF lighting device (or system) shall be certificated by the Commission pursuant to Subpart J of Part 2 to show compliance with technical requirements in Subpart J of Part 15 for Class A equipment if the RF lighting device (or system) will be used in a commercial/industrial environment or for Class B equipment if the device will be used in a residential environment.

(f) The following information shall be printed on the package containing the RF lighting device so that it will be clearly visible to the purchaser.

This device is being sold pursuant to a waiver of FCC rules as part of an experiment to determine whether it causes harmful interference to AM radios in or around the user's dwelling. Any interference should be reported to (fill in company name, contact person, and address).

(g) If a significant interference problem is caused by the devices authorized under this waiver, the Chief Scientist is authorized to instruct the manufacturer of the device in question to discontinue marketing the device until corrective measures are taken. Marketing may be resumed only on instructions from the Chief Scientist.

20. Pursuant to Section 1.3 of the Commission's Rules, since good cause has been shown, the NAPLC, IECS and Soli-Tronics petitions for waiver of the re-certification requirements of Section 18.142 ARE GRANTED subject to the conditions set out in paragraph 19 above. This waiver shall terminate 30 days after the effective date of any rules adopted by the Commission concerning operation of RF lighting devices.

21. IT IS FURTHER ORDERED that the Chief Scientist is authorized to increase the number of RF lighting devices covered by this waiver and to grant, subject to the same conditions, similar waiver requests which are filed by other parties and adequately justified. The petitioner must file the following minimum information.

(a) A detailed description of the RF lighting device.

(b) A statement why the present rules are unsatisfactory and why it is in the public interest to grant the waiver.

(c) A statement that the RF lighting device will comply with the conditions set out in paragraph 19 above.

22. Pursuant to Section 1.427(b) of Part 1 of the Commission's

Rules, since it relieves a regulatory restriction, this ORDER shall become effective on August 5, 1983.

23. Further information about the waiver may be obtained from Herman Garlan at (202) 653–8247.

For Construction Permit For New UHF
Television Broadcast Station

MEMORANDUM OPINION AND ORDER

(Adopted: August 25, 1983; Released: August 31, 1983)

BY THE REVIEW BOARD:

1. This proceeding is before the Board on the exceptions (and associated pleadings) of seven applicants for the Construction Permit for UHF Channel 14, Washington, D.C.[1] That television frequency became available when the Commission revoked the license of the previous occupant of that channel, WFAN-TV. *United Television Co., Inc.*, 46 FCC 2d 698 (1974). The applications of the successor-aspirants were designated for consolidated comparative hearing by the Commission on August 19, 1981.[2] Notwithstanding the multiplicity of applicants and issues in this proceeding, and a litigiousness intensified, no doubt, by the perceived value of the prize, Administrative Law Judge Edward J. Kuhlmann (ALJ) well-superintended the hearing and delivered in workmanlike course a 51-page *Initial Decision*.

2. After reviewing the exceptions, briefs, and the record in the case, as well as hearing oral argument by the parties on June 28, 1983,[3] the Board is of the view that further limited evidentiary exploration is needed with respect to several matters, all of which could be decisional in this important case. Although the Board is institutionally disinclined to casually remand a proceeding for further hearing, thereby protracting somewhat the comparative process, *see, e.g., Valley FM Radio*, 53 RR 2d 1195, 1196 (Rev. Bd. 1983), the Board has done so where uncertain inferences from the extant record would be critically inferior to deliberate factual fortification. *Cf. Bernard J. Winner*, 75 FCC 2d 300 (Rev. Bd. 1979). While the Board might help alleviate certain of the factual uncertainties in this existing record by requesting "paper" submissions on these troublesome questions, *see generally*, 47 C.F.R. § 0.365(a), the Board is largely without those procedural devices best suited for eliciting more definitive evidence, *see* 47 CFR Part 1, Subpart B ("Hearing Procedures" - discovery, testimony and cross-examination, *etc.*), and that imbue our adversary process with the unique potential

---

[1] One of the applicants, however, Urban Telecommunications Corporation, has specified Arlington, Virginia as its city of license and seeks a dispositive comparative preference based on Section 307(b) of the Communications Act, 47 U.S.C. § 307(b). *See Initial Decision* ("*I.D.*"), FCC 83D-2, released January 24, 1983 (E.J. Kuhlmann, ALJ). Our use of the Washington, D.C. designation with respect to the location of the channel implies no decision on the § 307(b) issue.

[2] *Hearing Designation Order*, BC 002820, *reprinted at* 46 Fed. Reg. 43737 (August 31, 1981).

[3] *See* Transcript of Oral Argument in re *WSCT-TV, Inc.*, BC Dkt. Nos. 81-528 *et seq.*

to lay bare factual conditions and to peer beneath artful legal rodomontade. Hence, rather than leave the resolution of the open decisional questions to disembodied collegial intellection, the Board has decided in this case to heed its own Polonian caveat that "it is better to be safe than sorry,"[4] and to remand the proceeding so as to assure to the extent possible the precision of the factual bearings on which the ultimate decision will turn.

3. In the *I.D.*, and by way of brief background, the ALJ concluded that the "deciding factor" in this case was the integration criterion and that grant of the application of WSCT-TV, Inc. (WSCT-TV) would best serve the public interest because the "level of participation" proposed by WSCT-TV's owners in station operations was "the highest of all applicants." *I.D.*, para. 156. He ranked the applicants as follows: (1) WSCT-TV; (2) Washington's Christian Television Outreach, Inc. (WCTO); (3) Washington Television, Inc.; (4) Capital Communications of Washington, Inc.; and (5) Century Communications, Inc. Urban Telecommunications Corporation (Urban) and Grant Broadcasting Corporation were omitted from the comparative rankings because the ALJ found that neither applicant had established its basic qualifications.

4. *Urban's Financial Qualifications.* Our initial concern relates to the disqualification of Urban under a financial issue. Urban proposes the full-time integration of its solitary black stockholder, Theodore R. White, and - if found qualified - would be a likely front-runner in this contest on other relevant comparative criteria. In disqualifying Urban, the ALJ reasoned that a financial issue had been specified initially by the Commission, that Urban made no attempt to correct the inadequacies in its original financing plan until a few days before hearing, and that instead of reforming its original showing, the applicant presented an entirely new plan for review. *I.D.*, para. 136. The amended Urban financial proposal relied upon a lease arrangement with AMVEST Leasing and Capital Corporation (AMVEST), under which AMVEST would provide up to $2,500,000 to purchase the equipment which would then be leased to Urban. Its proposal also contemplated a bank loan to $922,916.67 ($1,000,000 minus interest of $77,083.33) from the National Bank of Commerce of Washington, D.C. (NBC), that loan to cover the ($732,840.35) lease payments as well as operating and miscellaneous expenses. But, the ALJ held that Urban did not demonstrate that AMVEST itself had the ability to lease the equipment; or, even if the AMVEST arrangement were credited, that the ($1,000,000) loan from NBC would be available. In that latter regard, the ALJ noted that inasmuch as the Urban loan exceeded the statutory limit that NBC could loan unitarily, NBC would need to rely on correspondent banks to supply the balance; he found that there was no assurance

---

[4] *WHW Enterprises, Inc.*, 89 FCC 2d 799, 808 (Rev. Bd. 1982).

that any correspondent banks would participate in the loan. Thus, he concluded that Urban was financially unqualified.

5. We believe that the ALJ was hasty in completely disqualifying Urban under this issue and hold that Urban should be afforded an appropriate opportunity to support its amended financial plan. Although the *I.D.* observes that Urban waited until just before the commencement of the hearing to rectify its financial proposal, Urban correctly claims that it filed its amendment concerning AMVEST within 30 days after the financial issue was designated and advised that it was actively negotiating to secure a bank loan. Hence, while an amendment containing the NBC loan commitment letter was not filed until the eve of the hearing, the parties were not seriously prejudiced thereby since the signatory of the NBC letter testified at the hearing. Next, though the ALJ exercised his broad discretion in requiring that Urban establish AMVEST's ability to lend (such ruling being supported by Section III, para. 4 of the application form then being utilized), Urban had a colorable basis for uncertainty as to whether it was required to prove that entities such as AMVEST were *prima facie* financially qualified to lease equipment to applicants. For example, in *Cypress Communications, Inc.*, 88 FCC 2d 994 (ALJ 1981), *aff'd* 88 FCC 2d 990 (Rev. Bd. 1982), an applicant (ultimately the successful applicant) was found financially qualified despite the fact that, as here, it had not submitted a separate financial showing for the leasing corporation on which it was relying to establish its own financial qualifications; it merely submitted a letter from the financing corporation stating that it was a *bona fide* institution, and nothing to the contrary had been submitted by the other parties. *See* 88 FCC 2d at 1015. Moreover, in *Cypress*, the particular financing corporation involved had been noticed by the Commission as a qualified financial institution in another proceeding. *Id.* Here, Urban proffered AMVEST's Annual Report (1981) which indicated that it had financed over $21 million of equipment during 1981, and more than $170 million since 1970.[8] Further, as in *Cypress*, AMVEST has been noticed as a lending company in another Commission proceeding, *see Bison City TV 49 Limited Partnership*, 91 FCC 2d 26, 28–29 (Rev. Bd. 1982); and, perforce, it even appears that one of the other competing applicants in this very case (WCTO) is also relying on AMVEST for a similar leasing arrangement. That applicant's financing was never challenged, nor was it called upon, as was Urban, to prove AMVEST's independent ability. *See* Urban Exh. 10 (rejected by ALJ). In view of all of the above, we believe that Urban should be afforded an equitable opportunity to make its showing; and, in that connection, if AMVEST has been presumed qualified to finance another applicant

---

[8] The Annual Report was not admitted into evidence because Urban did not produce a sponsoring AMVEST witness.

herein, it seems only fair to treat all applicants alike. Similarly, with respect to the NBC commitment letter, several authorities have been cited which appear relevant, *e.g.*, *Cherokee Broadcasting Co.*, 8 FCC 2d 138 (Rev. Bd. 1967); *CBS, Inc.*, 49 FCC 2d 1214 (Rev. Bd. 1974). While those cases may be somewhat distinguishable, both the Commission and the Board have noted the difficulty faced by minority applicants in securing financing. *See*, respectively, *Muncie Broadcasting Corp.*, 54 RR 2d 42, 47 (1983); *Bison City TV 49*, *supra*, 91 FCC 2d at 30 n.5.[6] As in the latter case, Urban's swift disqualification appears unduly harsh under the totality of circumstances present, and we will reverse that ruling. *See generally Anax Broadcasting, Inc.*, 87 FCC 2d 483, 487–88 (1981).

6. *Syncom Agreement*. Our next concern involves the integration proposal of the top-ranked applicant, WSCT-TV, which the ALJ found was entitled to 78.04% full-time, and 13.77% part-time, quantitative integration credit.[7] WSCT-TV, Inc. is wholly owned by Formula Telecommunications, Inc. (Formula); the two corporations have, in the main, common officers and directors, and 91.81% of the owners of Formula propose to work at the new facility. The ALJ awarded WSCT-TV with the above integration percentages notwithstanding arguments raised by the competing applicants that a financing contract between Formula and Syndicated Communications, Inc., and its wholly owned subsidiary Syndicated Capital Corp. (collectively "Syncom"), compelled that WSCT-TV's integration proposal be reduced by as much as 26% to reflect inchoate Syncom equity in Formula. Such a reduction, of course, would significantly diminish WSCT-TV's chances of success in this proceeding. The Syncom agreement, dated January 14, 1981, provides, in pertinent part, that:

> . . . in consideration of a loan of $10,000 dated January 9, 1981 made by Syncom to [Formula], [Formula] agrees to provide Syncom *with a right to purchase warrants and to participate in the financing* . . . *of [Formula's station* . . . as outlined in Syncom's commitment letter to [Formula] dated December 17, 1980. [WCTO Exh. 1, Agreement (emphasis added).]

The referenced December 17, 1980 letter is, in part, a loan commitment from Syncom to Formula whereby Syncom promises to loan Formula up to $500,000: the first $300,000 is to be available upon grant of the Construction Permit; the other $200,000 is to be available during the first year and one-half after closing on the first portion of the loan. The Syncom letter further states that, upon making the loan, Syncom would receive warrants entitling it to purchase from 10% to 26% of the Formula's common stock, the precise percentage contingent on Formula's success in raising $1,000,000 in additional equity participation. Syncom, it seems, would receive warrants for the full 26% if Formula does not either raise $1,000,000 in additional equity or if Formula borrows the ($200,000) second portion of the loan. Furthermore, the deal gives Formula the right to acquire (call) the warrants held by Syncom; and, Syncom has the right to sell (put) its warrants to Formula at fair market value during the fifth through the tenth year after the loan closing. The cost to Syncom of purchasing the Formula warrants would be, apparently, a penny a share (a maximum of $20); and, the cost of converting the warrants into Formula common stock would be only ten cents a share (a maximum of $200).

---

[6] Not to the contrary is *Coastal Bend Family Television*, 54 RR 2d 367 (Rev. Bd. 1983). There, the applicant not only misstated grievously its original financial qualifications, it did not submit an amended (and again flawed) financial plan until 11 months after the hearing had been ended. In this case, Urban cannot be charged with a similar lack of diligence.

[7] The *I.D.* shows the figure as 77.64% (*I.D.*, para. 158) rather than 78.04%, but the former figure is apparently the result of a slight mathematical miscalculation.

7. The ALJ found the Syncom interest in Formula too indefinite to attribute to it a cognizable equity ownership interest. *I.D.*, para. 161. Thus, he rejected the contention that the January 14, 1981 agreement gave Syncom a currently vested right to the warrants, and he accepted WSCT-TV's contention that it neither relies upon the loan from Syncom nor has it indicated that it, in fact, will borrow the money from Syncom. He also noted that even if Syncom lends money to Formula and receives the warrants, Formula would have the right to have Syncom return the warrants in exchange for their fair market value from the fifth to the tenth years. *Id.*, at para. 162.

8. Almost all of the competing applicants urge in their exceptions that the ALJ fatally erred in disregarding the potential impact of the Syncom agreement on WSCT-TV's ownership integration level. Essentially, they argue: (1) that the decision on whether to participate in WSCT-TV's financing was transferred exclusively to Syncom by the January 14, 1981 agreement; (2) that Syncom therefore has an irrevocable right to acquire an equity interest in Formula of at least 10%, and as much as 26%, for a nominal price; (3) that George Corbin III, a stockholder of Formula (and WSCT-TV's proposed general manager) testified that there were no plans to solicit additional equity participation (Tr. 1661) which would, therefore, accord Syncom the unimpeded right to acquire the full 26% of the warrants; (4) that Syncom's right of equity participation is imminently exercisable; (5) that consideration for Syncom's purchase rights was supplied, in part, by a January 9, 1981 loan of $10,000 to Formula, money which Formula evidently needed *post-haste* (*see* WCTO Exh. 14, Agreement); (6) that given the value of a television station in a major market and the nominal cost to Syncom to convert the warrants to Formula common stock, it must be conclusively presumed that the conversion will occur; and (7) that should Syncom convert the warrants to stock prior to the fifth year, Formula's right to repurchase the warrants would be lost since the right apparently applies only to warrants. Exceptors also argue that

should Formula decide to raise additional outside equity, its instant ownership level would be further diluted. WSCT-TV responds that it (*i.e.*, Formula) has the sole right to decide whether Syncom can participate in its financing, and that Syncom cannot exercise the warrants until after ten years because of the put/call provisions.

9. We believe that essential questions remain as to whether Syncom's relationship with WSCT-TV's parent, Formula, portends an integration level that is either illusory or too ephemeral to credit as the dominant basis of a license award.[8] It has been held that the Commission will take cognizance of options that are adverse to the interests of its applicants in the absence of evidence that the options will not be exercised. *See Radio Laredo, Inc.*, 87 FCC 2d 353, 354 & n.14 (Rev. Bd. 1981), *review denied*, FCC 82-62, released February 3, 1982, *aff'd sub nom. Amigos Broadcasting, Inc.* v. *FCC*, 696 F.2d 128 (D.C. Cir. 1982).[9] Here, neither the fact that WSCT-TV claims that it does not need to borrow funds from Syncom to be basically qualified, nor that Formula possesses the right to have Syncom return the warrants after five years is necessarily dispositive if, indeed, Syncom has a vested right both to *require* Formula to allow it to participate in the financing of the station and to *convert* the warrants into common stock, in part, because there is no assurance that Formula will have the ability to later repurchase at market value. Further evidentiary hearing, as well as findings of fact and legal conclusions based thereon, are necessary to determine Syncom's rights and intentions with respect to a future ownership interest in Formula. We therefore direct the parties to revisit the vital question of Syncom's current legal rights (based upon appropriate principles of contract law); and, if necessary, to address the consequent question of whether an ownership integration plan which may well not exceed the inaugural license term is fully creditable under the Commission's comparative tenets or whether it should be diminished.

10. *Anderson Commitment*. Our final area of concern involves the integration proposal of Washington Television, Inc. The ALJ found that applicant entitled to 70.1% full-time quantitative integration credit for the proposed management participation of Dr. Joann Anderson, a 53.6% shareholder, and of Lonnie Murray, a 16.5% owner.[10] Dr. Anderson pledges to work as the station's general

---

[8] We also note that if it is determined that Syncom has a true vested interest in the applicant, Syncom's other mass media ownership interests might also be attributable to WSCT-TV.

[9] An option, or in this case a warrant, creates substantial uncertainty as to the ultimate ownership structure of an applicant and is therefore taken into account in determining an applicant's ownership structure, *i.e.*, the applicant's integration structure may be comparatively evaluated in its most unfavorable light. *See Radio Laredo, Inc.*, 87 FCC 2d 364, 376 (ALJ 1980), *aff'd Radio Laredo, Inc.*, *supra*.

[10] Only WSCT-TV and WCTO were awarded more quantitative integration credit than Washington Television, Inc., and the ALJ questioned the validity of two (20%) of WCTO's proposed integrated principals.

manager; but, virtually all of the competing applicants except to the integration credit awarded for Dr. Anderson's proposed integration, contending that her proposal should have been rejected because she failed to effectuate an integration pledge previously made to the Commission. Specifically, they invoke a 1974 application for a new FM station at Tallahassee, Florida filed by Amrad Corporation, wherein Dr. Anderson, a principal, was proposed as the full-time general manager of the facility. A competing application was filed, but the case was settled and Amrad's unopposed application was granted. Apparently, however, only one week after Amrad's grant, Dr. Anderson accepted a fellowship to pursue a graduate degree at Florida State, and she thereafter became a full-time student rather than the station's full-time general manager. She responds, though, that she did simultaneously work at the station on a part-time basis (on nights and weekends). The ALJ found that there was no evidence in the Commission's records that Dr. Anderson (or the station) ever notified the Commission of the change, *I.D.*, para. 109; nor does it appear that Dr. Anderson conditioned her prior full-time integration pledge on her potential academic schedule. Exceptors urge, in essence, that we recall the adage "once burnt, twice smart," and refuse to credit Dr. Anderson's latest integration proposal.

11. Inasmuch as this case must be remanded for other evidence, we believe that the above circumstances warrant additional inquiry to help determine whether Dr. Anderson's latest integration proposal should be accepted. The Commission, long ago, declared that it expects "the integration or principal participation representations made in the comparative hearing process to be discharged in good faith (with whatever revisions are felt necessary in light of changed circumstances)." *Tidewater Teleradio, Inc.*, 24 RR 653, 657 (1962). "Representations made to [the Commission] . . . are not to be put forth as a part of 'gamesmanship' or for tactical advantage: They must be seriously advanced and seriously regarded in actual operation." *Id.* Moreover, such representations cannot automatically be abandoned by a successful applicant upon the withdrawal of its competition. *Alexander S. Klein, Jr.*, 88 FCC 2d 583, 586–87 (1981). Here, the Board cannot determine on the basis of this record whether Dr. Anderson has met the *Tidewater* test, the record being almost barren of evidence concerning the circumstances surrounding the acceptance of the fellowship by Dr. Anderson—particularly the extent of her foreknowledge of the matter. Thus, pertinent examination should be made of such factual questions as when Dr. Anderson applied for the fellowship, the likelihood of its grant, when she was first apprised of its grant, and whether the Commission was, in fact, timely informed of her decision not to effectuate her integration pledge.

12. ACCORDINGLY, IT IS ORDERED, That the proceeding IS REMANDED to the presiding Administrative Law Judge for prepa-

ration of a Supplemental Initial Decision consistent with this *Memorandum Opinion and Order*.

FEDERAL COMMUNICATIONS COMMISSION
NORMAN B. BLUMENTHAL, *Member, Review Board*

FCC 83D-2

BEFORE THE

FEDERAL COMMUNICATIONS COMMISSION

WASHINGTON, D.C. 20554

Joseph E. Dunne, III, James Gammon, and *Richard G. Gay* on behalf of Washington's Christian Television Outreach, Inc.; *Lewis I. Cohen, Morton L. Berfield,* and *Roy W. Boyce* on behalf of Century Communications, Inc.; *Benito Gaguine, Russell C. Balch,* and *Heidi P. Sanchez* on behalf of Capital Communications of Washington, Inc.;

Jonathan Ginsburg and *E. William Henry* on behalf of Grant Broadcasting Corporation; *Alfred C. Cordon, Dennis J. Kelly, Pat Silver* ard *Mark S. Allen* on behalf of Urban Telecommunications Corporation;[1] *Steven C. Schaffer, Malcolm G. Stevenson,* and *Lawrence M. Miller* on behalf of Washington Television, Inc.; *Michael H. Rosenbloom* and *Richard H. Waysdorf* on behalf of WSCT-TV, Inc.; and *Allan Moskowitz* on behalf of the Chief, Broadcast Bureau, Federal Communications Commission.

INITIAL DECISION OF ADMINISTRATIVE LAW JUDGE EDWARD J. KUHLMANN

(Issued: January 14, 1983 Released: January 24, 1983)

1. This proceeding was designated for hearing on July 31, 1981 by the Chief, Broadcast Bureau.[2] The following issues are considered in this decision:

> 1. To determine with respect to Century Communications, Inc.:
>
> (a) the availability of additional funds over and above the $766,066 indicated; and
>
> (b) whether in light of the evidence adduced the applicant is financially qualified.[3]
>
> 2. To determine with respect to Urban Telecommunications Corporation:
>
> (a) whether it has $2,525,000 available for construction and operation of the proposed station;
>
> (b) whether in light of the evidence adduced pursuant to issue (a), applicant is financially qualified.
>
> 3. To determine which of the proposals would best provide a fair, efficient and equitable distribution of television service.
>
> 4. To determine the effect of *Velez v. Divine,* Civil Action No. 81–1225 D.D.C. upon Capital Communications of Washington, Inc.'s basic and/or comparative qualifications to become a licensee.
>
> 5. To determine the circumstances surrounding Capital's failure to disclose the involvement of A. Diane Graham in *Velez v. Divine* in answers to interrogatories, and to determine the effect, if any, upon Capital's comparative standing.

---

[1] Alfred C. Cordon and Dennis J. Kelly withdrew as Urban's lawyers on May 24, 1982. During part of the hearing sessions held on June 2 and 3, 1982 an officer of Urban, Pat Silver, represented Urban. On August 2, 1982, Mark S. Allen began appearing on Urban's behalf. Mr. Allen participated in the filing of proposed findings and conclusions and then on September 9, 1982, before reply findings were filed, he withdrew as Urban's counsel. Urban's reply findings were filed by Urban's only stockholder, Theodore M. White.

[2] *Hearing Designation Order,* BC 002820, released August 19, 1981, 46 Fed. Reg. 43737 (August 31, 1981).

[3] Originally this issue included an inquiry into Century's land costs and its construction and operation costs. In a *Memorandum Opinion and Order,* FCC 81M-4113, released December 31, 1981, at ¶ 24, summary decision was granted on those aspects of the issue.

> 6. To determine whether Lawrence Brailsford and Grant Broadcasting engaged in misrepresentation by failing to report Mr. Brailsford's bankruptcy and, if that is the case, to determine the effect on Grant Broadcasting's basic and/or comparative qualifications.
>
> 7. To determine which of the proposals would, on a comparative basis, best serve the public interest.
>
> 8. To determine, in light of the evidence adduced pursuant to the foregoing issues, which of the applications should be granted.[4]

2. Preceding the hearing additional issues were designated against applicants who dismissed their applications before the hearing. See *Hearing Designation Order*, BC 002820, released August 19, 1981, at 15 (Issues 2, 3, 4); *Memorandum Opinion and Order*, FCC 81M-4113, released December 31, 1981, at 13 (Issues 9, 10, 11, 12). These issues have not been resolved because of the dismissals. See *Order*, FCC 82M-0600, released February 24, 1982 (dismissing applications of Community Service Broadcasters, Inc. and Metropolitan Television, Inc.) and *Order* FCC 82M-0955, released March 24, 1982 (dismissing applications of Focus Broadcasting, Inc., Kent of Washington, Inc., and Television Communications, Inc.).

3. Prehearing conferences were held on October 22, 1981 (Tr. 1–32), January 8 (Tr. 33–62) and May 5, 1982 (Tr. 2589–2626). Hearing sessions were held on March 22 - April 2, 1982 (Tr. 63–2588) and June 2–3, 1982 (Tr. 2627–2947). The record was closed on July 19, 1982. *Order*, FCC 82M-2186, released July 19, 1982.

4. On August 2, 1982, all the competing applicants but Grant Broadcasting filed proposed findings of fact and conclusions of law on their own proposals.[5] On September 9, 1982, the competing applicants submitted proposed findings of fact and conclusions of law about one another's proposals. Reply findings were filed on September 30, 1982 by all parties. The Broadcast Bureau withdrew from participation in the case on July 27, 1982 and consequently it submitted no proposed findings or conclusions of law.

---

[4] The *Hearing Designation Order*, BC 002820, released August 19, 1982, at 15, designated an issue (No. 6) questioning the financial qualifications of Washington Television, Inc. Summary decision was granted on that issue. *Memorandum Opinion and Order*, FCC 81M-4113, released December 31, 1981, at 8, 12. In addition, an unresolved character issue in *Gemini Broadcasting Company*, Dkt. BC 81-381-387, against Grant Broadcasting Corporation's principal, Milton Grant, was considered pursuant to the Commission policy enunciated in *Allegan County Broadcasters*, 83 F.C.C. 2d 371, 373 (1980) and resolved in Grant's favor. *Memorandum Opinion and Order*, FCC 82M-2601, released August 26, 1982 (denying the Broadcast Bureau's request to enlarge the issues to consider the *Gemini* issue involving Grant.)

[5] Grant Broadcasting filed on August 3, 1982 and has requested leave to file out of time. Grant has submitted good cause for its request and no opposition has been received. Thus, its findings and conclusions will be accepted.

FINDINGS OF FACT

Qualifying Issues

5. *Century's Financial Proposal (Issue 1)*: The cost for Century to construct and operate for three months has been determined to be $1,692,017. The Broadcast Bureau found that Century had available $766,066, leaving an unestablished balance of $925,951. Century relies on bond subscriptions from three of its stockholders to provide these funds. Pauline Wechsler would provide $600,000, Dr. Everett J. Gordon, $300,000, and Dr. Herbert M. Wechsler, $300,000. Century Exh. 5, at 1.

6. Pauline Wechsler supports her commitment with a balance sheet showing net assets of $19,008,137 and net liquid assets of $1,351,507. Century Exh. 5, Attachment 4. Dr. Gordon supports his commitment with a loan for $300,000 from the United Bank and Trust Company of Maryland. Century Exh. 5, Attachment 5, 6. Herbert Wechsler has supported his commitment with a balance sheet showing net assets of $5,518,618.22 and net liquid assets of $871,914. Century Exh. 5, Attachment 7.

7. *Urban's Financial Qualifications (Issue 2)*: In August 1981, when these applications were designated for hearing, Urban Telecommunications Corporation estimated its costs at $2,525,000. Urban relied on a $4,000,000 loan from Sefel J. and Associates, Ltd. The Broadcast Bureau concluded that since the lender was not an equipment manufacturer or a financial institution, it was necessary for Urban to submit a balance sheet for its lender. *Designation Order*, at ¶ 26. The loan was also found by the Bureau to be faulty because it was conditioned on Urban's pending STV authorization and contained a 30 day backout clause. *Id.* The Bureau concluded that the loan from Sefel J. and Associates was indefinite, that it did not state its terms, and that it was unreasonable for Urban to rely on it. *Id.*

8. Urban did not amend its financial showing until March 15, 1982, nearly a week after the written case was due in this proceeding and two days before the parties designated the witnesses they wanted to cross-examine. In the proposed amendment, Urban reported that until the first week of March it had been unable to find financing. Then it found the Ideal Opportunities Corp., Miami Beach, Florida, "which expressed interest in Urban's objectives" and "expressed its willingness to loan Urban $1,250,000."[6] In addition, Urban stated in its petition that in the first week of March, it had obtained a letter from the National Bank of Commerce, Washington, D.C. "concerning a loan for $1,000,000."

9. With the hearing scheduled to begin on Monday, March 22,

---

[6] Petition for Leave to Amend, filed March 15, 1982, by Urban Telecommunications Corporation, at 2.

1982, Washington Television, Inc. filed on Friday, March 19, 1982 an opposition to Urban's petition for leave to amend. Urban also sought a protective order to prevent the authors of its last minute filed financial documents from having to appear for cross-examination. Washington Television, Inc. also opposed Urban's request for a protective order. Washington Television, Inc. urged rejection of Urban's amendment because there was no showing that the Ideal Opportunities Corp. was either a financial institution or an equipment manufacturer and Urban had not supplied any financial statement or balance sheet. Washington Television pointed out that this was the second time that Urban had ignored this requirement. Washington Television also pointed out that the terms of the loan were so extraordinarily favorable that the agreement did not appear to have resulted from an arms length transaction. In addition, Washington Television urged that the letter from Ideal Opportunities was ambiguous about what security would be required.

10. Washington Television also urged that the letter from the National Bank of Commerce was deficient because it stated no more than the bank's confirmation that it had an "interest in providing a loan." Washington Television maintained that this letter too, like an earlier Urban bank letter, was indefinite about terms of repayment, covenants, and personal guarantees. And Washington Television noted that the National Bank of Commerce could not legally lend the amount stated in the letter.

11. In addition, Washington Television argued that questions were raised about whether the stock and assets of Urban could be pledged to two different lenders. This was particularly troublesome since Urban proposed to lease all items that might ordinarily be available as collateral.

12. On the first day of the hearing these matters were resolved. Urban was directed to produce the authors of its lending letters for cross-examination and the proffered financial showing amendment was accepted. Tr. 69–72; *Order*, FCC 82M-0953, released March 30, 1982. At that time, Urban pointed out that it additionally relied on a letter from Amvest Leasing and Capital Corp. promising to lease Urban its equipment. Urban was directed to give some assurance that Amvest was qualified as a financial institution or an equipment manufacturer, or if it did not, it would have to establish Amvest's ability to provide the equipment. Tr. 70–71. Urban stated it would provide such assurance. Tr. 70.

13. Later, Urban urged that Amvest was a "recognized lessor of broadcast equipment" and that official notice should be taken that Washington's Christian Television Outreach (WCTO) had relied on equipment from Amvest Leasing and that the Broadcast Bureau had not designated a financial issue against that applicant. Tr. 189–90. Urban claimed that the Bureau's action in the case of WCTO

demonstrated the validity of its claim that it need not establish the ability of Amvest to supply Urban with equipment.

14. It was pointed out to Urban that the application form made no exception to the financial showing requirement for equipment lessors and that the Bureau's designation order was silent about the reason for finding WCTO financially qualified. Tr. 190. Urban stated that it would provide a memorandum establishing that lessors were treated like financial institutions. On March 23, 1982, Urban submitted a memorandum which purported to demonstrate that leasing entities need not demonstrate their ability to supply the equipment being leased. The memorandum relied on the Commission's holding in the hearing designation order in *Merrimack Valley Broadcasting, Inc.*, FCC 80-50, released February 13, 1980. In that order the Commission held that equipment suppliers need no longer demonstrate that they had examined and approved the credit worthiness of an applicant. The issue in this case is quite different: It is not the credit worthiness of the applicant that is uncertain but the ability of the lender to lend. There has been no demonstration that Amvest is capable of providing the equipment and it has not been established that Amvest is an equipment manufacturer. Moreover, the only standard available to measure its ability is that provided in the instructions to Form 301.

15. The need for an Amvest witness was underscored by uncertainties which developed during the testimony of Urban's President, Theodore White, concerning the nature and terms of the Amvest proposal. Tr. 2306–17. In view of the lack of such a witness, that portion of Urban's Exhibit No. 3 concerning the proposed Amvest lease and Exhibit 9 were rejected. Tr. 2384–85. Nonetheless, it was indicated that Urban might be permitted to present a representative of Amvest as a witness upon request if there was not too great a delay in such presentation. Tr. 2387.

16. The hearing sessions during which Urban presented its case ended on April 2, 1982. Additional hearing sessions concerning issues added with respect to other applicants were held on June 2 and 3, 1982. On July 7, 1982, Urban filed a Petition to Reopen the Record proposing an examination by telephone of a representative of Amvest on July 8 or 9, 1982. Urban's proposal was denied because it was too late and so indefinite and incomplete that it did not justify the disruption which approval would cause. *Order*, FCC 82M-2186, released July 19, 1982.

17. While the hearing was going on Urban elected not to rely on the financing of the Ideal Opportunities Corp. It did, however, attempt to demonstrate that the National Bank of Commerce had given reasonable assurance that it would lend Urban $1,000,000. Urban Exh. 3, at 2.

18. Urban relies on the net proceeds of $922,916.67 from the National Bank of Commerce (NBC) loan. Jeffrey N. Cohen, Chair-

man of the Board of Directors of NBC, testified at the hearing concerning the proposed loan. Tr. 2120–83. Although the NBC letter is worded as if NBC will be the sole source of the loan, Mr. Cohen testified that NBC is limited by law to loans of no more than approximately \$490,000 to any one entity for one purpose. Tr. 2131. He stated that other entities would have to participate with NBC to make the proposed loan and that those other entities would probably be banks. Tr. 2131. He testified further that such other banks could be any one of, or a combination of, Equitable in Baltimore, Maryland, Old Stone Bank in Providence, Rhode Island, and the National Bank of North America in New York. Tr. 2131–32.

19. Mr. Cohen stated that another bank would make an independent evaluation as to whether to advance funds towards any proposed loan in which it is asked to participate (Tr. 2132, 2133), and that banks have varying standards with respect to evaluation of loan requests. Tr. 2130, 2133. The three banks named by Mr. Cohen have a regular correspondent relationship with NBC (Tr. 2131), but there is no requirement that correspondent banks accommodate each other with respect to particular proposed loan transactions. Tr. 2133–34. Mr. Cohen has not spoken to anyone at the Equitable Bank or at the National Bank of North America concerning their possible participation in a loan to Urban. Tr. 2135. He has spoken about the possibility, for approximately ten minutes during a telephone call involving other topics, to a senior loan officer at Old Stone Bank. None of the written information provided by Urban to NBC (Tr. 2176) was sent to Old Stone Bank. Tr. 2135, 2178. However, Mr. Cohen may have told Old Stone Bank that Urban would operate Channel 14 as an STV station, because he was under the impression that that was the case. Tr. 2136–37, 2164.

20. Mr. Cohen was also questioned concerning the terms and conditions of the proposed loan. He testified that there might well be a facility fee charged in connection with the loan, were it made. Such a fee would consist of "points" representing a charge which could range from 1% of the total amount of the loan (\$10,000) to 7% of the amount of the loan (\$70,000), with various possibilities as to amount and method of payment required. Tr. 2137–40. He testified that there might be a requirement that Urban maintain "compensating balances," but representatives of Urban did not ask for an explanation of what this requirement might entail and no such explanation was provided, inasmuch as information as to the likely implementation of that possible requirement is not now known. Tr. 2156–57.

21. *Applicability of Section 307(b) as to Fair, Efficient, and Equitable Distribution of Television Service (Issue 3)*: Urban submitted a proposed hearing exhibit (Urban Exh. 4) to establish the Section 307(b) merit of its proposal for Arlington, Virginia. That exhibit was rejected. Tr. 2243. The presiding officer (as well as the competing applicants) devoted considerable time at the hearing to a

testing of the evidentiary shortcomings of the exhibit, and the possibility of reforming the exhibit to overcome those shortcomings. Tr. 2193–2244. This discussion included an extended colloquy between counsel to Urban and the presiding officer concerning the details of how to reform the exhibit and to make it probative. Tr. 2224–42. The Judge offered Urban an opportunity to prepare a substitute Urban Exhibit No. 4 to cure the problems. Tr. 2371–72. Counsel to Urban stated in this regard that: "I think at this point, Your Honor, I can represent that we'll try to put another exhibit in." Tr. 2372. Nonetheless, despite the invitation and acceptance, Urban never tendered a substitute Exhibit 4.[7]

22. A document prepared by Urban and given to at least one of its proposed financial backers was entered into evidence. Tr. 2126, 2277; WTI Exh. 9. Mr. White, President of Urban, testified that he had prepared the document in conjunction with his law firm. Tr. 2276. The memo is titled "Memo re: UHF Commercial Television in the Arlington, Virginia/Washington, D.C. Area," and it states that:

> The Arlington, Virginia (Washington, D. C.) television market consists of the greater metropolitan Washington area, all of southern Maryland, all of western Maryland, (except for Garrett County), all of Virginia north of the Rappahannock River (plus Fredericksburg and Spotsylvania County), the five northeasternmost counties of West Virginia, and Franklin County, Pennsylvania (Chambersburg). This market, defined by the national television market research firms (here, Arbitron), is ranked number 8 in the United States, out of over 210 such markets. In relation to its size, this market probably has the fewest number of local television stations in the nation.

WTI Exh. 9, at 1. The memo further states "There is a need for an additional television station in the Washington market, and, if done successfully, this can well be a lucrative venture." WTI Exh. 9, at 3. Other portions of the memo include a map of the proposed contour of the station (WTI Exh. 9, at 6) and a page entitled "Future Value of an Independent UHF Station in Washington." WTI Exh. 9 at 8. Mr. White confirmed, when questioned, that the revenue projections contained in the memorandum he had prepared included anticipated revenues from the entire Washington, D. C. metropolitan area. Tr. 2284.

23. *Capital Communications' Diane Graham's Violation of Title VII of the Civil Rights Act (Issue 4)*: Diane Graham, who is proposed for a part-time management position in Capital Communications, and is its President and a 12.5 percent shareholder, was found by the U. S. District Court for the District of Columbia to have discriminated, on the basis of sex, in hiring the Director of the Hispanic

---

[7] An exhibit in the nature of a rebuttal to Urban's 307(b) argument was prepared by the Washington, D. C. applicants for Channel 14, and the exhibit was identified at the hearing as WSCT Exhibit No. 25. Tr. 1630. Because of Urban's failure to meet the burden of going forward and establishing the issue, the Washington, D. C. applicants never offered the exhibit into evidence.

Employment Program, Office of Personnel Management. *Velez v. Devine*, No. 81–1225 (D.C. Feb. 9, 1982). WCTO Exh. 13. Ms. Graham is Assistant Director of the United States Office of Personnel Management for Affirmative Action Programs. CapCom Exh. 9, at 1; Tr. 847. It was Ms. Graham's function, as supervisor, to select one of the persons on a list of qualified applicants for the position of Director of the Hispanic Employment Program. Tr. 2805–06, 2810. Her failure to select Roceliz Velez for the position was found by the United States District Court for the District of Columbia to have violated Title VII of the Civil Rights Act of 1964. The Court held that Ms. Graham did not select Ms. Velez because she is a female. Ms. Graham testified at the trial held on the Velez complaint and the Court, in summarizing her testimony about the hiring of a male candidate over a female, stated that:

> . . . Ms. Graham's testimony therefore is not only insubstantial, it contains contradictions and inconsistencies with other evidence given at various times as to her reasons for not promoting Ms. Velez and, viewing it as a whole, the Court finds that it is not entitled to any weight. WCTO Exh. 13, Slip Op. at 5.

24. The Court continued:

> Finally, Ms. Velez was clearly better qualified than the male eventually selected for the Director's vacancy and at least as well qualified as the two other males to whom the job was offered. Thus, the Court must also reject as pretextual Ms. Graham's claim that Ms. Velez was not as well qualified as those offered the position. *Id.* Slip Op. at 6.

25. Ms. Velez was awarded back pay, ordered reinstated to the grade and step that she would have received had she occupied the position, and granted attorneys' fees and costs. *Id.*

26. While, as already pointed out, Ms. Graham testified in the trial of *Velez v. Devine* and sat through the trial as the government's representative, during the investigation she was not consulted "other than as a person answering questions." Tr. 2821. She made particular note in her testimony that she had no control over the government defense of her action.

27. She has participated in more than 40 hiring decisions during her years in government, and the *Velez* case is the only challenge that has been made to any of those decisions. Tr. 2799–2800. In her present position, which she has held since 1979, she has made approximately 30 promotions and 30–32 hires. Tr. 2802. During that time the staff she has supervised has increased from 63 percent women to 65–66 percent. Tr. 2800, 2803, 2844. These figures compare to only 37 percent employment of women in the government as a whole. The professional staff (Grades 12 and 13) is 66 percent women as compared to only 11 percent for the government as a whole. Tr. 2803. For managerial grades 14 and 15, the figure for the government as a whole is 5.7 percent while in Ms. Graham's office it is 50

percent. Tr. 2803. Promotions by Ms. Graham have followed a similar pattern. Tr. 2804.

28. Four witnesses testified that they knew Ms. Graham has a commitment to non-discrimination in employment: Ruth Bates Harris, Hedwig Oswald, Dolores de la Torre Bastning, and Francesca Farmer. Each of these women has a long standing record of working against discrimination in employment. They testified that Ms. Graham, in their view, does not discriminate against women and, to the contrary, that she has exhibited a professional interest in promoting women. Tr. 2768, 2778–81, 2786–91, 2853–67, 2880–85, 2891.

29. *Grant Broadcasting's Failure to Reveal Lawrence Brailsford's Bankruptcy (Issue 6)*: Lawrence Brailsford, who is a 25 percent stockholder/subscriber of Grant (one of only three), a Director, Vice President, and proposed part-time Public Affairs Director, in July 1981, filed for bankruptcy personally and for a corporation, Community Development, Inc., which he owns. There is also a pending suit against him regarding his bankruptcy. In September of 1981, Mr. Brailsford informed the bankruptcy court that his liabilities exceeded his assets. He did not report to the Commission his bankruptcy or the lawsuit against him when they occurred, nor did he reveal it when he was asked about such legal action in interrogatories in November 1981. Furthermore, on November 19, 1981, in response to a petition to enlarge about Grant's finances, Mr. Brailsford appeared to state that he was still able to meet the purchase price of $27,150 for his stock. See *Memorandum Opinion and Order*, 82M-1143, released April 9, 1982. The issue centers on whether Brailsford deliberately sought to conceal his bankruptcy because it would have raised questions about his ability to participate in Grant's application. His role is both quantitatively and qualitatively important. If he purchases his stock, he would own a significant share of the company and his role enhances Grant's application because he is black and lives in Washington, D. C.

30. In July 1980, when Mr. Brailsford submitted his first balance sheet to the Commission, he represented that he had $27,150 in cash on hand to meet his stock subscription. Century Exh. 37. Prior to this filing Mr. Brailsford met with Grant's two other stockholders, Milton Grant and Theodore R. Hagans, at Mr. Brailsford's home. He remembered that Mr. Grant stated that it was necessary that the reputation of participants in the application be impeccable. Tr. 2639–40. Mr. Grant testified that he also remembered the meeting and he recalled telling Mr. Brailsford that the application was already on file and that it was necessary to keep the Commission informed of significant changes. Tr. 2898, 2908. The necessity of keeping the Commission informed was also the primary topic at other meetings, Grant maintained. Tr. 2898.

31. Mr. Brailsford said there was no such discussion (Tr. 2639)

and that Grant had not told him the application was already on file. Tr. 2657. However, Mr. Brailsford agreed that at a third meeting held before he became a part of the application, Grant did tell him the importance of keeping the application current. Tr. 2642. Grant stated that it was also mentioned then and at all four meetings held. Tr. 2898, 2899, 2900. Brailsford said he did not remember the requirement from mid-1980 until mid-March 1982 when he was preparing for the hearing. Tr. 2652.

32. Mr. Brailsford said that he did not inform Mr. Grant or Grant Broadcasting's counsel of his bankruptcy because of preoccupation with other "pressing issues." Tr. 2649. However, he did tell Mr. Hagans, who is Grant's only other stockholder and a 25 percent owner. Tr. 2664, 2682.

33. When Grant Broadcasting submitted its November 18, 1982 responses to the interrogatories it did not supply information about the suit against Brailsford or his bankruptcy. Tr. 2911–14. Mr. Brailsford maintains that the interrogatories had not been discussed with him. Tr. 2688. Milton Grant testified that he had relied on his counsel's communication with Mr. Brailsford for the accuracy of Grant's responses involving Mr. Brailsford. Tr. 2915. He stated that when he went over the answers with his counsel, his counsel indicated that he had reviewed the responses with Mr. Brailsford. Tr. 2913–16.

34. At the same time Mr. Brailsford wrote Mr. Grant a letter which was included as part of a response to a petition to enlarge. Mr. Brailsford stated in the letter that he not only had the $27,150 reflected on his balance sheet already submitted to the Commission but that his net assets "above and beyond all long and short term liabilities" exceeded $15,000. Century Exh. 35. He also began the letter by noting that the commitment was both his and his wife's. *Id.* He included his wife, he stated, because, although she was not part of the application, he was financially incapable of meeting the obligation by himself. Tr. 2649–51. Mr. Brailsford claimed that he consulted Grant's counsel about his capability. Tr. 2668. The letter, which was originally drafted by counsel, was altered by Brailsford to include his wife in his commitment but he did not change the statement about his cash on hand, although he did not have the cash. Tr. 2678–79.

35. During the period Mr. Brailsford prepared the letter about his finances and the interrogatories were being answered, Mr. Brailsford spoke on the telephone with Mr. Grant at least twice. Tr. 2690–91, 2717. And, although he told Grant's former counsel about his bankruptcy in August or September 1981 (Tr. 2709), Mr. Brailsford initially maintained that he did not tell his current counsel about his bankruptcy when the letter about his finances was being prepared in November 1981. Tr. 2666. After a recess in the hearing he said that he had told his counsel in November and then

on redirect he maintained that he had not. Tr. 2681–82; 2720. Mr. Brailsford's testimony also reflects the same pattern of inconsistency when he was asked whether he had told Mr. Grant. Tr. 2667, 2681–82. Mr. Brailsford did say he was aware that the letter about his finances was intended for the Commission. Tr. 2687.

36. The inconsistency of Mr. Brailsford's testimony is highlighted by his detailed explanation of how he told Mr. Grant of his bankruptcy and financial problems in November 1981 and his total recant on redirect. Milton Grant's testimony is unequivocable that Brailsford did not tell him about the bankruptcy until March 1982. Mr. Grant also stated that his former counsel never told him that Mr. Brailsford had informed him of the bankruptcy. Tr. 2908–11, 2921–26.

Comparative Issues

Diversification of Ownership and Control of Mass Communications Media

37. Neither *Washington's Christian Television Outreach, Inc.*, nor any of its officers or directors, holds an ownership interest in or has any connection with any media of mass communications. WCTO Exh. 1, at 2. *Century Communications, Inc.* and its principals have no cognizable interest in any media of mass communications.[8] Century Exh. 2, at 1; Exh. 3, at 1–2; Exh. 4, at 2; Exh. 6, at 1; Exh. 7, at 2; Exh. 8, at 1; Exh. 11, at 2; and Exh. 13, at 2. Neither *Capital Communications of Washington, Inc.*, nor any of its stockholders, holds any interest in any media of mass communications.[9] Capital Exh. 2.

38. *Grant Broadcasting Corporation* does not hold any other mass media interest. Theodore R. Hagans, who is a director and 25 percent owner of Grant Broadcasting, is a 13 percent stockholder and a director of Washington Community Broadcasting Co., the licensee of WYCB(AM), Washington, D. C. He will divest this interest if a grant is made. Grant Exh. 2, at 1–2. Milton Grant, who is Chairman of the Board, Director and 50 percent owner of Grant Broadcasting, holds options to acquire 5 percent of Channel 21, Inc.,

---

[8] Century stockholders and principals, Steven Wechsler, Pauline Wechsler, Peter Yeskel, and Diane Wechsler are stockholders and principals of Marquee Television Network, Inc. which operates a pay television service distributed by microwave in Washington, D. C. They propose to divest themselves of their shares if a grant is made to Century. Century Exh. 2, at 1–2; Exh. 3, at 3; Exh. 4, at 2; Exh. 6, at 1. Everett J. Gordon has 5 percent ownership interests as a limited partner in the following cable television companies: CATV Harrington Company (Harrington, Delaware); CATV Sussex Company (Sussex, Delaware); and CATV La Plata Company (La Plata, Maryland). He will divest these interests if a grant is made to Century. Century Exh. 9, at 3.

[9] Thelma J. Mullin's husband owns 5 percent of the stock of WJDY, a daytime-only AM station in Salisbury, Maryland and is a 1.26 percent stockholder of KSTS-TV, San Jose, California. Ms. Mullin is a capital stockholder and principal.

the licensee of KTXA-TV, Fort Worth, Texas. His option may be exercised after April 1, 1984, provided Grant is still employed at the station. Mr. Grant will also hold 21/2 percent of Channel 20 Enterprises, which is about to become the permittee of KTXH-TV, Houston, Texas. In addition, when the joint venture of Channel 20 Enterprises is executed, Grant will hold an option to acquire a 5 percent share. Grant Broadcasting has not indicated what conditions, if any, may apply to the 5 percent interest.[10]

39. Milton Grant is also a 50.9 percent shareholder in Grant Broadcasting of Little Rock which has the right to acquire within one year from June 28, 1982, a 25 percent limited partnership in LRTV Limited Partnership, which holds a construction permit for Channel 16, Little Rock, Arkansas. The option is conditioned on Grant Broadcasting of Little Rock obtaining favorable final Commission or Commission staff action on its qualifications.[11] Grant Exh. 2, at 2–3.

40. *Urban Telecommunications Corporation* holds no other mass media interests. Theodore White, who is Urban's sole stockholder, President and Treasurer, is the 75 percent stockholder, President and Director of Page Broadcasting Corporation. Urban Exh. 6. Page E. Silver, who is Urban's Vice President and Secretary, is Vice President, Director and 25 percent stockholder in Page Broadcasting. *Id.* Page Broadcasting is an applicant for a construction permit for a new television broadcast station which would operate on Channel 30, Nashville, Tennessee. *Id.* Page Broadcasting agreed to settle the Nashville proceeding in exchange for expenses and the right to purchase 5 percent of the permittee, Television Corporation of Tennessee. *Memorandum Opinion and Order*, FCC 82M-3943, released December 10, 1982 (per ALJ Joseph Stirmer), at ¶3. The stock was to be issued to Page after final FCC approval. See Docket No. 81–684, Hearing Session held November 17, 1982, at Tr. 184. Theodore White is also an applicant for a low power television station at Charlottesville, Virginia. Urban Exh. 6.

---

[10] Grant's interest in Channel 20 Enterprises was only revealed after the Commission approved the assignment of the permit. See *Order*, FCC 82M-3669, released November 19, 1982, granting Motion for Leave to Amend, filed October 18, 1982 by Grant. Before the agreement is executed Grant continues to hold only an option to acquire a 21/2 percent interest in Channel 20, Inc. This option is subject to the same condition as the option to acquire an interest in Channel 21, Inc.

[11] Grant has not explained whether the condition has been satisfied or whether Grant Broadcasting of Little Rock intends to exercise the option. On August 26, 1982, in response to a Broadcast Bureau petition, the qualifying issues raised against Grant Broadcasting of Little Rock were considered in this proceeding and were found to be insufficient to affect Milton Grant's qualifications in this proceeding. *Memorandum Opinion and Order*, FCC 82M-2601, released August 26, 1982. Grant's subsequent pleadings do not state whether this satisfies the prohibition on Grant Broadcasting of Little Rock acquiring an interest in the Little Rock facility.

41. *Washington Television, Inc.*'s principal, Lonnie Murray, is the 13 percent owner of Radio Vanderbilt, Inc., licensee of WWIW(AM), New Orleans, Louisiana. WTI Exh. 1A, at 4. He participates in the operation of the station through a personal consulting and non-competition agreement with Radio Vanderbilt, which expires in June of 1984. *Id.* In recent years this agreement has required 5 hours or less of his time. Tr. 2425. John F. X. Browne holds less than 1 percent of the stock of Michigan Television Network, Inc., the licensee of WGTU(TV), Traverse City, Michigan and Satellite WGTO(TV), Sault Ste. Marie, Michigan. The other principals of Washington Television have no other interests in any media of mass communications.[12] WTI Exh. 1A, at 5; WTI Exh. 2, at 3; Tr. 2496.

42. *WSCT, Inc.* is wholly owned by Formula Telecommunications, Inc. Lewis A. Rivlin, a Formula stockholder, holds a 25 percent interest in Coaxial Systems, Inc. which has a 10% interest in Public Cable of Portland, Maine, the operator of Portland's cable television system. WSCT Exh. 2. Coaxial also has an 8.75 percent interest in cable television systems in Laurens and Clinton, South Carolina. *Id.* Portland is located 482 miles from Washington.[13] Armando B. Rendon, who is also a Formula principal, is a 10% stockholder in Los Cerezos Television Company, which is the licensee of an experimental television broadcast translator on Channel 56, Washington, D. C. WSCT Exh. 2, at 1. Tr. 1911. Mr. Rendon has stated he will divest if a construction permit is granted. WSCT Exh. 2.

Best Practicable Service to the Public—Integration of Ownership and Management.

43. *Washington's Christian Television Outreach, Inc.*: WCTO is a non-profit, non-stock D.C. corporation. WCTO is controlled by a board of directors which, in turn, elects the operating officers of the corporation. Corporate decisions are made in accordance with a majority vote of the Board of Directors. WCTO Exh. 1, at 1; Century Exh. 29, at 2. Its incorporators and original Board of Directors were A. Bert Carver, Dr. Wendell P. Witten and Dr. Lucas Blevins. Century Exh. 28, at 3. Seven additional members were added to the Board in 1980 to bring the total number of members to 10. WSCT Exh. 18, at 3. The directors of WCTO are elected to the Board of Directors for a two-year term and are eligible for reelection. The officers and directors of WCTO are:

---

[12] Louis Schwartz and Robert A. Woods, whose law firm, Schwartz, Woods & Miller, is a Washington Television stockholder, each holds 25 percent of the stock of Multi-Video, Inc., a corporation which holds 50 percent of the stock of Term-Comm, the licensee of MDS microwave station WQR23, Terre Haute, Indiana. WTI Exh. 1A, at 5.

[13] Pursuant to WSCT-TV's request, official notice is taken of these distances.

August Bert Carver	President, Director
Dr. Wendell P. Witten	Vice-President, Director
Dr. Lucas H. Blevins	Secretary/Treasurer, Director
Julia F. Carver	Director
Elaine H. Witten	Director
Jean H. Blevins	Director
Charles R. Hayes	Director
Joe-Ann Hayes	Director
Raul Vasallo	Director
Emma Vasallo	Director

WCTO Exh. 1, at 1–2.

44. Although WCTO's corporate charter authorizes it to engage in the business of operating a television station, WCTO's purpose is primarily religious, i.e., "To bring greater glory to Almighty God by disseminating the Gospel of Jesus Christ and other truths of the Holy Bible by whatever means possible . . . ." Century Exh. 28, at 2. Each director of the corporation is required to make a written statement of faith "which the Board of Directors shall find not to be inconsistent with the purposes of this corporation." Century Exh. 29, at 1; Tr. 130. WCTO's bylaws provide that all prospective employees be informed of the purpose of the corporation, and "be qualified and willing to render service consistent therewith." Century Exh. 29, at 7; Tr. 148–50, 201.

45. WCTO's bylaws also require the directors to act to ensure that "no decision" in the selection or dismissal of employees be based on the person's age, sex, race, religious affiliation or nationality background (Century Exh. 29, at 7; Tr. 200) and a person's religious beliefs would not disqualify a person from working for WCTO's station. Tr. 173, 201. WCTO's president, Bert Carver, explained the intent of these provisions as: "We've clearly proposed a station with a Christian format, and I would assume if they [prospective employees] made application that they would be aware of that. However, to remove all doubt, they will so be advised as to our programming format and purposes. And if they are qualified to do the job, and want the job, they'll get the job." Tr. 201. WCTO's bylaws also provide that the selection of persons to benefit from WCTO's corporate, educational, or charitable programs shall not be affected by a person's age, sex, race, religious affiliation, skin color, nationality, or employment. Century Exh. 29, at 7.

46. Eight of WCTO's ten directors propose to play an active part on a day-to-day basis in station management and all eight directors propose to work full time (at least 40 hours per week) at WCTO's proposed station. WCTO Exh. 1, at 2–6. Those directors, and the positions they propose to occupy at the station are:

August Bert Carver	General Manager	WCTO Exh. 1, at 2
Dr. Wendell P. Witten	Program Production Manager	WCTO Exh. 1, at 4
Dr. Lucas H. Blevins	Counseling Manager	WCTO Exh. 1, at 3
Julia F. Carver	Marketing Director	WCTO Exh. 1, at 3

Elaine H. Witten	Program Manager	WCTO Exh. 1, at 5
Jean H. Blevins	Counseling Manager	WCTO Exh. 1, at 4
Rev. Charles R. Hayes	Public Relations Director	WCTO Exh. 1, at 5
Joe-Ann Hayes	News Director	WCTO Exh. 1, at 6.

47. Bert Carver, WCTO's President, proposes to work full time (40 hours per week) as General Manager of WCTO's proposed station. WCTO Exh. 1, at 2. As General Manager, Mr. Carver would be responsible for the overall operation of the TV station and its relation to the community. He will be responsible for the planning of the goals, objectives, and operating procedures of the station. Mr. Carver would also be responsible, generally, for evaluation of station facilities and equipment, ensuring WCTO's compliance with FCC rules and regulations, the development of variations needed in individual and overall program formats, development of changes in rate structure on selling methods and revision of office procedures. WCTO Exh. 1 at 2–3. The various departments which would report to Mr. Carver include news, marketing, local production, programming, operations and financial. Tr. 145. Mr. Carver may also make limited appearances on the air, if necessary. Tr. 145. As General Manager, Mr. Carver will, with the concurrence of the Board of Directors, hire and fire employees. Tr. 145–46. Mr. Carver expects to be a paid employee of WCTO (Tr. 157, 159) but the specific amount has not been discussed by WCTO's Board of Directors (Tr. 156, 159), no specific salary has been set. Tr. 140, 159.

48. Mr. Carver's heritage is part Cherokee Indian (Native American). WCTO Exh. 2, at 1. Mr. Carver's mother had both an Indian mother and father. Since 1954, he has been employed by the Johns Hopkins University Applied Physics Laboratory (APL) in Laurel, Maryland. WCTO Exh. 2, at 2. Mr. Carver will quit his present job to work full time for WCTO. WCTO Exh. 2, at 4. From 1955 to 1957 Mr. Carver lived in Chevy Chase, Maryland, and since late 1957 he has lived in Wheaton, Maryland. WCTO Exh. 2, at 3.

49. In addition to his full-time employment with APL, Mr. Carver is the joint owner, with his wife, of a broadcast tower in Wheaton, Maryland, doing business as the High Tower Company (WCTO Exh. 2, at 3), which leases tower space to approximately nine entities. Tr. 136–37. Mr. Carver devotes approximately seven or eight hours on a weekly basis to this business. Tr. 137. In addition, Mr. and Mrs. Carver own Action Radio, a company that provides UHF repeater coverage for business radio communications. WCTO Exh. 2, at 3. Action Radio does business with approximately 20 or 21 business radio customers and Mr. Carver devotes about seven to eight hours per week to that business. Tr. 137. Should WCTO be granted a construction permit, Mr. Carver anticipates continuing his interest in Action Radio and High Tower Company, which will consume no more than 15 hours per week of his time. WCTO Exh. 2, at 4; Tr. 136–37. Mr. Carver's other outside activities include

attending church at the Fourth Presbyterian Church, Bethesda, Maryland, and religious meetings, which consume no more than two to four hours per week. WCTO Exh. 2, at 4; Tr. 138. In addition, once or twice a year, Mr. Carver attends a special religious meeting for about two weeks which is normally incorporated into a family vacation. Tr. 138.

50. Beginning in 1971, Mr. Carver was asked to serve as TV coordinator for a local religious group (WCTO Exh. 7, at 3), and participated in the production of and hosted "God's Good News," a weekly religious television program broadcast on Channel 20, WDCA, Washington, D.C. until 1976. WCTO Exh. 2, at 3; Tr. 140–41. In 1976, Mr. Carver and WCTO took part in the production of "God's Great News," a weekly religious television program broadcast on Channel 20, WDCA, Washington, D.C., until the program ceased production in September 1979. WCTO Exh. 2, at 3; Tr. 141. Mr. Carver served as a coordinator of the program, which involved advising the studio director what the group desired to be done. Tr. 166. These programs were normally broadcast at 11:00 p.m. on Sunday and at various times on Saturday morning (Tr. 141), and Mr. Carver hosted the program approximately a dozen times a year. Tr. 143. Mr. Carver has never been employed by any radio or television station or by any media of mass communications. Tr. 140. His work on these programs was as a volunteer and he continued until it took up too much personal time. Tr. 141, 144.

51. Dr. Wendell P. Witten is Vice President of WCTO, and has been a Director of WCTO since its incorporation in 1976. WCTO Exh. 3, at 3. Dr. Witten has committed to work full time (40 hours per week) at WCTO's proposed station as it Program Production Manager. WCTO Exh. 1, at 4; WCTO Exh. 3, at 3. WCTO submitted a general exhibit which stated that the Program Production Manager would bear the primary responsibility for producing the local portions of the station's program schedule, for appearing as talent or as the host for local programs, where appropriate, and for coordinating and obtaining guests and talent to fill local programming needs. WCTO Exh. 1, at 4; Tr. 220. Dr. Witten would host at least one local program (Tr. 221), "Washington," for which he will be responsible as director (Tr. 197) and assist in setting up the studio for local productions. Tr. 241. As WCTO's Program Production Manager, he will assist in supervising the technicians necessary for the production of local programming, and WCTO anticipates that as the station's operations expand, assistants will be hired under Dr. Witten to help with local programming and production. Dr. Witten will have direct responsibility for supervising the assistants. WCTO Exh. 1, at 4; Tr. 234.

52. Dr. Witten is a black male. He lived in Washington until February 1972, moving first to Falls Church, Virginia and then (in 1975) to his present address in Alexandria, Virgina. WCTO Exh. 8, at

1–2. He began practicing optometry in the northeast section of Washington in 1952 and he still practices optometry in downtown Washington. He has been self-employed since 1954. Tr. 210.

53. Dr. Witten will continue practicing optometry should WCTO receive a construction permit, but he will reduce his involvement in his practice to no more than 15 hours a week to fulfill his commitment to work full time at the station. WCTO Exh. 3, at 3; Tr. 225. He estimates that decreasing his hours of practice to 15 hours a week will reduce his current gross income some $15,000 or $20,000, and projects that his income for 15 hours per week of optometry will be $50,000 per year (Tr. 226), a drop from his current gross of $65,000 to $75,000 from his 40 hour-a-week practice. Tr. 236–37. Although Dr. Witten expects to receive a salary for working at the station (Tr. 225), no specific figure has been agreed upon. Tr. 225. There is, however, an agreement that all of the board members of WCTO will receive some compensation. Tr. 225. Dr. Witten served as a member of the Board of Examiners in Optometry for the District of Columbia from 1963 until June 1969, and during four years of that term he served as Vice President of the Board. WCTO Exh. 3, at 2.

54. In 1967, Dr. Witten joined the Full Gospel Businessmen's Fellowship International (FGBMFI), and became the co-founder, a charter member, and President of the Downtown D.C. Chapter in 1975. WCTO Exh. 3, at 2. Dr. Witten devotes approximately three hours a week to the FGBMFI organization. Dr. Witten is also the director of the Wendell and Elaine Witten Christian Foundation, a nonprofit foundation which funds Christian service work, but which is now inactive. WCTO Exh. 3, at 2; Tr. 215–16. Dr. Witten also participated in sponsoring a series of television programs broadcast on WDCA, Channel 20, Washington, D.C., beginning in 1971 and known as "God's Good News," and after 1977 as "God's Great News." WCTO Exh. 3, at 2. Dr. Witten sometimes co-hosted the "God's Great News" programs for approximately two years in the middle 1970's. WCTO Exh. 3, at 3; Tr. 216. In addition, in December 1979 Dr. Witten produced, directed, and co-hosted (with his wife, Elaine) a special Christmas program aired on Christmas night on Channel 20. WCTO Exh. 3, at 3. He and Mrs. Witten related the Christmas story directly from the Bible. Tr. 221–23. Dr. Witten claimed the expense of that program as a business deduction. Tr. 239.

55. Dr. Lucas H. Blevins, WCTO's Secretary/Treasurer and a Director of WCTO since its incorporation in 1976 (Century Exh. 28, at 3; Tr. 479), would also work full time (40 hours per week) at the station as one of two counseling managers. WCTO Exh. 1, at 3; Tr. 484. WCTO stated that Dr. Blevins, as a counseling manager, would be responsible for the continuing recruitment, direction, training and supervision of volunteer counselors used in WCTO's call-in programs (WCTO Exh. 1, at 3), which would be broadcast two hours each evening. Tr. 196–97. Dr. Blevins stated that it "really hadn't

been decided" whether the telephone calls with which he and his volunteers would deal would be generated by a particular program broadcast over the station. Tr. 484–85. While the program, "Washington," would be broadcast while Dr. Blevins is at the station and counselors would be available during that program, the calls would not be presented as part of the on-the-air programming of "Washington." Tr. 501. Dr. Blevins would have no connection with programming except in regard to these counseling duties. Tr. 498.

56. The counseling that WCTO would provide was described variously as "listening to the needs and problems of people and trying to help them in every way that we possibly can" (Tr. 502); as "Christian counseling" (Cf. Tr. 414); or as having "a program geared toward community outreach in which they will be helping people through Christian counseling." Tr. 335. Christian counseling was described as "spiritual healing." Tr. 336. The counselors' continuing training would also include weekly sharing sessions at which the problems posed by particular callers would be shared, the counselors' responses analyzed, and the concerns of all counselors discussed. WCTO Exh. 1, at 3. The counseling managers would also coordinate activities with the leadership of churches in the greater Washington, D.C. area, including joint programs, choir, and youth group activities, ladies group activities, handicapped golf activities, school group activities, and related activities. WCTO Exh. 1, at 4. Initially, Dr. Blevins and his wife, the other counseling manager, would supervise at least 10 unpaid volunteer counselors. WCTO Exh. 1, at 4.

57. The counseling managers would also train counselors, an activity which Dr. Blevins anticipates would take from 5 to 6 hours per person. Tr. 489. He describes the training the volunteers would receive as training in dealing with people, and in choosing the right organizations to whom to refer people. Tr. 488–89. The counselors recruited would likely be Christian (Tr. 501) because of the station's Christian format. Tr. 200. Dr. Blevins believes that persons who would serve as volunteer counselors should be Christian "because they have a compassion for people that people who aren't Christian don't have. . .." Tr. 487. Dr. Blevins has received a certificate attesting to his work in alcohol rehabilitation from Lorton Reformatory. Tr. 491. He has done Christian counseling at his church, home, and office. Tr. 423. He receives constant calls at his house. Tr. 154.

58. Dr. Blevins testified that he would be at the station at least from 8:00–10:00 p.m., five days a week (Tr. 501), and expects to be paid for his work as counseling manager. Tr. 484. However, there has been no discussion concerning a specific salary figure (Tr. 484), and he does not know personally if money for salaries has been provided in WCTO's budget. Tr. 494–95. To fulfill his full-time commitment to WCTO, Dr. Blevins pledged to withdraw from the practice of dentistry once WCTO goes on the air. WCTO Exh. 4, at 3. He would continue his practice on a temporary basis were WCTO to receive a

construction permit, until someone could take over his practice. Tr. 483. At present, Dr. Blevins has identified a young man coming out of dental school who he believes would take over his practice gradually. Dr. Blevins believes that it would take six months to a year to end his practice (Tr. 483–84), but that it would "be tapering off . . . and wouldn't interfere with [his] work at the station." Tr. 484.

59. Dr. Blevins has lived and practiced dentistry in Arlington, Virginia since 1939. WCTO Exh. 4, at 1; WCTO Exh. 5, at 1. Dr. Blevins is a member of the Arlington Chamber of Commerce and the Kiwanis Club (1941 to the present); is an Elder in the Christian Assembly (from 1972 to the present); is presently serving as a board member of the Christian Service Corp., a philanthropic Christian organization; and has been the President of the Arlington Chapter of the FGBMFI since 1979. WCTO Exh. 4, at 2. Dr. Blevins anticipates continuing outside activities once WCTO begins operating the station, and estimates that he presently devotes time to these activities in the following amounts: Church—three hours per week (Tr. 479); FGBMFI—two evenings a month (Tr. 478); Director, First Virginia Bank—one to two hours per month (Tr. 476–77); Bhutan Mission—one meeting per year (Tr. 477); and Christian Service Corp.—one meeting per quarter. Tr. 477.

60. In addition, Dr. Blevins has been involved in numerous civic activities over the years. WCTO Exh. 4, at 2.

61. Dr. Blevins has known WCTO's President, Bert Carver, since the 1950's (Tr. 153), and was involved from 1971–1979 as a co-host and producer of the programs broadcast over WDCA, Channel 20, Washington, D. C., entitled "God's Good News" and "God's Great News." WCTO Exh. 5, at 2–3; Tr. 153.

62. Ms. Julia F. Carver, a Director of WCTO since 1980 (WCTO Exh. 1, at 1; Tr. 450), would work full time (40 hours per week) as the station's Marketing Director. WCTO Exh. 1, at 3; WCTO Exh. 7, at 4. Ms. Carver would be responsible for program sales, coordination of program suppliers, supervision of station salespersons (when hired), and the sale of station production program tapes from other programs once production has begun. WCTO Exh. 1, at 3. In addition, Ms. Carver would assist the Program Manager and General Manager in scheduling programming. Tr. 451–52. Initially, Ms. Carver would not supervise any sales personnel (WCTO Exh. 1, at 3; Tr. 452), but would supervise the sales staff as it is hired. WCTO Exh. 1, at 3. Ms. Carver believes that she would be selling advertising spots during WCTO's local programming, but no definite decision has been made concerning the sale of advertising spots. Tr. 470–72. Ms. Carver anticipates that she would be paid a commission on her sales (Tr. 460–62), but has not discussed a specific percentage (Tr. 461–62) and understands that most of the other WCTO staff positions would be paid a salary. Tr. 459–61.

63. Ms. Carver is female and was born in Washington, D. C.

WCTO Exh. 7, at 1. She has lived in the area all of her life. In 1961, Ms. Carver served as the first telephone chairwoman for the Christian Women's Club in the Washington, D. C. area, and later served as decorations chairwoman for two years. She has also been a Bible Study teacher. WCTO Exh. 7, at 3. Since the late 1960's, Ms. Carver has been associated with the Women's Committee for the National Symphony Orchestra, working first at the Decorator Showhouse, then as Chairwoman for Silver Spring, and finally as Chairwoman for all of Montgomery County for two years, 1977–1979. WCTO Exh. 7, at 3. From 1979 to 1981, Ms. Carver was the Chairwoman for the Women's Committee for the National Symphony Orchestra in Silver Spring. WCTO Exh. 7, at 3. From approximately 1973 to 1975, she was also a member of the Citizens' Advisory Committee for cable TV in Montgomery County, and served as chairwoman of the program committee, assisting in the production of the report on programming submitted to the Montgomery County Council. WCTO Exh. 7, at 3. Since 1977, Ms. Carver has worked with various real estate firms as a broker. WCTO Exh. 7, at 4. Presently Ms. Carver is an independent contractor working as a real estate broker with Wayne McDonald Realtors. Tr. 446. If WCTO is granted the construction permit, she will limit her present activities in the real estate business to fulfill her 40 hour week commitment to WCTO. WCTO Exh. 7, at 4.

64. Ms. Carver assisted her husband in his television work with "God's Good News," arranging trips to the studio, scheduling guests, and working with telethons. WCTO Exh. 7, at 3. Also, particularly with respect to WCTO's program, "God's Great News," Ms. Carver appeared as a hostess, arranged music for the program, lined up and helped select guests, and made sure that the stage was set up correctly. Tr. 464. At times, when Mr. Carver was traveling, Ms. Carver had to do all the work. Tr. 464.

65. Ms. Elaine H. Witten, a Director of WCTO since 1980 (WCTO Exh. 8, at 2) would work at the station full time (40 hours per week) as Program Manager. WCTO Exh. 1, at 4. As Program Manager, she would be responsible for all station programming, local and non-local, for reviewing incoming program matter to make sure that it meets the public's problems, needs and interests. WCTO Exh. 1, at 4; Tr. 272. The Program Manager, in conjunction with the General Manager and Marketing Director, would be responsible for deciding the program schedule and for scheduling special program presentations. WCTO Exh. 1, at 4–5; Tr. 273. In addition, the Program Manager would be responsible for scheduling programs for production. Tr. 273. Ms. Witten would be reviewing incoming non-local programming, as well as some local programming, including programming produced by the Riverdale Baptist Church and Hunter Ministries. Tr. 270–72. Ms. Witten would also review her husband's programs (Tr. 281), and would probably review the scripts and plans

for live programs prior to production, including her husband's local programming "to a certain extent." Tr. 281. During the initial phase of station operation, which WCTO anticipates would last approximately 12 months, Ms. Witten would not supervise any employees. WCTO Exh. 1, at 5; Tr. 269–75. After the initial phase of operation, WCTO anticipates that Ms. Witten would supervise a staff of from two to five employees. WCTO Exh. 1, at 5.

66. Ms. Witten participated as an occasional co-host in the "God's Great News" program broadcast on Channel 20, WDCA, Washington, D. C. for approximately two years, from 1975 through 1977 (WCTO Exh. 8, at 2), and as a telephone counselor during the "Good News Tonight" programs broadcast on Channel 20 in 1974. WCTO Exh. 8, at 2; Tr. 267–68, 280. Ms. Witten also participated as a co-host on a Christmas special program broadcast Christmas night, 1979. WCTO Exh. 8, at 2.

67. Ms. Witten is a black female. WCTO Exh. 8, at 1. She lived in Washington, D. C. from December 1954 through February 1972, when she moved to Falls Church, Virginia. WCTO Exh. 8, at 1–2. In June 1975, she moved to her present address in Alexandria, Virginia. WCTO Exh. 8, at 2.

68. Ms. Jean H. Blevins, a Director of WCTO since 1980 (WCTO Exh. 5, at 3) would work full time (40 hours per week) as one of two counseling managers, and her responsibility would be co-extensive with her husband's, Dr. Lucas Blevins. WCTO Exh. 1, at 4; WCTO Exh. 5, at 3. Ms. Blevins expects to get paid for her services as counseling manager once the station is operating (Tr. 414), but does not know the amount. Tr. 415. Volunteer counselors would be the only persons reporting to Ms. Blevins (Tr. 414), and she would do some counseling, but describes her role as "mostly supervising." Tr. 409–10. She describes the duties of the counseling manager as "to recruit volunteers, to teach them, instruct them, and also to supervise them in counsel[ing]." Tr. 409. Ms. Blevins described counseling as having reference to the "whole man, body, soul and spirit" (Tr. 413); it "not only looks at the problem of the individual in the physical sense and emotional sense, but also in the spiritual sense." Tr. 414.

69. Ms. Blevins, using the term "Christian counseling," stated that the principles laid down in the Bible, both the Old and New Testament, would provide guidelines for WCTO's counseling. Tr. 438–39. However, if someone were to call with respect to a health problem, she would refer that person to another agency (Tr. 432) and she would not give medical advice. Tr. 433. When asked how she would deal with the person who called in proposing to commit suicide, Ms. Blevins testified that she has received many such calls (Tr. 434), mostly from young people. Tr. 435. Ms. Blevins testified that in response to such a call, she would "listen to them. . . . We listen to hear what is causing them to feel this way." Tr. 435. If

necessary, the caller would be referred to a mental health agency (Tr. 435), or, if the person was young, the parents would be called. Tr. 435.

70. Dr. and Mrs. Blevins, as counseling managers, would train and supervise at least 10 volunteer unpaid counselors (Tr. 411), but since there would be a turnover, there would need to be many counselors trained. Tr. 432. Ms. Blevins noted that counselor training would likely require one to three hours per person. Tr. 412.

71. Ms. Blevins has counseled people before, in her home, her husband's office, and in her church. Tr. 423. In addition, she has been involved in some counseling over the air and over the phone. Tr. 425. She acted as a television counselor with the program, "God's Good News." Tr. 434. Ms. Blevins has also been a telephone counselor for the 700 Club, where she first used a referral book and saw a manual for Christian counseling. Tr. 437–38. Ms. Blevins, with her husband, Dr. Blevins, was involved as a co-host and producer of "God's Good News" and "God's Great News." WCTO Exh. 5, at 2–3.

72. One technique used by Ms. Blevins and her husband is laying of hands on people so that limbs can grow or bones can be settled or reset, and "we state that" the "legs grow out and so forth" and that the arms will straighten out. Tr. 424. Although she does not expect to provide this type of counseling over the phone, if requested by a caller to provide this service at their home or the caller's home, "I believe that my husband and I would do that if it didn't—if our bodies hold up that long." Tr. 426. Ms. Blevins was referring to her age which is 72. WCTO Exh. 5, at 1.

73. Since 1939, Ms. Blevins has lived in Arlington, Virginia. WCTO Exh. 5, at 1. Ms. Blevins is active in church work. She presently teaches Bible classes at her church and in various homes. WCTO Exh. 5, at 2. Ms. Blevins devotes approximately two to three hours per week to her church activities. Tr. 401.

74. The Reverend Charles R. Hayes, a Director of WCTO since January 1980 (WCTO Exh. 9, at 1) would work full time (40 hours per week) at the station as WCTO's Public Relations Director. WCTO Exh. 1, at 5; WCTO Exh. 9, at 1. As Public Relations Director, Rev. Hayes would be responsible for writing both internal and external communications, including weekly, daily, and monthly reports; and also for developing relations with the press, radio and television representatives, and with the public. WCTO Exh. 1, at 5. Rev. Hayes would be responsible for reviewing letters of inquiry, and for organizing open houses and lobby displays. WCTO Exh. 1, at 5; Tr. 307. Rev. Hayes also anticipates interviewing individuals and visiting churches. Tr. 309. Finally, the Public Relations Director would be responsible for developing and contacting sources of additional donations when income from advertising and other income is not adequate to maintain a sound financial base. WCTO Exh. 1, at 5; Tr. 329. During the initial phase of the station operation,

it is not anticipated that Rev. Hayes would supervise any station employees (WCTO Exh. 1, at 5), but following this initial phase of the station operation, it is anticipated that Rev. Hayes would supervise a public relations staff of from one to three employees. WCTO Exh. 1, at 5. Rev. Hayes believes he would receive a salary for working at the station, but does not know the amount of the salary. Tr. 304. When questioned whether he would work for no pay, Rev. Hayes answered, "Yes, I would. I would have to say 'yes' because I'm getting out entirely to serve the Lord, and I would try to do what I could to further the aims of Christian broadcasting, . . ." Tr. 327–28.

75. Rev. Charles R. Hayes is a black male. He moved to Washington in 1958. In 1967 he opened the Grace Temple Religious Goods Store, and was ordained for the ministry by the Mooth Fountain Home Baptist Church on 9th Street. Tr. 296. Rev. Hayes' status as a minister is recognized by the D.C. government. Tr. 297. Grace Temple Church was started in 1970 (Tr. 297), and Rev. Hayes has pastored Grace Temple since then. Tr. 298. He is supported by the contributions of the twelve families in the congregation (Tr. 298), receiving approximately $1,000 a month in contributions. Tr. 305. Rev. Hayes describes his present activities as including two to three hours on Sunday and approximately four hours a week counseling at various hospitals. Tr. 298–99. Rev. Hayes has told his congregation of his plans to work full time at WCTO. However, he would maintain the present level of his activity at Grace Temple while working full time for WCTO. Tr. 300–01. In 1973, he became the Vice Chairman of the 14th Street Project Area Committee of RLA. He has been a member of the 14th Street Ministerial Board since 1973. WCTO Ex. 9, at 1.

76. Ms. Joe-Ann Hayes, a Director of WCTO since January 1980 (WCTO Exh. 6, at 2), would work full time, 40 hours per week, as News Director of WCTO's proposed station. WCTO Exh. 1, at 6; WCTO Exh 6, at 2. As News Director Ms. Hayes would be responsible for editing and presenting the station's news (WCTO Exh. 1, at 6), producing news broadcasts (Tr. 199), and would supervise both the technicians and cameramen necessary for news remotes and the volunteers, which WCTO anticipates would assist in initial news gathering and production. WCTO Exh. 1, at 6. WCTO presently proposes three hours per week of news, at 30 minutes per day (Tr. 199; 366–67) and she would be the only person on the news staff when the station commences operation. Tr. 199. The station would rely primarily on local news and upon wire service copy. Tr. 367. Local news would be gathered by her and through volunteers. Tr. 367.

77. Ms. Hayes did not know if the WCTO budget had any allocation for news, or whether provision had been made for news programming equipment such as a camera and tape recorder. Tr. 368, 379. If equipment is available, she would operate them herself if

she does not have a volunteer. Tr. 379. She did not know who would be reading the news over the air or even if she would be doing that. Tr. 380. In response to a question about the need to prepare for over-the-air news broadcasts before the actual broadcast, Ms. Hayes admitted that "I know absolutely nothing about the news at the present time." Tr. 381. Ms. Hayes testified that the offices and studio for WCTO would be in Wheaton, Maryland (Tr. 369), though she changed her answer when shown the WCTO application that lists Washington, D. C. as the location. Tr. 369–70.

78. Ms. Hayes is a black female, and has lived her entire life in Washington, D. C. WCTO Exh. 6, at 1. In June of 1981, Ms. Hayes became a Supervisor of Central Vault at the First American Bank of Maryland, Columbia, Maryland, a management position in which she supervises two departments: Central Payments and the Central Vault. WCTO Exh. 6, at 1. In that capacity Ms. Hayes is responsible for processing all payments and deposits made by mail, including seeing that all cash orders and shipments are properly placed and accounted for. WCTO Exh. 6, at 1. Ms. Hayes is paid $13,400 annually for her work at First American National Bank, and she would reduce her work week to 20 hours a week or less to accommodate her full 40 hour week commitment at the station.[14] WCTO Exh. 6, at 2; Tr. 352. Ms. Hayes has discussed her plans concerning WCTO with her supervisors. Tr. 352–53. Based on these discussions, Ms. Hayes would be allowed to work four hours a day and still be considered full time (Tr. 352–53), and, despite a decrease in her working hours, there would be no decrease in her salary. Tr. 354. Her time working at the station would be broken down as eight hours, Monday through Friday, at the station and four hours at the bank. Tr. 369. Ms. Hayes expects to be paid for her work at the station but has never discussed a specific salary. Tr. 365–66.

79. Ms. Hayes is married to Reverend Charles R. Hayes. WCTO Exh. 6, at 1. She serves as Choir Director of Grace Temple, the church which her husband pastors, and is a member of the Church Mother Board and Senior Missionary. WCTO Exh. 6, at 1–2. Ms. Hayes is active in missionary work for the church. It is an activity which takes approximately two to three hours a week. WCTO Exh. 6, at 2.

80. *Century Communications, Inc.*: Century proposes to integrate the following eleven stockholders: Steven Wechsler, who is Century's Executive Vice President, a Director, and 15.57 percent stockholder, is proposed as the station's General Manager. Century Exh. 1, at 1; Century Exh. 2, at 2. He would work full time. Century Exh. 2, at 2. Mr. Wechsler lives in the Washington area where he is an owner and is in charge of the financial and business affairs of Marquee

---

[14] She works each business day from 8:30 a.m. to 5 p.m. and has more than one hour commute, each way, by public transportation. Tr. 352–92.

Television Network, Inc., a pay television service distributed by an MDS operator. Century Exh. 2, at 1–2.

81. Pauline Wechsler, who is Century's President, a Director, and 19.80 percent stockholder, proposes to spend 20 hours a week performing her duties as President and Director of Century. Century Exh. 1, at 1; Tr. 783. She will determine and review the policies of Century in connection with the station and she will represent Century at meetings, functions and activities in the Washington, D. C. area. Century Exh. 3, at 3. Ms. Wechsler stated that she would not be managing the day-to-day operations of the station. Tr. 778. Ms. Wechsler lives in the Washington area and has long been active in a variety of civic and philanthropic activities. Century Exh. 3, at 2.

82. Peter Yeskel, who is Century's Secretary-Treasurer, a Director and 13.35 percent stockholder (Century Exh. 1, at 2), proposes to spend, on the average, 30 hours per week carrying out the duties of Secretary-Treasurer and Chief Financial Officer—comptroller of Century. Century Exh. 4, at 2. Mr. Yeskel stated that on a week-to-week basis he would not necessarily spend 30 hours at the station. Sometimes the time spent at the station might be as little as ten or fifteen hours. Tr. 611–612; 631. The number of hours would depend on whatever kinds of business problems he had in other areas. Tr. 632. His duties would include preparing budgets, financial projections and financial analyses, establishing bookkeeping procedures, supervising billings, collections and accounts payable. Century Exh. 4, at 1. He would also supervise all employees involved in Century's financial affairs and would review station performance. *Id.*, at 2. Mr. Yeskel lives in Bethesda, Maryland. *Id.*

83. Diane Wechsler, who is a 10.46 percent stockholder of Century, proposes to work full time as the station's Customer Service Manager. Century Exh. 6, at 1. She would be responsible for implementing Century's procedures for considering suggestions and complaints, ascertaining community needs, and she would review Century's performance. *Id.* Ms. Wechsler lives in a Washington, D. C. suburb. *Id.*

84. Charles Bennett Fisher, who is Century's Vice President, a Director, and a 2.70 percent stockholder, proposes to work full time as the Director of Community Relations and Special Affairs. Century Exh. 1, at 1; Century Exh. 7, at 2. In this position Mr. Fisher would implement all public affairs programming at the station, supervise employees responsible for the programming and administer and implement Century's equal employment opportunities program. *Id.*; Tr. 660–61. In the past Mr. Fisher has been active in party politics and in 1967 he hosted a radio show for one year called "The Right to Succeed." Century Exh. 7, at 1. Mr. Fisher has always lived in Washington, D.C. and he is black. *Id.*

85. Eugene Aikens, Jr., who holds 6.67 percent of Century's stock, proposed to work on a part-time (30 hours per week) basis as

the station's Personnel Director. Century Exh. 1, at 1; Century Exh. 8, at 1. He would, subject to the supervision of the General Manager, hire and fire all personnel. Mr. Aikens is black and lives in Washington, D. C. *Id.*

86. Dr. Everett J. Gordon, who is a Director of Century and 3.56 percent stockholder, proposes to work as Director of Special Projects on a part-time basis (20 hours per week). Century Exh. 1, at 1; Century Exh. 9, at 3. Dr. Gordon would act as the station's contact with community groups, would be "involved" in all aspects of non-entertainment programming, and assist other integrated principals. *Id.*; Tr. 680. He would supervise employees as required. Century Exh. 9, at 3; Tr. 681–82. Dr. Gordon lives in Washington, D. C. He is retired and he has been active in civic affairs. Century Exh. 9.

87. Claudia R. Rayford, who is a 1.78 percent owner of Century (Century Exh. 1, at 1), proposes to work 20 hours per week as the Director of Business Development. Century Exh. 10. In this position she would set station advertising policy and would serve as the link between the Director of Advertising and Marketing and the General Manager. Tr. 705. She would also develop "rapport" with advertising agencies. Tr. 706. Ms. Rayford has, to some extent, participated in community civic affairs. She has participated in auxiliaries of her husband's professional organizations, which appear to exhibit an interest in the community. Century Exh. 10, at 1–2. She is black and lives in Washington, D. C. Century Exh. 10.

88. Dr. Frances E. Rankin, who is an owner with her husband as a tenant by entirety of 2.67 percent of Century stock, proposes to work as Director of Women and Children's Programming for 20 hours per week. Century Exh. 1, at 2; Century Exh. 11, at 2. She has plans to implement two programs, one scheduled for weekdays and the other for Saturdays, and supervise employees as necessary. Century Exh. 11, at 2. Dr. Rankin is black, lives in Chevy Chase, Maryland and belongs to the NAACP and various professional organizations. Century Exh. 11, at 1.

89. Edna R. Jones, who with her husband as tenants by entirety, owns 1.78 percent of Century stock, proposes to work 20 hours per week as Director of Consumer Affairs. Century Exh. 1, at 2. Century Exh. 12, at 2. She would supervise the implementation of consumer programming. Century Exh. 12, at 2; Tr. 738. She is black, lives in Chevy Chase, Maryland, and has demonstrated an interest and participation in local civic affairs. Century Exh. 12.

90. Brenda Gladden, who with her husband as tenants by entirety, owns 4.45 percent of Century's stock and is a Director, proposes to work 20 hours per week as house counsel and Legal Affairs Director. Century Exh. 1, at 1; Century Exh. 13, at 1; Tr. 701–02. Her work would involve development of contracts and collections. Tr. 694. She claims this would also involve her in Century's non-entertainment programming. Century Exh. 13, at 1. Ms. Gladden is

black, lives in Washington, D. C., and has listed membership in various social clubs and auxiliaries of her husband's professional organizations. Century Exh. 13, at 1–2.

91. *Capital Communications, Inc.*: Each of the eight Capital Communications' stockholders holds 12.5 percent of the stock. However, at the cut-off date there was one more stockholder, Hortensia Alvirez, who withdrew, and if her interest is not counted as being redistributed, each of the stockholders would hold an 11.11 percent interest. CapCom Exh. 1A, at 1; Tr. 915, 1008.

92. Karen L. Braun, who is Secretary and a Director of Capital proposes to work full time as the Assistant General Manager. CapCom Exh. 4. Ms. Braun would participate in overseeing all aspects of station operation. Tr. 1062. She would assist the General Manager in formulating and implementing policies regarding station personnel and programming. She would have primary responsibility for the business management of the station and would have supervisory authority over all station personnel. CapCom Exh. 3A, at 4. While stockholder employees would be supervised by Ms. Braun and the General Manager, they would, as Directors, ultimately review the General Manager's performance. Tr. 1068. Ms. Braun lives in Rockville, Maryland and has been active in civic and community affairs. CapCom Exh. 4, at 1–3.

93. Yetta W. Galiber, who is a Vice President and a Director of Capital, proposes to work part time as Assistant Program Manager, staff producer and talent. CapCom Exh. 8, at 1. Ms. Galiber would be responsible for the production of some local programming which she would host. CapCom Exh. 3A, at 5. Ms. Galiber is black, lives in Washington, D. C. and has participated in numerous civic activities. Her concern has been with employment and education of the disabled, day care, civil rights, and the provision of community services. CapCom Exh. 8; Tr. 1126–27.

94. A Diane Graham, who is President and a Director of Capital, proposes to work part time as Assistant Program Manager and staff producer. She would have responsibility for producing some local programs and would appear in some. CapCom Exh. 3A, at 5; Tr. 863–64. Specifically, she would produce a program to be called "Maryland Forum" (Tr. 864) and a children's program using a magazine format. Ms. Graham lives in Potomac, Maryland, is black, and has appeared on numerous public affairs television programs about employment discrimination. CapCom Exh. 9, at 1; Tr. 852.

95. Margaret T. Johnson, who is the Assistant Secretary and a Director of Capital, proposes to work full time at the station as Assistant Station Manager and Director of Administration. CapCom Exh. 6, at 4. She would assist the Station Manager in coordinating and overseeing all day-to-day operations. She would be responsible for recordkeeping, bookkeeping, and paperwork. Tr. 1184; CapCom Exh. 6, at 4. Ms. Johnson lives in Vienna, Virginia and has

participated in numerous community activities over a long period of time. Her civic activities establish a strong record of community involvement. CapCom Exh. 6, at 1–4.

96. Nancy McCormick-Pickett, who is an Assistant Vice President and a Director of Capital, proposes to work full time as Station Manager. CapCom Exh. 5, at 4. She would be responsible for coordinating technical operation, program scheduling, regulation of work schedules, and facilities scheduling. CapCom Exh. 5, at 4; CapCom Exh. 3A, at 4; Tr. 1278–80. She proposes to produce a public affairs program to be called "Your Health." CapCom Exh. 5, at 4. Ms. McCormick-Pickett lives in Arlington, Virginia, is black, and has been active in civic affairs. CapCom Exh. 5, at 1, 3–4. While Ms. McCormick-Pickett has not worked at a broadcast station, she has had substantial media experience. She holds degrees in communications from Stanford University and American University. She has attended the Stanford Film and Broadcast Institute and a management training program sponsored by the National Association of Broadcasters at the Harvard School of Business. CapCom Exh. 5, at 1; Tr. 1274–75. She has been on the public affairs staff of the United States Information Agency, worked at the National Association of Broadcasters, where she directed the Employment Clearing House, has been a director of communications for the Cancer Coordinating Council of Metropolitan Washington and has acted as a consultant to the Consumer Assistance Division of this agency, the Federal Communications Commission. CapCom Exh. 5, at 2–3; Tr. 1275, 1276. She is an active member of American Women in Radio and Television. *Id.*

97. Thelma J. Mullin, who is Treasurer and a Director of Capital, proposes to work as the part-time Personnel Manager and on-air talent. CapCom Exh. 10, at 1. As Personnel Manager, she would be responsible for preparation and implementation of personnel policies and a personnel manual, hiring and firing, and personnel management. CapCom Exh. 10, at 1; CapCom Exh. 3A, at 6; Tr. 1203; 1217–18; 1220. She anticipates that the on-air appearances would be on programs that deal with handicapped children and the needs of inner-city blacks, areas that she has been much involved with over the past several years. Tr. 1209. She lives in Washington, D. C. and has an extensive record of participation in civic affairs. CapCom Exh. 10, at 1, 2; Tr. 1198.

98. Lili S. Packer, who is an Assistant Vice President and a Director of Capital, proposes to work part time as Co-Director of Public Affairs and Assistant Program Manager. CapCom Exh. 11, at 3. She would be responsible for publicity, promotion, and public relations. CapCom Exh. 11, at 3. Ms. Packer would supervise production of the proposed program, "Hispanic Highlights," and she would be engaged in the preparation and production of other programs directed to the Hispanic community. *Id.*; Tr. 894–95. In

addition, Ms. Packer would administer the station's planned internship program for communications students CapCom Ex. 3A, at 6; Tr. 899. She would also supervise the station's dual-language project, which is intended ultimately to provide simultaneous dual-language audio to the Spanish speaking audience. CapCom Exh. 3A, at 6, CapCom Exh. 11, at 3. She lives in Washington, D. C. Although she was born in Argentina, she is a naturalized citizen, and she has been active in local civic affairs. CapCom Exh. 11, at 1, 2, 3; Tr. 910.

99. David J. R. Pales, who is a Vice President and a Director of Capital, proposes to work part time at the station as Co-Director of Public Affairs and Comptroller. CapCom Exh. 7, at 2; Tr. 1230. Mr. Pales lives in Washington, D. C. and is Hispanic. CapCom Exh. 7, at 1.

100. Each of the foregoing Capital stockholders and directors would serve on four standing committees, which would meet on a monthly basis, or more frequently when the situation warrants. CapCom Exh. 3A, at 6; Tr. 874; 1060; 1073. These committees would consider station editorial policy, programming philosophy, complaints, and community relations. *Id.*

101. *Grant Broadcasting Corporation*: Two of the three principals of Grant Broadcasting Corporation would be integrated into the management of the station. Milton Grant, who is the President, a Director, Chairman of the Board, and 50 percent shareholder, proposes to work full time at the station as its General Manager. Grant Exh. 3, at 1. Mr. Grant lives in Texas but he commutes to Washington on a regular basis and he owns a house in Bethesda, Maryland. Grant Exh. 3, at 1; Grant Exh. 1, at 1; Tr. 1524. In Texas, he is the full-time President (Chief Executive Officer) and General Manager of Station KTXA-TV, Fort Worth, Texas. Grant Exh. 1, at 5. He has also agreed to supervise the construction of Station KTXH-TV, Houston, Texas. *Id.*

102. Milton Grant has worked as a broadcaster since 1947. Grant Exh. 1, at 3. From the time television station WDCA, Channel 20, Washington, D. C. began operation in 1966 until 1979, Mr. Grant was the station's General Manager. He also had the responsibility of putting the station on the air and until the station was sold in 1969 to Superior Tube Company, he controlled 50 percent of the station's stock. Grant Exh. 1, at 5; Tr. 1526–28. Even after the station was sold, he remained Vice President, Director and General Manager of the station and received 5 percent of the net profits. Tr. 1528–30. As a practical matter, he made the decisions about the station's programming, although Superior Tube could, but never did, overrule him. Tr. 1535–36.

103. An analysis of official program reports filed with the Commission by WDCA and other television stations licensed to Washington, D. C. for the years 1973–1979, disclose the following

news and public affairs program percentages for the complete broadcast day of each year's composite week:

	1973 *News*	*Public Affairs*
Average of all D. C. stations	**8.1**	**6.3**
WTTG (Ch. 5)	**6.8**	**6.7**
WDCA (Ch. 20)	**1.2**	**1.6**

	1974 *News*	*Public Affairs*
Average of all D. C. stations	7.7	**6.4**
WTTG	**5.6**	**5.4**
WDCA	1.1	2.0

	1975 *News*	*Public Affairs*
Average of all D. C. stations	8.5	6.6
WTTG	4.8	6.5
WDCA	1.2	1.1

	1976 *News*	*Public Affairs*
Average of all D. C. stations	8.6	5.9
WTTG	4.5	5.7
WDCA	1.1	.9

	1977 *News*	*Public Affairs*
Average of all D. C. stations	8.6	5.9
WTTG	4.4	4.9
WDCA	1.3	.8

	1978 *News*	*Public Affairs*
Average of all D. C. stations	7.4	5.1
WTTG	4.3	4.2
WDCA	1.2	.7

	1979 *News*	*Public Affairs*
Average of all D. C. stations	7.4	5.2
WTTG	3.9	4.1
WDCA	1.0	1.0

Century Exh. 26, at 37–38, 47–48, 56–57, 66–67, 76–77, 86–87, 96–97.

104. Washington, D. C. is ranked as the eighth television market.

A further analysis of the program performance for the period 1973–1979 for WDCA as compared with independent UHF television stations in markets ranked sixth (Boston, Mass.), seventh (Detroit, Mich.), ninth (Cleveland, Ohio), and tenth (Dallas-Forth Worth, Texas) disclosed the following overall station rankings, as contained in the stations' annual programming reports showing the percentages of news and public affairs aired during the complete broadcast day:

1973

Number of stations reporting: Nine.

	News
First Ranking, KXTX, Dallas-Ft. Worth	2.3
Ninth Ranking, WXON, Detroit	0
Eight Ranking, WDCA	1.2

	Public Affairs
First Ranking, WSBK, Boston	4.5
Eighth and Ninth Ranking WXON, Detroit and KXTX, Dallas-Ft. Worth	0
Seventh Ranking, WDCA	1.6

1974

Number of stations reporting: Nine

	News
First Ranking, KXTX, Dallas-Ft. Worth	2.3
Ninth Ranking, WXON, Detroit	0
Eighth Ranking, WDCA	1.1

	Public Affairs
First Ranking, KXTX, Dallas-Ft. Worth	12.1
Ninth Ranking, WXON, Detroit	1.3
Eighth Ranking, WDCA	2.0

1975

Number of stations reporting: Eight.

	News
First Ranking, KXTX, Dallas-Ft. Worth	2.3
Eighth Ranking, WXON, Detroit	0
Seventh Ranking, WDCA	1.2

	Public Affairs
First Ranking, WSBK, Boston	5.3
Eighth Ranking, WDCA	1.1

1976

Number of stations reporting: Nine.

	News
First Ranking, WGPR, Detroit	4.8
Ninth Ranking, WXON, Detroit	.4
Seventh Ranking, WDCA	1.1

	Public Affairs
First Ranking, WSBK, Boston	5.0
Ninth Ranking, WDCA	.9

1977

Number of stations reporting: Ten.

	News

	News
First Ranking, WXNE, Boston	3.4
Tenth Ranking, WSBK, Boston	.7
Eighth Ranking, WDCA	1.0

Century Exh. 26, at 29–95.

105. The foregoing comparison of WDCA's programming performance with other stations in the Washington, D. C. market and with independent UHF stations in other comparable markets were made on the basis of the complete broadcast day of sign-on to sign-off. WDCA broadcast a substantial portion of its news programming between the hours of midnight and 6:00 a.m., as indicated by the following comparison of WDCA news program percentages, for this time slot and for the complete broadcast day:

				News			
	1973	*1974*	*1975*	*1976*	*1977*	*1978*	*1979*
Complete Broadcast Day:	1.2	1.1	1.2	1.1	1.3	1.2	1.0
Midnight to 6:00 a.m.	.5	.5	.5	.5	.5	1.0	.6

Century Exh. 26, at 14–20, 38, 48, 56, 66, 77, 87, 96.[15]

106. Lawrence J. Brailsford, who is Vice President, a Director, and a 25 percent shareholder of Grant, proposes to work as the part-time (12 hours per week) Public Affairs Director. Grant Exh. 3, at 1. Mr. Brailsford is black and lives in the District of Columbia.

107. *Urban Telecommunications Corporation*: Theodore M. White, who is the President and sole shareholder of Urban Telecommunications Corporation, proposes to serve as the full-time General Manager of the facility. Urban Exh. 5, at 1. Mr. White is black, lives in the District of Columbia, and is not involved in any civic activities. *Id.*, Tr. 2261. He has no prior broadcast experience. Tr. 2249.

108. *Washington Television, Inc.*: Washington Television, Inc. proposes that two of its four shareholders would be integrated into management Dr. Joann Anderson, who is Treasurer, a Director, and holds a 53.6 percent interest in Washington Television, Inc., proposes to work full time as the station's General Manager. WTI Exh. 1A, at 3; WTI Exh. 2, at 2; Tr. 2448–49, 2573. She would be responsible for implementing station policy and guidelines and would be the primary station representative in community activities. WTI Exh. 2, at 2; Tr. 2558. Dr. Anderson holds graduate degrees in mass communications and works for the United States Department of Commerce, National Telecommunications and Information Administration, Public Telecommunications Facilities Program as a Program Officer. WTI Exh. 2, at 1, 2. The organization she works for finances the construction of nonprofit broadcast and non-broadcast telecommunications facilities. *Id.*

109. Dr. Anderson owned and worked part time as Assistant General Manager of WOWD(FM), Tallahassee, Florida. Tr. 2541–42, 2560–69, 2571. While Dr. Anderson told the Commission when she applied for WOWD in 1975 that she would be the general manager of the station, instead after a grant was made, she decided to go to graduate school. Century Exh. 34, Tr. 2564, 2571. This decision occurred after the competing applicant dropped out and the con-

---

[15] Mr. Grant, in order to demonstrate that the above data are not an accurate picture of Channel 20's performance, submitted detailed analysis of 1977. Grant assessed Channel 20's news and public affairs programming for alternate months during 1977 to demonstrate that substantially more news and public affairs were televised than the composite weeks referred to by Century. This evidence is not comparable, however, since Grant did not undertake a similar study of the other stations and compare it to Channel 20's performance. There is no way of telling if Grant had assessed the programming of other stations in the same way whether Channel 20's performance would still be relatively the same. See Grant Exh. 4, Attach. A, at 27–28. Thus, the evidence submitted is not probative without making highly subjective determinations about the value of a specific program. The information submitted by Grant provided only its own view of the value of Milton Grant's record at WDCA.

struction permit was granted. After she finished her graduate studies, she became the general manager for a four month period in 1979. Tr. 2542–43, 2561. There is no evidence in the Commission's records that Dr. Anderson or the station ever notified the Commission of the change.

110. Dr. Anderson lives in Bethesda, Maryland, is black, and works (since September 1981) with the Cub Scouts in Bethesda two hours per month. WTI Exh. 2, at 1, 3.

111. Lonnie Murray, who is President, a Director, and a 16.5 percent owner of Washington Television, Inc., proposes to work full time as Program and Operations Manager. WTI Exh. 1A, at 3, 4; Tr. 2395. Mr. Murray would supervise programming, traffic, administrative, and engineering personnel at the station. He would also have responsibility for preparation and administration of the budgets in all departments. WTI Exh. 1A, at 4; Tr. 2398, 2415–17. Mr. Murray is an owner of WWIW, New Orleans and has been since March 1977. Beginning in September 1977 and ending in May 1979, he was the President and two-thirds owner of the corporation that held the license for WWIW. WTI Exh. 1A, at 4. During that period the station manager reported to Mr. Murray daily and he visited the station approximately once a month. WTI Exh. 1A, at 4.

112. *WSCT-TV, Inc.*: WSCT-TV, Inc. is wholly owned by Formula Telecommunications, Inc. WSCT Exh. 1, at 1. The officers and directors of WSCT-TV are also officers and directors of Formula. WSCT Exh. 1, at 1, 2. George C. Corbin, III is President and a Director of the applicant, WSCT-TV, Inc., and he is President and Chairman of the Board of Directors of Formula. WSCT Exh. 1, at 1, 2. Mr. Corbin is a 36.72 percent owner of Formula. He proposes to work full time as General Manager of the station. WSCT Exh. 3, at 1. He would be responsible for overseeing and coordinating all functions of the operation. Tr. 1670.

113. Mr. Corbin has television and radio broadcast experience. He has been a radio announcer, television floor director, assistant director/associate producer for station productions at a Washington, D.C. television station; a director and operations manager at a television station in Goldvein, Virginia; and studio coordinator for the ABC network in New York. WSCT Exh. 4, at 1, 2. Mr. Corbin lives in Washington, D.C. and is black. WSCT Exh. 4, at 1.

114. Thomas A. Farrand is a Vice President and Director of the applicant and Vice President - Creative Services Director of Formula, of which he is a 13.77 percent owner. WSCT Exh. 1, at 1, 2. Mr. Farrand proposes to work full time as the station's Program Director. WSCT Exh. 3, at 1. He would direct programming activities, including production scheduling, and program acquisition. *Id.* Mr. Farrand has worked at a radio station, several television stations and produced an independent television program, "International Assignment." WSCT Exh. 6, at 2. His television work has been

as an assistant director, assistant producer, and producer and director of local and children's programming. WSCT Exh. 6, at 1, 2.

115. Mr. Farrand lives in the Washington, D.C. area and is active as a priest in his religion, the Temple of Cosmic Religion. WSCT Exh. 6, at 1, 3. He is also director of religious education for the Christ Interfaith Community Church, which is located in Washington, D.C. WSCT Exh. 6, at 2.

116. Amy C. Gilbert is a Vice President and Director of WSCT and Vice President, Director, and Treasurer of Formula, of which she is a 13.77 percent owner. WSCT Exh. 1, at 1, 2. She proposes to work 20 hours per week, or part time, as the Business Manager or Comptroller of the station. WSCT Exh. 3, at 1. Ms. Gilbert lives in Washington, D.C. WSCT Exh. 5, at 1.

117. Armando B. Rendon is Corporate Secretary of WSCT and Formula and he owns 11.47 percent of Formula. WSCT Exh. 1, at 1, 2. He proposes to work full time as the Station Manager. WSCT Exh. 3, at 1. Mr. Rendon would be the primary person responsible for the day-to-day administration of the station. *Id.* Mr. Rendon is a Hispanic-American, lives in the District of Columbia, and is very active in local civic affairs. WSCT Exh. 7, at 1–3. He has been the host and producer of a radio public affairs program and he holds a 10 percent interest in Los Cerezos Television Company, the licensee of an experimental television broadcast translator station on Channel 56 in Washington, D.C. WSCT Exh. 7, at 1; WSCT Exh. 2. Mr. Rendon was President of the Board of Los Cerezos from 1980 to 1981. Tr. 1911; WSCT Exh. 7, at 1. In addition, Mr. Rendon works as a public information officer at the U.S. Bureau of the Census. WSCT Exh. 7, at 1.

118. Bill E. Tucker is Vice President - Sales of WSCT and a Vice President and Director of Formula, of which he holds a 4.61 percent interest. WSCT Exh. 1, at 1, 2. He proposes to work full time as the station's Sales Manager. WSCT Exh. 3, at 2. He would have responsibility for all sales and would supervise the station's traffic, promotion and sales functions. *Id.* Mr. Tucker has worked as an account executive and local sales manager at two major market television stations and as an account executive at ABC and NBC. WSCT Exh. 8, at 1–2. He also held a similar position at Blair Television from 1979 to 1981. *Id.*

119. Mr. Tucker is black, he lived in Washington from 1978 to 1980, but since 1980 he has lived in New York City. He would move to Washington to work at the station. WSCT Exh. 8, at 1.

120. Van F. Alexander is the Vice President - Corporate Relations of WSCT and a Vice President and Director of Formula, of which he is an 11.47 percent owner. WSCT Exh. 1, at 1. Mr. Alexander proposes to work full time as the station's Director of Public Affairs. WSCT Exh. 3, at 2. He has taken training in radio and television skills and he worked as a sound technician at two

Washington, D.C. television stations from 1967 to 1972. WSCT Exh. 9, at 1. Mr. Alexander also was President of and worked at New Image, Inc., a television production firm. *Id.*

121. He lives in New Carrollton, Maryland, is black and has been particularly active in Washington civic activities, such as D.C. Reading Is Fundamental and the Work Education Council of the Washington Metropolitan Council of Governments. WSCT Exh. 9, at 1, 2; Tr. 2021.

122. Two issues about WSCT's ownership—and therefore its integration, have been raised. WSCT's parent, Formula Telecommu-
nications, Inc. has received a $10,000 loan from Syncom Capital Corporation. WCTO Exh. 14, at 2. Formula has used the loan to finance its syndicated program production. Tr. 1924. Formula is obligated to repay the loan with interest. WCTO Exh. 14, at 2.

123. In addition, by letter dated December 17, 1980 Syncom has also promised to lend Formula $500,000. WCTO Exh. 14, at 1. Of that amount, $300,000 represents a ten-year subordinated note carrying interest at 14 percent. *Id.*, at 1–2. The $300,000 loan commitment is available to WSCT upon grant of the construction permit from the FCC to build and operate Channel 14 in Washington, D.C. *Id.*, at 3. The remainder, consisting of $200,000, would be available on demand by Formula during the first one and one-half years after closing on the first portion of the loan. *Id.*, at 2. If any of this money is borrowed, it would be incorporated into the subordinated note after passage of the year and one-half. *Id.*

124. If the loan is made, Syncom would receive warrants convertible into Formula stock. The value of warrants would depend on the equity raised by Formula. If more than $1 million in equity is raised by Formula, the warrants will be equal to 1,000 shares or 10 percent of Formula's stock. WCTO Exh. 14, at 2. If Formula fails to reach $1 million in equity, the warrants would be increased, pursuant to a schedule, up to a maximum of 2,000 shares or 26 percent of Formula's stock, depending on the dollar amount of the equity raised by Formula. *Id.* Further, if the $200,000 in demand funds is called upon, Syncom is entitled to warrants sufficient to maintain a 26 percent interest. *Ibid.*

125. Syncom's loan commitment to Formula also contains a put/call provision. From the fifth to tenth years after closing, Syncom has the right to sell, or put, its warrants to Formula, and Formula has the right to purchase, or call, the warrants held by Syncom. WCTO Exh. 14, at 3. The warrants are to be acquired by Formula at fair market value as determined by appraisers. *Id.* The possible maximum of $500,000 in loan funds from Syncom to Formula must in any event be paid back—totally aside from the warrants—pursuant to the subordinated note provided for in Syncom's commitment letter. WCTO Exh. 14, at 1–2.

126. Syncom's loan commitment letter makes reference to the

$10,000 loan, but does not tie it to any requirement that future funding also be obtained by Formula from Syncom. WCTO Exh. 14, at 2. In fact, the $10,000 loan is repayable on its own terms and at a 16 percent interest rate under a demand note maturing on December 21, 1982. *Id.*

127. In an "Agreement" dated January 14, 1981, appended to the loan commitment letter, Formula has agreed—as consideration for the $10,000 loan—"to provide Syncom with a right to purchase warrants and to participate in the financing for the start-up and construction of FTI's [Formula Telecommunications Incorporated's] station and other business operations as outlined in Syncom's commitment letter to FTI dated December 17, 1980." WCTO Exh. 14, attached Agreement.

128. Participation of Syncom is, in any event, not necessary to WSCT's financing of its proposed station. Speaking to this issue, the Commission said, in the *Hearing Designation Order* (46 Fed. Reg. 43737, 43742 (1981)):

> Since the loan from MNB (Maryland National Bank) is sufficient to cover the construction and operation of the proposed facility, further analysis of WSCT's financial sources is not necessary. Accordingly, a financial issue will not be specified.

129. The second issue raised has to do with whether Formula has established a voting trust that distorts ownership. George Corbin explained how the trust would work (WSCT Exh. 29, at 2):

> This block of 5,500 shares would consist of the shares held by myself, Thomas Farrand, Amy Gilbert, Armando Rendon, Bill Tucker, and Van Alexander, and of these individuals, Armando Rendon, Bill Tucker, Van Alexander, and myself are minority group members. Together we hold 70% of the shares in the 5,500 share block. Through this means, we could insure that even if all 10,000 authorized shares of Formula's stock were eventually sold, the majority of those shares (55%) would be voted in a block that was itself minority-controlled. Thus, such a voting trust agreement, if it were formalized, would have the effect of insuring control of Formula by minority group members even if the ownership of Formula's stock by minorities were to fall below 50%.

130. However, no formal agreement exists about the trust. WSCT Exh. 29, at 3.[16] While some of Formula's principals have discussed the use of the voting trust concept, there has never been a vote of the Formula shareholders applying a trust agreement. WSCT Exh. 29, at 2, 3.

Comparative Coverage (Issue 3)

131. While each applicant will serve areas and populations already receiving a minimum of five television signals, there is a divergence in the extent of their projected service areas. WSCT Exh.

---

[16] D. C. Code § 29–330 provides that a true voting trust agreement must be in writing and deposited with the corporation at its registered office.

17, at 2. The varying service areas and populations to be served within the Grade B contours of the seven parties will be as follows (*Id.*, at 5):

Applicant	*Population*	*Area (Square Miles)*
Grant	5,144,312	6,298
WSCT	4,997,204	5,280
WCTO	4,729,296	4,185
Capital	4,686,961	5,027
Century	4,680,566	4,970
WTI	4,638,173	5,116
Urban	4,377,704	4,523

Capital Communications' Failure to Reveal In Interrogatories Velez v. Devine Involving Diane Graham (Issue 5):

132. During the pendency of *Velez v. Devine*, Capital Communications was served with interrogatories. Interrogatory 12(a) of Grant requested that Capital:

> State whether any principal of Capital Communications of Washington, Inc. is or has been an officer, director, or principal at any time during the last five (5) years of an entity involved in, or the subject of, any legal proceedings before any court or administrative agency, or is currently the subject of any investigation or outstanding judgments or orders arising from such proceedings.

CapCom did not disclose the pendency of *Velez v. Devine* in its Answer to this Interrogatory. WTI Exh. 11, at 2. Ms. Graham testified that she decided not to disclose the *Velez v. Devine* proceeding because she did not consider herself a "principal, director or officer" of the Office of Personnel Management. Tr. 2820. She decided that only political leaders could be considered officers, directors or principals and not members of the career civil service—even of a high rank—whom she determined to be mere employees. Tr. 2822. Ms. Graham is a member of the Senior Executive Service of the Federal Government, which is considered a managerial position. Tr. 2842–43. *Velez v. Devine* specifically concerned her actions as the selecting officer in failing to hire Ms. Velez. WCTO Exh. 13. She did not, in preparing answers to Interrogatories, tell either other Capital Communications stockholders or its counsel about the *Velez* proceeding. Tr. 2839.

133. Ms. Graham denied having deliberately concealed the pendency of the *Velez* case because of its possible impact on CapCom's application. Tr. 2842. This must be viewed in light of the immediately preceding testimony at Tr. 2841–42:

> Q: Did you view the pendency of the [Velez] case as helpful or adverse to CapCom's application?
>
> A: I didn't view it in relation to CapCom's application either way.
>
> Q: Well, if the [Velez] case turned out badly for you, and there was a finding of

> discrimination on your part, would that be helpful or adverse to CapCom's case?
>
> A: I'm not in a position to say because I'm not making judgments on CapCom's case.
>
> Q: All right, well, if there is a finding that you violated federal law, would you think that would be helpful to your application?
>
> A: I am not the person making the decision on what is helpful and what isn't helpful.

134. After Judge Gesell's decision, the Capital Communications application was amended to report it. Tr. 2823. The record shows, however, that Judge Gesell's decision was reported in the newspapers. Tr. 2877, 2891. There would have been little opportunity to conceal it, given the large number of local residents involved in competing applications in this case, at least some of whom would be likely to "read the newspaper like everybody," as Ms. Farmer put it. Tr. 2891.

Conclusions of Law

135. *The Financial Qualifications of Century and Urban*: The Broadcast Bureau found that Century Communications required an additional $925,951 in order to meet its estimated construction and operation costs. At the hearing Century demonstrated that three of its stockholders had subscribed to bonds totaling $1,200,000. Pauline Wechsler and Dr. Herbert M. Wechsler have provided financial statements which show sufficient net liquid assets to fulfill their subscriptions. Dr. Everett J. Gordon has demonstrated that he has an available bank loan to meet his. Thus, Century has more than enough money to construct and operate.

136. The Broadcast Bureau also found that Urban had not provided reasonable assurance that it had available the $2,525,000 it needed for construction and operation. Urban made no attempt to correct the inadequacies in its financial plan until a few days before the hearing. Then, instead of reforming its original showing, it presented an entirely new plan for review. This plan relied on $1,250,000 from a lender called Ideal Opportunities Corp. of Miami Beach, Florida. It was evident that Ideal Opportunities was not an equipment manufacturer, or a financial institution, and therefore Urban was asked to establish the ability of Ideal Opportunities to lend it over a million dollars. Urban, during the course of the hearing, chose not to make a showing with regard to Ideal Opportunities and withdrew the letter from it.

137. In Urban's new proposal it also relies on a loan of $1,000,000 from the National Bank of Commerce (NBC), Washington, D. C. The Chairman of the Board of Directors of NBC, Jeffrey N. Cohen, testified at the hearing that NBC would lend Urban the money but that it would need to rely on other banks to provide

$510,000 of the loan. Mr. Cohen stated that NBC frequently relied on three correspondent banks to supply such funds individually, or in combination. The correspondent banks, however, he pointed out, would independently assess the borrower. In fact, Mr. Cohen had not shown any of the material that Urban had submitted to NBC to secure the loan to the other banks. It cannot be said that there is any assurance at all that NBC's correspondent banks would participate in a loan to Urban.[17]

138. In addition, it is evident that even the $490,000 which NBC could legally lend to Urban might be reduced by "points" totalling $70,000, and restricted by a yet undetermined method of repayment. (For example, Mr. Cohen also said that Urban might need to maintain compensating balances.) Given these uncertainties about what conditions will be exacted, there is no way of determining Urban's ability to meet them. Overall the loan from the National Bank of Commerce is not reasonably assured.

139. Although Urban also relies on equipment to be leased from Amvest Leasing Corporation, it did not demonstrate that Amvest has the ability to lease that equipment. Urban refused to present either relevant written material establishing Amvest's ability or an appropriate representative of Amvest to discuss the leasing letter sent by Amvest.[18] Currently, there is a letter from Amvest in the record but it is unclear whether Amvest has the ability to lease the equipment and what conditions Urban would have to meet if it did.

140. Urban estimates that it needs $732,840.35 to pay Amvest and meet its additional expenses. Urban Exh. 3, at 1. Aside from the fact that these claimed expenses are unsupported (the designation order states an entirely different amount), it means that, even if the Amvest loan is credited, Urban must rely on the unestablished one million dollar loan from NBC. And this is a loan which cannot reasonably be considered available to Urban.[19] Finally, Urban's financial showing also fails because it did not comply with the order to produce witnesses. Urban is financially unqualified.

141. *The Character Issues Involving Grant Broadcasting and*

---

[17] In the sole discussion Mr. Cohen did have with a correspondent bank, he led the correspondent to believe that Urban would rely on pay programs for its format and revenues. However, Urban had long since abandoned its pay television format when the discussion took place.

[18] It should be noted in this regard that Urban did attempt to make a late showing. While the comparative hearing ended on April 2, 1982, the request to present evidence was not made until July 7, 1982, over three months after Urban had been asked to make such a showing. In addition, Urban's proffer was subject to several conditions: the hearing had to be held the next day and the witness could only be interviewed by telephone. This request was denied because it would have been disruptive and it was unclear what showing Urban intended to undertake.

[19] Urban, as already noted, is now without counsel and its proposed findings, which were filed by counsel, are not clear on how even the most flattering review of the existing record gives Urban sufficient funds to meet its estimates.

Capital Communications: Grant Broadcasting has three stockholders, Milton Grant, who holds 50 percent of the stock, Lawrence Brailsford, who holds 25 percent, and Theodore Hagans, who holds 25 percent. Only Milton Grant and Lawrence Brailsford intend to work in the day-to-day operation of the station. Of these two integrated stockholders, Mr. Brailsford presents two qualitative attributes that Mr. Grant lacks: He is black and he lives in Washington, D. C.

142. However, Mr. Brailsford, in order to perfect his 25 percent interest and his integration credit, must have available $27,150. In July 1980, when he submitted his balance sheet, he stated he had cash on hand to pay the amount required. However, in July 1981, he declared bankruptcy and, in September 1981, he informed the bankruptcy court that his liabilities exceeded his assets.

143. When, in November 1981, Mr. Brailsford was asked in interrogatories in this case about his involvement in legal proceedings, the bankruptcy was not revealed. In November 1981, Mr. Brailsford also submitted a letter, as part of a response to a petition to enlarge, which indicated that he still had sufficient cash on hand to meet his commitment. His testimony indicates that that was not the case.

144. Mr. Brailsford attempted to excuse his apparent deception by explaining, at least initially, that he told the relevant members of Grant about his bankruptcy. But Mr. Brailsford's testimony at the hearing is inconsistent about his claim that he told Grant's counsel and its two other stockholders, Milton Grant and Theodore Hagans, about his bankruptcy. First he maintained he had not told them, then in some detail he explained how he had informed each of them, and finally he stated that he had not. Milton Grant, Grant Broadcasting's President, denies he was told when the November filings were made. In his testimony, Mr. Grant maintained that he had not known of Mr. Brailsford's bankruptcy until shortly before the hearing, in March 1982, when the matter was reported to the Commission. It is also evident from Mr. Grant's testimony, and Mr. Brailsford's, that Mr. Brailsford had been repeatedly told by Milton Grant how important it was to keep material information in the application accurate and to report any changes as soon as possible. While neither counsel for Grant nor Mr. Hagans testified, Milton Grant's testimony was consistent and creditable. In contrast, Mr. Brailsford's testimony was too inconsistent to be credited.

145. Mr. Brailsford appears to have deliberately withheld a fact, which he believed to be material to Grant's case, until another applicant in this proceeding called it to the Commission's attention. His deceptive actions are no better illustrated than by his attempt to alter a letter purportedly reaffirming his financial means to purchase his stock. He attempted to include his wife in the obligation, but he left the clear impression in the body of the letter

that the assets to be used were the same as those he promised before his bankruptcy. While it may have been a deception which was unnecessary, since Milton Grant stated that if he had known he would have lent Mr. Brailsford the money, the record demonstrates that Mr. Brailsford believed it was necessary.

146. The record also reflects that when Mr. Brailsford was informed that such information was called for in interrogatories, he did not reveal it. Moreover, Mr. Brailsford's deceptive testimony during the hearing lends credance to the conclusion that he intended to deceive the Commission. See *West Coast Media, Inc. v. F. C. C.*, No. 81–1548, D.C. CIR. decided December 7, 1982, at Slip Op. 5. Overall, his testimony on this issue is so contradictory and inconsistent that it is unbelievable and not entitled to any weight.

147. It has been stated often enough that the relationship between licensees and the Commission is one based on trust because of the necessity to rely on applicants and licensees to report relevant facts and to state events truthfully: Mr. Brailsford fails in both these respects.

148. His actions, moreover, are important in determining Grant Broadcasting's qualifications. He is a major owner of Grant Broadcasting; he is proposed for part-time integration in a position in which he is to represent the station before the public; and he is a director and officer. Grant Broadcasting has taken no steps to minimize his participation, and it is evident that as a principal of Grant Broadcasting his influence would be substantial. While there is no evidence that Milton Grant, the largest stockholder and the only stockholder to be integrated on a full-time basis, has not dealt truthfully with the Commission, he has taken no steps to insure that Brailsford's influence will not affect the public interest. Grant Broadcasting is, therefore, not qualified and will not be given comparative consideration.

149. The President of Capital Communications of Washington is Diane Graham. She is currently the Assistant Director of the United States Office of Personnel Management for Affirmative Action Programs. One of Ms. Graham's hiring decisions at OPM was found by the Federal District Court for the District of Columbia to have resulted in discrimination against one of the applicants, Roceliz Velez, because of her sex. Moreover, the reasons Ms. Graham gave to justify her actions were not given any weight by the court because her testimony was inconsistent and contradictory

150. However, this incident stands out in her professional record as an anomaly. Her overall hiring record at OPM demonstrates a superior devotion to equal employment opportunity. Her own office, for which she bears hiring responsibility, has had an improved level of hiring and promotion in all job categories. Moreover, the number of women employed in her office far exceeds the level of female employment in the federal government as a whole. At the manageri-

al level, employment of women in her office exceeds the government average by eight times. Thus, aside from the single incidence of discrimination cited in this case, there is no other evidence that establishes that Ms. Graham discriminates on the basis of sex. The contrary is true, she has enhanced equal employment opportunity. This incident should not disqualify Capital and it is of no comparative importance in light of the weight to be attributed to Ms. Graham's other hiring decisions.

151. *The 307(b) Issue: Arlington, Virginia vs. Washington, D. C.*: This proceeding began with thirteen applicants, twelve applied for Washington, D. C. and one, Urban Telecommunications, applied for the Washington suburb of Arlington, Virginia. Urban is not financially qualified and it never did make an acceptable showing that Arlington should receive a 307(b) preference. Nevertheless, its assertion warrants discussion. The claim that Arlington should have its own commercial television channel is similar to the claim recently considered in *Cleveland Television Corporation*, 52 Radio Reg. (P&F) 2d 581, 586–87 (Rev. Board 1982) that the Cleveland suburb, Shaker Heights, should prevail over Cleveland, and it requires the same resolution. Urban proposes to serve essentially the same area and population as the other applicants. The record reflects that Urban's transmitter would be located in Washington, D. C. and that Urban views the whole Washington area as being the audience and support for the station. Moreover, Arlington, like Shaker Heights, is a contiguous suburb that represents only a part of the Washington, D. C. community.

152. In this setting, to accept the claim that an applicant for Arlington would provide a more fair and equitable distribution of Channel 14 would raise form over substance. The reality is that Urban would use Section 307(b) as a procedural device to gain a preference and it would then use the allocation to provide service to the same community as the other applicants. The record reflects it has no ties to Arlington. Its only stockholder lives in Washington, D. C., its transmitter would be in Washington, D. C., and its financial proposal to its backers has been on the basis that it would serve the Washington, D. C. television market. Section 307(b) is not of decisional significance in this case. *Id.*

153. *Diversification of Control of the Media of Mass Communications*: Of the five qualified applicants none hold media interests. While some of the principals in various applications have media interests, these media interests are not large and present no ground for comparative consideration; they are *de minimis*. *Gainesville Media, Inc.*, 70 F.C.C. 2d 58, 64 (Rev. Board (1978)). WCTO has no media interests and its officers, directors and board members have none. Century has no media interests and its stockholders have stated they would divest themselves of any existing interests they

now hold. The principals of Capital Communications, like WCTO, have no media interests.

154. Washington Television has two stockholders that have broadcast interests. Lonnie Murray owns 13 percent of a radio station in New Orleans and John F. X. Browne holds 1 percent in a company that operates two television stations in Michigan.[20] Neither Mr. Browne nor Mr. Murray control the entities in which they have an interest and the stations are located a substantial distance from Washington, D. C. While Mr. Browne's television interest is of no consequence, Mr. Murray's radio station warrants a very slight demerit.

155. WSCT's Lewis Rivlin, who holds only a 4.59 percent interest in the applicant, also owns 25 percent of a company that holds a 10 percent interest in three cable systems that are 400 miles or more away from Washington. Mr. Rivlin's derivative interest is 2.5 percent in one system, located in Portland, Maine, and 2.19 percent in the two other systems, located in South Carolina. Mr. Rivlin lacks the possibility of any control over WSCT and his interest in the cable systems is very small. Moreover, the cable systems are some distance from the Washington, D. C. service area. As a practical matter his cable ownership is too small and remote to warrant any comparative demerit. See *New Continental Broadcasting Company*, 88 F.C.C. 2d 830, 851 (Rev. Board 1981). The cable television interests in *New Continental* were assigned a very minor demerit. However, it is apparent that Mr. Rivlin's holdings are significantly smaller and more remote than those held in *New Continental* and, therefore, no demerit is warranted.[21]

156. *Participation in Station Operation by Owners*: The deciding factor in this case is the preference to be granted when an applicant promises that owners will actively participate in the day-to-day operation of the station. There are differences between the applicants in the quantitative participation promised, and to a lesser extent, in the quality of the persons who will participate. The level of participation promised by WSCT-TV is the highest of all applicants.

157. The Commission is "primarily interested in full-time participation." *Policy Statement on Comparative Broadcast Hearings*, 1 F.C.C. 2d, 393, 395 (1965). "[N]o credit will be given to the participation of any person who will not devote to the station substantial amounts of time on a daily basis." *Id.* Positions are

---

[20] Mr. Browne's media ownership is attributable for comparative purposes although the stations have since been assigned. See *Order*, FCC 82M-3669, released November 19, 1982, granting Washington Television's amendment notifying the Commission of the assignment.

[21] If Grant and Urban were considered they might each receive a slight demerit for their media holdings. Mr. Grant because of his interest in a Texas television station and Urban because of Mr. White's new interest in a Nashville, Tennessee construction permit.

assessed in terms of the role they play in policy formation and station management. Other positions will be of diminished credit. *Id.* An owner's residence and relevant broadcast experience strengthens a proposal, but local residence is more important than broadcast experience.

158. George C. Corbin, Thomas A. Farrand, Armando B. Rendon, Bill E. Tucker, and Van F. Alexander are all officers of WSCT-TV and its parent corporation, Formula Communications, and their collective ownership interest is 77.64 percent. Each would play an important role in the management and operation of the station on a full-time, daily basis. George Corbin, who is a 36.72 percent owner, would be the General Manager; Thomas Farrand, who is a 13.77 percent owner, would direct programming activities; Armando Rendon, who is a 11.47 percent owner, would be the Station Manager; Bill Tucker, who is a 4.61 percent owner, would be the Sales Manager; and Van Alexander, who is a 11.47 percent owner, would be the Director of Public Affairs.

159. Their quantitative integration is enhanced by their qualitative attributes. All live in Washington, D. C., but Mr. Tucker, who would move to Washington. In addition, Messrs. Farrand, Rendon, and Alexander have exhibited participation in community affairs. Each of them have had relevant television experience, and some of that experience has been in the Washington, D. C. market. In addition, Messrs. Corbin, Tucker, and Alexander are black and Mr. Rendon is Hispanic. Overall, minority group members, who will work full time at the station in management, own 64.27 percent of the applicant.

160. WSCT-TV's proposal is further enhanced by the part-time (20 hours per week) integration of a woman, Amy Gilbert, who owns 13.77 percent of the applicant and would be the Business Manager, or Comptroller. She also lives in Washington, D. C. When her participation is considered, WSCT-TV proposes integration into management, on a full-time and part-time basis, persons who own 91.81 percent of the applicant. And, of this group, minorities and women hold a 78.04 percent interest in WSCT-TV. This becomes particularly important when it is remembered that the Washington, D. C. area has a large Hispanic and black population.

161. The competing applicants have argued that the total ownership by these principals would be reduced by the possibility of future stock holdings of the Syncom Capital Corporation. WSCT-TV has indicated that it might borrow from Syncom to finance its application. The agreement between WSCT-TV and Syncom provides that under certain circumstances Syncom could become one of the owners of Formula, WSCT-TV's parent. However, the potential Syncom interest is too uncertain to attribute an ownership interest to it.

162. WSCT-TV does not rely on the potential loan from Syncom

and it has not indicated whether it will borrow the money from Syncom. Moreover, even if it did, there is no reason to assume that Syncom would become a Formula stockholder. While, if Formula borrows from Syncom, Syncom would become the holder of warrants that could be converted to Formula stock, Formula retains the right to have Syncom return the warrants in exchange for their fair market value. And Syncom has the right to simply cash in the warrants. These rights apply from the fifth to the tenth year after the loan is made. Sycom's ownership is at this stage conjectural. There is no evidence that Formula will decide to borrow the money and, moreover, that if it does, the loan will result in Syncom owning Formula stock.[22]

163. In addition, the competing parties have argued that WSCT-TV's principals have formed a voting trust which essentially withdraws ownership power for the shares placed in the trust. While WSCT-TV principals have discussed a voting "trust," none has actually been formed and no voting through a trust has resulted. The trust, if ever formed, is intended to preserve the existing control of Formula, and therefore, WSCT-TV, by minorities. This is particularly reassuring since control of ownership by minorities is a factor in awarding WSCT-TV a substantial and decisional preference for its integration proposal. *Gilbert Broadcasting Corporation*, 52 Radio Reg. (P&F) 2d 429, 444 (1982).

164. The bona fides of Mr. Rendon's full-time and Ms. Gilbert's part-time proposed integration has also been challenged. The assertion is that Mr. Rendon, because he has stated he would practice law when he graduates from law school, and Ms. Gilbert, because she has an active career as a CPA, would not fulfill their proposed obligation. There is no evidence that Mr. Rendon would practice law if a grant is made to WSCT-TV, or that if he does that he would not be able to fulfill his commitment. Nor is there any evidence that Ms. Gilbert could not adjust her CPA practice to spend 20 hours per week with WSCT-TV.[23]

165. Finally, there is no merit to the claim that Mr. Rendon's position is at variance with the application. While the title of Station

---

[22] WSCT-TV's parent, Formula, in a separate agreement has borrowed $10,000 from Syncom to finance the development of syndicated programming. That agreement, dated January 14, 1981, restates Syncom's right to purchase warrants and participate in the facility applied for here on the terms outlined in Syncom's original December 17, 1980 commitment letter to Formula. Contrary to the claims of the competing parties, this recent borrowing does not establish that Formula has decided to borrow the funds or that Syncom now has a right to the warrants.

[23] The further claim that she would not spend 20 hours a week because there would be insufficient work is an improper inference to reach from the fact that she stated the work would take more time in the beginning.

Manager, was later applied to his functions, Mr. Rendon's role has remained the same.[24]

166. Nor has there been a change in Mr. Alexander's title. Mr. Alexander's corporate title in WSCT-TV, Inc. is Vice President, Corporate Relations. WTI Exh. 4, at 2. In the staffing proposal, WSCT-TV provided for a Public Relations Manager. WTI Exh. 7, at 2. From this the parties construct their variance claim. Such an argument is without merit.

167. From the outset, Mr. Alexander has understood that his role would be in the public relations area. Tr. 2032. As a public relations official, Mr. Alexander's duties will involve the station's external relations. Tr. 2035. Thus, he will have a position that is differentiated from Armando Rendon's position which deals with internal station matters. Tr. 2035–36.

168. Washington's Christian Television Outreach also proposes a significant amount of participation in station operation by the board members of its non-profit, non-stock corporation. WCTO is controlled by its Board of Directors and corporate decisions are made by a majority vote of the Board. Eight of the ten Board members propose to work at the station and WCTO would attribute to each director a 20 percent share in the corporation. The President of WCTO, A. Bert Carver, proposes to work full time as the station's General Manager. The other seven integrated directors would also work full time. Dr. Wendell P. Witten is proposed as Program Production Manager, Elaine H. Witten as Program Manager, Dr. Lucas H. Blevins and Jean H. Blevins as Co-Managers of Counseling, Reverend Charles R. Hayes as Public Relations Director, Joe-Ann Hayes as News Director, and Julia F. Carver as Marketing Director. All live in the Washington area, Elaine and Wendell Witten and Joe-Ann and Charles Hayes are black, four of the eight are women, and Mr. Carver is part Cherokee Indian (his mother had both an Indian father and mother). Mr. Carver, Ms. Carver, Dr. Witten, Dr. Blevins, Ms. Blevins, Rev. Hayes and Ms. Hayes have participated in local civic activities.

169. All of the integrated directors of WCTO have participated in one or two religious television programs broadcast in Washington, D. C. on Channel 20, WDCA. None of them has been employed by a broadcast station in a managerial position. Their jobs with regard to

---

[24] Mr. Rendon was originally listed as the Corporate Relations Director in WSCT-TV's staffing proposal in its application. Mr. Rendon testified that he foresaw his functions under that title as one where he would work with "all the other divisions or departments in the station." Tr. 1964. It is evident that while the title of his position now includes the traditional description of Station Manager, his function in the WSCT-TV proposal has remained the same. WSCT-TV had little incentive to vary Mr. Rendon's job by supplying a more common title to it since the *Comparative Policy Statement* is concerned with function not form and none of the competing parties have demonstrated that there has been a variance of function.

Channel 20's religious programs were on a volunteer basis and the work they performed ranged from "assisting production" to performing or participating as talent on the programs.

170. If all of WCTO's proposed integration is credited, it would have 80 percent full-time integration. Some of the parties have objected to crediting the Blevins with a management position since they are essentially going to assist each other in the same job of managing and training volunteers during an evening call-in program. These positions are undoubtedly significant to the production of the program they will be associated with, but it is clear that they will not play an important role in the station's management. In fact, there appears to be no policy function to their role and Dr. Blevin's testimony indicates that his daily time at the station will equal no more than two hours. *New Continental Broadcasting Company*, 88 F.C.C. 2d 830, 839 (Rev. Board 1981), *application for review to the Commission*, filed January 29, 1982. Moreover, their role is a shared function, essentially one job split in half, which means that any influence they exert on the station would not be as great as if they had responsibility for separate station operations. This does not mean that the Blevins should not be given credit for their participation, but it does mean that it is reduced in importance. In this regard WSCT offers a greater degree of full-time integration. And whether or not the Blevins are given full quantitative credit, WSCT-TV proposes, overall, a greater amount of integration.

171. Qualitatively, WCTO proposes the participation of more women than WSCT-TV (women represent 40 percent of WCTO and 13.77 percent of WSCT-TV) but WSCT-TV proposes more integration of minorities (integrated minorities represent 64.27 percent of WSCT-TV and 50 percent of WCTO). Aside from these percentages, however, there is a significant difference because WSCT-TV is controlled by minorities. This is not the case with WCTO's representation of women or minorities. WSCT-TV also proposes that the station will be operated by blacks with significant television experience which directly relates to the management of the proposed station. WCTO's directors have not had any broadcast experience that warrants similar credit. WSCT-TV is to be preferred over WCTO on both quantitative and qualitative grounds.

172. Washington Television proposes that two of its stockholders would operate the station. Dr. Joann Anderson would work full time as the General Manager and Lonnie Murray would work full time as Program and Operations Manager. They both live in the Washington, D. C. area, Dr. Anderson has participated in a civic activity, and Mr. Murray and Dr. Anderson have assisted in the management of radio stations. They are black and Dr. Anderson is a woman. However, they own only 70.1 percent of the applicant, which is not as great a percentage of ownership as that proposed by WSCT-TV or WCTO. Washington Television is qualitatively nearly the same as

WCTO, but it is not as strong on relevant experience and civic participation as WSCT-TV.

173. Capital Communications proposes significant integration, but most of it is part time. Karen Brown, Margaret Johnson, and Nancy McCormick-Pickett, each of whom can be credited with 11.11 percent ownership, represent proposed full-time management. Yetta W. Galiber, A. Diane Graham, Thelma Mullin, Lili Packer and David Pales would work twenty hours per week at management positions and their ownership interests total 55.55 percent. All but one stockholder are women, three are black, and the only male stockholder is Hispanic. The stockholders in this group have been very active in local civic affairs, and all have been long time local residents. In these respects they are qualitatively equal to those applicants that have promised more full-time integration. They do not, however, present the same quality of broadcast experience as WSCT-TV.

174. Century's integration proposal is also weaker than the other applicants' on quantitative grounds. Steven Wechsler, who is a 15.57 percent stockholder, is the proposed full-time General Manager. Diane Wechsler, who is a 10.46 percent stockholder, proposes to work full time as Customer Service Manager. And Charles Bennett Fisher, who is a 2.70 percent stockholder, proposes to work full time as Director of Community Relations and Special Affairs. All three live in the community. Mr. Fisher has been active in civic affairs and he is black, and Ms. Wechsler is a woman. Although they do not have broadcast experience, Mr. Wechsler operates a movie subscription service which is distributed by microwave.

175. Century proposes that two of its stockholders would work 30 hours per week and that six other stockholders would work 20 hours. Peter Yeskel, who is a 13.35 percent stockholder, proposes to spend an average of 30 hours on the duties of Secretary-Treasurer and Chief Financial Officer. Mr. Yeskel stated, however, that his commitment was not to the day-to-day operation and that the time he would spend would depend on other problems he might have with his other business interests. During some weeks, he believed, he might spend as little as ten hours. His day-to-day commitment is, therefore, uncertain and cannot be credited. On the other hand, the 30 hours proposed by Eugene Aikens, Jr., who holds 6.67 percent of Century's stock, is definite. He is proposed as the station's Personnel Director. Mr. Aikens is black and he lives in Washington, D.C.

176. Of the people who would spend twenty hours a week, only slight credit can be given for Pauline Wechsler, who owns 19.80 percent of Century's stock, because she stated she would not be involved in the day-to-day management of the station. Instead, she merely plans to represent the station at community functions. The remaining stockholders, who propose to work 20 hours per week, would only participate in a limited way in the development of day-to-

day station policy. Dr. Everett J. Gordon, who is a 3.56 percent stockholder, would act as the station's contact for community groups; Claudia R. Rayford, who is a 1.78 percent stockholder, would serve as a "link" between the Director of Advertising and Marketing and the General Manager; Dr. Frances Rankin, who is a 2.67 percent stockholder, plans to develop children's programming (two are planned); Edna R. Jones, who is a 1.78 percent stockholder, would supervise implementation of consumer programming; and Brenda Gladden, who is a 4.45 percent stockholder, would work as house counsel and be involved in non-entertainment programming. While all of these part-time participants have qualitative attributes, the quantity of ownership and the jobs they would perform does not raise Century's proposal to a level that is equal to the other applicants.[25]

177. *Auxiliary Power Source and Comparative Coverage*: WCTO and Century claim a preference for their proposal to install auxiliary power. The Commission has provided that auxiliary power equipment is "a factor of decisional significance in comparative AM and FM broadcast proceedings." *Addendum to Policy Statement of July 28, 1965, on Comparative Broadcast Hearings*, 2 F.C.C. 2d 667, (1966). The Commission has made no provision for television proceedings and therefore, WCTO and Century's request for a preference must be denied.

178. The claim of WSCT-TV and Grant Broadcasting for preference based on coverage is also without merit. All proposed coverage areas now receive Grade B coverage from a minimum of five signals. While there are population differences in the areas covered by the applicants, the coverage evidence submitted does not identify the number of signals received by the population which is exclusive to WSCT-TV and Grant, which claim superior coverage. In part this is the case because only the minimum number of signals are identified and not the maximum. No preference can be accorded in light of the showing made.

179. *Capital Communications' Failure to Report Diane Graham's Involvement in VELEZ V. DEVINE*: While the sex discrimination case of *Velez v. Devine*, involving the hiring decision of Capital's principal, Diane Graham, was pending, Capital was asked if any of its stockholders were principals in an entity that was involved in, or the subject of, litigation. Capital did not report the sex discrimination case involving Ms. Graham. Ms. Graham testified that she did not view herself as a principal of the Office of Personnel Management. She believed that principals would be political appointees. She formed this conclusion despite the fact that she is a member of the Senior Executive Service of the Federal Government and holds the title of Assistant Director of the United States Office of Personnel Management for Affirmative Action Programs. In the common use of the word principal, there can be little doubt that the distinction she drew was unwarranted.

180. Once Ms. Graham decided on her own that she was not a principal she did not reveal the discrimination case involving her to other Capital stockholders or its counsel. However, once the case was publicly known Capital Communications did report the case because, of course, it did involve Ms. Graham, who is Capital's President. It is apparent that Ms. Graham was not fully candid about a matter that could have affected Capital's case. Her view that she was not a principal in the *Velez v. Devine* case is simply not creditable, particularly since Capital did report the case when it became publicly known. Because Capital did ultimately report the case and its impact has been considered, this issue does not rise to a level warranting disqualification. But Ms. Graham's withholding of information about the case greatly lengthened the time required for this hearing and demonstrated lack of candor and an unwillingness to reveal potentially harmful facts. A comparative demerit against Capital is required on this issue.

Summary Evaluation of the Applicants

181. Grant Broadcasting and Urban Communications are not entitled to comparative consideration because they have been unable to establish their qualifications. Grant Broadcasting is unqualified because of the deception its principal, Lawrence Brailsford, undertook to keep the Commission from learning of his bankruptcy. Urban Communications has not established its financial qualifications and it has refused to cooperate in the examination of its finances. The remaining five applicants are qualified and none have media interests that affect the outcome of the case. Only Lonnie Murray, a principal of Washington Television, has an interest that requires comparative recognition, and that interest requires only a very slight demerit.

182. The area of significant difference is in the promises the applicants have made to have owners operate the proposed facility. Of those promises, that made by WSCT-TV would best serve the public interest. Its proposed full-time and part-time integration is 91.81 percent. In addition, WSCT-TV is controlled by minority members who will work at the station in management positions. Those who will be integrated are, with one exception, already living in the community, most of the integrated stockholders have a high degree of relevant broadcast experience, and most of them have been active in area civic affairs.

183. In second place is WCTO. Its proposed integration is 80 percent. But two stockholders, Dr. Lucas H. Blevins and Jean H. Blevins, who represent 20 percent of the WCTO integration proposal, would not perform the same level of day-to-day management participation as the other integrated Board members. It is also evident that the Blevins would not occupy positions as responsible as those jobs that will be undertaken by WSCT-TV's principals. But

more importantly, WSCT-TV will be run and controlled by minorities and a woman, who represent nearly eighty percent of its ownership.

184. Because they have proposed lesser amounts of integration than WSCT-TV and WCTO, the remaining parties would be ranked as follows: Washington Television, Inc., Capital Communications and Century Communications. In addition, Capital Communications would receive a moderate demerit because it did not report, when it arose, the litigation involving its principal, Diane Graham.[25]

ACCORDINGLY, IT IS ORDERED that the petition for leave to file out of time, filed August 3, 1982 by Grant Broadcasting Corporation IS GRANTED.

IT IS FURTHER ORDERED that the petition for leave to amend, filed November 18, 1982 by WSCT-TV, Inc. IS GRANTED and the amendment IS ACCEPTED.

IT IS FURTHER ORDERED that the petition for leave to amend filed January 5, 1983 by Washington Television, Inc. IS GRANTED and the amendment IS ACCEPTED.

IT IS FURTHER ORDERED that Urban Telecommunications Corporation's motion for leave to amend filed January 10, 1983 IS GRANTED and the amendment IS ACCEPTED.

IT IS FURTHER ORDERED that the motion for leave to file supplemental pleading and supplemental conclusions of law of Washington Television, Inc. IS GRANTED.

IT IS FURTHER ORDERED that the application of WSCT-TV, Inc. (File No. BPCT-800118KP) for authority to construct a new commercial television broadcast station on Channel 14, Washington, District of Columbia IS GRANTED and the applications of Washington's Christian Television Outreach, Inc., Century Communications, Inc., Capital Communications of Washington, Inc., Grant Broadcasting Corporation, Urban Telecommunications Corporation, and Washington Television, Inc. ARE DENIED.[26]

---

[25] Although Grant Broadcasting's proposal has not been compared, if it had been it would not have prevailed since Grant's full-time integration is only 50 percent and its part-time is 25 percent. Moreover, this assessment assumes no comparative consideration would be given to Mr. Brailsford's failure to report his bankruptcy. If Urban Communications were qualified, it too would not prevail. While Urban Communications proposes the full-time integration of its sole stockholder, Theodore R. White, this would amount to only slightly more integration than the 91.81 percent that is proposed by WSCT-TV. This difference is *de minimis*, however, when compared to WSCT-TV's proposal which, unlike Urban, includes significant broadcast experience and participation in local civic affairs.

DECISION

(Adopted: August 22, 1983; Released: August 26, 1983)

BOARD CHAIRMAN MARINO FOR THE REVIEW BOARD:

1. In this comparative case involving a new FM broadcast station in Littleton, New Hampshire, Administrative Law Judge Edward J. Kuhlmann awarded the construction permit to White Mountain FM, Inc. *See Initial Decision* (FCC 83D-17) (*I.D.*), released March 11, 1983. White Mountain was awarded a substantial preference on the

diversification criterion because its opponent, Profile Broadcasting Company, Inc., is the licensee of Littleton's only commercial radio station, WLTN(AM), whereas White Mountain owns no other media interests. White Mountain was also given credit for auxiliary power, and received a slight preference for providing a second aural service both during the day and at night. Profile has filed exceptions in which it argues that the ALJ erred in failing to add a financial issue against White Mountain, and that he should have awarded Profile a moderate preference for comparative coverage and a substantial preference for integration. After review of the record and briefs, we affirm the *I.D.* in all major respects.

2. *White Mountain's Financial Qualifications*. The *Hearing Designation Order* stated that White Mountain's application did not demonstrate its financial qualifications; that the Commission's new Form 301 required only a certification as to financial qualifications; and that White Mountain would be given 30 days to review its proposal, make any necessary changes, and, if appropriate, submit a certification to the ALJ. If it could not make the certification, the ALJ was authorized to specify an appropriate issue. This procedure was modeled on the Chief, Broadcast Bureau's (now Mass Media Bureau) designation Order in *Minority Broadcasters of East St. Louis, Inc.*, Mimeo No. BC5092, released July 15, 1982.

3. In its exceptions, Profile states that on October 4, 1982, White Mountain certified to its financial qualifications but failed to indicate what changes, if any, it had made in its financial proposal which permitted it to so certify. Believing that White Mountain's certification should not be credited in the absence of such information, Profile requested the ALJ to add a financial issue against White Mountain. The ALJ declined to do so, Tr. 3, and Profile excepted to this ruling. Oral argument on May 26, 1983 was focused exclusively on this matter. Subsequently, however, on June 2, 1983, the Commission released a Memorandum Opinion and Order in *South Florida Broadcasting Co., Inc.* (FCC 83-255) which overturned the Bureau's *East St. Louis* policy because it applied the certification procedure in a manner inconsistent with its intent. The Commission thereupon ordered all applicants in hearing status who initially filed under the old Form 301 but subsequently established their financial qualifications by certification to make the full documentary showing required by the old form within 30 days and authorized the specification of an appropriate issue if an applicant could not so demonstrate its financial qualifications. *Id.*

4. In accordance with *South Florida,* White Mountain, on June 22 1983, submitted a detailed financial amendment intended to establish its qualifications. According to the information furnished, White Mountain will need $138,959 to meet its costs of construction and first three months of operation. For funding, it relies on the net proceeds of a loan from The Saver's Bank, in Littleton, of $123,200, a

net deferred equipment credit of $43,124, cash on hand of $169, and a $10,000 contribution from its principals, Thomas M. and Kathleen G. Pancoast. While the Pancoast's balance sheet of June 1, 1983 shows sufficient net liquid assets from which they could advance $10,000, the applicant has not complied with the requirement that it furnish the agreement obligating them to do so and showing the terms of the commitment. *See* Form 301, Section III, Page 3, Item 4a. While this may have been simply an oversight, it appears that the applicant is financially well qualified even without reliance on these funds since it has a "cushion" of other funds over costs of almost $28,000. Profile has not challenged White Mountain's documentation and it appears that no financial issue is warranted, no material questions of fact being evident. Profile's financial exceptions are therefore denied.

5. *Comparative Issue: Coverage.* White Mountain was given a preference based on findings that it would provide a second aural service during the day to 1,258 persons, as compared to 218 by Profile, and a second aural service at night to 3,150 persons compared to 397 by Profile. While Profile would serve more persons overall in a slightly larger area, the ALJ noted that this population already has at least three services. *I.D.*, para. 14. Profile argues that it should receive a moderate coverage preference because its service area is 6.4% larger and contains 29.5% more people than the area that would receive primary service from White Mountain. *Br.* at 8.

6. The ALJ's award of a modest preference to White Mountain was a correct resolution of the coverage factors in this case. The Commission has traditionally placed greater emphasis on the provision of a first or second broadcast service than on superior overall coverage to areas and populations that cannot reasonably be said to be underserved. *Compare, e.g., Ram Enterprises*, 57 FCC 2d 844 (Rev. Bd. 1976), *rev. denied*, FCC 76–597, released June 24, 1977 (decisive preference to applicant proposing first and second primary services, *with Wolverine Radio Co.*, 49 FCC 2d 1038 (Rev. Bd. 1974), *rev. denied*, FCC 75–985, released September 12, 1975 (slight preference to applicant for provision of new service to 21,000 more persons than its opponent); *see also Barnes Enterprises, Inc.*, 69 FCC 2d 1957 (Rev. Bd. 1978), *rev. denied*, FCC 79–451, released July 19, 1979, and cases cited therein. Profile has cited no supporting precedent at all, let alone a case involving comparable facts, where a preference was awarded to the applicant in its relative position. On the contrary, the law is clear that provision of a second primary aural service is a "factor of considerable importance" and should result in a preference. *Communications Properties, Inc.*, 92 FCC 2d 45, 49 (Rev. Bd. 1982) (moderate preference awarded), *rev. denied*, FCC 83–320, released July 7, 1983; *see also Town and Country Radio, Inc.,*, 70 FCC 2d 572, 575 (Rev. Bd. 1978) (moderate preference awarded). Thus, White Mountain receives a preference for providing this additional service both during the day and at night. Its

preference is a modest one, however, because the absolute numbers of additional persons it will serve are not as large as in the cited cases, and the additional overall population coverage by Profile is not inconsiderable. In view of these factors, we believe the ALJ prudently avoided overstating White Mountain's advantage but that the preference it received should be adjusted somewhat and be labeled as slight to moderate.

7. *Participation of Ownership in Management*. Kathleen G. and Thomas M. Pancoast each own 50% of the stock of White Mountain and each intends to work 40 hours a week at the proposed station in various management positions. Likewise, Profile's shares are jointly held by Peter C. and Judith F. Aydelott and each of them proposes to work full-time in management roles at the station. The applicants differ somewhat in terms of their qualitative enhancements but in view of their 100% full-time quantitative integration proposals, the ALJ found them to be nearly equal and did not award either one a preference. *I.D.*, paras. 12, 13, 15. Profile excepts to the award of full-time credit to Mr. Pancoast on the ground that his plan to continue working part-time as an attorney will conflict with his proposed role at the station. It urges award of only part-time credit for his role and a resulting substantial preference to Profile because of the difference between its 100% full-time proposal and White Mountain's reduced 50% full-time and 50% part-time proposal.

8. We affirm the ALJ's award of full credit for Mr. Pancoast's proposal. Mr. Pancoast testified that if the White Mountain application is granted he would reduce the 25 hours per week he now spends in his law practice to 10 to 15 hours per week and would also resign his position as a Master of the New Hampshire Superior Court where he now works two days a week. *I.D.*, para. 6; White Mountain Exh. 5. Mr. Pancoast's testimony is uncontradicted and unrebutted. Where, as here, a principal's integration proposal is set forth in some detail and he has specifically allocated his time so as to accommodate his outside interests in order to effectuate his proposal, we may conclude that the applicant has demonstrated the necessary assurance that its proposal will be carried out. *Central Texas Broadcasting Co., Ltd.*, 90 FCC 2d 583 (Rev. Bd. 1982); *Bradley, Hand and Triplett*, 89 FCC 2d 657 (Rev. Bd. 1982); *Blancett Broadcasting Co.*, 17 FCC 2d 227 (Rev. Bd. 1969). Profile's exception does not cite to any record evidence or case law for support but relies instead on bare speculation. This, of course, is an insufficient basis for over-turning the ALJ's conclusion. We affirm the ALJ's conclusion that Mr. Pancoast should be fully credited and that the applicants are virtually equal because of their comparable 100% integration proposals.

9. *Petition to Reopen*. On June 15, 1983, Profile requested reopening of the record and remand on new issues to determine whether the transmitter site specified in White Mountain's applica-

tion is available to it; if the site is unavailable, whether White Mountain lacked candor or misrepresented in claiming the site was available; and the impact on White Mountain's qualifications. Profile contends that White Mountain cannot obtain access to its proposed transmitter site on Mann Hill because only one road provides access to that site. The road traverses private property owned by Roy and Barbara Hendrickson, and is subject to a restrictive easement which allegedly precludes White Mountain's use. Specifically, the easement allows access to use the road to the University of New Hampshire in order to maintain and operate educational television station WLED-TV from the site on Mann Hill. The easement is intended for this purpose only, Profile asserts, and the Hendricksons will not permit the road to be used by White Mountain or anyone else for any other purposes. Thus, Profile argues, a substantial question exists as to the site's availability.

10. In support of a candor issue, Profile asserts that White Mountain failed to ask the Hendricksons about using their road for access to the transmitter site, and that this is "tantamount to a failure by White Mountain to make any inquiry as to the availability of its proposed transmitter site." *Petition* at 7. Accordingly, since White Mountain never had reasonable assurance of the availability of its transmitter site, Profile argues that a misrepresentation or lack of candor issue is also warranted.

11. In opposition, White Mountain contends that it has both reasonable assurance of, and access to, its proposed transmitter site on Mann Hill, and that allegations of misrepresentation and lack of candor made by Profile are without merit. In support, White Mountain attaches the statement of William Ingalls, the transmitter supervisor for the WLED-TV site, who states "I know Thomas M. Pancoast of Littleton, New Hampshire. I met him as a result of his seeking and obtaining our reasonable assurance to allow White Mountain FM, Inc. to utilize the television tower of our WLED-TV on Mann's Hill in Littleton for the purpose of transmitting the signal of its proposed FM station." White Mountain also responds that it is not dependent upon the Hendrickson property for access to the transmitter site because another property owner, Daniel Edgar, will allow White Mountain access to the site over his land, or if that fails, a helicopter can be used to scale the mountain. In an attachment, Mr. Edgar states: "Existing logging roads on our property furnish access to the common boundary between our property and that of the State of New Hampshire" and that White Mountain is "welcome to cross our property to and from the property of the State of New Hampshire for the purpose of installing and maintaining an FM radio transmitter and antenna on the property of the State of New Hampshire, and to improve and maintain any roads on our property necessary for this purpose. . . ." Finally, as to the issue of

misrepresentation or lack of candor, White Mountain denies any knowledge of the existence of the Hendrickson easement.

12. The Board will not reopen the record to add site availability and misrepresentation or lack of candor issues against White Mountain. It is evident from the statements supporting its opposition pleading that White Mountain has had, and continues to have, reasonable assurance of its proposed transmitter site and of likely access to it. Although Profile replies that access is still in question and submits a supporting statement from John Keller, a forester, who conducted an aerial survey of Mann Hill to show that no truck-traversable road exists on the Edgar property that would allow access to the proposed site, this is an insufficient basis for addition of an issue. First, we have previously held that the mere fact that there are no present roads to a proposed site does not preclude the future construction of a road or the possibility of access to the site over existing barren land. *Charles Vanda*, 4 RR 2d 543 (Rev. Bd. 1965) (site issue denied). Secondly, the property owner who is affording White Mountain access to its proposed site, Mr. Edgar, has expressly given his permission for White Mountain to develop whatever roads are necessary for access to the site. And finally the applicant has even considered the possibility of airlifting its transmitter and associated equipment to its site if all other means of access fail. We also find that Profile's allegations of misrepresentation or lack of candor against White Mountain are baseless. White Mountain's claimed lack of knowledge of the Hendrickson easement at the time it specified the Mann site is not disputed by Profile, nor is its reasonable assurance of use of the Mann site itself challenged. The only question is that of access to the site and we find no factual questions relating thereto that warrant further evidentiary proceeding. One way or another, it appears, White Mountain will gain access to its site.

13. *Summation*. White Mountain has been found financially qualified and no basis for reopening the record to examine new issues has been shown by Profile. Comparatively, White Mountain is clearly superior, having an undisputed substantial diversification preference, a slight to moderate coverage preference, and an auxiliary power preference. A grant of White Mountain's application will serve the public interest, convenience and necessity.

14. ACCORDINGLY, IT IS ORDERED, That the petition to reopen the record and enlarge issues, filed June 15, 1983, by Profile Broadcasting Company, Inc., IS DENIED; and

15. IT IS FURTHER ORDERED, That the application of White Mountain FM, Inc. (File No. BPH-810408AC) for a construction permit for a new FM station on Channel 292A at Littleton, New

Hampshire, IS GRANTED, and that the application of Profile Broadcasting Company, Inc. (File No. BPH-811027AL) IS DENIED.

INITIAL DECISION OF ADMINISTRATIVE LAW JUDGE EDWARD J. KUHLMANN

(Issued: March 7, 1983; Released: March 11, 1983)

1. By *Hearing Designation Order*, 47 Fed. Reg. 41630, published September 21, 1982, the Commission, by the Chief, Broadcast Bureau, designated the mutually exclusive applications of White Mountain FM, Inc. and Profile Broadcasting Company, Inc., to construct a new FM station at Littleton, New Hampshire, for hearing on the following issues:

> 1. To determine which of the proposals would, on a comparative basis, better serve the public interest.
>
> 2. To determine, in light of the evidence adduced pursuant to the foregoing issue, which of the applications, if either, should be granted.

2. In specifying the above issues, the Broadcast Bureau Chief noted that data submitted by the applicants indicated that there would be a significant difference in the size of the areas and populations which would receive service from the proposals. Therefore, the areas and populations which would receive FM service of 1 mV/m or greater intensity, together with the availability of other

primary aural services in such areas, will be considered under the standard comparative issue.

3. A prehearing conference was held on November 19, 1982. The evidence in this case was presented in written form on January 5, 1983 and subjected to objections at an oral hearing session held with counsel on January 19, 1983. The applicants did not request cross-examination of the written testimony and the record was closed on January 19, 1983. Proposed findings of fact and conclusions of law were filed by all parties on February 4, 1983 and replies were filed by the applicants on February 14, 1983 and the Mass Media Bureau on February 15, 1983.

FINDINGS OF FACT

4. *Diversification of control of the media of mass communications*: Profile is the licensee of station WLTN(AM) located in Littleton, New Hampshire. WLTN(AM) operates on 1400 kHz, 1000 watts daytime, although a construction permit has been granted for 2.5 kW daytime. The station is licensed to operate with 250 watts nighttime. Littleton has no other commercial broadcast facility and only one non-commercial facility, a television station, WLED-TV, Channel 49, operated by the University of New Hampshire. White Mountain Exh. 2. The only other media outlet in the community is a weekly newspaper, the *Courier*. *Id.* Profile and its principals have no other media interest. Profile Exhs. 1, 2, 3. Neither White Mountain nor its principals has any media interests. White Mountain Exh. 2, at 2.

5. *Full-time participation in station operation by owners*: White Mountain is owned by Kathleen G. and Thomas M. Pancoast; they each hold 50 percent of the 100 shares issued. Ms. Pancoast would work 40 hours per week at the station as the General Manager, Sales Manager, News Director and Director of Public Service Programming. White Mountain Exh. 1. Ms. Pancoast lives in Littleton, she has no recent broadcast experience, and for over ten years she has participated in the civic affairs of Littleton. She is also the President and a Director of White Mountain. *Id.*

6. Mr. Pancoast would work 40 hours per week at the station as Program Director, Promotion Manager, Assistant Sales Manager, Assistant News Director, and Chief Financial Officer. White Mountain Exh. 2. Mr. Pancoast lives in Littleton, he has no recent broadcast experience, and for over ten years he has been active in the civic affairs of the community. *Id.* Mr. Pancoast currently practices law 25 hours per week, acts as the trustee of a savings bank, and two days a week works as a Master for the New Hampshire Superior Court. *Id.* If a grant is made, he would resign his position with the Superior Court and reduce his law practice to 10–15 hours per week. *Id.*

7. Profile's shares are held jointly by Peter C. Aydelott, who is its

President and a Director, and Judith F. Aydelott, who is its Vice President, Treasurer, and a Director. Profile Exh. 1(P). Mr. Aydelott would work full time as Station Manager and Ms. Aydelott would work full time as Business Manager. *Id.*

8. Mr. Aydelott currently works at WLTN(AM), Littleton, New Hampshire and, therefore, has broadcast experience. He has, since 1975, been active in the civic affairs of Littleton. Profile Exh. 2(P). He lives in Sugar Hill, New Hampshire, which is eight miles from Littleton. *Id.* Ms. Aydelott has been active in Littleton civic affairs, she is the Business Manager for WLTN, and she lives in Sugar Hill. Profile Exh. 3(J).

9. *Auxiliary power*: White Mountain proposes auxiliary power. White Mountain Exh. 2, at 7.

10. *Comparative coverage*:

*Tabulation of Populations**
and Areas

	White Mountain		*Profile*	
	Population	*Area (Sq. Miles)*	*Population*	*Area (Sq. Miles)*
Total within 1.0 mV/m (60 dbu contour)	19,124	537	24,766	574
Total within Common area	14,348	376	14,348	376

Fourth	0	0	1,657	6
Fifth	0	0	0	0

*Joint Exh. 1
Profile Exh. 4(G), at 13.

CONCLUSIONS OF LAW

11. White Mountain and its owners have no media interests, while Profile Broadcasting is already the licensee of Littleton, New Hampshire's only radio station, WLTN(AM). WLTN operates both daytime and nighttime. Therefore, White Mountain is entitled to a substantial preference over Profile Broadcasting on the diversification criterion.

12. Kathleen G. Pancoast and Thomas M. Pancoast are equal owners of White Mountain. They both would work full time at the station in management positions, they are long-time residents of the community and are active in the civic affairs of Littleton. Ms. Pancoast, who is White Mountain's President, would be the Station Manager. She would hold significant programming policy positions at the station and because she is a woman in these positions, she receives additional preference.

13. Peter C. Aydelott and Judith F. Aydelott jointly own the shares of Profile. Like the Pancoasts, they would work full time at the station in management positions. They live eight miles from Littleton in Sugar Hill, New Hampshire, but they are active in Littleton's civic affairs and they operate an AM radio station in Littleton. They both have broadcast experience. Ms. Aydelott, like Ms. Pancoast, receives an additional preference because she is an integrated woman, albeit not in a position as important as the one to be held by Ms. Pancoast.[1]

14. White Mountain is entitled to a preference for its proposal to provide auxiliary power. It is also entitled to a slight preference for its superior second service aural coverage during the day to 1,258 persons (compared to Profile's 218) and to 3,150 at night (compared to Profile's 397). Overall, Profile would actually provide service to more people within a slightly greater area than White Mountain, but the gain in service would be to a population that already has at least three, four or five services daytime and nighttime.

15. White Mountain's application is comparatively better than Profile Broadcasting's because it would enhance diversification in the community. White Mountain, in addition, receives credit for its auxiliary power and slight credit for its provision of a second aural service. On the basis of integration the applicants stand nearly equal.

ACCORDINGLY, IT IS ORDERED that the application of White Mountain FM, Inc. (File No. BPH-810408AC) for FM Channel 292A at Littleton, New Hampshire IS GRANTED and the application of

---

[1] Each of the parties has argued that the other would not perform its promised integration. White Mountain argues that the Aydelotts could not work full time at the station because they already work at WLTN(AM). Profile argues that Mr. Pancoast could not work at the station and still practice law, since both jobs require the same daily hours. Neither of these arguments are supported by record facts. There is no record evidence about what the Aydelotts plan to do about their jobs at WLTN; in fact, there is no record evidence about how much time the Aydelotts now spend at WLTN. On the other hand, Mr. Pancoast has explained how he will accommodate his law practice and his position at the station; his explanation, which is reasonable, is unquestioned on the record and must, therefore, be assumed to be true.

Profile Broadcasting Company, Inc. (File No. BPH-811027AL) IS DENIED.[2]

FEDERAL COMMUNICATIONS COMMISSION
EDWARD J. KUHLMANN, *Administrative Law Judge*
